If breeders generally will incline to strengthen their herds, both in the matter of quality and numbers, they will be acting on a safe basis. An abundance of rough feed should be produced that the herd may be maintained at the least expense. Consumption of corn as human food steadily increases and is emphasized by the present shortage of the wheat crop. It is time to pay particular attention to pastures and meadows, that every acre may produce as near the maximum as possible. American products are being drawn upon as never before in the world's history and it appears that these requirements will increase rather than decline. Every phase of the situation offers encouragement to the man who is producing good cattle. His advantage is everywhere recognized. He should make the most of it.

The American Short-horn Breeders' Association is encouraging all identified with the production of Short-horns to increase rather than deplete their herds; to bring the standard to as high a state of efficiency as possible and in so doing to contribute their part in providing an ample food supply. That the profits assured fully warrant the action seems clear to even the most casual observer.

F. D. Tomson.

A Music Course
For Advanced Students

Finishing courses in vocal, piano and all string or wind instruments will make you a competent, experienced concert artist or parlor performer, as you choose. Finest teachers, most efficient methods.

Dramatic Course develops for amateur or professional work on stage or for films.

Normal Course, guaranteed, in any line, will make you a successful teacher.

All based on the advanced Centralizing Method. Write today for booklet of courses and terms.

CENTRALIZING SCHOOL OF MUSIC

East Oklahoma and West Arkansas

YOU CAN OWN A FARM for less money in East Oklahoma and West Arkansas than you can rent one in the old, well-settled states. A little money and enough energy to clear virgin land, will make a farm for the right kind of a man. Cheap lands for many thousands along the **Kansas City Southern Railway.** Write for information to Immigration Bureau, No. 321, K. C. S. Bldg., Kansas City, Mo.

ARE YOU GOING TO BUY LAND?

IF SO, GET A COPY OF OUR JOURNAL FIRST. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25 cents for one year's subscription or $1.00 for five years. Department F. Farm and Real Estate Journal, Traer, Iowa.

FARM FOR SALE—133 acres, heavy clay loam; 30 acres timber, balance productive fields that produce acre for acre as much as any land in the West; great markets; ½ mile from town and railroad; new 10-room house, full basement; telephone; large new basement barn, hen houses, fruit; fine climate, mild winters. Price $3,000, half down, balance on easy terms. Send for free photos and description. A. L. Wilkins, R 1, Union, N. Y.

FARM WANTED

WANTED to hear from owner of good farm for sale. Give cash price and description. Write **JOHN H. OAKS, 432 Main St., Oshkosh, Wis.**

GOOD FARMS in a good country. Always sure crops; no destructive storms. Good bargains are yours by writing Geo. C. Rice, Webster, Wis.

POULTRY AND PET STOCK.

FOR SALE---S. C. RHODE ISLAND REDS

GOOD BREEDERS from exhibition and trapnested laying stock. Write for prices. **WINNEBAGO POULTRY YARDS, A. J. Schloern, Mgr., R. 23, Omro, Wis.**

BARRED PLYMOUTH ROCKS and Buff Orpington ducks; Chicago winners; great layers; established 1892; eggs for hatching: $1.50, 15; $4.50, 50; $8, 100; prompt delivery and good hatch guaranteed. G. Earl Hoover, R. 24, Matthews, Ind.

HATCHING EGGS; prize-winning S. C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W. F., Fond du Lac, Wis.

HATCHING EGGS—S. C. Reds, prize-winners all leading shows. Eggs, $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

RHODE ISLAND REDS—Setting of 15 eggs from pure-bred prize-winning Rhode Island Reds, $1 per setting; three settings for $5. Hildebrandt & Vea, Stoughton, Wis.

ENGRAVING Halftones made from pictures or drawings of stock for your letterheads, post cards, catalog advertising. Quick service, best work, reasonable prices. Write for information. **HOMESTEAD COMPANY** Engraving Dept. Des Moines, Iowa

Wisconsin Has Good Harvest.

Rye, Barley and Oats Are Fine—Hay Made Excellent Yield—Corn Shows Gain in Growth—Live Stock Continue Normal.

WISCONSIN.

Calumet County.—Rye and wheat crops are fine and most of the acreage has been cut. Barley has been harvested also. The acreage of these crops is nearly the same as last year. Oats are turning white. Clover is a good crop and the acreage is somewhat larger than that of last year. The corn prospects do not look promising. There is more young stock in this county than there was last year. A number of milk cows died this spring, which cuts down production.—Joseph Buchinger.

Crawford County.—Rye, barley and wheat have been harvested and oats are now being cut. All grain crops are above the average and far ahead of those of last year. With the coming of warm weather corn has made excellent progress. Some fields have formed ears. Prospects are favorable for a bumper crop if frost does not come too soon. Hay is heavy and the weather is favorable for putting it up. Potatoes, beans, cabbage and tomatoes look fine. Pastures have held out well and live stock are in good condition.—H. H. Stuckey.

Chippewa County.—Most of the hay crop is harvested and weather conditions have been favorable. The yield ran from one and one-half to three and one-half tons per acre. Heavy rains have fallen during the last few days and pastures are good. Potatoes are a much better crop than last year. Corn looks well, but some of it is a little backward. A heavy crop of rye has been harvested. Wheat is the best it has been for several years. Barley is good. The pea factory has closed a very successful year, with a production of 1,300,000 cans. Sugar beets and tobacco look fine. Oats are being cut and a heavy crop is reported.—Ernest Neitzel.

Douglas County.—Haying is about half done and indications point to a crop about 30 per cent below that of last year. No grain has been harvested, but the prospect for small grain is the best it has been for several years. Wheat is very promising. The average yield of all small grains will be about 20 per cent above that of a normal crop. Corn looks fine, prospects being more favorable than they have for the last three years. Farmers have been sowing a large acreage of root crops, to furnish feed.—B. N. Stone.

Dunn County.—We have had some very hot weather which has pushed the corn along rapidly. Haying is nearly finished. Barley and rye are in the shock and some oats have been cut. Small grain is good, but not quite up to expectations. The milk flow has dropped off considerably because of flies and heat. Potatoes are fine and gardens look well. Many farmers are building silos to save the soft corn and meet the high cost of feed.—Jas. A. Smith.

Florence County.—Grain is in normal condition, but has not yet been harvested. Hay on old meadows will average one and one-half tons per acre and on new meadows two and one-half tons. Feeding operations are increasing. The fruit crop is very light in this county, but gardens are normal.—Phil Kelmes.

Iowa County.—Hay made a good average crop and it is now up in good shape. Grain harvest has commenced and an increase in yield of about 5 per cent over the average is promised. Corn is backward, but in sections where rain has fallen it has gained in growth wonderfully. This county has suffered from a damaging drouth. Pastures are gone. The second growth of clover and alfalfa are poor and corn, potatoes and late garden stuff are drying up. The milk flow has decreased about 25 per cent and on account of the high prices farmers are not trying to maintain it.—Art. G. Hoskins.

Juneau County.—Haying is nearly finished. The crop was large and most of it went up in good shape. Wheat, rye and barley are harvested and these crops are above the average. Oat harvest has just commenced and the prospects are favorable for a good yield on high ground, but on low ground the outlook is poor. Corn made a great gain in the last week. Potatoes are very good.—C. W. Hale.

Langlade County.—The hay crop is harvested and will average about one and one-half tons per acre in yield. The rye crop is better than it was a year ago; some has been cut. Winter wheat is well filled. The barley and oats were injured by hot winds recently. Corn is growing fine and shows good color. Gardens are growing well. Live stock show fine condition. Pastures are holding out well and stock are getting no other feed. Eggs are scarce and some farmers are buying them.—M. C. Parsons.

Marquette County.—Corn has grown fine for the last few days, but still is about three weeks late. Rye is good, but thin. Oats are doing well and will make a good crop. Potatoes have a very good stand. Tame hay yielded heavily. Marsh hay was thin. Pastures are getting short and the milk supply is decreasing.—J. W. Williams.

Medford County.—Favorable weather Oats and rye look well. Haying is in with local showers have pushed crops. full swing and new meadows are yielding fairly well, but the old meadows are making only half a crop. Wheat is poor, but rye looks fine. Potatoes never looked better. Live stock are in fine condition. There are plenty of horses for sale cheap, but they are heavy, weighing about 1,600 pounds. Spring hogs are scarce and sell from $10 to $12 a pair. Sheep and lambs are doing fine. Wool sells for 50 cents a pound.—E. H. Dehne.

Outagamie County.—The season is late, but haying is well under way and the crop is fine. Clover especially is very good. Grains of all kinds are uniformly good, but it is too early to tell how well they will fill. Hot weather may diminish their yield. Corn is very backward, the best of it is only commencing to tassel. Much of the crop on wet soil was stunted in growth. Potatoes were never better and every nook and corner seems to be planted to them. Strawberries and cherries were immense this year. Potatoes will soon be at $1 a bushel. Pastures are good and dairymen are reaping just rewards with cheese at 22 cents a pound. Many farmers are leaving creameries to patronize cheese factories. No mill feed is required for feeding. Banks are full of idle money.—R. T.

Pierce County.—Hay made a good yield of fine quality. Rye and barley are in the shock. Rye will yield from twenty-five to thirty bushels per acre, and barley from thirty to thirty-five bushels. Oats were injured to some extent by hot weather, but the same weather helped the corn wonderfully. However, unless the weather remains very favorable we will not get much sound corn. Potatoes never looked better. A severe storm of wind and rain passed over a part of this county on August 4th, sweeping down the nncut grain, so that a large part of it will have to be cut one way. thus increasing the work of harvest.—G. K. Moore.

Price County.—Most of the timothy and clover crops have been put up and their quality is excellent. The average yield is about two tons per acre. Rye and barley are getting ripe and look promising. Oats will average about thirty bushels per acre, the same as last year. Corn is growing rapidly, but still is late. All live stock are doing well, but pastures are getting short because of lack of rain.—G. F. Glissendorf.

Rusk County.—The hay crop is about half harvested and the yield is exceedingly good on the new seeding, but on the old somewhat light. Corn has made a great advance in the last few days of hot weather. It looks as if a full crop would mature. Small grain will be better than it has for many years. A larger acreage of potatoes than usual has been planted and conditions were never more promising for a bountiful yield. Milk cows are producing well and beef cattle are in the pink of condition.—T. M. Thomas.

Taylor County.—Pastures are fair and live stock are in good condition. A recent rain saved the potatoes and small grain, because they were suffering badly from drouth. Potato bugs are not bad this season. Haying is done and a bumper crop has been put into the barns and stacks. Rye is getting ripe and promises a good yield. Barley is turning and at present looks very good. Oats will make a bumper yield if no drawback occurs. Potatoes look fine and root and garden crops are above the average.—J. C. Hoffman.

Washington County.—Haying is nearly completed and the yield and quality are much better than they have been for several years. The second cutting of alfalfa is at hand and if weather remains favorable for another week it will yield greater than the first cutting. Winter grains and barley are being cut. Wheat and rye will yield better than last year and barley will be a very good crop. Oats will require about two weeks yet in which to mature. Corn is nearly a month late. Gardens and fruit are in fine condition.—M. P. Salter.

Waukesha County.—A big crop of hay has been put up in fine condition. The weather favored all but the very early cutting. The second crop of alfalfa was better than that of last year. Barley is good, but the stripe disease will cut down the yield in some fields. Oats look well, but some disease is affecting it. Corn is developing ears, but lags behind the season. Live stock of all kinds are doing well. Pastures are good. The dairyman who meets high prices this year will have to get more than $3 a hundred for his milk. Fruit has been very plentiful.—W. J. Mann.

Wood County.—Hay was put up in fair shape, considering the wet weather which came at haying time. Rye and oats are nearly all harvested and promise good yields. Corn made a rapid growth during the warm weather, but is holding back just now because a cool spell has come. It is beginning to tassel and develop ears. Fruit and gardens still look well. All live stock are in good condition. Farmers are weeding out the poor milk cows and selling them for canners.—Fred E. Weber.

More Sheep By All Means.

To the Editor:—It is a bit interesting to learn that certain grades of wool are selling in this country at $1 a pound, and even twice that is quoted for some exceptionally choice lots. If anything would impel a man to stop and think of the possibilities of sheep at the present time, it seems to me that should.

Many sheep go to the shearer bearing six pounds of wool. This may be given, indeed, as a pretty fair average for the sheep of the United States. It would be an interesting experience to wrap up a single fleece and receive in return for it $6. When before in times of peace has such a thing been known?

Very many ewes produce for their owners two good lambs in a single season. It is a very poor lamb that does not bring for meat $5. This for one lamb would bring the annual return from a single ewe up to $11. Twin-bearing ewes would swell this to $16 for the season.

By farmers who have had experience with both sheep and cows, it is calculated that one may maintain eight sheep on what would be required for one cow. That is, for eight good sheep, feed enough would be consumed to support one cow. Now, the average cow will make not more than $50 for her master. With prices for feed and help where they are now, scarcely that figure could be reached. But place it at $50. Eight sheep properly cared for should give back to their owners, according to wool quotations, $48 for wool alone; and if they had one lamb each we could add $40 for the lambs, making $88; while the twin-bearing ewes would bring that up to $40 more. Now, I know this may seem a rosy statement to the man of the hard head, so let us divide the price for wool by two and leave it at $3 for the eight sheep, or $24 for the eight. Add to this the $40 for lambs and we still have $64 from the sheep, as against $50 for the cows, with the chances at least $20 better for the twin-bearing ewes.

And the best of this is that there is far less work connected with getting the wool and the lambs than there is with the cows. We need to be very attentive to the wants of the sheep for a few weeks when the lambs are due to come. After they get fairly started, we do not have much trouble for the season. While this is true, we must milk our cows twice a day and be to much other expense for care and maintenance.

It is not best that all farmers should go out of dairying and take up sheep. I never thought it paid to go to extremes in anything. A steady gait is always best. But I do think every farmer who is situated so that he can do so should add some sheep to his farm animals. It will be many years before sheep will be down very low. Present conditions indicate a trend the other way. He will be a wise farmer who invests in some sheep, providing he is a lover of sheep and has a farm that is adapted to the sheep industry. E. L. Vincent.

$15-$20 A Day Baling Hay

Send For Free Book

Big money baling hay—faster the press—the more the money—that's why you should use the

Solid all-steel press, Sandwich gas and oil engine with magneto, mounted on same truck furnishes power.

Sandwich Hay Press

A marvel for speed—turns out a continuous stream of bales. Heavy steel transmission, self-feeder and block dropper. Friction clutch starts or stops press instantly. Especially adapted for alfalfa.

Live Stock and Commercial Notes.

Gathered by Representatives of The Wisconsin Farmer.

Herefords in Wisconsin.

THOSE who are of the opinion that cattle other than dairy breeds have no place in Wisconsin agriculture may be surprised to learn that there is a herd in Grant county numbering 109 head of pure-bred females. This does not include about 40 high-grade cows that furnish steers and heifers for the feed lot. L. M. Scott & Sons, Bagley, Wis., have a herd of Herefords that are a credit to the breed. Their farm, known as the Maple Glen Stock Farm, consists of 800 acres, is one of the most beautiful farms in Grant county. No doubt there are many farmers in Grant county that did not know there was such a large herd of good Herefords within its bounds. Maple Glen Herefords, during the past few months, have been shipped to the two Dakotas, Montana, Michigan, Illinois, Iowa, and, of course, Wisconsin has taken several. Just at this time the imported bull, Curly Boy, is offered for sale. This bull is five years old and is being sold for no fault, but there are some 30 heifers in the herd sired by him, and, as there are two other herd bulls on the farm, this fellow can be spared. He is a half brother to the noted Renown, that recently sold in the Blue Ribbon sale at Kansas City for $2,300. He will weigh right at 2,400 pounds and could be made to weigh 3,000. His breeding is given in the advertisement that appears on page 18. This is no ordinary bull, but the critical breeder that is particular when buying herd bulls is the customer that the Scotts are looking for. Let them describe this bull in detail. Their address is L. M. Scott & Son, Bagley, Wis., located about 40 miles up the river from Dubuque.—Adv.

Lee Eastman, of Lancaster.

MOST everyone in Grant county knows the genial Lee Eastman, and everyone in the state that takes any interest in Polands has heard of Dobson & Eastman. With this issue Lee Eastman makes his debut to our readers as a Poland China breeder. We do not mean to infer that the firm Dobson & Eastman is no more—that will be the same as ever, in charge of that efficient hog man, Burley Dobson. Mr. Eastman has recently purchased 275 acres, and when he gets through with the improvements on this farm it will be "some place." Don't be misled and think he is in the "game" for fun, for he is on the job personally, and we are glad to say that the Polands that he has and the spring pigs that he is offering will compare with the best of them. Those that attended the Madison sale will remember that Mr. Eastman bought some of the best. Spring boars are being offered sired by several of the good boars of the state, and at this time are being priced reasonably. All the hogs on this place are cholera immune. We are glad to recommend the Eastman Polands. He can ship you pigs that will give satisfaction. Mr. Eastman is in the game to stay, and it behooves him to send out boars that will make future customers. Write him for further information. See advertisement on page 19.—Adv.

McDonald Has Wonderful Poland Exhibit.

J. D. McDONALD, North Bend, Wis., will show a herd of big-type Poland Chinas this fall that, we feel safe in saying, will be the greatest show herd of big-type Polands ever seen at the Wisconsin State Fair. Notice the advertisement that appears on page 19 in this issue. Mac expects to make this his banner year. He will show hogs that will certainly be a credit to the breed and to the state of Wisconsin. He has a wonderful lot of spring pigs that he is shipping now, and he will also have some good sale pigs at the different fairs. If you don't buy before make it a point to see the McDonald Polands at some of the fairs where he exhibits. Mr. McDonald has claimed February 6th for a bred sow sale. It is the ambition of this breeder to put up an offering of big-type sows the equal of any ever sold in the Northwest. Mac has the goods and he should be able to make a great sale. —Adv.

Joins the Chester Advertisers.

WITH this issue of The Wisconsin Farmer, Carl Hickcox, Spring Green, Wis., a breeder of Chester Whites, starts an advertisement in which he calls attention to the March and April pigs that he has for sale, boars and gilts. The pigs are sired by Prince Triumph A., he by old Prince Triumph, and Little Wonder 42049 by Little's Style. There is a good litter by Guy's Comet, he by White Prince. The dam of this litter was the top sow in the Burlington sale last winter, she being sired by Eagle Chief, out of that good sow, Sister No. 1. The dam of another good litter is a daughter of old Dollar Mark. Mr. Hickcox has a good lot of pigs that are well grown, and he can send you boars and gilts that he guarantees will give satisfaction. You will make no mistake if you correspond with this breeder before you buy. Please mention this publication. See advertisement on page 18.—Adv.

Fred Matthes, Duroc Jerseys.

FRED MATTHES is one of the recent additions to the Wisconsin Duroc Jersey ranks. He is located at Viola and we believe he is a comer in the Duroc game. He has a good litter by Pathfinder 2d and two litters by son of Cherry Chief Wonder, out of dams by Cook's Defender. One litter by King the Col. Again, a son of King the Col. We will have more to say about this herd later.—Adv.

Produce Pork With Less Feed.

SINCE Geo. D. Sprain & Sons, West Salem, Wis., started to raise pure-bred Durocs they have found that they could produce pork at less cost than when they kept the same number of "ordinary" hogs. We don't mean to infer that they pork all of their produce, but feed is figured just the same. They have simply found out that the better the hog the easier the keeper." Three good boars head this herd of pure-bred Durocs, namely, Grand Model 17th, a son of the noted Grand Model, the three times champion. Grand Model 17th is the only Grand Model boar that we know of in Wisconsin. Illustrator Special is one of the best yearlings in the state. He was sired by the grand champion, Prince Illustrator, out of a Col. Gano dam. Royal Top Col. is sired by Put's Top Col. The Sprains can sell you boars not related to anything you may have in your herd. We have seen a good many boars that this firm has sent out, and they have made friends. No firm gives a better guarantee. See page 18.—Adv.

John Pellett & Son, Viola, Wis.

THE above firm breed and sell Chester White swine, Jersey cattle and Collie dogs; so if you are in the market for any of the above breeds, don't forget the name. Just now they offer Chester Whites, and, having recently seen this herd, we do not hesitate saying that they have some pigs that will certainly please their buyers. Mr. Pellett took in some of the important Iowa sales last winter, where some of the best sows were sold, and made some purchases. One sow has a litter sired by Wm. A Wonder, in which is some herd-boar material. Another good litter is sired by the Anderson boar, Chief Filmore. These pigs are of later farrow, but, age considered, are as good as any on the farm. The boar in use in the Pellett herd is sired by the noted Crandall boar, Schoolmaster, and he has sired some unusually good pigs. This firm is in a position to sell you a boar and a couple of gilts that are unrelated and at a price that is consistent with breeding and quality. Write them. See page 18.—Adv.

Hoover Select—Ideal Combination.

THE above-named boars are the attraction on the L. J. McBain Chester White farm at Bloom City, Wis. This name is not new to Wisconsin Farmer readers. Bloom City is in Richland county, and Mr. McBain's shipping point is Viola. Hoover Select is sired by Demonstrator, he by Combination Rex. His dam is by Controller. This boar is a spring yearling, and there are many good things about him. The other boar is Ideal Combination, a son of the noted sire, Combination 2d. There is also a good litter by Paddy 2d, he by Paddy by Schoolmaster. The best litter on the farm is out of a daughter of Iowa Boy, the big boar that was used in this herd for several years. Mr. McBain has over 50 pigs of March, April and May farrow and fom this number he will be glad to fill your order. Communicate with him and please mention The Wisconsin Farmer. See page 18.—Adv.

The Salter Red Polls.

WE have just received the following letter from J. W. Salter & Sons, Unity, Wis., advising that they continue to enjoy a good Red Poll cattle business: "We are selling and growing Red Polls all the time. Our recent sales have been to Fred Bauch, Birnamwood, Wis.; Henry Necker, Cadotte, Wis., and Jos. Rabb, Auburndale, Wis. Each of these men bought a good bull. We have eight choice heifers coming two years old, and we will sell two or three of these, bred or open, as purchaser wishes. We also have four bulls that are ready for service and they are from exceptionally heavy milking dams. We have, coming on, the best bunch of calves we ever raised." The reason the Salters make good sales is because they give value received. Write them for Red Poll literature. See this page. —Adv.

Shea's Good Durocs.

WHEN it comes to raising Duroc Jersey pigs Dennis Shea, Melvina, Wis., can produce the goods. He has some 160 spring pigs and, numbers considered, no breeder has a better lot. They are sired by good boars and out of some of the largest brood sows to be found in the state. Dennis can fill your order and satisfy you. The breeding is the very best. Notice his advertisement on page 18 in this issue and write for further information. Mention The Wisconsin Farmer, please.—Adv.

Short-horn Congress and Sale.

DUE to a mistake the dates for the Short-horn Congress, show and sale under the management of the American Short-horn Breeders' Association at Chicago next winter, have appeared in our columns as February 25th to March 1st. These dates are wrong, as the time for this big event will be from February 18th until February 22d inclusive.—Adv.

SALE DATES.

Short-horn Cattle.

Oct. 31, Carpenter & Carpenter and J. W. McDermott, Chicago, Ill.
Nov. 1, Herr Bros. & Reynolds, Chicago, Ill.
Dec. 1, Anoka Farms, Waukesha, Wis.
Feb. 18-22. Short-horn Congress Sale, Chicago.

Duroc Jersey Swine.

Oct. 17, L. F. Atwater, Bangor, Wis.

Poland China Swine.

Oct. 2, Grant Co. P. C. Breeders' Assn., boar sale. Burlie Dobson, secretary, Lancaster, Wis.

Feb. 7, State Assn. Sale, Madison, Wis. Burlie Dobson, secretary, Lancaster.
Feb. 8, Grant Co. P. C. Breeders, Lancaster, Wis. Burlie Dobson, secretary.
Feb. 22, Wm. Smiley & Sons, Albany, Wis.

Chester White Swine.

Feb. 6, Combination Sale, Wm. T. Butts, Walter George and B. H. Babcock, Evansville, Wis.

Tile Draining the Land.

To the Editor:—The past season of early wet weather and later dry weather has been ideal for bringing out the inadequacy of our ditching systems. People usually live about up to their knowledge of things. Improvements only come when the necessity for or the importance of improvement is borne in upon them. Almost all of the instruction given in our farmers' institutes and other sources of information has been devoted to the method by which the drainage sysems are to be installed. To me, as a user of tile drains, by far the most important consideration is to understand the full benefits to be derived and when these are understood the rest will come easy.

We do most willingly and intelligently the things the importance of which we understand. It seems to me, then, desirable that attention be called to some of the numerous benefits to be derived from a complete system of drainage. The most important, as also the most apparent, is the lengthening of the season.

This is accomplished first by enabling the farmer to get into his fields to plow and to plant earlier. We all should recognize that the longer the growing season the larger crops of anything it is possible to produce. The tremendous yields of stuff reported in some of our southern states is due to good conditions of soil and long growing season.

All experienced corn growers have found that the early corn is usually by far the most productive and the quality infinitely superior and hence any man who is held out of his field by reason of bad drainage is living much behind his opportunity. The sunshine over his fields could much more advantageously be used in warming up the soil than in licking up the excessive moisture which is holding him from his field.

Also, this same evaporation, made necessary by poor drainage, shortens the season because the very process of evaporation is a cooling one. Drainage must be accomplished that the least amount of water be removed by evaporation. Corn is a semi-tropical plant and we must do what we can to bring about suitable conditions.

The season is lengthened by the giving off of latent heat in the rainwater that is allowed to enter the soil and then flow off as soil water.

Where a soil is water logged and this water run off, no such advantage accrues. Just how much benefit is derived from this source is difficult to determine, yet when we realize the tremendous amount of latent heat in water and further that there is a difference in temperature, often of several degrees, in the water that flows from the soil in the spring and the water that flows out through the drains, we know that the heat of the water has been imparted to the soil. Where water is enabled to flow into the soil and out through the drains air will follow and occupy interstices. Though the circulation is slow, it is considerable and the soil soon responds to the influence of the warm air in the early spring.

The influence of good air circulation in the soil, caused by good tile drainage, accounts for the extra early warming up of the soil more than any other agency. My mixing with different farmers leads me to conclude that only a small per cent of them really realize these things as they actually are, but when these considerations are fully realized I am sure that farmers will look upon drainage as an investment and the sure means of paying off the mortgage, and, rather than farm wet land, land that is not paying for its keep, the farm will be bonded to drain itself.

In going about we can all see patches here and there in fields that are unproductive simply because they are water logged. When they do dry out they become so hard that they cannot be worked to advantage, thus they lie idle three years out of four usually. The extra crops on this good land will more than pay the bill of drainage in a few years and the land be in still better shape for making more money.

Let's look about and see if there are any spots in our fields that need this work and if so apply the remedy and watch the result. Subscriber.

A four-horse gang plow with two twelve-inch bottoms will cover about 4.12 acres in a day of 9.6 hours, according to records at the Missouri College of Agriculture. A three-horse sulky with a fourteen-inch bottom will plow about 2.5 acres a day and a two-horse fourteen-inch walking plow will break about 1.75 acres a day. These figures apply when the ground is turned to a depth of six inches. When plowing eight inches deep the area covered is from one-fifth to one-fourth acre less.

A silo on the farm will make one acre of corn feed twice as many cattle, if the crop is cut for silage instead of being harvested for grain.

Pony Puzzle

Count the Dots and Win a Prize

Here is a Shetland pony covered with dots. By being careful any boy or girl can count the dots on this pony. If you can do this we will send you as a prize, a packet of five beautiful embossed postcards lithographed in rich colors, and also a certificate for 1500 Free Votes in our grand contest for a beautiful Shetland Pony. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

Beautiful Pony Given

Remember the pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in this great contest. In case of a tie for the pony one will be sent to each person so tied. Full particulars by return mail.

Boys! Boys!

Get a "Bing-Bang" Gun Free

This is one of the greatest novelties of the season. The "Bing-Bang" Gun is good for 1000 Hot Shots, does not cost a cent to operate, and is absolutely harmless. You can have all kinds of fun with one of these "Bing-Bang" Guns. If you get one, every boy in your vicinity will want one too.

All you need to do is to write a letter and say *"Please send me one of your 'Bing-Bang' Guns and tell me all about the American Junior Automobile that you are going to give away."*

As soon as I receive your letter I will mail you a "Bing-Bang" Gun and send you full information about the American Junior that I am going to give to you or some other little boy or girl. Please enclose 3c in stamps in your letter to pay postage and cost of mailing the Gun. I have given away many automobiles and I want to tell you how you can get one for your own.

Address your letter to Pres. Junior Auto Club, Dept. 125, Popular Bldg., Des Moines, Iowa.

Orion Col. S.

EVERY time we see Orion Col. S., the good Duroc boar in the W. C. Jenkins herd, Bangor, Wis., the better we like him. We consider him one of the three top aged boars in the state. Orion Col. S. is big, has a wonderful back, great depth and a good head and ear. He has his faults, of course. Did you ever see one that was perfect? But his good qualities offset his poor ones. He comes from a line of breeding that is standard—it has made good for years. He is sired by Col. S. Jr., going back through The Professor to Ohio Chief. The dam, Opal Orion, was by Orion Chief, one of the greatest sow sires of all times. Orion Col. S. is great by inheritance. See him at Milwaukee with the good sows that go to make up the Jenkins herd.—Adv.

HOLSTEIN-FRIESIAN CATTLE.

Milford Meadows Stock Farm

OFFERS FOR SALE a very well-bred bull calf by Dutchland Creamelie Denver Prince (165048) that is better than a grandson of Colantha Johanna Lad and out of Canary Ormsby Johanna De Kol, a 28-pound three year old, 111.95 pounds in 30 days, which is practically a perfect individual. Write for extended pedigree. Other bull calves out of A. R. O. dams by same sire for sale.

EMMONS BLAINE, Prop. Lake Mills, Wis.

TWO-YEAR-OLD HOLSTEIN BULL

A BULL THAT WE GUARANTEE to be right in every respect and just as we describe him or no sale. He is straight, good size, well built, nicely marked, more white than black and throws light-colored calves; whose eleven nearest dams have good A. R. O. records. Sire's dam, Princess Mercedes Riebe at four years made 26.39 lbs. butter and 561.50 lbs. milk; at two years, 667.39 lbs. butter and 17,400.70 lbs. milk for one year. Sire's grandam at four years made 18.23 lbs. butter and 474.10 lbs. milk and 909.91 lbs. butter and 21,611.70 lbs. milk for one year. The dam of this bull made nearly 21 lbs. butter at three years of age; her dam made 16 lbs. butter at two years of age and her dam made 16.60 lbs. butter. If you are in need of a bull come and see this one, or write for a tabulated pedigree and price to Mountain Ash Stock Farm.

J. B. CAIN, Prop. Glenbeulah, Wis.

Are playing an important part in the development of the Holstein Breed in America. There are over 300 head in this State Accredited herd.

We sell bull calves at a price ranging from $150 up. Send for list.

POLAND CHINA SWINE.

100 BIG-TYPE POLAND CHINA SPRING BOARS AT $30.00 EACH

Double treated, and we record them. They will be worth $30.00 on the market by the time you are ready for their service. Farrowed in last of February, March and April, the greatest lot of high-class pigs we have ever raised, long and deep bodied, heavy boned, nicely marked and good backs.

They are **from the most noted families of the great breed,** sired by **Giant Jumbo 2d, the 700-lb. year-old son of Giant Jumbo,** whose sire was the 1,055-lb. Maid's Halvor 1st; his dam sired by the 1,000-lb. and over Big Bone 2d, his grandam by Mouw's noted Big Jumbo. There is no bigger breeding. Others by **Long Expansion, a 900-lb. two year old,** and **Pawnee Wonder, a 1,000-lb. son of A Wonder.**

The dams are sows weighing from 600 to 800 lbs. and over, of the most intense big-type blood lines. **Buy your boar now and save from $20 to $50.** Boars will be high and scarce this fall.

Send your check right with the order, tell us the kind of a boar you want and we will send him or **return your money.** Come and see our herd, one of the greatest in America, as well as one of the most up-to-date, pure-bred stock breeding establishments.

Price $298

Proven Out By Two Years of Actual Every Day Farm Work

THE Auto Pull is not a new machine—it has been in use for two years. It is thoroughly tested and you can be absolutely sure of every claim we make. Remember the Auto Pull is the oldest tractor attachment. There is no other machine like the AUTO PULL. Its many exclusive features are protected by patents so you can only get these features on the AUTO PULL.

Turns Your Ford Into a GUARANTEED Powerful TRACTOR

You will find AUTO PULL TRACTOR ATTACHMENTS everywhere—Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Wisconsin and other states. They have been giving real satisfaction, because the Auto Pull is a real tractor. It is built like a tractor, works like a tractor, and is the most powerful machine of its kind. You cannot realize its tremendous power until you see it working. Send for our FREE BOOK. Don't wait any longer. Get all the facts now.

The AUTO PULL is Geared Down to Fit Your Own Soil Conditions

You never saw a tractor or tractor attachment with this feature. If you have a tough piece of land, think what this means. You can get an Auto Pull that you absolutely know will do the work. It is built to fit the conditions of your soil. There are no "ands, ifs or buts" about the Auto Pull—it will do all we say it will and more. Prove this to yourself.

The Auto Pull is not geared at 10 or 11 to 1. This makes your tractor machine pull too fast. The Auto Pull is geared down to 12 or 15 to 1—just the right speed to work your tractor, which gives a working speed of 2½ miles per hour. Ford engine starts and runs on high at the easy economical road speed of 20 miles per hour. Get all the facts. We can't tell you everything about the Auto Pull here. There are too many big and exclusive features—each feature is important—and the only way you can know about this is to get our **Big Free Book.**

Special Belt Pulley Attachment

With the special Auto Pull Pulley Attachment, you get a powerful 3 to 12 H. P. Stationary Engine for only $25.00 Extra. With this pulley attachment you have plenty of power for filling silos, pumping water, baling hay, sawing wood and a hundred other things.

Quickly and Easily Attached, Quickly Taken Off, No Ford Wheels or Fenders to Remove

The AUTO PULL fits your car "like a pair of overalls."

You don't remove the wheels or fenders—just back your car up to the Auto Pull and fasten a few bolts—NOW YOU ARE READY FOR WORK. Unscrew a few bolts and you have a pleasure car again. Nothing is so simple, easy and quick. The Auto Pull traction wheels go right over your rear Ford wheels, but the Ford wheels are not used. The Auto Pull Wheels do the work and push the car ahead—there is no strain on engine or frame.

The Auto Pull Tractor Attachment weighs 1,000 pounds—all the weight is right where you need it—over the drive wheels. There is positively no strain on your car—it will do the work of 4 to 5 horses. The three-point suspension of the Auto Pull gives the natural easy balance all tractors should have.

Find out all about the Auto Pull by mailing the Coupon for our new FREE BOOK at once

Many Special Features

1. No Wheels to Remove.
2. No Fenders to Remove.
3. Double Gear Reduction.
4. Auto Pull Traction Wheels fit right over the Ford Wheels.
5. Gears are enclosed — outer gears run in oil.
6. It is The Original Tractor Attachment, fully covered by patents.
7. Weighs 1,000 Pounds with the weight where it is needed, over the drive wheels, so that you always get plenty of traction.
8. Drive Wheels, 10 Inches Across the Face.
9. Takes five minutes to attach it—less time to remove it.
10. Simple, Sturdy Construction.
11. Steel Traction Wheels.
12. The Natural Easy Balance of Three-Point Suspension.
13. Special Water Cooling Capacity.
14. Special Pulley Attachment that turns Auto Pull into a powerful stationary engine.

Get All the Facts

Send for our new book "FARM POWER FACTS"—you'll find information in it that's worth big money to you. It shows how to solve the labor problem—how to get your work done in half the time with less help. It shows why the Auto Pull is guaranteed—why it will stand up under severe farm conditions — it shows how the Auto Pull can be geared down to fit any soil conditions.

Send for the book NOW NO CHARGE— No obligation. Just mail Coupon.

THE WISCONSIN FARMER

VOL. XLVI. NO. 34. THURSDAY, AUGUST 23, 1917. WHOLE NO. 1856

Success With Hogs, Cattle and Corn

MAKING 15 per cent on an investment for three years in succession is good business. Making this percentage through farming without any special windfalls or freak luck is out of the ordinary. However, this is the record Riley Martiny and son, Pierce, of Baraboo, can point to with pride and satisfaction.

The Martiny combination is corn, hogs and dairy cattle. All the corn raised on the farm is prospective seed corn. That not fit for seed purposes is fed to the cattle and hogs. The hogs are Duroc Jerseys and the cows Guernseys. Being pure bred the surplus stock of both cattle and hogs command better prices than grade stuff, and being Martiny raised they are in greater demand and worth more dollars than the average pure bred. The hog end seems fair to outdistance the cattle and corn end of the business within a few years, but the hogs will have to prove first that they can make as much money for the farm by themselves as the three main enterprises of the farm now combined do.

Though Mr. Martiny has been farming for a great many years there has been more joy and pleasure in the work since the son, Pierce, has been able to take an active part in handling the live stock end of the farm. Ever since his ninth year Perce has shown an especial aptitude for the live stock work. He began by accompanying stock to the fairs at that age, and since that time—13 years—has missed only one state fair. The father encouraged this love for live stock on the part of the boy at every opportunity, and he has had the satisfaction of seeing the list of ribbons for firsts and grand championships accumulate until the total prizes won represent better than $2,000 in cash.

The arrangement was made years ago that the care of the cows and the hogs should fall to Pierce and the care of the fields to Martiny, Sr., or, as Mr. Martiny puts it, "Out in the field, I am boss; around the barn, Pierce is boss."

"Around the barn" includes about 24 head of cows and about 100 head of Durocs besides the poultry which forms a smaller, but nevertheless very profitable enterprise. The hogs are favored by Pierce because he has had wonderful success with them. While the spring crop this year was below normal, all that lived are thriving and putting on weight at a clip which will make state fair winnings highly possible. Anyone can feed a hog for a time and show wonderful results in gains per day. However, to feed a pig from weaning time until show time, get it into highest possible condition and still have a healthy hog after it is all over, is the work of a master. Neither do all the hogs feed alike. A man must know hogs in order to be able to choose intelligently. A March pig weighing 160 pounds the first week in August is doing right well. A March pig that weighs 200 pounds at the same age is doing better than it really wants to. It is the feeder behind that pig who knows his business and who knows which hog to choose who is really responsible for the extra gain. There are several such instances to be found on the Martiny farm which show that Pierce has learned his business well. Not all things are the result of feeding and selection, however. Much of the feeding qualities of a pig is bred into it. Realizing this, young Martiny keeps his weather eye open all the time for the royally bred sows and sires in the Duroc world. Only the highest types are used for the mating for the litters and only such families as Lee's Defender, Golden Model IV, Royal King and Chief Invincible, are admitted to the High Banks herd. They have to be Marion Wonder bred or equally well bred to get in. To look over the spring crop of this year will make the ordinary man's eyes stick out and the lover of Durocs say a few things in praise in spite of himself.

THE HOG HOUSE BUILT FOR SPRING FARROWING

With the cows the income from the milk aside from the sale of the surplus stock is considerable each year. During the last year 16 head of cows averaged 438 pounds of butter fat in the testing association. The nearest herd averaged 318 pounds of butter fat per head for the year.

In March of this year the herd average was 57 pounds of butter fat per head, the highest average in the state for any association herd. The cows are stabled the year around. It is another point Mr. Martiny considers a money-maker. With no pasture to worry about the upkeep of the fences is no longer an item. Fences are scarce on the High Banks farm, and this will be found an added advantage when, as Mr. Martiny considers now, a tractor will be brought on the place next year to further cut down the cost of farm operations. A summer silo has made it possible to feed the cows in the barn the year around. "I have lost in former years the price of a silo each summer by the falling off in milk because of poor pasturage," said Mr. Martiny. Fifteen pounds of alfalfa, 15 pounds of silage plus the grain ration given each cow in accordance with her yield of milk, form the ration during the summer. As a soiling crop or green feed a little alfalfa is cut each day and fed to the cows. This does not require a great amount of labor, as the alfalfa is cut with a machine and loaded on the wagon with the loader. A little bit each day of this green feed, however, goes a long ways toward keeping up the summer production. It was this problem of keeping the cows milking heavily during the summer months which first gave Mr. Martiny the idea of stabling his cattle. He figures that he has gained by this the use of 30 acres ordinarily required for pasturing 24 cows. In a good season 20 acres of pasture might be enough. Now he uses these acres formerly devoted to pasture for growing corn and grain and he feeds his cows on considerably less than 20 acres, does it with about the same amount of labor and receives much more milk. Seven acres of corn will yield all the silage necessary for summer feeding. Additional acres will furnish the hay required. The total acreage of the farm, however, can be devoted to the raising of crops without wasting a lot of land on pasture. Mr. Martiny built his first silo nine years ago. That was a winter silo, but from it he gained the idea, and he proved it by trying it out, that a summer silo would pay equally as well. When he was ready to discontinue his pasturage he erected a second silo, which he uses as a summer silo.

With a few exceptions all the cattle are pure breds. Years ago when Mr. Martiny first started farming the Durham cattle were popular in various parts of the country. To the credit of those representatives still remaining in the herd it must be said that their records have proved that there are exceptions to every rule. The production of these cows has been extremely high. Some of the best records that have been

(Concluded on page 5.)

THE SEED CORN HOUSES AT HIGH BANKS.

SILOS ARE IN USE THE YEAR AROUND.

CURRENT EVENTS

POPE BENEDICT made a peace proposal to the warring nations last week, but it is extremely doubtful if anything tangible will result. England and France are suspicious of Germany and Austria, the latter being a strong Roman Catholic country, and believe that while the pope is acting in splendid good faith he is being made a catspaw by the central empires, which are willing to talk peace, now that the tide of war seems to be running against them. The pope would have the sovereignty of Belgium and Rumania restored and that portion of northern France which is in the hands of the Germans restored to the French, leaving the question of Alsace-Lorraine (the French provinces taken from France as a result of the war of 1870), Poland and the Italian provinces which Italy wishes to reclaim from Austria left to arbitration after the war. It is expected that President Wilson will join with our European allies in rejecting the pope's peace terms, as all the countries fighting Germany wish to insure the end, for all time, of the imperialistic and militaristic aims of the kaiser and his advisers. In closing his appeal for peace the pope made this eloquent appeal: "Incline your ears, therefore, to our prayer. Accept the fraternal invitation which we send you in the name of the Divine Redeemer, the Prince of Peace, reflect on your very grave responsibility before God and before man. On your decision depends the repose and the joy of innumerable families, the life of thousands of young people; in a word, the happiness of a people for whom it is your absolute duty to obtain their welfare. May the Lord inspire your decision in conformity to His very holy will. May God grant that while meriting the applause of your contemporaries you will also obtain in the future generations the splendid name of pacificators. As for us closely united in prayer and in penitence with all those faithful souls which sigh for peace, we implore for you the light and counsel of the Divine Spirit."

AMERICAN troops participated in the fighting on the French front for the first time last week, according to war dispatches. To what extent they participated has not been disclosed, but a newspaper cable from England reported that wounded American troops were arriving at the hospitals there. It is currently reported that the United States has about 100,000 men in France, under command of General Pershing. The troops have been given intensive training behind the lines for some weeks and are probably now in good condition to take their place alongside the seasoned troops from France, England, Canada and the other English possessions. General Haig, in command of the English troops, has been conducting a determined offensive movement for the past week, making good gains on the German lines, bringing the city of Lens (held by the Germans for over two years) into danger of recapture. Dispatches from Russia state that the former czar, his family and most of the members of his household, have been exiled to Siberia. The czar, his wife and his children, have been kept captives ever since he was dethroned, but the provisional government now believes that he should be removed still further from the royal chair which he once occupied. Just what the Russian army has been doing for some days past has not been disclosed, but at last reports Kerensky seemed to have the situation fairly well in hand.

THE food administration bill having passed both houses of congress, been signed by the president and Herbert Hoover having been appointed food administrator, the work of making price inflation impossible has begun in earnest. The food administration is prepared to take over the entire 1917 wheat crop if necessary to stabilize prices throughout the year. It formed a $50,000,000 corporation with all of the stock held by the federal government, to buy and sell wheat at the principal terminals. The movement was the first of a series to be taken to reduce the price of bread. Millers already have agreed to put themselves under voluntary regulations and are working out with the food administration a differential of profits. Distribution of flour by wholesalers and the baking of bread will be taken up next. The hope of the food administration is to establish a scale of prices from the farm to the grocery store, eliminating undue profits and ending speculation. The maintenance of a standard price for wheat, its officials believe, is the first and most necessary step. In announcing formation of the wheat corporation, the food administration also made known the personnel of a committee which will fix a price to be paid for this year's wheat yield, and the names of thirteen men who will act as purchasing agents for the corporation at terminals.

THE entire 687,000 men composing the first increment of the army draft forces will be under training early in October. Under orders issued last week the first 30 per cent of the quota of each district will begin entrainment for cantonments September 5th; the next 30 per cent, September 15th, and another 30 per cent, September 30th. The remaining 10 per cent will be mobilized as soon after that date as possible. The plan to assemble the new forces in three increments distributes the task of furnishing supplies and equipment through September. It will also prevent serious shortages in any camp, and will give the new officers from the training camps time to familiarize themselves with their duties gradually before responsibility for a great body of men falls on them. The order means that about 12,000 men will reach each of the sixteen cantonments soon after September 5th. They will first be examined physically by army doctors and finally accepted or rejected. This will take some time and the men will have to be furnished with temporary quarters and rations while awaiting examination. If the full quota were assembled at one time great confusion would result.

EXPRESSING confidence in the soundness of the character of the Russian people for self-government, Elihu Root, head of the special diplomatic mission to Russia, denounced the part played in that country during its time of peril by "men corresponding to the Industrial Workers of the World here, the extreme socialists and anarchists with whom the German agents made common cause." Col. Theodore Roosevelt, likewise declared that "organizations like the Industrial Workers of the World are criminally aiding German propaganda in this county," adding: "Let us make those who oppose obstacles to the success of the war feel that they are unhung traitors." He further said that "until the United States has placed 5,000,000 men in the fighting line we will have no right to consider ourselves as standing level with Canada in this fight for democracy," and advocated the putting of American soldiers "in masses on whichever front they are most needed."

EXTENSIVE reductions in passenger train service in addition to those already made are soon to go into effect in the Middle West. Between March 1st and July 15th, the railroads in this territory effected a saving at the rate of almost 7,000,000 passenger miles a year in passenger train service, according to a report made recently to the railroads' war board by R. H. Aishton, president of the Chicago & Northwestern Railway and chairman of the central department committee. The total reductions already made and those soon to be put into effect in this territory amount to over 12,000,000 passenger miles. The states included in the central department are Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Nebraska, North Dakota, Ohio, South Dakota, West Virginia, Wisconsin and Colorado. The reductions made in the central department will result in saving 500,000 tons of coal a year, which is made available for other purposes.

SAVE THEM ALL

A NATION TO FEED

The Nation will need every potato you can produce this year. There will also be a big export demand. Get all of them. Adopt a better and cheaper method of digging your crop. Use a

Hoover Potato Digger

Digs fast and easily

Gets all the tubers. Saves the backaches from hand digging. Digs from five to eight acres a day. Delivers all of the potatoes on top of the ground—easily seen and picked up. No weeds or trash to bother. This is delivered to the side of row. Picker attachment can be furnished which delivers potatoes in piles or in crates.

Hoover Potato Diggers represent a better investment than ordinary diggers. They give more years of service and at less cost for upkeep. Made of steel and malleable castings almost entirely. Elevator rods are offset. This promotes better separation, and prevents potatoes from falling back on elevator.

Hoover Diggers are built in different styles and sizes—there is a type that will meet your requirements.

Write for Hoover Potato Digger Booklet. Mailed free. Ask for package P—64

In and Around Wisconsin

An average of sixteen carloads of cherries a day was shipped from Door county during the busy harvest of fruits in the peninsula this season. Some of the shipments went as far as Winnipeg, Canada, on the north and Oklahoma City on the south. The quality of the fruit was excellent, the cherries being large and of good flavor. Nearly 3,000 pickers were busy picking the late crop.

The Land-Clearing Special is continuing its work and the schedule for the balance of the season is as follows: Hines, Douglas county, August 20th-25th; Brill, Barron county, August 27th-September 1st; Phipps, Sawyer county, September 3d-8th; Washburn, Bayfield county, September 10th-15th; Mercer, Iron county, September 17th-22d; Merrill, Lincoln county, September 24th-26th; Rhinelander, Oneida county, September 27th-29th; Phelps, Vilas county, October 1st-6th; Laona, Forest county, October 8th-13th.

Within the past year the dairy department of the Wisconsin College of Agriculture has received 583 requests for men to fill important positions. Of the total number, 183 were wanted for buttermakers, twenty-four for helpers in creameries, fourteen buttermakers and ice cream men, 176 cheesemakers, sixteen combined butter and cheese makers, twelve ice cream makers, four cow-testing association officials, six city milk inspectors, thirty-five condensed milk factory assistants, eight dairymen, three traveling men, seven assistants in oleomargarine factories and twenty-five instructors in dairy schools. Mr. E. H. Farrington, head of our dairy school, can secure a good position for any young man who will become proficient in any line of dairying. There are not nearly enough good men in the dairy business. Good men are the kind of men who will be able to stop leaks and losses. A saving of 25 cents a day on fuel, 10 cents a day on oil, 10 cents a day on salt, 5 cents a day on color and $1 on butter fat, in handling milk at cheese factories and cream at butter factories, will mean $500 to $1,000 a year saved.

There is considerable interest in western and northwestern Wisconsin in the Stocker and Feeder Show at South St. Paul September 20th and 21st. Over $3,000 in prizes are being offered and complete information may be secured by writing to George K. Tietema, the secretary, South St. Paul, Minn.

It has been suggested that farmers may get a good price for any old metal which they have on the farm and that it is now a good time to sell old worn-out machinery which is past fixing up for use. An enormous amount of good metals might be secured in this way which would be of service to the nation and incidentally bring returns to the man who has this metal to sell. It is best to be real sure what the metal is worth, as many buyers will try to get it for less than it is worth if they can. Ask some reliable dealer whom you can trust what ought to be paid for old iron before negotiating a sale.

The attention of breeders is directed to the closing of entries for cattle and horses at the Wisconsin State Fair on August 24th. Entries giving name and registry number of animal must be made on or before Friday, August 24th, and should be accompanied by an entry fee of $2 and payment for the number of stalls required. Entries must specify owner's name and postoffice address, and name, sex and breed or description of animal with registry number. No animal can be entered in the name of any other than a bona fide owner or owners. The department of horses is in charge of Supt. W. K. Caldwell, Morrisonville. He is very optimistic regarding an excellent showing in this department. This is true also of the department of cattle, which is in charge of Supt. H. W. Claflin, Muskego. The cattle exhibit at the state fair this year will be the most comprehensive in the history of the state fair, judging by the inquiries and early entries made, according to Superintendent Claflin.

The Wisconsin Cheese Producers' Federation in Sheboygan county, with headquarters and storage plant at Plymouth, is increasing its business. During the first seven months of 1916 this association handled 4,523,116 pounds of cheese, and in the first seven months of 1917 this was increased to 5,447,430 pounds. The increase is 924,234 pounds. During the first seven months of 1916 the sales of this company amounted to $734,041.50, while during the first seven months of 1917 this had increased to $1,317,725.90. The increase of receipts is due partially to the amount of cheese handled and particularly to the increased price. The showing for this important coöperative enterprise is regarded as very satisfactory.

Aldebaran Farms, owned by Stephen Bull, Racine, Wisconsin, recently donated a pure-bred Ayrshire bull calf to the Red Cross fund, the proceeds to be donated to the local unit at Racine. About $600 was secured for the calf under the plan which was adopted for disposing of the animal. A number of our breeders have donated valuable animals for the Red Cross, and in almost every instance the patriotic impulses of the buyers have resulted in a big price being paid for the animals donated. This method of donation not only results in a good fund for the Red Cross, but it has started many people to thinking about the value of good breeding stock. Every time a well-bred animal gets into new hands the live stock industry of this state has made a distinct gain. It profits us some for the big breeders to raise fine stock and sell the same at fancy prices, but it is when this good blood is introduced into new herds that we begin to reach the larger benefits as a live stock state.

The Wisconsin Farmer

THURSDAY, AUGUST 23, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

IS FARM LIFE SORDID?

I AM delighted to find my women readers writing most entertainingly in regard to my quotation from a recent magazine which I called a libel, inasmuch as it pictured farm women as being "a worn and dreary lot, living a skimmed-milk existence," and showing "blue-white, glassily perfect false teeth" when they smiled. I was prepared for a large number of interesting letters, but I will admit I was not prepared for some, which declare, in most positive terms, that the picture is not a libel—that it is all too true. When I tell you that the strongest letter of commendation comes from a prosperous and progressive Wisconsin neighborhood, where the farm woman, if any place in all the world, should be happy and contented and well cared for, you will be as much surprised as I am, I feel sure.

There are two sides to every controversy—I know that. But I cannot bring myself to agree with the magazine writer who pictured the farm women as being "ignorant and terribly lonely, with the dumb, lack-luster eyes that bespeak monotony." Rather do I agree with Mrs. E. J. Briggs, of Arbela, Mo., who writes me a wonderfully interesting and to me convincing letter, championing the farm women, as follows:

Your criticism in a recent number of your splendid paper of the author who characterized the lives of farmers' wives as sordid and tragic was read with much interest, for I had just finished reading a story in which it seemed to me the author had taken especial pains to make the lives of the moderately well-to-do people of whom she wrote sordid and ugly.

There is too much written of the ugly side of life, enlarging on the discomforts of moderately circumstanced people in general and of farmers in particular. It gives a wrong impression to readers who do not know farm life and, what is far worse, it sometimes causes young people on the farm to become discontented.

We have a friend who was born and raised in a city, an eastern city at that, who visits us occasionally. All she knew about farm life was what she had read. That she had most amazing ideas is shown by her being surprised that we had "lanes," as she called them, running right past our door so that we could run our cars or vehicles close and not have to walk far to get to them. Also, she was chock-full of lectures on sanitation, how to avoid monotony, etc., but we led her such a strenuous life showing her the sights of the farm, calling on and receiving calls from our neighbors, rushing to the county seat in the car, and other (to us) everyday occurrences that she forgot to deliver them and ended by saying we were wonderful, wonderful.

So I say all hail to the author who will write the wonderful story of the Mississippi valley folk and give us our just place. Life is not tragic and sordid anywhere only as the individual makes it so, and least of all is it tragic and sordid on the farm.

Mrs. Briggs has handled her material admirably, in my opinion. I am going to send a copy of her letter to the magazine which printed the article to which I took exception a few weeks ago and to the grain-belt author who was guilty of writing it.

I would be unfair, however, if I did not print a characteristic letter from those who believe the picture was no libel, but true to life; that the farm woman here in the grain belt is in a sorry way, after all. Such is the letter from a woman who asks to be known only as "A Wisconsin Farmer's Wife," and who writes me in this manner:

I have just read the article entitled "A Libel on Farm Women," and while I bless you for the optimism and chivalry that prompted it, I want to tell you, from a woman's viewpoint, the description taken from the magazine stands true. That's the reason the criticism cuts deep—it's true. You can go into any small-town store and see the same thing any day—women worn with hard, unappreciated toil at the washboard (maybe, "when we can afford it," he will get a washing machine), dragged with child-bearing, up the tenth day, for if she has the good fortune to have a helper it is expensive, and, anyway, the helper is to provide the meals and comforts for the husband and the hired man, (the mother and baby being a side issue), one-sided from lugging calf pails, swill pails, water pails and the omnipresent baby.

In the fall maybe they go to town with the poultry, which she has trailed through wet grass to feed and care for when every bone in her body ached. The simple purchases are made—for the children mostly—while the toil-worn hands run lovingly over the pretty ribbons and inexpensive dress, feasting the heart-hungry soul on the silken texture and soft colors. But the children must have warm underwear and shoes and stockings, for they have to go so far to school. Maybe if there is anything left there is a wrapper or cheap hat for mother; oftener not, for "by the time I get around to all of them I'm thankful if I have enough." And when it is time to go home he says, with a cigar in one corner of his mouth and an odorous breath: "By gosh, it don't pay to bring the old woman to town too often, it's too expensive; have to bring a lumber wagon to take her stuff home in, I guess." And the weary little woman in a raincoat, with an old sweater under it for warmth, and a faded scarf over her head, smiles wanly at the antiquated joke, climbs wearily in, without assistance, and goes—home? Yes, God bless the woman's soul, for it is home. Bare of beauty except that of cleanliness, lacking conveniences, the well forty rods from the house, the cistern outside, the woodpile open to snow and rain. And outside stand the hay loader, the binder in a corner, the corn planter and side-delivery rake likely where last used, along with the cultivator.

There are other homes, of course, but don't you ever dream that this picture is overdrawn in thousands of homes. And in the end, what? Dragging illnesses, operations and the tired body laid away—glad to go, to lay down the burden. "The children are old enough to do for him," the neighbor women say under their breath. Is it right? Is it just? Where is the remedy? There is none till man is made over again.

My Wisconsin correspondent is a splendid writer, but I fear she is carried away by her ability and does not really mean all she says. She is too much like a lawyer arguing a lost case to the best of his ability, being true to his oath to defend the accused to the very end, but knowing full well that his case is a hopeless one and that he does not himself believe all he is saying.

I want more letters on this subject; I will print the best of them. But you must know, in advance, that while I will print an occasional letter such as this last one above, I do not believe the situation is as black as it is painted, or that the writer thereof really means what she says. I will admit, right in the beginning, that if the matter is ultimately left to me, I shall find the magazine accusation a base libel, and champion the farm woman with the last breath of my body.

"HERE LIES A MAN."

NOW that the gospel of efficiency—of making every minute and every ounce of energy count to the limit—is being preached on all hands, especially to the farmer, I believe that this little prayer, which I have clipped from a newspaper, will be appropriate reading. The newspaper from which I clipped it states that it occupies a prominent place on the wall of a large wholesale house in the city. It would be just as fitting to have it prominently displayed in every farm home. It sums up the need and the duty of the hour admirably. See what you think of it:

Teach me that sixty minutes make an hour; sixteen ounces one pound, and 100 cents $1.00. Help me so to live that I can lie down at night with a clear conscience, without a gun under my pillow and unhaunted by the faces of those to whom I have brought pain. Grant that I may earn my meal ticket on the square, and that in earning it I may not stick the "gaff" where it does not belong. Deafen me to the jingle of tainted money and the rustle of unholy skirts. Blind me to the faults of the other fellow, but reveal to me my own. Guide me so that each night when I look across the dinner table at my wife, who has been a blessing to me, I will have nothing to conceal. Keep me young enough to laugh with my children. And when comes the smell of flowers and the tread of soft steps, and the crunching of wheels out in front, make the ceremony short and the epitaph simple: "Here lies a man!"

I do not believe that much, if any, comment on my part is necessary. The prayer is a little gem. Personally, I have always been a great admirer of those fervent supplications which Robert Louis Stevenson (one of my favorite authors, by the way) wrote while he was a resident of the South Sea island to which he had been exiled because of the tuberculosis, from which he was a sufferer. When a man knows that the hand of death is near him and can write as splendid prayers, full of thanksgiving and hopefulness, as Stevenson wrote, it does not matter what his creed or church, he is imbued with the real religious spirit. I am going to print one of the best of Stevenson's prayers:

We beseech Thee, Lord, to behold us with favor, folk of many families and nations gathered together in the peace of this roof, weak men and women subsisting under the covert of Thy patience. Be patient still; suffer us yet a while longer;—with our broken purposes of good, with our idle endeavours against evil, suffer us a while longer to endure, and (if it may be) help us to do better. Bless to us our extraordinary mercies; if the day come when these must be taken, brace us to play the man under affliction. Be with our friends, be with ourselves. Go with each of us to rest; if any awake, temper to them the dark hours of watching; and when the day returns, return to us, our sun and comforter, and call us up with morning faces and with morning hearts—eager to labor—eager to be happy, if happiness shall be our portion—and if the day be marked for sorrow, strong to endure it.

If any of my readers know any equally good prayers, to be fit companion pieces to these two, I wish they would send them to me. The nation is imbued with the religious spirit in the great crisis which confronts us today, as never before. This being the case, the prayers which I print herewith seem to me to be unusually timely.

PASS THE CORN BREAD

I AM delighted to see the progress which is being made these days in what we might well call, for lack of a better name, the "johnnycake revival." Here, for instance, is the New York World, one of the largest and best newspapers in our largest city, suggesting to its readers, as a slogan to be posted conspicuously in every American kitchen and dining room: "Eat corn meal and beat the submarines." And here, too, is Collier's, our national weekly, going into more than a million homes, adding: "We can't see that there's anything the matter with corn cakes in peace time, either." It certainly looks as though the leaven were beginning to work.

After all, why not a revival of lye hominy, johnnycake and some of the other toothsome and economical edibles of the day when we all enjoyed better health than we do now, in these overly prosperous times of highly seasoned foods bearing high-sounding French names? Why not a return to the simple life, when we ate to live, rather than lived to eat, and when the community health was better, on the general average, than it is nowadays, notwithstanding all the inventions and discoveries of science? You can't make me believe there is any meal which the most efficient exponent of domestic science can concoct today (untiring as are these teachers and splendid as are their menus) which comes so near to filling the bill for every member of the household (from the growing boy, with apparently unlimited capacity and appetite, to the toothless and doddering granddad) as the corn pone which my mother made for our family, back in the dear old Ohio home of fondest boyhood memories. Covered with gravy or saturated with maple sirup—ah, there was a dish fit for an American, than whom no king is greater or more deserving of the best things this world produces. I abhor war, I abominate the thought of it, but if war shall result in carrying us back to the days of rugged, honest, unaffected, wholesome simplicity, it will have had a value which no man can compute in dollars and cents, but which can be measured, in life and happiness and health, none the less.

Why not a corn revival, now that we are called upon to share our stock of wheat with the world—a stock none too large at best, in view of the poor condition of winter wheat? Corn is available for human food in the form of meal, hominy, starch and prepared breakfast foods. I am informed by millers that 15 to 20 per cent of corn meal can be mixed with wheat flour to make a palatable and a nourishing bread, supplementing the corn bread (pone, johnnycake or whatever you choose to call it) which is already a popular and a rib-covering dish in so many of our rural homes. Corn bread well covered with gravy, maple sirup, sorghum or New Orleans molasses—have we not here something which will not only put to rout the high cost of living, but will give us better bodily vigor and cause us to sit down to the table with no jaded appetite, but eager to partake of one of the best and most palatable dishes ever devised by human hands? I am glad, indeed, that the johnnycake revival is on—that other men are speeding it by word and deed. Here, for instance, is a tribute and a testimonial which I find in one of our smaller grain-belt newspapers. Read it and reflect on what you are missing if your table does not offer this toothsome edible:

We're eatin' johnnycake these days, several times a week. Don't understand how we ever let the johnnycake habit of our childhood get away from us. We advise you to get the johnnycake habit, too. There's something about the good, golden corn bread that you'll never get in white bread, or whole wheat bread, or rye. There's a roughness to the tongue and the palate that, the diet experts tell us, puts roughness in the bone and sinew of the human chap—such roughness, or robustness, as we need these days. But you don't need that excuse to worship before the shrine of johnnycake—good old johnnycake, like mother used to make.

"Eat corn meal and beat the submarines:" Mush, johnnycake, hominy, cornflakes, and so on; by doing this shall we not be fighting against tyranny and injustice, while at the same time renewing our bodily vigor, giving our system the simple food it needs and clearing our brains of fogs and headaches? A nation nourished on corn bread has little to fear from the tyrant. Will you join in pushing the campaign along?

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

THE WISCONSIN FARMER, Madison, Wisconsin

How Should Milk Prices Be Figured?

In many districts in Wisconsin whole milk is sold by the "3 cents a point method." For example, the price is fixed per hundred pounds on the basis of milk testing 3.5 per cent butter fat, and deviations from this standard are met by allowing 3 cents for each additional .1 per cent and subtracting 3 cents for each .1 per cent decrease. The system apparently aims to reward the man who produces milk with a high fat content, but in reality it favors the production of low-testing milk. The price per pound of butter fat in the milk of poor quality is appreciably higher than that paid for butter fat in rich milk.

This will seem strange to many who have not made a study of the situation, because men interested in the dairy industry everywhere have advocated raising high-testing cows. They maintain that since butter fat is the most valuable part of milk, dairy animals should be bred that have the characteristic of high fat production.

But the "3 cents a point method" discourages such work. Take, for example, this illustration: When milk testing 3.5 per cent butter fat brings $2.15 a hundred, and 4.5 per cent milk would be worth $2.45, allowing 3 cents for each .1 per cent above the standard of 3.5. One hundred pounds of 4.5 per cent milk would contain 4.5 pounds of butter fat and the standard milk would contain 3.5 pounds. By figuring the price per pound of butter fat, we find that the fat in the higher testing milk brings 54.4 cents per pound, while that in the lower testing milk brings 61.4 cents, giving a difference of 7 cents per pound of butter fat in favor of milk with a 3.5 per cent test. Now suppose the test falls 1 per cent below standard. For such milk 30 cents would be deducted from the standard price of $2.15, making it worth $1.85 a hundred. This milk would contain 2.5 pounds of butter fat worth 74 cents a pound. Thus it may be seen that the lower the test the higher the price per pound of butter fat. Of course, these figures disregard the value of skim milk, but this would have no bearing on the fact that the system encourages production of low-testing milk.

While the price standard as now used has many conveniences for cheese factories and condenseries and can be easily calculated, still it operates against some phases of the dairy industry. In the first place, it fosters breeding of low-testing animals—cows that produce large quantities of thin milk. To breed and feed cows with a high fat production is difficult and expensive, and unless the dairyman receives pay for his extra labor and expense, he will not go to the trouble.

Furthermore, this method encourages watering and diluting. Four hundred pounds of milk testing approximately 4.5 per cent would be worth $9.80, when the price of milk testing 3.5 per cent is fixed at $2.15 and 3 cents is allowed for each additional .1 per cent. Now if 100 pounds of skim milk is added the 500-pound mixture would test 3.6 per cent and would be worth $10.90. This simply means that the "3 cents a point method" puts a value of $1.10 a hundred on skim milk when it is used for diluting 4.5 per cent milk.

Buyers who pay according to this system have intended to be fair. They have used it because it was simple and easy to figure. But because of the way in which percentages operate, a premium is put on butter fat in milk of inferior quality. Possibly a more satisfactory method could be worked out by some of the testing associations, so that prices would favor the producer of high-testing milk, rather than discourage him as they now do.

The Profit From a Silo.

There are hundreds of cases where farmers will testify that they were able to pay for their silo in one year by the saving of hay alone. One such instance is that of Fred Dettweiler, of Monroe, Wisconsin, who runs his 160-acre farm as a dairy farm. Five years ago he was short of a hay crop for his cattle, and, being without a silo, carefully figured the expense of erecting one as compared with what it would cost to buy the necessary hay for his herd on the market. The figures he arrived at showed that it required twenty tons of hay to winter his herd and produce the usual amount of milk. Hay was then quoted at $22 a ton. He erected a silo for considerably less than the sum required to purchase hay, fed his herd all winter until May 30th, and instead of buying twenty tons of hay he only had to purchase one ton. Not only did he have the silo itself left after the season's feeding was over, but he produced more milk during that winter than ever before.

It is easy enough to figure out the cost of the silo as compared with the cost of buying roughage and to see the advantage of the silo in feeding for milk production. Mr. Dettweiler incidentally has added other improvements to his place by the same process of figuring. Where formerly 265 acres were required by Mr. Dettweiler and his father to milk and care for thirty producing cows he has since proved that 115 acres will raise all the necessary feed that these cows will require for milk production and the amount of milk produced not only equals the former annual yield but shows an increase of several hundred pounds.

Wisconsin Farmers Get Better Acquainted.

The Wisconsin Farmer is in receipt of a letter from Mr. Geo. Service in which he gives us some interesting information concerning a trip which twenty farmers of Oneida county recently took through Winnebago county. The farmers from up-state were personally conducted by Mr. W. D. Juday, county agricultural agent of Oneida county. Mr. Juday's work as county agent has attracted more than state-wide attention. His purpose in arranging the trip was to have the Oneida county farmers see some examples of what they might be able to accomplish in dairying. It was a trip planned for the live stock farmer, and the dozen automobiles which carried the party speeding over the roads of Winnebago county were arranged for by Mr. G. A. Sell, emergency food agent of the Winnebago County Council of Defense.

Such a trip, arranged for the purpose outlined, is certain to be highly commended. Those who visited Winnebago county gained some valuable information and pointers on feeding, on barn arrangement and ventilation, breeding and caring for dairy stock, etc. What is more to the point, several temporary options were taken on pure-bred sires and also on heifer calves, which will be shipped to the northern county. Mr. D. S. Bullock, of the agricultural extension service, gave several talks on the different herds visited.

At the farm of Ed Race at Winneconne, the party saw the results of building a herd of 100 head of good cattle in eight years, and saw a gasoline engine unload hay two forks at a time. A little later at Omro, Jerry Egan's entire herd of pure-bred Holsteins, bred in six years, was inspected. That night prominent business men of Oshkosh and members of the county council, including John Thompson, the chairman, and G. A. Buckstaff, now agricultural member of the State Council of Defense, banqueted with the party at the Elk's Club.

In the last few years Wisconsin breeders have begun to ship a good deal of stock outside the state. This is because outsiders have recognized the value of this breeding stock and have been willing to pay better prices for it. Most good patriotic Badger breeders would prefer to see good breeding stock remain right here in our own state. There are a number of the newer sections of the state which might well afford to organize parties to visit farms where our old established herds have been developed. We will not undertake to say what the ultimate result of the trip arranged for by Mr. Juday may be, especially if the good cattle upon which options were taken, are all placed on Oneida county farms.

Feeding Unthreshed Oats With Ensilage.

One of our subscribers asks for information regarding the practicability of feeding unthreshed oats in conjunction with ensilage, his purpose being to avoid the expense of threshing. Unfortunately this subscriber does not state whether he proposes to feed dairy cows, fattening steers or stock cattle. He estimates that it would cost him 11 cents a bushel if he threshed and ground the grain and he is of the opinion that by feeding it whole in the sheaf he can save a considerable part of this expense.

Under certain conditions it is entirely practicable to feed oats in the sheaf, but this plan applies particularly to idle horses or even work horses. When it comes to feeding dairy cattle or fattening cattle the situation is somewhat different, because in that case good judgment must be used in determining the relative proportions of grain and roughage to feed. If considerable ensilage is fed along with unthreshed oats the cattle will very quickly acquire the habit of eating off the heads of the sheaves and rejecting the straw unless, of course, they are put on a limited ration, and in that case dairy cows will not give a very good account of the feed that is consumed. It requires so much grain and roughage to maintain an animal and it involves a dead loss in feeding dairy cows or fattening cattle to simply feed enough grain and roughage to maintain the animals.

On the other hand, when the plan of full feeding is followed the stockman should know exactly what he is feeding. In order to do that he must have his grain and roughage separate. It is true that in the case of ensilage the two are mixed, but the proportion of corn to the roughage is so limited that accurate allowance may be made for the amount of grain in each hundred pounds of ensilage. Oat straw is by no means as palatable as ensilage and if sheaf oats should be fed in anything like liberal quantities most of the roughage would be wasted.

When to Cut Cane.

One of our subscribers asks for information concerning the proper time to cut amber cane. It is his intention to use the cane in the form of roughage for cattle and he naturally desires to obtain from his crop its maximum feeding value.

Cane fodder, unlike millet, does not become woody and indigestible as it matures. On the other hand, the proportion or percentage of sugar in the stalk greatly increases with maturity and for that reason there is a real advantage in allowing the crop to stand until the seed is hard. It is desirable, of course, to cut the fodder before it is nipped by the frost, as the fodder will rapidly deteriorate after freezing, but so long as it is matured nicely and remains fresh and green let it alone.

By allowing the seed to ripen the yield of actual nutrients per acre is not only increased, but the crop is more easily handled after it is cut. Early cutting means that one must deal with a product that is very succulent, one that dries out slowly, requiring a long time to cure out. On the other hand, later cutting and greater maturity will mean that the problem of curing will be greatly simplified. Of course, in any event, a good deal of weight must be dealt with, but it is surprising how quickly cane will cure in favorable weather. If it is cut with the mower and left on the ground for a week or ten days it will then be in condition to be put into shocks so that it will cure out without molding and without waste.

Success With Hogs, Cattle and Corn.

(Continued from page 1.)

made on the place have been made by the grade stock. No cow remains on the place, however, unless she shows that she can earn her keep and a profit besides. For seven years Pierce has been taking the yield of each cow and weighing it carefully and figuring production against the cost of feed. As long as these cows can show that they are on the right side of the ledger there is no reason for disposing of them just because they are grades. The plan is to have the entire herd pure bred and under official test of the national Guernsey association in a short time, however.

In the field where Mr. Martiny runs things the most notable work that is being done is with seed corn. About 60 acres are in corn this year. The Golden Glow variety of corn has proved a heavy yielder on the High Banks farm. For two years Mr. Martiny has held the state record for yield of corn per acre with a record of 121½ bushels from a single acre. The secret, besides careful selection of the seed corn, is in the handling of the ground and proper rotation. The

RILEY MARTINY'S HEIFER, FOUR TIMES CHAMPION IN 1916 SHOW CIRCUIT.

rotation followed by Mr. Martiny consists of two years of corn, one year of small grain and one year of clover and timothy meadow. Plenty of manure is added once every three years and oftener if possible. Lack of manure caused Mr. Martiny to quit sheep raising as a chief enterprise many years back, and he accordingly got into dairying because of the greater yield of manure for his acres. The greatest care is being taken to have a high-testing, high-yielding corn each year. When the corn that has been carefully planted and cultivated is ready for the harvest, about the third or fourth week in September, huskers are sent through the field, who husk the corn, throwing it into the fourth row always as they go along. Mr. Martiny then follows up the huskers and selects the seed corn from the crop as it is lying on the ground and other wagons follow to carry away the remainder to the bins for feeding. The corn selected for the seed is placed in the drying houses built especially for this purpose. These houses are constructed with three bins to each house. The new corn enters the first bin, where it remains in a layer two feet deep to dry out, and passes from there to a second, and later to a third bin. Underneath the slat flooring of these bins a stove is located which throws off enough heat to dry the corn rapidly. In the last bin it remains until it is ready for shelling. The fire is kept up continually until January, giving cold weather no opportunity to injure the germ and lower the vitality in any way by freezing. As the corn is shelled the final selection is made and all ears which do not show a proper filling out at the tips and the butts and which lack in other essentials as seed ears are thrown out. The best stock is kept for home use for the next season's crop of seed. The corn usually tests around 98 per cent, according to the university tests. Yields from Mr. Martiny's Golden Glow have been not only heavy in bushels but also in amount of fodder. A record was made on High Banks farm for silage corn several years ago when four acres completely filled a silo 14 by 37. As this seemed impossible to Mr. Martiny and his friends the land was measured with great care and found to be exactly four acres. However, Mr. Martiny would rather have silage from corn not so thick, as corn less coarse will make a higher grade of silage.

Though Mr. Martiny is farm raised, he did not have a cent when he started 23 years ago other than the money he had earned himself. As a young man he put in seven years on the railroad, and after saving a little money he rented the present place, with the exception of a few acres, for the first year at the rate of $3 an acre. It took him four years to get started with live stock, and for a good many years after that even his chief income was from the grain raised on the farm. Sheep and hogs for market purposes later on proved quite profitable, and a little thinking and more hard work did the rest. The problem of supplying the soil with fertilizer induced Mr. Martiny to get rid of his sheep and go into dairy cattle. From grade stuff he went to pure breds, both in cattle and hogs, and instead of raising market stuff he now raises breeding stock. He was one of the first in Sauk county to see the advantages of the silo.

The hog barn became too small last year and a new building was put up 24 by 60, well lighted and ventilated, which will take care of 14 sows during farrowing time. Another barn is to follow this year somewhat larger which will replace the old barn and take care of the surplus.

RILEY MARTINY'S FARM HOME IS MODERN IN EVERY RESPECT.

White Wyandotte and Leghorn chickens and a few turkeys form a very profitable side line. The 10 turkey hens bring, besides a crop of young turkeys, about $100 by the sale of eggs, and the chickens average well over $50 per month for eggs alone.

A new house recently built by Mr. Martiny is unique in that it has been built entirely from lumber found on the farm. Oak and birch trees found on the place were sawed into lumber for building purposes and the entire house erected for the cost of approximately $1,200. The same house today could not be built for less than $6,000. It is built on modern plans with large and airy rooms, toilets, running water and heat. The house is wired for electric lights, which will get their power from the Kilbourn line as soon as this is completed. But in every way the home of Riley Martiny is as comfortable as a home can be made.

Minnesota Barley Yields.

Four loads of improved Minnesota 105 barley threshed at University Farm a few days ago gave a total of 101 bushels. According to exact records, the yield was fifty-one bushels to the acre. This barley was raised for seed purposes and will be distributed after being carefully cleaned and graded at the market price plus a sum sufficient to cover the cost of cleaning and grading. The Minnesota Experiment Station is endeavoring not only to develop new varieties and strains of grains and other products, but it is seeking to grow sufficient seed from improved varieties to enable the farmers of the state to get a start at growing the same improved grains.

It's the kind that is built for all around work on the average sized farm. It makes no difference what condition you're up against on your farm, the Turner Simplicity will do the work—and what's more, do it at a big saving over any other method.

You need a tractor—you settled that in your mind some time ago—the only question that puzzled you was to pick the right one for your particular conditions—some were too heavy, some too light and some couldn't be used economically for other work. The Turner Simplicity Tractor has demonstrated its ability time and again to do the heaviest, as well as the lightest kind of work. It's the tractor you want.

Standardized design—built on most approved and tried out principles. Best materials used. Light in weight but of unusual strength. A Waukesha Tractor Motor gives it abundant power for plowing, discing, harvesting, hauling big loads or for heavy belt jobs—and it's light enough for the small jobs, too. It will deliver 2,000 pounds constant pull at draw bar. Easily operated by its simple control. Has single gear-shift lever—similar to your automobile. Working parts operate in bath of oil and are positively protected from dust and dirt. Equipped for either kerosene or gasoline. A quality tractor with 17 years of manufacturing experience behind it.

SEE OUR EXHIBIT AT THE WISCONSIN STATE FAIR, SEPTEMBER 10TH TO 15TH INCLUSIVE

Tear out this ad, write your name and address on the margin and mail for descriptive literature. Mark a cross under the Simplicity Farm Engine and Feed Cutter if interested in these products.

TURNER MFG. CO., 107 Lake Street, Port Washington, Wis.

Simplicity Blower-Cutter noted for its great capacity and economy of operation. Many exclusive features which insure efficiency and durability.

New Simplicity kerosene engine. Throttling governor insures smooth running. Special carburetor provides perfect mixture. Burns kerosene without smoke or carbon.

FARM MECHANICS

Questions and Answers.

Gas for Balloons.

How can I make a liquid that will generate a gas for filling model dirigible ballons?

Answer.—Hydrogen is the best gas for filling balloons. Hydrogen may be obtained by pouring muriatic acid on zinc, the gas given off being hydrogen and the liquid remaining being zinc chloride, which makes an excellent soldering fluid. Hydrogen mixed with air is highly explosive. See that all the air is out of the balloon before attaching it to the hose from the bottle containing the zinc and the acid; also see that enough gas is generated to fill the bottle and drive out the air before attaching the hose to the bottle.

Three-Speed Gearing for Tractor.

I have an eight-horse-power Cushman engine. It has a clutch and a sprocket wheel next to the pulley. I want to use it on a tractor. Would I have to have a differential, and if so, how can I make one? I want the tractor to have three speeds; two forward and one reverse. How could I make a transmission? I have plenty of sprockets and cog wheels to make it myself, and I would like to have your opinion as to how to make it. The transmission and differential parts bother me the most. Please give diagram and state how many cogs each gear should have.

Answer.—You will require a differential unless you make a three-wheel machine having but one drive wheel. This is not an unusual construction. We doubt that you would be able to make a differential. You had better buy one of some tractor manufacturer or obtain one from an old tractor.

The figure shows the arrangement of a three-speed transmission. There are many possible arrangements of transmission gearings. In the figure, E is the engine crankshaft and C is the engine sprocket on the clutch. B is a square shaft, turned round at the bearings. A is a large sprocket keyed to shaft B. ST is a sliding gear, shifted by a fork in groove, G. The shaded sections on all the shafts represent bearings. RS is the reverse shaft and gear, which is shown by itself at the lower left-hand corner of the figure. CS is the countershaft, fitted with gears, U, X and Y, all of which are keyed to the shaft. D is the differential. DG the differential gear, DS DS the differential shafts, BP BP the bull pinions. The differential shaft is mounted so that the

small end of the reverse gear meshes continually with gear Y on the countershaft, and the large end of the reverse gear meshes with the end T of the sliding gear in the reverse position. On low speed, T meshes with Y. On high speed, S meshes with X. As it is necessary to go into low gear in order to reverse, the above transmission is not of the selective type; this is no serious disadvantage, however. If you prefer to build a three wheel machine to avoid the use of a differential, DG in the figure becomes the bull gear on the drive wheel. Without knowing what gearing you have, we can only give you an approximate idea of how many teeth each gear should have. With thirty-six-inch diameter drive wheels, the drive wheels should make twenty R. P. M. This is about the right speed for plowing. On high gear, your tractor should make four to five miles per hour. Too high a speed will soon shake it loose when traveling over rough roads, or even fairly smooth roads if they are hard. If your engine runs at 500 R. P. M., the bull pinion, BP, should have four times as many teeth as the bull gear with which it meshes. This would make the differential shafts run at eighty R. P. M. DG should have three times as many teeth as U. The countershaft would then make 240 R. P. M. Y should have twice as many teeth as T, S and X being nearly the same size. Sprocket A should have a few more teeth than C. If your engine runs at 750 R. P. M., A should have one and one-half times as many teeth as C.

In case you build a single drive wheel machine, arrange the gears as follows: The bull gear should have four times as many teeth as U, Y should have twice as many teeth as T, and X should have the same number of teeth as S. A should have three times as many teeth as C.

Battery or Wiring Defective.

I have a 1915 Maxwell touring car equipped with a six-cell twelve-volt storage battery. It is giving me trouble. The battery is down, and will not take a charge. Is it possible that it can be rebuilt? If not, what make of battery would wou advise buying? Also, when the battery is out of the car, the lights will not burn from the magneto.

Answer.—It may be that your trouble comes from loose connections, defective wires, or a defective generator. Examine the wiring first and see that the wires are in good condition and that all the connections are tight; also that the wires are connected correctly. If these are O. K., write to the manufacturer of your battery as to where is the nearest service station, and to the advisability of sending the battery to the service station for repairs. A storage battery often does not last three years in automobile service. Any of the storage battery companies advertising in this paper are reliable.

Spot Light on a Ford.

Would you please tell me how to put a dash light on a Ford car? What size bulb must I use? Could I fix it so that I can use a two-candle-power, six-volt bulb? Is the Ford magneto strong enough to run a spot light having a 6-8-volt, twenty-two-candle-power light? My car is 1916 model.

Answer.—It is not advisable to run any lights from the Ford magneto except the two headlights. The magneto will stand some overload and would take care of two eight-volt two-candle-power dash lights. Wire from the magneto terminal on the back of the coil box to th dash lamp switch, which you will have to purchase. From the switch, wire to one light; from that light to the other light; and from the second light run a wire to the frame of the car, grounding it securely on the frame. A single six or eight-volt light would probably burn out. Anyway, a twenty-two-candle-power light is more than the magneto should be expected to handle in addition to the headlights. Even if the magneto were not injured by the excessive load, the lights would be very dim except at high speeds.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word per insertion. See page 12.

Harvest Season Is Well Advanced

Badger Crops Average Well in Yields—Small Grains Are Excellent—Hay Produced Abundantly in Some Sections—Live Stock Sold Off Closely.

Barron County.—Hay crops were put up in fine condition. Alfalfa has been cut the second time and for both cuttings will average two and one-half tons per acre. A good crop of barley has been harvested. It will make from thirty to forty bushels per acre. Wheat will make twenty bushels, and rye about thirty bushels. Farmers are depending upon pastures entirely for feed. Hogs are sold off very closely.—Wm. Bartlett.

Burnett County.—Small grains filled out in good shape on account of the late rains and cool weather. The hay crop is short and meadows that have never been cut before were cut this year. Potatoes and all garden truck are fine. Pastures are fair and cattle are fine, although flies are very bad.—A. G. Peterson.

Brown County.—Haying is nearly finished and a good crop of hay has been put in the barns. The second crop of clover is growing well. Barley harvest is nearly finished. The crop is not as good as it should be. The oat crop is beginning to ripen. The corn crop has very poor prospects. Potatoes are good, but the bugs are numerous. The milk flow has fallen off considerably. Farmers in this section are turning their attention to dairying. War is the all-absorbing topic and many of the boys are being taken away.—S. J. Shannon.

Crawford County.—Haying is nearly finished. The new seeding of clover was good and timothy was fair on some fields, but on others it was not so good. Winter wheat, rye and barley are all harvested, and threshing has commenced. Oats are being harvested rapidly and the yield will be heavy. The yields of small grain will be above those of last year. A corn crop is assured if frost does not come before September 15th or October 1st. Garden truck is good and young stock are growing rapidly. Cattle feeding is increasing and dairying is increasing.—George Ashbacher.

Dunn County.—Hay harvest is finished. Clover will average from one to two tons per acre. The old seeding is not as good as the new. Grain harvest is well under way with wheat much better than last year. Both winter and spring wheat will average from twenty-five to thirty-five bushels per acre. Oats promise from forty to sixty bushels per acre The corn crop is very late and will probably make a poor crop. Potatoes are excellent and will yield much better than last year. Gardens are good and cows are doing well on pasture.—E. A. Finley.

Dorr County.—Haying has just been finished. The acreage and also the yield per acre is the largest we have had for years. The first part of the crop was damaged to some extent by rain. Harvesting of rye and barley, also winter wheat is in progress. give promise of a good yield. Oats are backward. Peas will be short on account of the heat and dry weather. The corn crop is in fine shape and with a favorable fall will make a good idea. We are harvesting Montezuma cherries and they are the finest we have ever grown.—L. E. Birmingham.

Eau Claire County.—Haying is done. There is not much clover, due to winterkilling. Clover and alfalfa averaged about one and one-half tons per acre each. Barley is cut and oats are about half harvested. The yields are about the same as those of last year. Very little rye is raised here. Corn is doing fine; many fields are just tasseling. Cattle are in good condition, but milk cows are falling down in milk production. Hogs are thin on account of the high price of feed.—C. A. Koll.

Green Lake County.—Weather conditions have favored harvesting and with the exception of barley all small grain crops are better than they were last year. Tame hay has yielded heavier than usual and the crop was harvested in good condition. Corn has been making slow progress because of cold weather. Early potatoes are very good, but most of the early apples are of poor quality.—G. B. W.

Juneau County.—A good crop of hay has been cut, but some of it was damaged by wet weather. Grain harvest is well advanced and the yields are fine. Oats and wheat will be considerably better than last year's crops. Pastures are excellent for late summer. No live stock are on feed.—J. H. McNown.

Kewaunee County.—An average hay crop of very fine quality has been harvested. Barley, rye and fall wheat are now ripe. Spring wheat and oats are excellent. Recent rains have helped gardens, root crops and pastures. Cattle look fine and corn is now making splendid growth. The apple crop will be short.—Fred Lutz.

LaCrosse County.—The hay crop is of good quality and shows up better than it did last year. No threshing has been done, but from indications grain crops will be better than they were last year. Corn has made rapid growth and looks fine, but needs favorable weather to mature it. Feeding operations are not as extensive as usual.—S. H. D.

LaFayette County.—Most of the small grain is cut and in the shock. Oats made about forty or forty-five bushels per acre, barley, from thirty to thirty-five bushels. Haying is nearly all done. The new seeding was unusually heavy. Old meadows were somewhat light. Most of the hay was put up in good condition. The weather has been perfect for curing hay. A good rain has helped the corn crop very much. Pastures, late potatoes and gardens also benefited by it. Pastures are quite short and cows have not produced as well this year as last.—W. F. Pease.

Ozaukee County.—On account of hot, dry weather the crops are very good. Hay crops are about the same in quality and yield as those of last year. Oats look well, but barley is not so good as it was last year. Corn and potatoes are good. Pastures are dry and short. Live stock are fair and feeding operations are increasing to some extent.—N. J. M.

Polk County.—Haying is finished and some timothy is being cut for seed. The hay crops, especially the new meadows are very good. The grain crops show good quality. Corn is growing well, but needs warmer weather. The pickle harvest is on and the yields are not more than ordinary. Live stock are in good condition.—Wallace Fountain.

Portage County.—Practically all the hay is in the barn. The yield was the greatest we have had for several years. Clover averaged between one and one-half and two tons per acre. Timothy was slightly less. Most all the hay went up without getting wet. All rye and barley are cut and show good quality. They will yield 25 per cent better than the average yield for the past year. Oats were greatly damaged by strong winds in July; many fields were bent down and some lodged. Very little oats have been cut, but the yield promises to be better than that of last year. Corn is twenty days late, but looks well and is growing rapidly at present. Dairymen are economizing on feed, but the majority are still feeding some concentrate in addition to pasture. Very little of the feed supply for the winter has been purchased. Live stock are in good condition, but fewer in numbers than they were last year.—Arthur H. Peterson.

Price County.—Haying is nearly done. The new seeding made about one ton per acre and the old meadows about one-half a ton. Wheat, barley, rye and oats show prospects of good yields. A good rain on August 7th saved the meadows, which were burning up, besides pushing the corn and potato crops along. Live stock are in fair condition, but will suffer from poor pasture soon. Farmers predict that much live stock will be shipped from here on account of the poor hay crop and high price of feed generally.—J. W. Fox.

Richland County.—The hay crop is good with a yield of about two tons per acre. Oats are very good, but barley is only fair. Oat cutting has just commenced, but some of the fields are quite green yet. Fruit is plentiful.—E. C. Stewart.

Sauk County.—Clover is yielding about 20 per cent heavier than last year. The quality is above the average as weather conditions were right most of the time. Wheat and barley are harvested, but much of the oats was delayed by rains. Rye also is harvested. There are considerable lodged oats. All small grains promise to yield heavily. The geater part of the corn crop is behind the average of recent years. Potatoes look better than they did last year Apples appear stunted, but there are lots of them. Live stock are in good condition, as pasttures are holding out well.—Richard F. Klemm.

Sheboygan County.—A bumper crop was harvested. The corn crop is far behind normal. We are not having enough warm weather to insure a crop of silage to say nothing of ripe corn. Harvesting of rye and winter wheat has been progressing rapidly and good yields of both crops are promised. Oats should yield heavily where lodging has not occurred. Recent rains have refreshed the pastures and cows are picking up in milk production. Cattle on the second crop of clover in the meadows are doing especially well.—M. J. Hoppert.

Taylor County.—Haying is done and the crop is from 5 to 10 per cent short. Oats and barley will hardly be normal. The harvest has already commenced. Corn is poor and will not make anything but silage. The weather has been too cool for it. Gardens are good. Potatoes are doing well. Pastures are fair, but need rain. Dairy cows are in good condition. Few hogs are raised in this county.—John E. Miller.

The Scales With A 10 Year Guarantee

Be your own weighmaster. A dependable, all-purpose scale on your farm makes and saves you many a dollar which otherwise you would lose without knowing why or where.

McDONALD—
The Original Pitless Scale

Sold under a positive 10-year guarantee of accuracy. Solid steel frame locked at corners, solid steel joists, knife edge bearings protected against frost and clogging, and other distinctive features in design and construction make the McDonald trouble-proof, repair-proof and permanently reliable. Many of them in use over 20 years are giving satisfactory service today.

Easy to erect or move. No pit to dig or expensive foundation to build—no expert needed. Full directions with every scale which anyone can follow.

Ask your Moline Dealer about the McDonald Pitless, or write us for Illustrated Literature.

THIS CHECKED HEAD OUR TRADE MARK

Wisconsin Poultry Show.

James G. Halpin, secretary of the Wisconsin Poultry Association, announces the dates of the annual show this year as January 7 to 11, 1918. Messrs. Hackett and Wells will be judges. The show will be held at Madison, and will be one of the big poultry events of the year.

Advice to Stockmen.

It can hardly be doubted that farmers and owners of live stock generally, as well as poultry raisers, are not living up to their privileges in the way of getting advice on live stock and poultry ailments from those competent to give it. This thought is suggested by the broad invitation that is given in the advertising of the Dr. Hess & Clark preparations which are being advertised in this paper. In their booklets, distributed free through their dealers, and in many of their larger advertisements, the invitation is given substantially as follows: "Should you at any time have a sick or injured animal or any poultry trouble concerning which you would like to consult a competent veterinary surgeon, write Dr. Hess and he will send you a prescription and letter of advice free of charge." The only condition is that a two-cent stamp for the reply be enclosed by the inquirer. Dr. Gilbert Hess is a doctor of veterinary science of long standing, has written numerous veterinary books, and is competent to give specific direction and advice on all animal ailments. You do not have to be a user of the Dr. Hess preparations in order to obtain this free veterinary service, and are not placed under any obligations whatever. All that is necessary is to write fully all the particulars and symptoms, so as to convey to Dr. Hess an intelligent idea of the trouble, and enclose the 2-cent stamp, and a personal letter of advice will reach you promptly. This service will enable you to save veterinary bills. It will give you direct, positive and disinterested advice. By availing yourself of it you may be able often to save the life of an animal because you do not wish to call in a local veterinarian. The service is open to any reader of this notice. Direct letter either to Dr. Gilbert Hess personally or to the Dr. Hess & Clark Information Boreau, Ashland, Ohio.—Adv.

SUGAR 5c A LB.

Only one of the many wonderful bargains offered in our new Price-Wrecking Grocery Catalog, sent free to you today with your first order of the sample outfit quoted below. This catalog is not sent out indiscriminately. Its hundreds of bargains in highest class, staple food products are intended only for those who buy in quantities sufficient to make such remarkable prices possible. Only those who are interested in saving 30 to 50 per cent on all their fine groceries will receive this big list of bargains free with the trial order quoted below.

FLOUR $9.60 Per Barrel

SUGAR $5.00 Per 100 Pounds

In order that we may know you will appreciate and make prompt, earnest use of the hundreds of big bargains contained in our catalog, we have chosen from it this sample order amounting to $1.87:

TRIAL ORDER A. 39

$ .50	5 lbs. our Best Granulated Sugar..	.25

CONSUMERS' WHOLESALE GROCERY CO.

DEPT. A. 39 CHICAGO, ILLINOIS

The Age of Dairy Cows.

In the life of the dairy cow, as in that of every other thing that lives, there are three natural periods. These are indicated by the terms growth, maturity and decline. Productiveness does not begin until the first period is well advanced. This is largely preparatory. Toward its close the productive powers are rapidly developed and the cow becomes a source of income. During the period of maturity the cow is at her best and for a few years from the time it is reached she ought to yield her owner a large profit. At the close of this period a downward movement begins. At first this is slight, but it will go on until it comes to an end with the total failure of the productive functions of the cow or their destruction with her death.

A cow may more than pay her way for some years after the period of decline begins, but if she lives she will eventually reach the age limit of profitable production. Of course, she should be disposed of before this point is reached, for, though she is not yet a source of expense, she is taking room and care and is consuming feed that would be much more profitably consumed by a younger animal.

But it is not always an easy matter to determine just the best time to dispose of an aged cow. The natural basis for judgment on this point is the number of years she has lived. And this is an item that should be carefully considered even though she appears to have failed but very little. Yet when taken by itself this test is not decisive and it may be very misleading, for to a considerable extent the term age has only a relative meaning. As far as usefulness is concerned some cows are as old at eight years as others are at fifteen. Consequently each individual must be judged by herself.

There is something to be said in favor of keeping a good cow considerably beyond the close of her period of maturity. If the dairy business is to be continued cows must be kept. If those which have passed the time of their best possible performance are disposed of, others must be obtained to take their places. In this exchange there will be more or less risk. Judging from the past the owner of an old cow can tell what she is likely to do in the future. If he exchanges her for a young cow he cannot be nearly as sure what returns she will make. If the young cow is in a healthy condition, well developed and from high-class dairy cattle there are, of course, strong probabilities that she will do well. And yet there is some wisdom in the remark of a dairyman who said that he would rather have a good cow than a good cow's calf. There can be no question as to the merits of a cow that has been thoroughly tested and has proven to be good, but there will be some uncertainty regarding what kind of a cow her calf will become.

On the theory that "a bird in the hand is worth two in the bush" it would not seem best to turn off a first-class cow as soon as the least waning of her powers is discovered. On the other hand care must be taken not to keep her too long. Just when she ought to be disposed of will depend largely on her vigor, the condition of her teeth, her appetite and digestion and on whether she has been highly fed or has recently had a serious illness.

And even though the cow appears to be strong and well if she is kept after she has passed her prime she will need more careful attention and more liberal feeding than she required in her earlier years. Yet neither this nor anything else can restore the degree of vigor and capacity that she has lost. The most that can be accomplished is to somewhat retard the natural progress of her decline. Her value for feeding when she is retired from the dairy will decrease. For awhile, perhaps for years, she may pay well for all that is done for her, but she will be exposed to the perils which inevitably come with advancing age.

Soon after an animal passes the period of maturity changes which are gradual, but which will surely be progressive, set in. The bones become weaker, the circulation of the blood is less active, nerve force is diminished and the danger of accident and the liability to disease of various forms increases in a marked degree. And this item of present and ever-increasing risk should be carefully weighed when considering how much longer an aged cow can profitably be kept for use in the dairy.

Dairy Labor Difficulties.

Owing to the amount of labor required to conduct a dairy farm as it should be conducted, there is often a tendency to neglect some of the work whenever there is the slightest pressure from demands of other things. On every dairy farm these times come with more or less frequency and where the farm does not possess too much available labor it is quite a problem to get the work done properly and on time. In order to obtain economical returns we endeavor to get along with a limited amount of labor. When the pressure becomes too great there must be an inevitable loss occasioned by neglect of some part of the work. The less system that is being used on the farm the greater the opportunity for loss, and the same might also be said of conveniences.

Since we usually limit the amount of labor available it is necessary to safeguard our work as much as possible by planning and by the arrangement and availability of our conveniences. Choosing the easiest and quickest methods of performing our regular work without detracting from the profit of the season is one of the fundamentals of economical production. Always to do our work in the most laborious fashion only turns us into slaves and when this stage is reached we can never really enjoy our calling as a good dairyman will.

Many are the difficulties that continually crop up in the handling of a dairy farm and one needs to have an eye focused on the principles which go to make the business of dairying most enjoyable and this can be done to the best advantage by such planning as will not necessarily lessen the amount of work really accomplished, but which will systematize and lighten it to such an extent that it is only very exceptional conditions that would cause even a temporary neglect of some part of the work.

Keeping the Separator in Good Order.

All users of cream separators who haven't tested their skim milk for butter fat recently should make this test at once, for it is probable that they are not getting as much butter fat from their milk as they can and should obtain. Cream separators, like all other kinds of machinery, sometimes get out of adjustment. When the separator is in good working order not more than .02 of 1 per cent of fat ought to be found in the skim milk, but there is no question but that on a great many farms .05 of 1 per cent of fat is left in the skim milk and this means a heavy waste.

If the separator is not skimming as close as it ought to, see whether it is standing level or not. If it is not standing level it must be leveled up. A separator cannot be expected to do good work unless it stands perfectly level. The bowl must be in balance. If it vibrates while in operation clean skimming cannot be obtained. If a level is not at hand one suitable for the purpose can be had by filling a glass vial nearly full with water.

It may be that the machine is not being turned in accordance with the directions of the manufacturer. If the bowl does not revolve at the speed it should a portion of the butter fat is certain to be left in the skim milk. If the separator is being operated by hand it is well to check up occasionally to see whether the handle is being turned the proper number of times per minute.

If all the above-mentioned conditions are as they should be and still the machine is not doing good work it will be necessary to look elsewhere for the trouble. Sometimes the cream outlet becomes clogged or partially closed. If this is the case it can readily be seen that less cream will flow through the outlet per minute than if it were larger. The result will be a thicker cream and the chances are that the skimming will be much less perfect than would otherwise be the case. Everyone who uses a separator knows that the percentage of butter fat in the cream can be regulated by turning the cream screw either one way or the other. By enlarging the opening the cream becomes thinner and by reducing it the cream becomes thicker, that is, the cream will contain a larger percentage of butter fat.

Some separators will not skim effectively when the cream contains as much as 40 per cent of butter fat or more and the only way one can tell whether his machine is one of that kind or not is by testing the skim

Make Your Dairy Pay

EVEN though you have no more than three cows, there are many good reasons why you should have a **Lily** or **Primrose cream separator.** It is the only way to get all the cream. It gives you warm, wholesome skimmed milk to feed. It saves a lot of tiresome work. When you get your **Lily** or **Primrose** separator busy, you will wish you had done it when you first got your cows.

Lily and **Primrose** separators skim down to the last drop of cream in each gallon of milk. You can't beat them for close skimming. They turn ea ily. The bearings oil themselves as you ru the machine. They don't get out of adjustment—that is important. By turning a screw on the outside of the separator once in six months or so, you keep the bowl at the correct height, and this is positively the only adjustment necessary.

Next time you go to town, drop in and see the obliging dealer who handles **Lily** or **Primrose** cream separators. In the meantime, drop us a line, and we will send you some interesting reading matter about separators.

Save Your Corn Crop

All of it. Let's have no waste. You don't have to worry about getting your silo as we are still in position to make *prompt shipment* on our silos and ensilage cutters.

Kalamazoo LIFE-TIME-SILOS

are built to meet the exacting farmer's needs. Best in design, material and workmanship. Have every desirable feature a silo should have and embody the "know how" acquired through more than twenty years experience in silo building.

Wood Stave Silos—Your choice of four of the best time-defying woods. Kalamazoo Silos are manufactured complete ready to set up. Quickly and easily erected by inexperienced home labor. All Kalamazoo silos are made with Galvanized Steel Door Frames and continuous doors, forming a safe ladder entire height of silo.

Write today for our free descriptive booklet. If interested in an Ensilage Cutter, ask for Kalamazoo Cutter catalog. *Easy payments*, if you wish.

KALAMAZOO TANK & SILO CO., Dept. 211, Kalamazoo, Mich.

Use A Wood Tire Hollow Wall Silo

Cannot Sag, Blow Down or Rot.

Cures and preserves silage perfectly. Prevents freezing of silage. Easy to construct. A real farm building, permanent and rigid. No hoops to get loose. No guy wires. No staves to shrink or swell, but a smooth, double wall from base to roof, the inner wall being of *California Redwood.*

Guaranteed for 20 Years

"But Lasts a Lifetime"

The patented wood "tire" is built up of inch boards, and shipped in sections. The boards overlap in step formation at both ends. When nailed together, these sections form a ring of unusual strength. The silo frame forms its own scaffolding.

milk. A Babcock testing outfit should be on every dairy farm, but in the absence of this the proper thing to do is to take a sample of the skim milk to a neighbor who has a tester or to the creamery and have it tested there. If one is not a regular customer of the creamery he may have to pay for the testing, but the cost will be nominal and should not be considered, for it pays well to know exactly whether or not all the butter fat is being gotten out of the milk.

Langlade Holstein Meeting.

To the Editor:—Langlade county Holstein men held their annual summer picnic as an automobile excursion to leading Holstein farms of and near the county on August 5th. Sixteen auto loads made the trip. Visits were made to Geo. Wunderlick's Bear Lake Farm, to Dr. Harrington's, Hogarty Holstein Farm and to the Dells of the Eau Claire River. Mr. A. C. Oosterhuis, of the college of agriculture, gave a splendid address on dairy type at the formal part of the meeting held at the Harrington farm.

Holstein breeding is still in its early stages in Langlade county. About seventy-five farmers own pure-bred sires. Only about half a dozen or more own pure-bred females. Interest is growing, however. Many farmers are awakening to the importance of using better sires. One by one they are discarding the grade or the scrub and replacing it with a pure bred. Those owning a pure bred when buying the second one insist that he come from dams with a record of production.

The county Holstein breeders' association is doing its bit to awaken interest. Likewise the work of the cow-testing association is fostering a keener desire for better stock. It was very apparent from the attention paid to Mr. Oosterhuis' address that Langlade county farmers are anxious to learn about the dairy cow.

Cheese factories never had a bigger run than during the present summer. Four new factories were built this spring and three of this number received up to and better than 5,000 pounds of milk per day as their maximum run. The new cheese warehouse built at Antigo early in 1917 took in thirteen carloads of cheese during July, mostly Langlade county product.

Encouraged by the development of the cheese industry, Hirt Bros., of Deerbrook, are planning to install cheese box machinery in one of their mills.

Langlade county, with its fertile soil and splendid pastures, has ideal conditions for dairy development. Farms average small in size, ninety-one acres per farm, to be exact, making dairy farming practically a necessity for assured profits. Whether he will or no every farmer will be compelled by force of circumstances to resort to better methods of breeding. High cost of feed, scarcity of help, mean that the farmer can no longer afford to breed to a poor bull, not even to a poor pure bred. The poor cow offspring of inferior breeding can no longer be given a place in his barn. The accurate methods of the cow-testing association must replace the guesswork methods still practiced on too many of the farms of the county. The several breeders' associations and the cow-testing association are the leavening influences which are destined to bring about permanent improvement.

F. G. S.

Value of Skim Milk for Pigs.

Addressing a crowd of 5,000 at the second annual picnic of the Manitowoc County Dairy Advancement Association on Sunday, August 5th, at Silver Lake, Prof. G. H. Benkendorf, of the college of agriculture, University of Wisconsin, said Wisconsin easily ranks first as a dairy state; this is due to several reasons, chief among them being the climate, the soil and the fact that Wisconsin is settled by people who are willing to milk cows. In 1909 we ranked first in butter and cheese. According to data available in 1914, we were a very close scond in condensed milk. About a year ago there were thirty-seven condensing factories in the state, but that we now have fifty, owing to the rapid development of that industry during the past two years.

Professor Benkendorf devoted considerable time explaining how a farmer can determine the relative value of skim milk on the farm, when fed to pigs. The well-known "Gurler" method was discussed. Mr. Gurler is one of the leading dairy men of the whole United States and his method is very simple, namely, skim milk is worth as much a hundred as corn is a bushel. For example—if corn is worth 60 cents then skim milk is worth 30 cents; if corn is worth $1.80 then skim milk is worth 90 cents.

The "Hoard" method, named after Ex-Governor Hoard, is based on the fact that a hundred pounds of skim milk, when fed to pigs, will produce five pounds of pork. When in combination with corn or barley in the proportion of one pound of corn or barley to three pounds of skim milk, the results are very much better, being about six pounds per hundred pounds of skim milk. In other words, it is easy to determine the value of skim milk by multiplying the price of hogs on the hoof by five or six, as the case may be. For example, if hogs are worth 14 cents per pound, six times 14 cents equals 84 cents.

It has been determined many times by the leading experiment stations in America that whey is worth one-half the value of skim milk.

The average composition of milk and its products is as follows:

	Water	Fat	Casein and albumen	Milk sugar
Cows milk..	87.17	3.69	3.55	4.88
Skim milk ..	90.30	.10	3.55	5.25
Whey	93.38	.32	.86	4.79

From the foregoing data the speaker said it was plainly evident that whey was a feed of considerable value. In 100 pounds of whey there were nearly five pounds of milk sugar and about eight-tenths of one pound of albumen and casein. The speaker said that the white of eggs is a good example of albumen. Professor Benkendorf then referred to experiments made at the Canadian Agricultural College, which were the same as results obtained at Madison. In these trials whey was fed to pigs with the following results: 481 pounds of mixed grain when fed alone produced 100 pounds of gain; 303 pounds of mixed grain with 1,398 pounds of whey produced 100 pounds of gain.

In other words, 1,398 pounds of whey saved 178 pounds of grain, which proves that 785 pounds of whey was worth 100 pounds of grain. From results like these it is very plain why the feeding authorities claim that whey is worth about one-half the value of skim milk.

That there is not much danger of an overproduction of meat for years to come was emphasized by the speaker. Citing an investigation it showed that the number of beef cattle in the United States decreased 30 per cent between the years 1907 to 1914, while during the same time the population increased 14 per cent.

Fill Your Silo As You Cut

Run your own filler, from day to day, as is convenient, with the

AUTO UTILIZER

Just back car onto runway—No jacking up, nothing to attach.

With the Auto Utilizer, you are always ready to put your corn into the silo **just when it ought to go in,** instead of having to let it lie around after cut, getting full of dirt and rotting while you wait your turn with the filling crew. The Auto Utilizer will save its cost on the first year's filling. That's what users say. Let us send you their say-so.

Easiest thing a car was ever set to do

Car stands level and runs exactly as it does on the road. Positively no strain on its construction or working parts.

Because the Auto Utilizer is so simple and everlastingly strong, it's the only practical means of using a car for farm power. Unit construction makes it easy to move about. All steel and iron. Only two simple revolving parts—running in long Hyatt Roller Bearings. Find out all about it and you won't do without it.

Ask your dealer if he has seen it—if he is going to demonstrate it. Send today for complete descriptive literature.

Sweet Clover as a Soil-Improving Crop.

Unlike many legumes, sweet clover will make a good growth on soils too depleted in humus for profitable crop production. The effect of the large, deep roots in opening up the subsoil and providing better drainage is often very noticeable in the spring, as the land upon which sweet clover has grown for several years will be in a condition to plow earlier than the adjacent fields. The roots are often one-eighth of an inch in diameter at a depth of three feet, and they decay in five to eight weeks after the plants die. The holes made by the roots are left partly filled with a fibrous substance which permits rapid drainage. The roots add much organic matter to the layers of soil below the usual depth of plowing, while those in the surface soil, together with the stubble and stems, when the crop is plowed under, add more humus than possibly any other legume which may be grown in short rotations. Not only does this crop add organic matter to the soil, but in common with other legumes it has the power of fixing atmospheric nitrogen by means of the nitrogen-gathering bacteria in the nodules of the roots.—[Bulletin.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Sauerkraut.

Mrs. S. is seeking information about preserving the surplus from her garden. She writes:

I have read about putting up beans the same as kraut. I must confess that I do not even know how that is done. Will you please give me this information, as I have an abundance of both? So far I have always been a failure at putting up anything, and I am very anxious to know how to dry, can and preserve for winter use.

Here is an excellent recipe for making homemade sauerkraut: Select nice heads of cabbage, remove outer leaves, halve heads, remove core and slice with knife or cutter. Thoroughly clean and scald a three to five-gallon stone jar. Place in the bottom of the jar a layer of cut cabbage four or five inches deep and sprinkle lightly with salt. Salt should be used at the rate of one pint to twenty-five gallons of cabbage. Tamp until juice begins to show on top. Use end of block of wood with handle attached for this purpose. Repeat the process until the jar is filled to within four or five inches of the top, tamping each time thoroughly. Cover the surface with cabbage leaves and place a cloth over this. Cut a board to fit loosely for cover and weigh down with stones. If kept at a temperature of 75 or 80 degrees fermentation will likely be complete in a month, when the kraut will be ready for use.

A liquor should appear over the surface of the kraut after the second day. If it does not appear, then add more weight and pour in enough brine to cover the top. Every other day remove the scum which collects on top of the brine until it no longer appears. When fermentation is complete store kraut in a cool place.

Mrs. S. and others who want to take care of garden and orchard surplus, should write to the department of agriculture, Washington, D. C., for the various bulletins issued by the government on the subject of food preservation in the home. These include bulletins on canning, drying and preservation by fermentation, and very complete and definite instruction is given therein.

Ways of Cooking String Beans.

To the Editor:—I wonder if Mrs. H. L., who asked for new ways of cooking string beans, has ever tried cooking them with carrots and seasoning well? They are fine. Another good way is to cook them till tender in salted water, drain and cover with a good salad dressing. Chopped peanuts may be mixed with them for a change when making into salad if liked by the family. Used in this way they take the place of meat. Steamed tender and covered with a sweet spiced vinegar they make fine pickles, or they may be mixed with small onions and pickled. Another way is to cook in salted water until tender, drain, then add plenty of butter and pepper and fry slowly until thoroughly seasoned, but not brown. Cooked with a slice or two of bacon or fat pork of any kind they will usually be relished, thickening the liquid with flour when the beans are tender. String beans cooked with sweet corn make a dish fit for a good American.

And don't neglect to can a plentiful supply for winter use. I am canning now by the one-period cold-pack method, and the beans are fine in appearance. The only thing difficult about this method is the name. I have simplified all the processes as much as possible, and am well pleased with the result. Have also canned Swiss chard greens with the stems separate as a vegetable, as well as beet greens, small beets and cauliflower so far this season. I wash and dress the vegetable as for cooking, place in a clean, thin cloth (I use an inner sugar sack), place in boiling water from five to ten minutes, lift out and immediately drop into a pan of cold water. Lift from this to a pan. Now pack into jars and add the salt (a level teaspoonful to a quart), fill the jar with boiling water, put cover on loosely and set in the wash boiler on a cloth with cloths between the jars. I have the water come up about half way on the jars. This water is kept boiling steadily for the required time. I can several kinds at a time and remove each kind when it is done. Cauliflower takes one hour, beets an hour and a half, beans and greens two hours. The jars are removed one at a time and covers tightened. With the care taken in canning fruit as to tight caps, etc., no one need hesitate to try vegetable canning.

Ivy Fisher.

A Farm Home That Fulfills Its Mission.

THE modern farmhouse is built with an eye to beauty, comfort and convenience. The ideal farm home cannot be built without a certain definite knowldge of practical housekeeping and family needs. The man who undertakes to erect a home for his family will find that a little knowledge of some phases of household science will be a tremendous asset. The farmer builds the house, but the farmer's wife does the housekeeping, and, therefore, each should take an active part in perfecting the plans.

THE LARGE, SCREENED PORCH AND OUTSIDE ENTRANCE TO BASEMENT ARE FEATURES THAT WILL APPEAL TO FARM WOMEN.

The accompanying illustrations show the result of such a combination of effort. This particular house is the pride of the farmer who built it and the joy of the wife who presides over his household. Every member of the family, even to the hired man, was taken into consideration when the plans were made.

Notice the spacious screened porch at the rear. Off this opens a commodious wash room furnished with lavatory with hot and cold water. Here the men can wash without entering any part of the house proper or in any way interfering with the household. The hired man's room, also, is located so that it can be reached without passing through any of the family living rooms. This is an advantage that many a hired man will appreciate as well as many a housewife.

SPACIOUS WINDOWS INSURE PLENTY OF SUNLIGHT FOR EACH ROOM

The lessening of the housewife's work was one of the main considerations in the planning of this house. She has every convenience from running water to electric lights and a vacuum cleaner. She does not have to carry in or out a single drop of water; there are no lamps to clean or fill; the vacuum cleaner does the heavy cleaning of rugs and carpets; and Monday has no terrors for her—the well-equipped laundry takes care of that. Her kitchen is a marvel in its completeness. Linen closets and store closets are conveniently located. The bathroom is completely equipped, even to shower bath.

And when this farmer and his wife planned their home they thought about the two little boys and the little girl who are growing up there. For them, as well as for themselves, they made it beautiful within and without. With a thought for their health they made a sleeping porch and many broad windows for fresh air and sunshine; with a thought for their pleasure they made a roomy attic for rainy-day romps and revels; they built a fireplace for winter-evening coziness; they built shelves for books—in fact, they included everything that makes for convenience, and comfort, for contentment and happiness.

There is more to building a house than putting the lumber together, and this beautiful home is surely convincing evidence of the satisfying result of careful thought and planning on the part of farm families.

THE YOUNG FOLKS

One Eye, Two Eye, Three Eye.

Dear Young Folks:—I am a girl twelve years of age and I am going to school with my little brother. I like to go to school very much and I am in the seventh grade.

I like the story called "One Eye, Two Eye, Three Eye," and I will tell it to you.

Once there was an old woman who had three little girls named One Eye, Two Eye and Three Eye. They were called these names because One Eye had only one eye, Two Eye had two eyes, and Three Eye had three eyes. The old woman didn't like Two Eye because she was like other people, and she made her work out in the field all day with a little goat, but she let One Eye and Three Eye play all they wanted to.

Two Eye could get nothing to eat all day except one crust of bread. One day when she was very, very hungry she sat down in the field and tried to eat her crust, but it was too hard to eat, and she began to cry. Then she heard someone say, "What are you crying for?" She looked up and there stood a fairy.

"Oh," said Two Eye, "my mother doesn't like me, and she only gives me this hard crust to eat."

"Well," said the fairy, "whenever you are hungry just say, 'Little table, spread,' and see what happens." Then the fairy vanished and poor little Two Eye was so hungry that without waiting a minute she said the words that the fairy had told her to. And the next minute a table stood before her all covered with good things to eat. There was bread and butter and sauce, potatoes, pudding, apples, oranges, meat, cookies and lemonade to drink.

Two Eye ate all she wanted and was wondering what in the world to do with the table and the food she had not eaten when she noticed a slip of paper pinned to the tablecloth. This slip said that when she was through eating and didn't want any more all she had to do was to say "Little table, away." So Two eye repeated the words, and the table vanished.

Of course when Two Eye went home that night she was not hungry and her mother wondered why she did not eat her crust of bread. Every night it was the same way—Two Eye would not eat her crust. So finally her mother told One Eye to go out in the field with Two Eye and watch her to see what she did. One Eye promised to go and the next day she followed her sister and Two Eye wondered at it because she never had wanted to come with her before.

When dinner time came Two Eye sang a song and One Eye fell asleep. While she was asleep Two Eye said "Little table, spread," and ate all she wanted. Then she said "Little table, away," and when One Eye awoke she did not know what had happened and they went home because it was getting dark.

When they got home their mother took One Eye into the bedroom and asked her what Two Eye had done, and One Eye had to tell her that she had fallen asleep when Two Eye sang a song, and she had not seen what happened.

So the next day the old woman sent Three Eye to the field with Two Eye. When dinner time came Two Eye sang her song again and Three Eye shut her two eyes and went to sleep, but she kept her one eye open so that she saw what happened and that night she told her mother. It made her so angry that she killed the goat that Two Eye tended in the field.

Two Eye went under a shade tree and began to cry and her good fairy came again and asked her what was the matter. "Oh," said Two Eye, "my mother has killed the goat, and now I cannot go to the field any more and can have nothing more to eat."

But the fairy said, "Never mind, little Two Eye. Run back home as fast as you can and plant the goat's heart and see what happens."

Two Eye ran back home and did as the fairy had told her, and in the morning a great big tree with golden apples had grown up where she had planted the heart. One Eye and Three Eye said it was their tree, but Two Eye said it was hers.

Pretty soon a man went by and her naughty sisters made Two Eye go and hide. The man came in and asked for some of the golden apples, but they could not get them for him. He asked them if they had another sister and they said, "Yes, but she went away and hid herself." Then he called Two Eye and when she came she got six apples for him. He was so pleased with her that they were married and were very, very happy.

The old woman and her other two girls got so poor that Two Eye had to give them food and clothing. And after a while they got very much ashamed of the way they had treated her and she forgave them.

Esther.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Inclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date 1917 spring and summer catalog, containing over 550 designs of ladies', misses', and children's patterns, also some points for the needle. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

Waist 2182-Skirt 2181—A smart dress, suitable for many occasions. Waist pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt also in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. For the entire dress for a medium size it will require 6 yards of 36-inch material. Two separate patterns, 10 cents for each pattern.

2165—Juniors' dress, with sleeve in either of two lengths. Pattern is cut in 3 sizes: 12, 14 and 16 years. It requires 4¼ yards of 44-inch material for a 14-year size.

1592—Dress or apron with bloomers for girls. The pattern comprises both, and is cut in 5 sizes: 2, 4, 6, 8 and 10 years. It requires for a 6-year size, 3¼ yards of 27-inch material, with 2¼ yards for the bloomers.

2034—Ladies' dress, with sleeve in either of two lengths. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 8 yards of 36-inch material for a 36-inch size.

1639—A dainty dress for party or best wear. Pattern is cut in 4 sizes: 4, 6, 8 and 10 years. Size 6 requires 3⅛ yards of 44-inch material, with 1⅜ yards of 27-inch material for the bolero and collar.

2172—A new and popular style. Pattern is cut in 4 sizes: Small, 32 and 34; medium, 36 and 38; large, 40 and 42, and extra large, 44 and 46 inches bust measure. Size medium will require 6¼ yards of 48-inch material.

2166—Boys' "overall" or play suit. Pattern is cut in 4 sizes: 2, 3, 4 and 5 years. It requires 1¼ yards for the blouse and 2⅛ yards for the overalls, of 27-inch material, for a 3-year size.

2001—Ladies' house dress, with or without back yoke, and with sleeve in either of two lengths. Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6⅜ yards of 36-inch material for a 36-inch size.

2164—A practical popular garment. Pattern is cut in 4 sizes: Small, 32 and 34; medium, 36 and 38; large, 40 and 42, and extra large, 44 and 46 inches bust measure. Size medium requires 4 yards of 36-inch material.

2194—Ladies' Guimpe, with sleeves in either of two styles. Pattern is cut in 7 sizes; 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 2¼ yards of 36-inch material for a 36-inch size.

2183—A dainty dress for the little miss. Pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires for a 6-year size, 1½ yards for the guimpe, and 2½ yards for the dress, of 27-inch material.

2177—Ladies' maternity skirt. Pattern is cut in 7 sizes: 24, 26, 28, 30, 32, 34 and 36 inches waist measure. Size 26 requires 3⅞ yards of 44-inch material.

Kitchen Sink Should Be Durable and Convenient.

Kitchen sinks should be durable, non-porous, easily cleaned and at a convenient working height.

Any cleaning powder or soap that contains a rough scouring agent is a poor article for cleaning sinks. Kerosene cuts grease. It should be applied with a cloth. When followed by soap and water it is particularly effective.

Enameled iron sinks are durable and will last for years with proper care. They should not be cleaned with abrasive cleaning powders, as the enamel will wear off and cause a roughened condition. A sharp blow will chip the enamel and cause rust to attack the exposed iron foundation. These sinks come in a variety of styles, making it possible to get them in almost any dimensions and with or without drain boards.

Soapstone sinks are less expensive and are desirable where much dirty work is done. The soapstone, however, absorbs grease and wears away by constant scouring.

Copper and German silver sinks are attractive, easily cleaned and sanitary. Because of the cost these sinks are seldom found in kitchens, but are satisfactory in butler's pantries for dish washing purposes.

The average sink should be from thirty to thirty-six inches in length, twenty inches wide and eight inches deep. The drain boards should be at least twenty-four inches long and if there is but one, it should be on the left side. The drain board made of the same material as the sink is the most desirable, but a hard wood such as oak, ash or hard maple, may be substituted.—Rebecca Bartholomew.

International Sunday School Lesson

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson For August 26, 1917.

The Captivity of Judah.

LESSON TEXT—II Kings 25:1-21.

GOLDEN TEXT—As I live, saith the Lord God, I have no pleasure in the death of the wicked.—Ezekiel 33:11.

Many years after the kingdom of Israel was taken captive by the Assyrians, Judah was carried away to Babylon. Judah's captivity was in three stages, covering about twenty years. The first deportation was while Jehoiakim was king. Daniel and his friends went into captivity at this time (Dan. 1:1-6). The seventy years captivity dates from this time. The second deportation was while Jehoiakim reigned. Most likely Ezekiel was carried away with this second company (Ezekiel 1:1-2). The third deportation, some twelve years after the second, is the one described in our lesson. At this time the greater part of the nation was removed to Babylon. Only the poor and unimportant were left. Jerusalem itself was destroyed at this time.

I. Jerusalem Besieged (vv. 1-3). Zedekiah owed his kingship to the king of Babylon (chapter 24:17), who appointed him to the throne after the removal of Jehoiakim. His name was changed from Mattaniah to Zedekiah. He was not a good man (24.19). Though having his position by the will of the king of Babylon, he rebelled against that king. He thought that by the aid of the surrounding nations, especially Egypt, he could throw off the yoke of Babylon. Jeremiah counseled submission, but the king refused. Nebuchadnezzar came in person with all his host and laid siege to Jerusalem, even building forts against it (v. 1). This siege lasted for about a year and a half. For a while during that period the Chaldean army withdrew because of the appearance of Pharaoh's army (Jer. 37:5). Shut off from help from without, the Jews soon were famishing for want of bread. The horrors of this famine were awful. For a description of it one should read the book of Lamentations. Mothers ate their own children (Lam. 4:10). The richest, even ladies in silken robes, wandered about searching for scraps in the dung heaps (Lam. 4:5-10). Their tongues clave to the roofs of their mouths, and their skins were dried up. Added to these horrors were murderous fights between parties among the Jews. Some wanted to surrender; others insisted upon holding out.

II. Zedekiah's Flight (vv. 4-7). At length the city was broken up, and the king and his warriors fled by night. His thought was to escape to the country beyond the Jordan. The Chaldean army overtook him, scattered his army, and carried Zedekiah to Riblah, where Nebuchadnezzar had his headquarters. Here judgment was passed upon him. In his trial it was shown that his solemn oath of allegiance to the Chaldeans had been broken, thus showing himself a traitor (II Chron. 36:13). As a punishment for his treachery his own sons were slain before him, his eyes put out (v. 7), and he himself carried to Babylon, where he remained a prisoner till his death (Jer. 52:11). In this we have a marvelous fulfillment of prophecy (Ezekiel 12:3), which says that Zedekiah shall be taken to Babylon and die there and yet not see the city. He could not see it because his eyes were out. Let us learn from this that that which God says will surely come to pass, even though we cannot explain its details.

III. The Destruction of the City (vv. 8-10). Not only were the people taken captive, but the city itself was subjected to the utmost rigors of war. They plundered the house of the Lord, the palace and the houses of the rich, and then consigned them to the flames (v. 9). They even broke down the walls of Jerusalem (v. 10) and massacred many of the people (Lam. 2:3, 4).

IV. Disposition of the Inhabitants and the Contents of the Temple (vv. 11-21). 1. The inhabitants (vv. 11, 12). They were divided into two classes, those who had deserted to the Babylonians during the siege and those who were found inside of the city at the time it was taken. Many doubtless deserted to the Babylonians during this siege, as even Jeremiah was arrested on this charge (Jer. 38:13). The poor of the land were left to be vine dressers and husbandmen. The wealthy and influential were taken away, as they would be of value to the conquering nation; besides they would be a menace if left behind. The poor were left because pauper captives would be a burden.

Besides it was very undesirable for the land to lie in waste, as then they could not exact tribute from it. To that end encouragement was given by the Babylonians, as "vineyards and fields" were given to the poor.

2. The contents of the temple (vv. 13-21). From the temple which had been twice plundered before (II Chron. 36:7, 10), such of gold, silver and bronze vessels as still remained were taken, even the great pillars of the molten sea. The captives and the treasure were delivered to Nebuchadnezzar at Riblah, where more than threescore of men were killed (vv. 19-21).

Oliver the Choice at Fremont

At the National tractor demonstration at Fremont, Oliver tractor plows and other Oliver products were drawn by forty-two different tractors. The same reason that caused sixty-five per cent of the tractor manufacturers not making plows to pull Oliver products in order to secure the best results from their tractors is the reason why you should insist upon an Oliver implement for use with your tractor.

Oliver tractor plows are furnished with two, three or four bottoms for light tractor use; in larger sizes for heavy tractors.

The Oliver tractor disk harrow and roller pulverizer are especially adapted for tractor hitch.

Tell your plowing needs to the nearest Oliver dealer or write us for information on the plow best adapted to meet them.

GOOD FARMS in a good country. Always sure crops; no destructive storms. Good bargains are yours by writing Geo. C. Rice, Webster, Wis.

Janesville Has Fine Fair.

The Janesville big fair came to a close August 17th, having been one of the most successful ever staged by this association. Even though threshing was in full swing, the attendance was the largest they have ever had. The racing cards were especially attractive and several of the races had a field of twelve and fourteen horses. Weather conditions were ideal and everything was conducive to a grand fair. Exhibits were about as usual, though the automobile show was extraordinary. One of the novel features of the fair was the giving away of milk on Wednesday, Milk Producers' Day. The Kee & Chappel Co., of Janesville, had a large tent on the grounds and on this day they served glasses of milk free to all those who cared for a drink of milk. The fact that over 400 gallons of whole milk was passed out in this manner goes to show that many took advantage of this company's donation. The live stock show was not as large as last year, though there was a good showing of all breeds. The Short-horns led in number and many creditable animals were shown. The sheep show was the best ever seen at this fair. All exhibition stock was in good condition this year. Many that felt they could not afford to fit their stock this year stayed at home, but those that did show had their stock in nice condition. Nothing happened to mar the week and the Janesville big fair is fast becoming one of the leading district fairs of the country.

The Short-horn show was the best on the grounds. Fewer undesirable animals were on exhibition than ever before. The feature in this division was the excellent herd owned by J. E. Kennedy, of Janesville. He is headed for the big fairs and has a wonderful herd of cattle. He was the heavy winner in this division. The Hereford show was light, W. Rott, Wonowoc, Wisconsin, being the only exhibitor. The showing of Holsteins was lighter than at some of the previous shows, though there was a good showing of this popular dairy breed. The two championships went to John L. Fisher, who had a very creditable showing. The Guernsey exhibits were made up of the Rock County Guernsey Breeders' Association and L. P. Martiny, Chippewa Falls, Wisconsin. Mr. Martiny is showing a very fine herd, which will be shown at the big eastern and western fairs. He won both championships and most all of the firsts. Two herds made up the Jersey show, W. W. Knight, Eagle, Wisconsin, winning the majority of the prizes. There was a good showing of Durocs, there being over thirty spring boars competing in one class Riley Martiny & Son, Baraboo, Wisconsin, were the heaviest winners. E. H. Parker & Son showed the grand champion boar. Three herds were represented in the Poland China classes. L. P. Martiny, Chippewa Falls, and Louie Reese, Brooklyn, divided the prizes quite evenly. There was a nice showing of Chesters, the competition being furnished by B. F. Babcock and Wm. F. Butts, of Evansville, and Chas. Rogers & Sons, Union Center. Babcock and Butts had a very fine showing of pigs and the competition was keen throughout.

Breeding For Exhibition.

To the Editor:—I find that many farmers have the idea that exhibition poultry are not profitable producers. I have found it to be the opposite, at least, with Buff Orpingtons. The Standard-bred Buff Orpington is essentially a practical fowl. The Standard calls for a full-breasted, deep-bodied bird of good length and a long, level keel, broad back of good length and width carried to the tail. Standard weights are: Cock, ten pounds; cockerel, eight and one-half pounds; hen, eight pounds; pullet, seven pounds.

As long as we stick to the Standard in our selection of breeding birds we will have a most practical fowl. The Buff Orpington is a great winter layer, a first-class setter and mother, and as a market fowl is unsurpassed.

A great many breeders have made the mistake of breeding considerably over Standard weight. By doing this they lose on the egg yield, the mothers are too clumsy as mothers, and they are too coarse and apt to be too leggy to top the market as a table bird. My experience has been that my most typical Orpington birds have been my most profitable, from the eggs and market standpoint, as well as the fancy.

The breeder that can combine with this Orpington type the proper shade of buff with strong undercolor and more of the inner fancy points, such as proper color of eye, beak and earlobes, combs of good shape and free from side sprigs, legs free from feathers, stubs, etc., than his fellow breeders, is the man that wins at the shows and the successful breeder of exhibition Buff Orpingtons. All of these last-named points have nothing to do with the practical side of the breed, but make them pleasing to the eye as well as profitable.

If I were about to start breeding exhibition Buff Orpingtons, I would take in a few of the largest shows in my vicinity and spend all my time studying the winners, thereby fixing in my mind the proper Orpington type and shade of buff to breed to, at the same time getting acquainted with as many of the breeders as possible and getting all the pointers possible from them. I would then go to the breeder I had the most confidence in and who breeds his winners, not buys them, and buy a trio of birds mated by him, or a couple of settings of eggs from his best hens for my foundation stock.

They will not be perfect birds, as the perfect bird has not yet been produced. But if they are mated properly the male will be strong, where the females are weak. For instance, if the male is a little long legged and short in the back with the tail carried too high, the females will be a little low down with nice, long backs and low-tail carriage. If the females are a little weak in color of eye and have gray in the wing the male should be especially strong in these points, etc. But when it comes to color, do not mate a dark bird with a light female and expect good results. Procure as near the proper shade of buff in both sexes as you can afford to buy.

You can perfect your strain better by line breeding than by introducing new blood in a haphazard way each year. Do not breed any closer than cousins. For a few years go back to the same breeder for new blood and tell him just what points your birds are weak in, so he can send you birds strong in those points. Then later on if you see another breeder's birds that you like especially well, that, as a strain, are strong where yours are weak, buy a bird or eggs from him and mate carefully with yours, keeping strict track of the progeny by marking the little chicks with a toe punch, so that when they are developed and should not come up to your expectations, you can discard the whole lot without damaging your strain. On the other hand, if they should develop the qualities you are looking for you can infuse the blood into your entire strain, thereby improving it.

It is a great game and the more you study it the more interested you become in the race to produce the perfect bird. At the same time, you are doing your share in the improving of the general utility flocks of the country.

Selling your big, husky cockerels that fall short on the exhibition points to farmers improves their flock, just as the pure-bred sire is doing in every branch of live stock breeding.

S. D. Seymour.

Milwaukee Co., Wisconsin.

Feed the Fighters! Win the War!
Harvest the Crops! Save the Yields!

On the battlefields of France and Flanders the United States boys and the Canadian boys are fighting side by side to win for the World the freedom that Prussianism would destroy. While doing this they must be fed and every ounce of muscle that can be requisitioned must go into use to save this year's crop. A short harvest period requires the combined forces of the two countries in team work, such as the soldier boys in France and Flanders are demonstrating.

THE COMBINED FIGHTERS IN FRANCE AND FLANDERS
AND THE COMBINED HARVESTERS IN AMERICA
WILL BRING THE ALLIED VICTORY NEARER

A reciprocal arrangement for the use of farm workers has been perfected between the Department of the Interior of Canada and the Departments of Labor and Agriculture of the United States, under which it is proposed to permit the harvesters that are now engaged in the wheat fields of Oklahoma, Kansas, Iowa, North Dakota, South Dakota, Nebraska, Minnesota and Wisconsin to move over into Canada, with the privilege of later returning to the United States, when the crops in the United States have been conserved, and help to save the enormous crops in Canada which by that time will be ready for harvesting.

Help Your Canadian Neighbors When Your Own Crop Is Harvested

Canada wants 10,000 Harvest Hands to take care of the

13 MILLION ACRE WHEAT FIELD

One cent a mile railway fare from the International Boundary line to destination and the same rate returning to the International Boundary. High wages, good board, comfortable lodgings.

An Identification Card issued at the boundary by a Canadian Immigration Officer will guarantee no trouble in returning to the United States.

AS SOON AS YOUR OWN HARVEST IS SAVED, move northward and assist your Canadian neighbor in harvesting his; in this way do your bit in helping "Win the War."

For particulars as to routes, identification cards and place where employment may be had, apply to Superintendent of Immigration, Ottawa, Canada, or to

Live Stock and Commercial Notes.

Gathered by Representatives of The Wisconsin Farmer.

Founding an Excellent Short-horn Herd.

ADVOCATES of Short-horns will be pleased to learn that an excellent herd is in the making at Portage, Wis., owned by Daniel H. Grady, one of the foremost lawyers in the state. His beautiful "Arlington Stock Farm," one of the finest half sections in the state, is located near Poynette. The buildings are substantial, yet not elaborate. Mr. Grady recently purchased the J. N. Tittemore herd, established some 12 years, containing some of the most noted cows known to the breed. Mr. Tittemore did not advertise as his cattle would warrant, and we are safe in saying that many breeders of this state and the Northwest never heard of the Tittemore Short-horns. Mr. Tittemore purchased Premier, at a long price, after he won first at Iowa. Premier died about 30 days ago, after 13 years of hard service. Premier was a son of old Choice Goods, out of Lad's Goldie by The Lad For Me. Mr. Grady has secured several daughters of Premier. Those that are acquainted with the popular Short-horn blood lines will appreciate the following cows secured by our lawyer friend: Village Maid 45th, out of imported Village Maid by Bapton Coronet; Red Lady 40th by Morven, a Bruce bull. The sire of her dam was Wanderer Gift by Wanderer by Old William of Orange. Seraphine is by Emperor 2d, out of Sarepta 5th by Knight of Orleans, tracing to imported Sorrel by Roan Gauntlet. The following animals are represented in this pedigree: Pride of the Isles, Champion of England, Lord Sackville and Roan Gauntlet, giving to this cow one of the finest Secret pedigrees ever written. There are two daughters and one granddaughter of Golden Queen out of Imp. Princess Alice, by the famous Duthie undefeated bull, Field Marshal. The sires appear in this pedigree as follows: Premier, White Sultan, Imp. Golden Crest, Golden Knight, Imp. Craven Knight and Field Marshal—can you beat it? Old Anoka Broadhooks, a daughter and granddaughter, were also purchased. In her prime Anoka Broadhooks was perhaps the best known show cow in the United States. She is by Ceremonious Archer. There are four Princess Royals, four Marr Missies, four Cruickshank Secrets, two Victorias, two Roan Ladys, one Bridesmaid, one Duchess of Gloster, and one Miss Ramsden in this herd. Barring accidents, many good things will come from this herd in the future.—Adv.

Abundant Pulling Power on the Farm.

A POWERFUL tractor can be made out of a Ford car at moderate cost with the Auto Pull tractor attachment. Here is a chance to get cheap power on the farm and to reduce the number of horses eating high-priced feed. Your car will not be damaged at all—after the heavy work is done the attachment may be removed in a few minutes' time and the car is again ready for pleasure driving. Every attachment is geared down to relieve strain on the car and transfer every ounce of power into pulling force. No parts have to be removed from the car in making connections—not even the fenders or the back wheels. Farmers who buy the Auto Pull make no mistake. It has many exclusive features which you should learn about. Even if you have no car, but expect to get one, learn about the Auto Pull anyway and plan on cutting down your power costs. A new book, "Farm Power Facts," tells all about the Auto Pull and contains much valuable information about power farming. You may obtain it free by writing at once to the Auto Pull Tractor Company, 1182 First National Soo Bldg., Minneapolis, Minn. A full-page advertisement of this attachment appeared in last week's issue of The Wisconsin Farmer.—Adv.

High Banks Farm and Their Durocs.

WE do not claim to be prophets, but Riley Martiny & Son, Baraboo, Wis., sure have the goods when it comes to Durocs They will be at Milwaukee with a herd, and we predict that they will be near the head of the class, if not the leaders. Every spring boar they have on the farm is for sale and while they do not advertise boars that sell at $25 they do advertise and sell boars that cost more because they are worth it. We all know that the best are the cheapest in the long run. Any kind of a boar is going to cost more this year, so why not add a little more and get some of the best that money and scientific feeding can produce? The Martiny boars weighed, August 1st, from 180 to 200 pounds, and they were not overdone. Of course, they have boars that were farrowed in April that are not so heavy and can be purchased with less money. They will describe the breeding, if you are interested, and will be glad to correspond with you. They have about 20 boars for sale, and we are frank in saying that they are as good as we have seen in the Northwest this year. Visit their pens at Milwau- and La Crosse. See page 15.—Adv.

Hughes' Short-horns.

MILKING Short-horns of the high-producing strains are advertised for sale on page 16 by Wm. Hughes & Son, Waukesha, Wis. They have a well-selected herd of well-bred individuals, that are of excellent type. One very noticeable feature of their cows is their good udder development and their fine, soft, pliable hides and silky hair. These factors, though seemingly unimportant for the production of milk, are invariably indication of good production ability. A bull that will improve the pedigrees and production of your next crop of calves can be secured here. See page 14.—Adv.

Spotted Poland China Exhibit.

A NEW exhibit of swine, the Spotted Poland China, will be seen this year at the Iowa, Kansas, Nebraska, Missouri, Illinois, Michigan, Indiana and Ohio State Fairs and also at the National Swine Show at Omaha. This exhibit will be quite an attraction to swine breeders everywhere, and every effort is being made to have a good exhibit of first-class animals. This class is being promoted by the fair boards in the different states in connection with the National Spotted Poland China Record Association, the newest record association in the United States, and one promising much assistance to the Spotted Poland China breed and the swine industry in general. This association asks you to write their secretary-treasurer, Fred L. Obenchain, Bainbridge, Ind., for their interesting and instructive breed paper, The Spotted Poland China Journal, their by-laws, a list of their members' names and a button bearing the likeness of one of their choice animals, all of which are free for the asking. Their annual association sales of animals, representing something like 100 herds from the East and West, will be held at Crawfordsville, Ind., October 19th and at Kalona, Iowa, October 29th. Address Fred L. Obenchain, Secretary, Bainbridge, Ind., for catalogs, and other information. See page 15.—Adv.

SALE DATES.

Short-horn Cattle.

Oct. 31, Carpenter & Carpenter and J. W. McDermott, Chicago, Ill.
Nov. 1, Herr Bros. & Reynolds, Chicago, Ill.
Dec. 1, Anoka Farms, Waukesha, Wis.
Feb. 18-22, Short-horn Congress Sale, Chicago.

Duroc Jersey Swine.

Feb. 22, Wm. Smiley & Sons, Albany, Wis.

Chester White Swine.

Feb. 6, Combination Sale, Wm. T. Butts, Walter George and B. H. Babcock, Evansville, Wis.

Shanks' Duroc Sale.

On August 14th W. N. Shanks held his annual fall Duroc Jersey sale at Worthington, Minn., resulting in an average of $160.10 on 47 head. Shanks' herd boar, Investor, made a decided hit with the large number of breeders in attendance. The boars by Investor were eagerly sought for and the good sows bred to him were appreciated. Investor is truly one of the real, big-type breeding boars of the country and those who will be fortunate enough to have Investor pigs for sale need not worry about a profit. The top sow again went to Wisconsin, she being a litter sister to the sow that topped the winter sale, also going to Wisconsin. W. C. Jenkins, Bangor, Wis., was the buyer, paying $380 for this good daughter of Lady Top Notcher 6th, bred to Investor. One of the fall boars by High Model sold to F. Christianson, Fairmont, Minn., for $505. The top spring pig was a son of Investor, going to Masden & Ayler, Granden, N. D., at $385. There was a large crowd of breeders present, and the result of the sale was very satisfactory. We follow with a complete report. Colonels Kraschel & Duncan sold the offering:

Sows.—No. 1, A. Obermarr, Worthington, Minn., $145; 2, W. C. Jenkins, Bangor, Wis., $380; 3, Geo. A. Romey, Melvin, Ia., $140; 4, J. A. Fey, Edgerton, Minn., $280; 5, J. A. Fey, $215; 6, Smith Bros., Worthington, Minn., $135; 7, H. Geistie, Forest, Minn., $125; 8, O. A. Reeves, Brewster, Minn., $115; 9, F. W. Year & Son, Melvin, Ia., $130; 11, O. A. Reeves, $110; 10, Blom Bros., Bricelyn, Minn., $105; 12, Pallesen Bros., Fulda, Minn., $150; 13, A. G. Fisher, Randolph, Ia., $220; 14, J. R. Conway, Westfield, Ia., $180; 15, R. E. Steele, Falls City, Neb., $95; 16, G. A. Cooper, Boyden, Ia., $90; 58, A. T. Martin, Sac City, Ia., $300; 59, E. A. Thompson, Carroll, Ia., $310; 60, O. S. Larson, Logan, Ia., $205.

Boars.—No. 17, W. C. Quinn, Lamberton, Minn., $125; 18, W. S. Barnes, Tabor, Ia., $180; 19, J. A. Irwin, Huntington, Ia., $90; 20, O. A. Reeves, $80; 21, C. Herbert, Rock Rapids, Ia., $105; 22, Masden & Ayler, Branden, N. D., $385; 23, J. R. Stofren, Humboldt, S. D., $135; 24, D. C. Cox, Fairmont, Minn., $140; 25, Dan Nystrom, Worthington, Minn., $215; 26, J. W. Brown & Son, Stewartville, Minn., $160; 27, M. Anderson, Cottonwood, Minn., $125; 28, S. O. Smalling, La Porte City, Ia., $105; 29, S. I. Anderson, Frost, Minn., $120; 30, Robt. Townsend, Ashton, Ia., $265; 31, Frank North, Vail, Ia., $100; 32, H. P. Cook, Luverne, Minn., $135; 33, Mr. Mohr, Monroe, Neb., $145; 36, Cannon Bros., Huntley, Minn., $80; 38, F. Christianson, Fairmont, Minn., $505; 39, Clyde Young, Allen, Neb., $175; 40, Mike Hogan, Worthington, Minn., $70; 43, S. I. Anderson, $85; 45, S. I. Anderson, $85; 46, R. L. SUMMARY.

28 boars	$4,095;	average	$146.25
19 sows	3,430;	average	180.52
47 head	7,525;	average	160.10

Ailing Animals.

Warts on Teats.

I have a fine three-year-old cow which has warts all over her teats. They are long and in the way when milking. Could you tell me what to do for them? She will not be fresh until next spring.

These are often very troublesome, yet they may be greatly benefited or entirely removed by smearing them thickly after each milking with pure olive oil. If they persist they may be cut off with a sharp pair of scissors and the sore touched with a stick of lunar caustic. They may now be oiled and the caustic repeated as demanded to prevent their renewed growth.

Sunburn.

Would like to have you tell me what the trouble is with my pigs and a remedy for same. I have them on rape pasture and feed them whey and water and about fifteen quarts of ground wheat and rye a day, about half and half, also slop from the house. The trouble with them is they are sore across the front shoulders and get a kind of dry scab on it which seems to act like scratches on a horse. They are also getting these sores back of their ears. It affects the old pigs as well as the small ones. I feed the spring pigs (twenty-four of them) about eighteen to twenty quarts of wheat and rye, half and half, ground, and about one pound of oil meal in about ten gallons of water.

Your pigs are probably troubled with sunburn. About all that can be done is to shield them from the direct light of the sun. If the inflammation is severe, cooling antiseptic applications may be applied.

Hog Thrift
Sprinkle or spray Dr. Hess Dip and Disinfectant about pens, feed troughs and yards and give your hogs a chance. Use it the year round. It will give them clean, healthy skins, free from lice and free from disease. That means better growth—more pounds of high-priced pork. Disinfect the barns and poultry houses. Also use it about the house, in the sick room, in sinks and cesspools to destroy disease germs and establish health conditions.
Dr. HESS & CLARK
Ashland Ohio

HOLSTEIN-FRIESIAN CATTLE.

Milford Meadows Stock Farm

OFFERS FOR SALE a very well-bred bull calf by Dutchland Creamelle Denver Prince (165048) that is better than a grandson of Colantha Johanna Lad and out of Canary Ormsby Johanna De Kol, a 28-pound three year old, 111.95 pounds in 30 days, which is practically a perfect individual. Write for extended pedigree. Other bull calves out of A. R. O. dams by same sire for sale.

EMMONS BLAINE, Prop. Lake Mills, Wis.

Are playing an important part in the development of the Holstein Breed in America. There are over 300 head in this State Accredited herd.

We sell bull calves at a price ranging from $150 up. Send for list.

PABST STOCK FARM
(Breeders, Not Dealers)
Oconomowoc Wisconsin
Box F

Purebred Registered

HOLSTEIN CATTLE

The most profitable dual purpose cattle are Holsteins, as impartial investigations conducted by experiment stations of Michigan, Iowa and Nebraska have conclusively shown. The Holsteins showed a greater gain per steer at a less cost per pound of either roughage or grain than any of the other breeds. Holstein calves are big, strong and grow quickly, and Holstein beef is as fine in texture and taste as that of any cattle. Pure-bred Holsteins have firmly established themselves as the world's best dual purpose breed. There's big money in the big "Black and White" Holsteins.

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America
F. HOUGHTON, Sec'y, Box 143, Brattleboro, Vt.

NOW IS THE TIME

HERE IT IS

$75.00 HOLSTEIN BULL, $75.00—Calved Jan. 30, 1917. Sire, Korndyke Hengerveld Artis 8th A. R. O. Dam, A. R. O. 18.75 butter 7 days, over 9,000 lbs. milk in 10 months. Grandam, 29.6. Bull is right in every way. Light colored. First check gets him.
SILVER SPRING FARM CO., Eau Claire, Wis.

RUST BROS.

OFFER the richly bred Holstein bull, Sir Ise Lotta Hengerveld 188663, born Aug. 18, 1915. Ready for service. His dam, Ida Lotta Hengerveld, at 3½ years made 21.34 lbs. of butter in 7 days, 31 days after calving. She is from a long line of heavy producing ancestors, records of her three nearest dams averaging 27.20 lbs. butter in 7 days. She has inherited this heavy producing ability, and transmits it. Sire of bull for sale is Daisy Johanna 5th, 1st prize two year old at Wisconsin State Fair, 1915. His dam has two A. R. O. daughters. Arthur Rust, West Allis, Wis.

10 Registered Holstein Friesian Heifers

Ages From 14 to 18 Months Old

THESE HEIFERS trace directly, on both sides, to SEGIS FAYNE JOHANNA, the world's record cow. Priced $150 each. I consider this to be a great sacrifice.
DR. B. L. WERNER Marshfield, Wis.

GOING FAST

SONS OF Sir Hengerveld Korndyke Ormsby, whose dam, Pietertje Maid Ormsby, made 35.56 in 7 days and 145.66 in 30 days and whose full sister has 1,255.62 butter and 25,418.3 lbs. milk in a year. We are now offering one born May 18, 1917, from an 18.25 lb. 3-year-old granddaughter of King of the Pontiacs. Calf is dark in color and a splendid individual. Write now for price, pedigree and photo to
WALCOWIS FARMS,
N. DICKINSON & SON Lake Geneva, Wis.

Pontiac-Ormsby Breeding

BULL, BORN JANUARY 23, 1917; dam Daisy DeKol Ormsby 3d. Record 25.15 lbs. butter in 7 days; 612 lbs. milk. Her dam is a 21.07 lb. daughter of Sir Ormsby Heng. DeKol, who has 66 A. R. O. daughters. His sire is out of the 35.43 cow, Pontiac De Nijlander. The bull is mostly white, and a grand individual, the making of a good show bull. For pedigree and further information address

POLAND CHINA SWINE.

100 BIG-TYPE POLAND CHINA SPRING BOARS AT $30.00 EACH

Double treated, and we record them. They will be worth $30.00 on the market by the time you are ready for their service. Farrowed in last of February, March and April, the greatest lot of high-class pigs we have ever raised, long and deep bodied, heavy boned, nicely marked and good backs. They are **from the most noted families of the great breed,** sired by **Giant Jumbo 2d, the 700-lb.** year-old son of **Giant Jumbo,** whose sire was the 1,055-lb. Maid's Halvor 1st; his dam sired by the 1,000-lb. and over Big Bone 2d, his grandam by Mouw's noted Big Jumbo. There is no bigger breeding. Others by **Long Expansion, a 900-lb. two year old,** and **Pawnee Wonder, a 1,000-lb. son of A Wonder.**

The dams are sows weighing from 600 to 800 lbs. and over, of the most intense big-type blood lines. **Buy your boar now and save from $20 to $50.** Boars will be high and scarce this fall.

Send your check right with the order, tell us the kind of a boar you want and we will send him or **return your money.** Come and see our herd, one of the greatest **in America,** as well as one of the most up-to-date, pure-bred stock breeding establishments.

W. H. COOPER Hedrick, Iowa

The Truth About Tractor Lubrication

By Those Who Know

THEORY has its place in any scientific equation. But for everyday purposes we must rely on practical experience. Recommendations by the Standard Oil Company must be correct, not only in theory but backed up by practical, every-day experience under working conditions.

Your tractor pulls a terrific load. The working temperature of your engine is extreme, whether you burn gasoline or kerosene for fuel.

You must have an oil that will maintain its viscosity under any and all conditions. If it doesn't, metal will touch metal and there is trouble—serious trouble—more expensive than your lubricating oil for several seasons will amount to.

Crookston, Minn., June 28, 1917

To Whom It May Concern:—

Considerable advertising has been done by a great many Oil Companies, stating the amount of saving, etc., which could be made through the use of high priced lubricating oil, and as I am the owner of a Big Four—four cylinder—30-60 Gasoline burning tractor, I was interested in finding out whether high price had anything to do with high-quality, so decided to have a test made.

June 26th I filled my engine crank case with an oil retailing in Crookston at 65c per gallon when purchased in barrel quantities, and which is the oil recommended by the company manufacturing it to be the proper oil for summer use in a 1915 model, Big Four 30-60 tractor.

I ran the tractor myself, pulling the same load under exactly the same conditions as those previously encountered while using Stanolind Gas Engine Tractor Oil, and although there was practically no difference in the weather temperature, it only took two hours work pulling a 30-inch, Model A, Russell Elevator Grader until the temperature of the cooling system had risen 50° higher with the 65c oil than when using Stanolind Gas Engine Tractor Oil.

It is needless to say that with this difference in temperature of the cooling system more gasoline and lubricating oil was used. I, therefore, feel that I can conscientiously recommend Stanolind Gas Engine Tractor Oil, even though it is much cheaper in price, to all operators of Big Four 30-60 Gasoline Burning Tractors.

My tractor was purchased during the season of 1915, and since that time to date I have plowed 1800 acres, broke 475 acres, and have pulled a heavy road grader more than 800 miles in the construction of roads. I have never found it necessary to overhaul the motor as the compression is good and the tractor has plenty of power.

With the exception of one barrel of lubricating oil, I have never used other than Stanolind Gas Engine Tractor Oil manufactured and sold by the Standard Oil Company of Indiana, which is selling today at 29.4c per gallon F. O. B. Crookston.

Yours very truly,

[Signed] E. A. McCOY.

A High-Priced Oil Does Not Mean The Best Oil

There are lubricating oils on the market which sell for double the price of Stanolind Gas Engine Tractor Oil, Standard Gas Engine Oil and Polarine.

But these latter oils are made by the Standard Oil Company (Indiana) and for that reason can be, and are sold, at a low price.

They are made especially for tractors. They are the results of exhaustive and extensive research work on the part of the most complete assemblage of lubricating experts who have devoted their lives to the solution of lubricating problems.

These men recommend Stanolind Gas Engine Tractor Oil for tractors using kerosene; Standard Gas Engine Oil for tractors burning gasoline—and Polarine in various grades for tractors having high speed motors.

They Say—

that these oils add power and life to your motor; that they are of great durability and economical in use; that they lubricate thoroughly even the remotest reciprocating surfaces, reducing friction to a minimum; that they maintain their viscosity even under extreme heat conditions to practically the same degree as the so-called heavy oils.

What Leading Tractor Builders Say—

The International Harvester Company recommends Stanolind Gas Engine Tractor Oil for their tractors. J. I. Case Threshing Machine Company recommends Stanolind Gas Engine Tractor Oil for their tractors, as do numerous other manufacturers recommend one or the other of these superior lubricating oils for their respective tractors.

And the letter from Mr. E. A. McCoy of Crookston, Minn., at the left, needs no comment. If you go to a physician you accept his diagnosis—you don't dispute the judgment of a lawyer on legal matters. Accept the united recommendation of the largest manufacturers of tractors, of the largest refiners of oil, of the best petroleum research men, and an enthusiastic tractor owner.

THE WISCONSIN FARMER

VOL. XLVI. NO. 35. THURSDAY, AUGUST 30, 1917. WHOLE NO. 1857

Thirty Years With Brown Swiss.

IN SPITE of the advances of the other dairy breeds during the last ten years, the Brown Swiss breed is still being backed by a loyal group of breeders in different states of America. These breeders pinned their faith on the Brown Swiss cow many years ago, and they refuse to believe that the merits of this breed of dairy cattle will forever go unnoticed. Their conviction that the day will also come when Brown Swiss cattle will be numerous and in demand is based on various strong points which they point out with convincing confidence.

One of the most successful and also one of the pioneer breeders of Brown Swiss cattle is H. W. Ayers, of Honey Creek, Wisconsin. It is more than thirty years since Mr. Ayers bought his first cow. Through a mistake a Brown Swiss cow from an Illinois herd had been included in a shipment of cattle to the stockyards where Mr. Ayers had just finished unloading some stock of his own. A commission man called his attention to the lone Brown Swiss in the bunch and offered the cow to Mr. Ayers for something less than $100. That was a high price for a dairy cow in 1885, but Mr. Ayers took her home and a year later sold a bull calf from this cow for $75. That woke him up to the fact that dairying meant money and pure breds gave bigger returns than scrub cattle. Later on he sold a heifer for $50 and then decided to go into the breeding of dairy cattle on a bigger scale. He went back to Illinois and bought three registered heifers and a bull calf for what was then considered stupendous prices and some time later purchased a whole herd of registered Brown Swiss cattle from another Wisconsin breeder.

Mr. Ayers' success in the show ring is known to every cattle man who has made the circuit.

The actual showing of the cattle has always been entrusted to Monte Ayers, who has had charge of the herd for a great many years. It is his round, jolly face that most breeders are familiar with. Monte is a cousin of H. W., and his interest in Pleasant View Farm ends with the cattle. But he takes pride in the accomplishments of the dairy which is his in part. The show-ring record of the Ayers Brown Swiss herd is a long one. One animal alone brought sixty-five championships and grand championships to the farm in five years. This was the bull, Zell, imported in dam from Switzerland and bought by Mr. Ayers at the age of six months. The entire Ayers herd shows a uniformity of breeding. The Brown Swiss cow which we usually see has about her a certain coarseness in the head and horns and a somewhat unnecessarily large frame. The bones seem extremely heavy. There is nothing of all this in the Brown Swiss cow at Pleasant View Farm. From the very first the Ayers boys have kept their eyes on the dairy end of the business altogether. Years ago when the fairs made no special class of the Brown Swiss cattle, but simply grouped them as dual-purpose cows, many breeders accepted this judgment of the fair boards to mean that they should try to breed both beef and dairy qualities into the same animal. Mr. Ayers makes no claim for a dual-purpose animal. He has bred for more than thirty years for refinement of bone and refinement of head and in the horn. Looking over the young stuff and the mature cows this point of quality is the most striking thing one notices. Refinement shows all over the body, in the handling of the skin, the straightness of lines, the clean-cut appearance around the head, and, though the horn is large, it is not coarse. The cattle are allowed approximately six weeks between drying up and calving time. The average weight of a mature Brown Swiss cow ranges right around 1,400 pounds. Cows are never bred to come in before they are two and one-half years old at Pleasant View Farm. This is done so the cattle will keep their size and not become smaller through early breeding after a few generations. Alfalfa and clover hay, together with a mixture of barley, bran and other concentrates, form the herd ration, which is dished out in proportion to the yield and the size of the cow. Monte Ayers does not believe in a strict one pound of grain to three and one-half pounds of milk ratio. He insists that each cow requires according to size and the amount of work she does either a large or a small ration. Some cows will even produce more with less feed than on a larger ration. The herdsman must determine this from previous experience and close observation of each animal. Two other dairy breeds have, according to Mr. Ayers, received a fair trial on the farm, but their performance as a herd did not equal that of the Brown Swiss, and—[Concluded on page 12.]

FARMERS' MARKET

Wanted--For Sale--To Exchange

THIS department is to bring the buyer and the seller together. You may have live stock, poultry and eggs or machinery for sale. You may want to sell or buy a farm. Write your copy for the advertisement. The rate is six cents per word, each insertion.

The Wisconsin Farmer, Madison, Wis.

FARM LANDS.

THOUSAND-ACRE live stock and grain farm in middle Georgia, well adapted for cattle and hogs, healthy section, rich land, fine climate. Grow two crops each year. Will farm on shares five to ten years proposition with reliable man. This farm managed right will make man of small means independent. Former owner, now deceased, made nice fortune raising live stock. Would consider selling half interest. Party would be required to invest $2,500 in live stock. References given and required. Address E. T. Nottingham, Owner, Thomaston, Ga.

EXTRA GOOD BARGAINS—120 acres level cut-over land; clay loam soil; log buildings; spring brook; 2¾ miles to cheese factory; $1,800. 80 easily cleared, $1,400. 40, school on corner, $500. Good 40-acre farm with stock and crop, $1,800. Well-improved, 80-acre farm with stock and crop, $5,500. Half cash. Bargains with easier terms on application. The E. L. C. Co., C-M, Dept. 10, Merrill, Wis.

ALABAMA ALFALFA LAND, Demopolis Section—No part of America equal of this in the great combination of alfalfa, corn, velvet beans and grass. Rolling lime land, fertile, healthy country, artesian wells, tick free. Lands are cheap, quality considered. Full information and photographs. C. C. Clay Alfalfa Land Co., Demopolis, Ala.

HARDWOOD cut-over land, silt loam, clay subsoil. Not sandy or gravelly. Close to towns. Good roads. In the heart of the dairy country. You deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 9. North Western Lumber Company, Land Department, Stanley, Wis.

WE WANT every homeseeker to investigate Central Wisconsin. Send for our land list and state map of our choice Central Wisconsin dairy and grain farm bargains. Pictures of all our farms sent free. Write today. Graham's Land Office, Marshfield, Wis.

WOULD YOU SELL YOUR FARM if you got your price? Sell direct. No commissions. Particulars free. Charles Renich, G-2, Woodstock, Illinois.

165-ACRE FARM—Good land, good buildings, 47 miles from Chicago, 14 miles south of Gary, Ind. $140 per acre. J. W. Sherburne, LeRoy, Ind.

GOOD FARMS in a good country. Always sure crops; no destructive storms. Good bargains are yours by writing Geo. C. Rice, Webster, Wis.

PORTABLE ENGINES.

ONE 12 H. P. United Engine Co.'s portable gasoline engine, friction clutch, pulley, $275. Two 9 H. P. Lambert portable engines with friction clutch, pulleys and Webster magnetos. These are new engines, fully guaranteed and will be sacrificed to obtain space for fall goods. John Dorsch & Sons, 209-211 Wells St., Milwaukee, Wis.

HOLSTEIN-FRIESIAN CATTLE.

REGISTERED HOLSTEIN BULL, 10 months old; two of his dams averaged 105 lbs. milk in one day and 40.67 lbs. butter in seven days, officially; $150. Wisconsin Live Stock Association, Appleton, Wis.

MONEY TO LOAN.

MONEY TO LOAN on Wisconsin farms in amounts of $5,000 to $25,000. Security must be twice the amount of the mortgage. 6% with privilege of paying $100 or more at any time. Address 206 Washington Bldg., Madison, Wisconsin.

LIGHTNING RODS.

LIGHTNING RODS that are guaranteed protection, $250.00 to find a building burned by lightning with our rods. L. F. Diddie Co., Marshfield, Wis.

LEARN TELEGRAPHY.

TELEGRAPH OPERATORS IN DEMAND—One superintendent writes: "Can use 25 operators tomorrow." Ladies or gentlemen. Wisconsin School of Telegraphy, Oshkosh, Wis.

LEARN TELEGRAPHY—Positions guaranteed; Young men and women. Write Northwestern Telegraph School, Eau Claire, Wisconsin.

PERCHERON STALLION FOR SALE.

PURE-BRED imported Percheron stallion, Eutopia (69032) 50785. Price reasonable. Address H. A. Bender, Route 3, Cambria, Wis.

ALFALFA SEED.

TIMOTHY SEED—$4.00 per bu. High purity and germination, first class in every way. Timothy-alsike mixture, $4.50 per bu. Satisfaction or your money back. Henry Field, Shenandoah, Ia.

RYE—Wisconsin pedigree No. 1. Write for prices. A. H. Buehler, Baraboo, Wis.

AGENTS WANTED.

BIG MONEY selling Milwaukee Shock Absorbers for Ford cars. Territory going fast. Write today. Milwaukee Shock Absorber Co., Milwaukee, Wis.

SALESMEN WANTED.

SALESMEN WANTED—Owing to draft and enlistment we have a few well-worked territories open and will be pleased to hear from interested persons. Applicant must be exempt from draft. McConnon & Company, Dept. T, Winona, Minn.

STANCHIONS.

ROY SWING STANCHION—Good enough for the best stable and price low enough for the poor man; none better. Ask for booklet describing them. Manufactured by Roy Brothers, East Barnet, Vt.

FURS.

SIBERIAN FUR FARM, Hamilton, Canada, breeds foxes, marten, mink, ermine, skunks and black Siberian hares. Information and price list free. Write address plainly.

WANTED—GOATS, HONEY, SORGHUM, CHICKENS.

WANTED TO BUY—Milk goats, extracted honey, sorghum and chickens. Wm. Dietz, R. R. 2, Rockford, Illinois.

CURRENT EVENTS

FEW, if any, tangible results of the pope's appeal for peace are yet in evidence. The allied governments which are fighting Germany propose to send separate answers and President Wilson is expected to draw up a strong document, which will be most notable among his official state papers. The allies' replies will probably all be along the same line, but couched in different terms. While the allies are a unit against accepting any peace now which does not put an end forever to Germany's militaristic ambitions and tendencies, Germany and Austria are said to look favorably upon the peace plan. Prince von Hohenlohe-Schillingfuerst, Austrian ambassador at Berlin, delivered a peace talk at the German emperor's birthday reception at the embassy. He said that the day of peace could not longer be far distant and that the good sense of the people fighting Germany and Austria must soon knock aside the statesmen who were barring a way to peace. He added that meanwhile the central powers, who were not fighting to make annexations by violence, would not drop their weapons a second before the allied governments abandoned their piratical aims. Each side is suspicious of the other, so that little can be done until one or the other makes a real opening and announces a plan in detail of what they will accept or what they will grant. In the meantime the armies in the field are fighting as hard as ever and the loss of life continues frightfully heavy.

AUTHORIZATION to issue bonds and certificates totaling $11,538,945,460 at one time is provided in the new war budget bill embodying recommendations of Secretary McAdoo. In addition authority to float a $7,538,945,460 4 per cent bond issue to care for a previous $3,000,000,000 and a future $4,000,000,000 allied loan authorization, the secretary desires power to issue additional certificates of indebtedness to the amount of $2,000,000,000 and an equal amount of war savings certificates in a form available to small investors. If these new bonds are issued, as planned, a portion of them will be used to retire the recent liberty loan, the new bonds to draw a higher rate of interest, but to be subject to taxation, netting the investor about the same as the first liberty loan. It is expected that everyone who subscribed to the recent loan would take an equal, or greater, amount of the new loan, just transferring their subscriptions. The government is going to need an immense sum of money for the war and to loan to its allies in the next year and the people must expect to have several bond issuances and to have many demands upon their purses and bank accounts.

UNDER the authority conferred upon him by the food-control bill, President Wilson has fixed coal prices for every mine in the United States. This will insure a reduction of prices in most parts of the country and give to the people greatly-needed relief from a situation which was rapidly becoming intolerable. Prices were set on cost of production on estimates furnished by the federal trade commission after months of exhaustive investigation. The country is divided into twenty-nine districts and every producer in a district will market his output at the same price. The president named no agency to carry out the provisions of his order, but is expected to appoint soon a coal administrator who will be given entire control of the coal industry. Rumor names President H. A. Garfield, of Williams College, as the man. Mr. Garfield now heads a committee named by the president to fix a government price for wheat. His work will end before September 1st, when the wheat committee probably will be dissolved. The prices named for run of mine coal in the large producing districts average slightly more than $2. In a few districts they are below that figure, and in the western territory they are higher. Washington state is highest, with $3.25. Already, the largest firm of retail coal dealers in the country has announced a reduction in price, ranging from $1 to $1.80 a ton, which will save the coal buyers of the territory served by this company hundreds of thousands of dollars before the winter is at an end.

THE legislative program remaining for the extra session of congress has assumed such definite form that leaders express hopes of vacation about September 15th or not later than October 1st. Included in the program for disposal within the next three or four weeks are: The $2,006,000,000 war tax bill. A new war budget authorizing about $7,500,000,000 in bonds, probably at 4 per cent, for further loans to the allies and to retire the $3,000,000,000 of 3½ per cent bonds already authorized, and providing for $2,000,000,000 worth of certificates of indebtedness and a like amount of small denomination war savings certificates. A deficiency appropriation measure aggregating between $6,000,000,000 and $7,000,000,000 now being prepared by the house appropriations committee. The administration trading with the enemy bill which passed the house July 11th. The administration measure for insurance of soldiers and sailors. The Webb export trade bill, peace resolutions, in the senate espionage act and several minor measures. Most of the measures, leaders believe, can be disposed of while the war tax bill is in conference.

MOST of the record-breaking corn crop will be past the point where frost can damage it at the average date of the first killing frost, in spite of the fact that the crop is from ten to fifteen, and in places even twenty days later than the average at this season of the year in central and northern districts, says a Washington report. Reports said the Kansas crop was recovering from the effect of the drouth to a surprising extent, due to recent rain. Warmer weather was decidedly favorable for corn in all central and eastern sections during the last week, but lack of rainfall was being felt to some extent from Iowa eastward. Harvesting of winter wheat was nearly completed last week and yields continued good. Plowing for the next winter wheat crop is progressing under very favorable conditions of the soil in the southwest. Spring wheat and other grain harvesting is making satisfactory progress in most northern sections of the country, and the yield in North Dakota and Montana is better than was expected.

CHANCELLOR MICHAELIS, of Germany, informed the main committee of the reichstag that Germany would not reply to the papal peace note until she had consulted her allies. Dr. Michaelis added that in view of the fact that Germany had previously repeatedly and positively indicated her readiness to enter peace negotiations the vatican's appeal, of course, is looked on with sympathetic approval. Germany, however, could not again offer peace in face of the summary rejection of previous proposals and continued declarations by the entente that no peace is possible until the central powers are defeated and crushed. He said Pope Benedict's proposal was spontaneous and not at the request of the central powers.

MAJOR GENERAL PERSHING, the American commander of the forces in France, declares that the war can be won only by hard and forceful blows delivered by a well-trained American army working in conjunction with the allied armies. Deploring the lukewarmness of the American people in regard to the war, General Pershing adds: "Every man, woman and child should support the administration in its determination to arm and equip the American army and to keep up its morale and that of the allied armies. The war will not be won by talk or by subscribing to the Red Cross. The American people must come to a full realization of what the war means. It can be won only by striking hard and forceful blows, and not otherwise."

Now Cook Swatted Rooster.

"Swat the rooster week" is past and now it's up to mother to cook the rooster that father has swatted. And rooster meat need not be tough meat, either, if it is cooked correctly, says the home economics division at Ames, Iowa.

Hang the dressed fowl up for several days before cooking to soften the fibers, but be careful it does not spoil. Long, slow cooking in moist heat is best for meat that is likely to be tough. The fireless cooker is the best for this. Add one or two tablespoonfuls of vinegar to the water to help soften the fibers. If more rooster meat is on hand than can be used at once, and if the supply of cans is not short, can the surplus meat by the cold pack method for winter use.

Do not always serve boiled rooster; vary the dish. Mix the meat with crumbs, seasoning and eggs and make "rooster loaf," similar to meat loaf. Make croquettes or chicken pie or jellied chicken. Many good recipes can be found, using either gelatin or the chicken aspic to set the stock for this latter. Make a scalloped dish, using chopped meat, rich and gravy.

In case the roosters have not yet been swatted, it is best to separate them from the flock and feed them on a mash of ground oats, bran, shorts and tankage moistened with sour milk. This will help soften the flesh.

Excellent opportunity to secure good farm at reasonable price. Write for full particulars. **N. C. NISSLY** Dallas Center, Iowa

FARM WANTED

WANTED to hear from owner of good farm for sale. Give cash price and description. Write **JOHN H. OAKS, 432 Main St., Oshkosh, Wis.**

Feed the Fighters! Win the War!

Harvest the Crops! Save the Yields!

On the battlefields of France and Flanders the United States boys and the Canadian boys are fighting side by side to win for the World the freedom that Prussianism would destroy. While doing this they must be fed and every ounce of muscle that can be requisitioned must go into use to save this year's crop. A short harvest period requires the combined forces of the two countries in team work, such as the soldier boys in France and Flanders are demonstrating.

THE COMBINED FIGHTERS IN FRANCE AND FLANDERS AND THE COMBINED HARVESTERS IN AMERICA WILL BRING THE ALLIED VICTORY NEARER

A reciprocal arrangement for the use of farm workers has been perfected between the Department of the Interior of Canada and the Departments of Labor and Agriculture of the United States, under which it is proposed to permit the harvesters that are now engaged in the wheat fields of Oklahoma, Kansas, Iowa, North Dakota, South Dakota, Nebraska, Minnesota and Wisconsin to move over into Canada, with the privilege of later returning to the United States, when the crops in the United States have been conserved, and help to save the enormous crops in Canada which by that time will be ready for harvesting.

Help Your Canadian Neighbors When Your Own Crop Is Harvested

Canada wants 40,000 Harvest Hands to take care of its

13 MILLION ACRE WHEAT FIELD

One cent a mile railway fare from the International Boundary line to destination and the same rate returning to the International Boundary. High wages, good board, comfortable lodgings.

An Identification Card issued at the boundary by a Canadian Immigration Officer will guarantee no trouble in returning to the United States.

AS SOON AS YOUR OWN HARVEST IS SAVED, move northward and assist your Canadian neighbor in harvesting his; in this way do your bit in helping "Win the War."

For particulars as to routes, identification cards and place where employment may be had, apply to Superintendent of Immigration, Ottawa, Canada, or to

FAMILY CIRCLE TALKS BY THE PUBLISHER

THE WEST IS AWAKE.

I HAVE already expressed my views on the charge all too often made by easterners that the Middle West is not awake to the seriousness of the war situation and is not alert in its response to the call of patriotism. I have pointed out how thousands of farmers responded to the call of Uncle Sam for ready money and bought Liberty Bonds in large quantities. I have told of whole rural mail routes which subscribed liberally to the Red Cross fund. I have told of the eagerness with which farmers have set about to make this a bumper crop year, no matter whether the government guarantees a minimum price for our products or not. I may not have told, but most of you know, how the boys from the farm are making up a large proportion of those who have been enlisting in our army and navy for many weeks past. My friends, the Middle West was never more awake, never more alert.

Do not take my word for this alone. Let me reprint something I read just the other day. It was written by a grain-belt writer, Mr. Henry J. Allen, of Kansas, and appears in one of our great national magazines, Collier's Weekly. Mr. Allen has heard the same charge which I have heard and finds it as unfounded as I have so often declared it to be. Here is the vigorous way he disposes of it:

Every day we go to the train and see some of our best young men off to training camps, or to the East, and we very well know that some of them are starting upon the long adventure. There is no holiday spirit in the air. There is no need of anything more to wake us up. There is no call for any more patriotic meetings. We didn't want the war; it is not popular now with us, but we are not organizing any protests. The West is not complaining.

I have lived in the Middle West many years. I have seen it under every form of trial—grasshoppers and drouth and prairie fires, populism and usury and mortgage foreclosures. I have seen it excited to the highest degree and sullen to the lowest. But I have never seen it just as it is now—eager, strong, resolute, realizing the full measure of its responsibility, realizing the cost, but not counting it. With a mingling of French fervor and English sobriety it is getting ready to go the limit in every form of service left to our initiative or to the command of the government. Until the heroic throbbed again in us, we did not realize how tired we were of being fat and rich and ineffectual. Every day we find men who are childishly glad to realize that the vision of the fathers is yet in us, that sturdiness, latent through the years, has not departed from us.

Mr. Allen has stated the situation admirably. We did not want the war, it is not popular with all of us now, but we are confronted by a duty which none of us propose to shirk, even though we may long and work and pray for the day to come quickly when it shall no longer be ours. We are indeed raising bumper crops; we are indeed sending the flower of our young manhood to fight under the colors on foreign shores. We shall continue to make our fields yield to their utmost, even when the day shall have come when our boys and young men are no longer demanded. We are far from being asleep, far from being indifferent to the needs and the duties of the hour. I firmly believe that patriotism—the real, simon-pure brand that sees and considers the needs and the problems of the future as well as of today—is more nearly at white heat here in the Middle West than anywhere else in all the country. We have no selfish ends to attain here, we seek no personal advancement or enrichment; we are resolved to do whatever shall be demanded of us to keep honor and righteousness alive in the world. Until the day when Peace shall fold her wings over a world which has laid down its arms we shall continue to do our duty, hard though it may be at times, even to the greatest of all sacrifices: our own life and the lives of those most dear to us.

A GOOD START.

ABOUT this time last year I was explaining the workings of the new federal farm-loan law to my readers and predicting that if it were given a fair trial it would be found deserving. The law was approved a year ago last month and the members of the federal farm-loan board were appointed a year ago this month. The law has not really been in effect, so far as the farmer's ability to get much money thereunder, for a year, however, because it was not until late in the spring that loans were actually made. But enough time has elapsed to show that the law will eventually be a big boon to farmer-borrowers and that the hopes of its framers and sponsors are likely to be fulfilled.

I am advised by members of the federal farm-loan board that something like twenty-five farm-loan associations are being chartered daily, each association representing nearly $50,000 worth of loans. These loans are very evenly distributed throughout the nation. Farmers in states of high land values, where interest rates have been low in the past—such states as those of the grain belt, for instance—are making use of the system to an even greater extent than was expected. During July, for instance, loans to the amount of $536,400 were approved in Indiana. Now, the farm-mortgage debt of Indiana is only about one-third that of Wisconsin and one-fourth that of Iowa, while the interest rates are lower there than in either of these two states. It seems to me that when low-interest states, such as Indiana, take advantage of the new law to such an extent, it is bound to work out to the advantage of farmers in the states where higher rates are charged and where the aggregate farm-mortgage debt is larger.

My Washington correspondents advise me that in the last two and one-half months more than 800 farm-loan associations have been chartered, representing total loans of approximately $40,000,000. Additional associations now being organized will run the total of loans applied for the first year far beyond the $100,000,000 mark. This is but a small percentage of the total four-billion-dollar farm-mortgage debt of the United States, but a good start is being made and I look to see the law become still more effective before another year has passed.

BACK TO BUCKWHEAT.

WHEN we stop to consider that our buckwheat yield last year was only one-half what it was fifty years ago (I am comparing the government's 1916 and 1866 crop reports), while last year's price per bushel was almost double the price of the 1866 crop, we may well ask if the grain-belt farmer is not overlooking a possibility here. Our nation, and the world at large, is turning to substitutes for bread. Why not a return of the good old days of buckwheat cakes; not the thin, sole-leather imitation that masquerades as the genuine nowadays; but the real, old-time, golden-brown, genuine buckwheat cake flooded with country butter and maple sirup? I find that I cannot possibly do the subject justice myself; let me quote a better writer, as I find him giving expression to what I would like to say, in a recent issue of the Kansas City Star:

Not many of the younger generation ever saw buckwheat growing, for the acreage is limited, and even buckwheat griddle cakes are a rarity. But the old settler leans back against the store front and recalls when buckwheat cakes were on nearly every table the winter through and when a young woman who couldn't mix a good buckwheat batter wasn't considered "fitten" to wed and take charge of a household.

"Buckwheat cakes and Injun batter makes you fat, and makes you fatter," hums Old Settler, harking back to the days of fifty years ago when that was a popular song in Missouri.

Buckwheat cakes and maple sirup!

Not the kind of maple sirup they make nowadays, though. No, siree. Not that sort of stuff, thin enough to fill a fountain pen with, but maple sirup boiled down until it was thick as bees' honey. Take a buckwheat cake hot from the griddle, fat, thick, brown, light; spread it with country butter that melts as it touches; then upend the sirup jar over it and let the thick, amber colored fluid trickle down until every bubble hole on the cake is swimming full of hot butter and sirup, and——

"Hush your mouth," exclaims Old Settler. "There was nothing so good, unless it was hot buckwheat cakes and bees' honey."

One beautiful feature of growing buckwheat is that its bloom is peculiarly rich in honey of a high quality, as good as clover honey, and, Old Timer says:

"When you planted buckwheat you killed two birds with one stun; you grow'd the buckwheat to make the cakes and the honey to eat on 'em both at once."

There is a practical as well as a poetic and gastronomic side to buckwheat raising. I am indebted to Mr. Jewell Mayes, secretary of the Missouri State Board of Agriculture, for the information that buckwheat does best on sour lands and on lands poisoned with cockleburs, morning-glories, cotton weeds and the like. It will not only smother them out, but it pays something like $15 to $25 an acre while it is doing this good work. Yet the fact remains that here in the grain belt, where we produce two-thirds of all the oats of the nation, more than one-half of all the corn, almost one-half of all the wheat and two-fifths of the hay, we grew last year but one-twentieth of the buckwheat. This, too, in the face of the fact that last year's crop brought 40 cents a bushel more than the 1915 crop, passing the dollar mark for the first time in our national history.

When a crop is so valuable both in dollars and in satisfied appetites, is there not every reason why we should consider it in laying out our plans for another year? Even the younger generation, which never knew the real "buckwheat cakes and Injun batter" should give heed. Because we have never yet seen Heaven is no reason why we should not long for the day when this rapture shall be ours.

MONEY VS. HAPPINESS.

MY READERS will recall that the Wisconsin farm woman who wrote me such an interesting and touching letter, telling of her endeavors to get out of the tenant rut, expressed the hope that her husband could secure a position as cow tester. A number of those who have written to me, giving this woman advice or the results of their own efforts to get ahead, have suggested that this position would take the husband away from home much of the time and that this is a factor to be seriously considered. Better make less money and keep the family united is the keynote sounded over and over again.

Let me quote a portion of a letter written by Mr. J. N. Shirley, of 116 South Emerson Avenue, Indianapolis, Ind., who owns several hundred acres of fine farm land and seems very anxious to give this Wisconsin couple a chance on one of his farms. Mr. Shirley has this to say about the cow-testing position in this particular case:

This woman says something about cow testing. Don't encourage her and her husband in this direction. Such work takes the husband from home and means travel, boarding and clothing expenses that can be avoided at home. Besides, cow testing and "on-the-road" work cannot be followed well in one's declining years. Tell this woman and farm boys and girls to stay on the farm; tell them to become experts in something they want to follow all their lives and not have to learn a trade or take up a life of drudgery after they have spent the best of their lives on the road or in the office or machine shop and finally are displaced by younger men or women who, in their turn, will be kicked out when their most active days are over. Almost every day I hear some city or traveling man say he expects to be a farmer some day—just as soon as he gets able to buy and equip a farm, in other words, when he gets to be a millionaire. Suppose he were a millionaire, he could not farm after spending most of his life selling goods or testing cows. David could not use Saul's armor, and a dry goods clerk or a doctor don't make a good farmer in his old age; neither does a retired farmer make much of a success as a city business man, and I am sure he is like a fish out of water if he does nothing in the city.

Mr. Shirley's point is well taken; farming is every bit as much a profession as the law or journalism; it must be studied scientifically and followed with the closest care if success is to be won. No man can turn to farming in his old age or ill health and expect to make a success out of it without determined attention and the most conscientious study and hard work. The day of "only a farmer" has passed, never to return. Successful farming is now a fine art, a fact testified to by those who have succeeded and those who have failed alike.

Another letter which is along somewhat the same lines, although giving more detailed information as to the work of the cow tester, comes to me from Mrs. O. Wharam, of Mason City, Iowa, and is as follows:

In reading over the interesting things you have to tell us I came across the letter from a Wisconsin lady, asking about the work along the line of cow testing. As we have had a tester at our place, what I know may be of some little service to them. The work, part of it, is not hard. It is mostly tending to business that counts. The testing is done with a testing machine that may be bought from most fair-sized hardware supply places. But if a testing association is formed I think they would see to getting the machine and the directions for use. The men that we employed came once a month and received $1.25 per cow when there were fewer than twelve cows, and $1 per cow when there were more. That was for the inexperienced man. Those who had a regular state college dairy education, of course received more, because they knew just how much of each grain to feed to make a good ration that would make the cows produce more milk and cream. I believe the first one got $50 and his board and room. You see it means being away from home all the time unless the farms are close together.

After all, will it make toward greater happiness and freedom if the financial income is materially increased, but the father is taken away, a great part of his time, from his brood of loved ones? Better a united family, around a table laden only with the bare necessities, than a divided family surrounding a table groaning with delicacies. The chair of an absent one, as the family gathers around the dinner table, far more than offsets a few more (or many) dollars added to the family income. Think of these things when you are tempted to accept work which takes you away from home for a long time. After all, there is more to this life than money, necessary as it is at all times.

THE WISCONSIN FARMER, Madison, Wisconsin

Save the Corn Fodder.

There will be a serious shortage in the supply of hay until the 1918 crop is available. In some localities dairy farmers have pooled their interests and undertaken to buy hay in the West in hundred-ton lots, but they are finding that hay producers are holding back and it is very difficult to make purchases. Exorbitant prices were paid for hay last spring by some dairymen before cattle were turned to grass, and the crop will be much shorter this year than it was in 1916.

Under the conditions, it may be expected that more corn fodder will be put into shape for winter feeding this fall than ever before. Indeed, it is not too early to lay plans for cutting and shocking a big acreage. Those who have silos have no cause to worry, as their problem is easily solved. Where a supply of ensilage cannot be put up the next best thing is to cut at least part of the corn crop just after the lower leaves begin to turn and put into large shocks. The corn binder should be used to the limit this year and binder owners should be generous in renting out their machines. The majority of those who put considerable fodder into shock will doubtless feed it out directly from the shock, but with grain high in price this is not always an economical way of feeding.

If weather conditions are at all favorable corn fodder will dry out sufficiently in a month or five weeks after being put in shock so that it may be shredded and stored in a mow or put into a stack. Shredded fodder does not deteriorate much if it is not wet at time of shredding and there is real advantage in separating the grain so that one may know exactly what he is feeding. Horses and cattle will come through the winter in good shape on shredded fodder and a very small amount of grain. Not a pound of tame hay should be fed wherever it can be avoided, and let it be remembered that those who propose to buy hay for their work horses next spring may be sadly disappointed. A supply of good fodder will save the day and the amount that will be made available will be determined during the next month or six weeks. Fortunately, the corn crop is heavy this year and a few acres will furnish an enormous amount of feed, and there is not a corn-producing farm in the entire Central West on which at least part of the crop should not be either put into the silo or saved to be fed out in the form of dry fodder.

Buying Feed Co-operatively.

The Milk News, of Chicago, official organ of the Milk Producers' Association, advises its members to look carefully into the matter of buying feeds coöperatively. The season is on when such winter feeds as are needed should be bought or contracted for later delivery. It is announced that the New England Milk Producers' Association is planning to make feed purchases on a coöperative basis. The Davenport, Iowa, Cow-Testing Association, through its officers, has served notice on each member to make up a list of his feed needs for the winter, so that bids may be asked for and the feeds secured in large shipment at as low a cost as possible.

It has been demonstrated by Mr. Moss, in Waupaca county, and by several other of our cow testers and county agents, that a saving may be made on winter feeds by buying in bulk. The bulk purchase accomplishes two good results: It saves money to the individual buyer and it also leads many to use needed elements in their rations which they might otherwise fail to use. As an individual buyer a farmer-dairyman finds it impossible to fill out his feeding ration as he knows it should be filled out. As a coöperative buyer he will feel that he is able to do so.

The whole tendency of the times is to cut down expenses and the dairyman must look to his business needs in this respect. Buy concentrates in carload lots wherever possible. Milk prices are high and will be higher, but feed prices have soared in proportion and these things must be taken into account.

While the dairymen of other states are giving most serious consideration to the feeding cost problem, Wisconsin dairymen should also be on the alert. When the cow tester or the county agent comes along and advises carload purchases, discuss the matter with him seriously. Let him show why it is advisable to feed a well-balanced ration and how such feeding will increase production. In most cases, however, at this time, it is scarcely necessary to prove the value of correct feeding. The bugbear is the cost. This cost may be greatly reduced by buying coöperatively. In many cases there are good reliable dealers who can cut prices down a whole lot if they can have big orders—say several carloads. Talk with them and get their prices on the feed needed. In communities where there are no organizations someone can take the lead and several neighbors can go in shares on the purchase of a car of such feeds as are needed. The matter is at least well worth investigating, and while we are all talking and preaching coöperation here is a place where communities can put it into practical operation to their advantage.

The Fairs Offer Much Better Value.

The Wisconsin State Council of Defense has advised that our people save time and money by keeping away from cheap and worthless carnival attractions which are being offered in a few places in this state. Inasmuch as it is the purpose of the State Council of Defense to conserve the resources of the state during the war the suggestion is well taken. Why waste money on inferior amusements which are, to say the least, degrading? It is much better to spend the same time and money attending a good county or district fair, or the big Wisconsin State Fair at Milwaukee. Fairs are educational and instructive and they furnish just as much entertainment and amusement as any cheap carnival and this entertainment and amusement is of an infinitely higher quality. Why not enjoy the cleaner classes of entertainment furnished by the fairs? The average good county or district fair with an admission fee of 25 to 50 cents gives more for the money than a dozen carnivals offer.

War times make us think. We want to get the worth of our money on every implement or tool that we buy. We insist upon good value when we purchase an automobile. If we are buying land we want to look it over and find its weak spots—pick out the unproductive acres and subtract enough from the price per acre to make up for these weak spots. In these times we study the foods which go upon our tables to the end that we may get a maximum of value for the money expended. Further than this we are learning to study the value of feeds given to live stock, so that we may get every dollar possible in productiveness from their costs. Under such circumstances is it not fitting that we see whether we are getting our money's worth when it comes to entertainment? There are too many worth-while sources of amusement for us to waste time and money on the cheap carnival which has little to offer save the immodest suggestions of the "barker" on the outside. These suggestions are seldom, if ever, made good once the ticket taker has gotten us under the tent. When we stop to think of it the authorities, under the wise laws of our state, could not permit many things which the "spieler" tries to make us believe are going to happen inside the tent. In no case should the authorities allow either the "barker" or what he pretends to promise to exist.

Right now is a good time to decide to take in the county or district fair. And we must not forget the big state fair at Milwaukee. We repeat that an exposition of this kind offers far greater value for the admission price than any class of entertainment which we can think of. Why not get our money's worth this year by dropping out the cheap shows and planning to be present with all the family at the fairs?

Tax on Dogs.

Wisconsin live stock farmers are interested in the proposed tax on dogs which is to come before the congress of the United States. The following letter to Senator Robert M. La Follette, of Wisconsin, is self-explanatory:

I understand that there was an attempt made to incorporate in the federal revenue bill, while before the finance committee of the senate, a provision for a tax on dogs; that the finance committee failed to act in the matter and that now an attempt will be made to have such an amendment attached to the bill on the floor of the senate.

I wish to urge upon you my approval of such a measure. This very idea occurred to me just recently by seeing the number of dogs running about the country.

These worthless creatures are not only eating up a vast amount of food that should go toward feeding humanity, but are also a public nuisance. The rambling dog has been the curse of the sheep industry, not only in Wisconsin, but of the whole country.

Take my own particular case: I have never been without sheep since I have been farming and sheep have been kept on this farm for sixty years. During the past fifteen years I have spent a lot of time and money breeding up a fine flock, but last spring I decided to sell out and did so. The main reason was this: Sheep had become very valuable and I had a lot of money invested in that flock and I did not feel that the flock was ever secure, but was liable to be destroyed at any time. Hence I sold the sheep. This same complaint comes from every state in the Union and is a reflection upon the thoughtfulness of our statesmen.

If a dog is worth anything he is worth paying a tax on and if he is not worth paying a tax on then let us make soap grease out of his worthless carcass and give his food to starving humanity.

I would suggest a federal tax of $3 per head (that is a few cents a week only) and any animal that is not worth that amount is better dead than alive.

I know of a number of families in this community who keep a worthless cur hanging around the front door and the wolf is hanging around every other door and window.

I feel that this is an unusually opportune time to strike this nuisance and at the same time raise a much-needed revenue.

Thanking you for past favors and trusting that you will see this matter as I do and will use your influence to have such a provision incorporated in the pending bill, I am,

F. R. CONSTANCE.

Mr. Constance is one of our progressive breeders and there will be hundreds of breeders and raisers of sheep in this state who will back him up in the sentiments which he has expressed. Mr. Constance is an official of the Wisconsin Live Stock Breeders' Association.

Plan Big Wisconsin Potato Show.

A potato show, such as will fairly represent the big crop in Wisconsin this year, will be held at Madison, Wisconsin, November 19th-24th. This is the first time that the Wisconsin Potato Growers' Association, at least in recent years, has arranged to hold its annual meeting and show in a southern Wisconsin city. The last show was held at Eau Claire and the one prior to that at Marinette, and the last one before that at Grand Rapids. This time it is hoped to secure not only the usual attendance from the commercial potato growing centers of the state, but also a liberal attendance from central and southern Wisconsin, which have not previously had a very large representation at the show. Growers, retailers and the railroads, and, of course, the Wisconsin College of Agriculture, are all planning to make this the most important potato show ever held in the state and The Wisconsin Farmer can promise that the people of this section will have an opportunity to see potatoes which will make their eyes open up real wide.

Officers of the Wisconsin Potato Growers' Association do not plan to neglect the potato-growing centers. On the contrary, they are arranging for automobile tours from these centers to Madison. More than twenty counties of the state will have competitive exhibits at this show. As usual the Wisconsin Potato Show will set the pace for the nation. Those who attend the national show have said in years past that it has nothing on the Wisconsin show.

Several committees have been appointed to coöperate in a strong effort to make the 1917 show a record breaker. The committee on transportation is composed of A. L. Fisher, traveling freight agent of the North-Western Line, chairman; George Wallace, of Eau Claire, representing the Omaha Line, and J. H. Judge, of Madison, representing the Chicago, Milwaukee & St. Paul Railroad.

The advisory committee on management will be composed of K. L. Hatch, director of agricultural extension, chairman; Dean H. L. Russell, director of Wisconsin Experiment Station; C. P. Norgord, commissioner of agriculture; E. L. Luther, superintendent of farmers' institutes. The reception and entertainment committee includes Burt Williams, chairman; Howard D. Piper, L. L. Ords and Julius Klueter. The publicity committee includes Andrew W. Hopkins, agricultural editor of the University of Wisconsin, chairman; F. B. Swingle, associate editor of The Wisconsin Agriculturist; William H. Wiseman, associate editor of The Wisconsin Farmer; W. T. Evjue, Wisconsin State Journal; H. F. Rookwood, Madison Democrat; Fred L. Holmes, representative of press associations. T. L. Bewick, of the college of agriculture, will have charge of the boys' and girls' club work and contests.

Of course, there will be more detailed announcements of this big potato show in later issues of The Wisconsin Farmer, but it is well to keep the dates, November 19th-24th, in mind, and plan early to attend the show and get as much benefit out of it as possible.

Pork From Food Waste.

The National Department of Agriculture is stimulating meat production in every possible way and is putting forth special effort to induce stockmen to utilize products that ordinarily are partially or wholly wasted. In a recent press bulletin on the subject the department says:

Even though the hog furnishes the most meat for a given amount of feed and will produce it in the quickest time, this meat should be produced mainly from food wastes and not from good grain that would furnish food directly to man. The great economy in pork production comes from the fact that pigs furnish a food by-product from these wastes and do not need the high-grade feeds that beef cattle must have.

Wastes on farms and in the towns make good hog feed; by-products from canneries, bakeries, fisheries, packing plants and the like can be utilized as hog feed and to better economic advantage than in any other way. Dairy wastes are particularly valuable as hog feed and promote rapid growth with a good money return for every gallon fed.

The farm orchard furnishes large quantities frequently, and not all at one feed. Garden wastes, tops of vegetables, culls of all sorts, even weeds are readily eaten, and such as may not be eaten will be worked over, going into the bedding and adding to the manure.

Kitchen wastes are an excellent source of food for hogs, but should be kept at a minimum, because practically all food prepared for man's use should be eaten by him.

It goes without saying that in the case of a farm located a considerable distance from a central market the waste products available would include only those that are produced on the farm. Ordinarily skim milk and buttermilk are utilized to the limit, regardless of the price of grain. Very often, however, there is a waste from the garden and from the orchard. While summer and fall cull apples

have no great amount of feeding value, it is surprising what growth a bunch of shoats will make when turned into an orchard where there is considerable grass in addition to the fallen apples. They will not fatten, to be sure, unless fed grain at the same time, but they will lengthen out and it puts stretch into them so that later on a pound of grain fed will do the maximum amount of good.

Where fields are fenced hog tight there is always considerable good picking in stubble land. It matters not how carefully a crop is harvested, there is some waste left and pigs will make better use of this than any other class of animals. They literally get it all and it amounts to something this year when grain is worth 3 or 4 cents a pound.

Wisconsin Farmers and the Coal Situation.

The average farm family in Wisconsin is more dependent on coal than any other one thing for comfort and health this winter. So far as the other necessities of life are concerned, the Wisconsin farm family comes more nearly being self-sustaining than any other in the country. But with the blizzards sweeping across miles of open snow, and the mercury trying to crawl through the bottom of the thermometer, coal is the only thing which can insure comfort, if not life itself, to the people on the farms of Wisconsin. For this necessity they are entirely dependent on others, so that its price and supply are of vital importance to every reader of The Wisconsin Farmer.

Wisconsin is one of the states that produces no coal. She must look to others for this necessity, in exchange for the dairy products and other foodstuffs which she produces in such abundance. For that reason The Wisconsin Farmer has been viewing with growing alarm the failure of the state to secure a sufficient reserve supply of coal, even at the existing high prices. With winter coming on and the coal bins on thousands and thousands of farms unfilled, this alarm was fully justified.

So The Wisconsin Farmer has welcomed the active participation of Governor Philipp and the State Council of National Defense in the conferences of thirteen midwestern states which have been held in Chicago during the last few weeks. Governor Philipp took a prominent part in these meetings and presented the claims of Wisconsin for consideration in a manner that won the coöperation of the representatives of all the coal-producing states, when he declared:

> Wisconsn is primarily interested in having a sufficient supply of coal this winter and next in a reasonable price for what she is able to get. She has got to have it and you gentlemen from the coal-producing states must see that it is furnished us in adequate amounts. We will pay a good fair price for it gladly, and in return you can call on us for our vast store of food products, with which we will help feed this country and the nations of the earth. But coal we must have and we are going to have if there is any power in this country to get it.

As a result of the first conference a memorial was sent to President Wilson, urging that immediate and vigorous steps be taken to provide for increased coal production, for its proper distribution and for reasonable prices, and within a few days the president responded by fixing maximum prices for coal at the mines in the various coal-producing states. These prices are merely temporary, until further investigation can be made. Following this another conference of thirteen states was held at Chicago and steps were taken that may lead to further reductions, as it was generally felt that the prices named by the president were in many cases rather more than liberal to the coal operators.

As to exactly what constitutes fair prices to the coal operators and to the public is a delicate question, but The Wisconsin Farmer has no hesitation in saying that they should be considerably below those which have existed during the past few months and probably even below those named by the president. In any conflict between the public welfare and personal interests of the coal operators and dealers there is no question but that the former is paramount and that, especially in times of war, state and federal governments have the right to use every possible means for the public's protection under the exercise of their "police powers."

The Wisconsin Farmer hopes that it will not be necessary for the government to take such drastic steps as to seize the mines and operate them, in order to secure fair treatment for the consuming public, but, if it does become necessary, we certainly trust that the government will not hesitate to do so. The individual is powerless to protect himself in such matters and he must look to the protecting arm of the government as his only means of defense.

The Wisconsin Farmer's representative at the Chicago conferences felt that there was no question about the earnestness of the representatives of the various states present, or their determination to go the limit, if necessary, to see that the people of the country were fully protected in their right to "life, liberty and the pursuit of happiness" so far as their fuel supply is concerned. We are glad that the state administration in Wisconsin is so thoroughly alive to the needs of the hour and can assure Governor Philipp and his associates that all of their efforts in this direction will be fully appreciated by the men and women on Wisconsin's farms and gladly supported in the editorial columns of The Wisconsin Farmer.

Work the Soil to the Limit.

A reduced fertility supply will be one outcome of the present cropping program because every man is using his best endeavors to excel all former records. We have in mind one instance where an eighty-acre field was plowed up this spring after being in grass for forty years, the owner's purpose being to do his level best to add to the grain supply of the world.

An Illinois subscriber, in the following communication, outlines a plan that will, if carried out, bring the soil to its limit in production:

In developing methods to get the best possible returns from a small farm of forty to eighty acres or even less, I have found it necessary to give careful attention to soil conservation. Long years ago I became a firm believer in the feasibility and practice of double cropping, but this system will soon exhaust the soil, unless a thorough application of manure is provided every year, and an intelligent scheme of rotation is adopted.

Either in operating a small dairy, or raising stock for market, one must be prepared to feed through frequent periods of summer drouth. This is absolutely necessary if the milk output is maintained on a basis that will fulfill contracts and bring in the cream checks regularly. Corn comes late in the summer and fall, and in addition to this the winter supply of hay must be provided. Summer feeding seems to be of ever-increasing importance in dairy districts. Then the growing scarcity, or advancing value of land constitutes another question. It needs little argument to show that we ought to improve our farming lands, if possible, accomplish as much on forty acres as formerly we did on eighty or one hundred.

I have always secured practical results by sowing rye for fodder. This is ready to cut and put away late in May, and it can be followed with millet, late corn, cane, feterita, or a dozen different things. Then you come face to face with the problem of soil exhaustion. It would not be wise at all to repeat that process regularly without something put back, and lots of something. Yes, manure is good, but how about getting enough? It can be seeded to clover following the millet, and it should be devoted to clover for a couple of years. Then after that it is fit for almost any crop. If the clover cannot be successfully seeded in the fall, then don't let the soil lie bare, but sow to rye so as to not waste any elements, and plow early and sow the clover with a nurse crop of oats in the early spring.

When a field has produced corn for two seasons, it is proper then to seed to oats and clover, or if you have manured the soil sufficiently, the clover may be left out and the oats followed by late fodder corn, with rye following this. This gives the land a pretty severe trial, but what are we keeping the land for, and had we not just as well work the soil to its full limit? Two years with clover and good applications of manure will give it strength to do lots of work, and I think we are not doing our duty unless we work it to the limit, both ways. Feed the soil liberally and crop it heavily.

The present dry season here in southern Illinois is affording another test of dairy principles. It becomes more and more apparent that alfalfa will have to become the mainstay of dairymen who are not provided with silos, but don't put off getting the silo too long.

Pastures are getting poor here and if the weather continues dry long in many cases the cattle will be consuming the fodder planted for next winter.

GETTING TOO WARM FOR THEM.

But even the farmers who have a good sized alfalfa field must push forward on intensive lines. They need the greatest possible diversity consistent with reason, and this they can best secure by giving intelligent study to the system of double cropping and practical rotation, and this is only the duty of every farmer. Are we going to do it and reap good harvests in future years, or will we just plug along and find our farms soon about gone?

This subscriber might have gone one step further and recommended the application of artificial fertilizer. The supply of manure made available each year is only enough to fertilize a very small percentage of our total crop area and after we have used the manure to the limit and clovered the land as much as is practicable there are still great possibilities ahead that may be realized as a result of applying the kind of artificial fertilizer that is best adapted to one's land. Potash is literally off the market, but we have an almost unlimited supply of phosphoric acid, so that in working the soil to its full limit we will fall short of the mark in many instances if we lose sight of the fact that it is possible to greatly increase production and to increase the profit in a given crop by using phosphorus in one form or another.

Sowing Winter Wheat in Corn.

If the shortage in the world's wheat supply is made up in 1918 it will be necessary to increase the acreage sown this fall enormously. At the present time oat stubble is being turned under and the farmers of the corn belt show every indication that they are heeding the cry of the nation for more wheat.

The stations are giving detailed instruction in regard to the preparation of the seed bed for wheat, and in so doing attention is being given mainly to the handling of ground that has produced a crop this year. Very little is being said regarding the practicability of sowing wheat between the corn rows. Wheat sown in this way will not, under ordinary conditions, yield as heavily as if sown alone on a well-prepared seed bed. Nevertheless it is sometimes possible to obtain a yield of thirty or even thirty-five bushels per acre from a crop seeded in corn.

Other things being equal, corn land that is used for wheat should be fairly free from weeds, otherwise it is almost impossible to get anything like a uniform stand. If robust weeds fill the row it will be difficult, even with a seeder especially designed for the purpose, to cover the seed, and the result will be a thin stand. On the other hand, where the ground is fairly clean a one-horse drill may be driven so that the rows of wheat will not be more than six or seven inches from the corn hills and every grain will be covered. It is generally advisable to sow half the seed in one direction and the balance in the opposite direction so that a smaller part of the ground will be missed. This is important, because weeds will make a rank growth on bare ground and unless a fairly good stand is obtained a weedy crop may be expected next year.

It should be remembered that under unfavorable conditions in so far as winterkilling is concerned wheat seeded in corn will sometimes come through the winter and spring in better condition than the crop sown on specially prepared soil, for the simple reason that the old cornstalks tend to catch the snow, furnish a certain amount of shade so as to delay thawing out in the spring and as a result, as said before, the danger from winterkilling is lessened. It follows naturally that in a heavy crop of corn growth will be much slower in the fall than it will be in the case of wheat sown on a well-prepared seed bed, and for that reason it should be put in anywhere from ten days to two weeks earlier than is the custom ordinarily. Except in those regions where the Hessian fly is doing damage, there is no objection to early sowing, and a good, vigorous top and root will be important factors in bringing the crop through the winter in any event.

Those who do not have one-horse drills and yet who desire to put part of their corn land in wheat may resort to broadcasting methods, covering the wheat with a one-horse cultivator, or by using the one-section harrow. By all means go over the field lengthwise and crosswise in order that every kernel may be covered. Seed wheat is high in price and there should be no waste this year in the seeding.

The state fair is the people's university. This year the fair at Milwaukee will be held September 10-15. The preparations made for the fair eclipse all former records and it is hoped that the attendance will do likewise.

Small Grain Yields Above Normal

Early Threshing Reports Favorable for Rye, Barley and Oats—Corn is Still Backward, But Improving—Hay Below Normal.

WISCONSIN.

Adams County.—The rye harvest is completed and some threshing has been done. The yield will be better than it was last year. The oat harvest is nearly completed and this crop promises a much better yield and better quality than last year. Tame haying is done; the crop was damaged some by rain at curing time. Corn is three weeks late and does not promise more than half of a good crop. The dairy business and feeding operations are on the decline because of the high prices of feeds.—W. B. Barnes.

Appleton County.—The hay crop will be very good. Common clover and alsike wlil make about two and one-half tons per acre. Alfalfa made a better second crop than it did a first crop. Oats have not been harvested, but promise from fifty to seventy bushels per acre. They will make a better crop than they did last year. Wheat will make a fair crop. Barly shrunk somewhat on account of hot weather at ripening time. The corn crop is doing nicely, although somewhat backward. Gardens and fruit are good.—Harry Lepplu.

Buffalo County.—Most of the grain is in the shock and threshing has begun. Oats are heavy and yield much better than they did last year. Corn is backward, but potatoes are promising a good yield. Pastures are doing well. Farm labor is scarce and most of the hired help has gone to the city. —J. W.

Burnett County.—The clover crop on newly seeded ground made a yield of about two tons per acre. Alfalfa did a little better than this, but in general the hay crop will not be more than half normal. Oats will make an average yield. Winter wheat and rye will make fair yields. Spring wheat suffered from drouth in July and will make only a medium crop. Corn is holding its own at present. Many farmers are selling off their stock on account of the high price of feed and cattle will be scarce before long.—Erick H. Johnson.

Clark County.—Haying is nearly done and the crop is making approximately 80 per cent of a normal yield. The clover yield was good, but rains at curing time injured the quality. Most of the oat crop is harvested. High winds which followed the intense heat of a few weeks ago damaged the oat crop so that it will be about 87 per cent normal. Corn has grown wonderfully during the last two weeks and in some localities will make a splendid crop. Throughout the county, however, the yield will be about 50 per cent normal. Gardens are fine, but the apple crop is not as large as was expected.—Louis Buddenhagen.

Crawford County.—Recent rains have improved the pastures and helped the corn. A good corn crop is assured if frost holds off. The hay crop is fair with the exception of the first cutting of alfalfa and most of it has been put up in good shape. Threshing is now in progress and wheat, oats and barley are making big yields. Vegetables of all kinds are more plentiful than ever before. Fruit is scarce and high priced. As usual the dairyman is prosperous and happy. There are not many beef cattle and the hog crop is light. There will be a big increase in the wheat, oats, barley and corn crops this year.—A. M. Laird.

Door County.—Just harvested a very large crop of hay in this vicinity. Potatoes are looking good to the present time. Bugs have been extremely bad this year. Rye is a good crop. The dry weather hurt the peas 30 per cent and they will not fill well. Pastures have been good and all cattle look fine. Corn is very backward and will only be used for silos or feeding out of the shock.—J. A.

Douglas County.—Most of the hay is up. The quality is good. Weather conditions have been ideal for haying. The yield will be above half as large as that of last year. Small grains are looking fine. Potatoes are good, but need rain. This is also true of garden stuff. The dairymen are undecided as to what to do. The hay crop is short and feed will be so high in price that the business will not be profitable unless the price of milk is at least $3 a hundred.—J. N. Ottun.

Dunn County.—Threshing has just begun in this locality and indications point to a small grain yield considerably greater than that of last year. Corn is still backward. Potatoes will yield a normal crop. Pastures continue good and live stock are in good condition.—J. D. Miller.

Fond du Lac County.—Grain is nearly all harvested and threshing has commenced. The yield of barley will be rather light. Oats are better than they were last year. Corn is doing well and with a reasonably late fall will mature fairly well. Apples and other crops are promising well. Potatoes are plentiful and good in quality. Pastures have become quite dry and cows are not producing well unless they receive silage. Feed prices at present are such that farmers are not buying much, but will rely on their own corn and hay.—C. A. Williams.

Grant County.—Hay was an excellent crop in this locality. Harvesting is about all done and most places threshing has commenced. From all reports, oats and barley are exceptionally good. Corn is looking fine, but it is still late and needs a good fall. Gardens have been fine and fruit is fairly good. As far as I know there is no disease among live stock.—Al Vesperman.

Iowa County.—The harvest is well under way. Most of the grain is stacked and threshing machines are beginning work. The oat crop will average about fifty bushels per acre. Barley is very good. Corn looks well, but is late. Early potatoes are turning out well. Hay made from two to three tons per acre.—J. M. Blotz.

Jackson County.—The harvest has just ended. Small grains gave a good yield of high quality. Oats lodged badly. Potatoes are very promising. Corn is still improving rapidly, but has not yet reached normal. Pastures are good. The hay crop was one of the largest ever made in this section.—P. W. Jones.

Juneau County.—Clover made from one and one-half to two tons per acre of good hay. But the rain hindered harvesting. Tame hay made about two tons to the acre of fair quality. Grain cutting is nearly done. Oats will make sixty bushels per acre, winter wheat about thirty bushels, spring wheat about twenty-five bushels and barley about thirty-five bushels to the acre. Corn has made good progress in the last month and a good fall will make good corn. Fruit is scarce on account of heavy wind storms and blight. The number and condition of cattle are normal. Feeding operations are not increasing. Dairymen are feeding crops raised on the farm.—C. E. Haskins.

Lincoln County.—Haying is done and a big yield is in the barns. All grains are good, but barley was damaged to some extent by hot winds. The yields of all grains will be above the average. Cattle are healthy. Very little feeding is in progress. Pastures are very good. Potatoes will make a big crop. Gardens are good.—G. A. Patterson.

Manitowoc County.—Hay has made an excellent yield and shows good quality. Winter wheat has all been harvested. All grain crops are above normal except barley, which was hit hard

A Large Wisconsin Farm Family.

John Walker, of Dane County, Does Not Need to Fear the Farm Help Problem as it Affects so Many Nowadays.

CLOSE economy in small things, hard work and a faith in the earthly reward of the laborer have made it possible for John Walker, of Mendota, Dane county, to become not only an owner of a farm but also to be able to rear and support an unusually large family besides.

Sixteen children have been born to the Walkers and all are strong and healthy with hardly a sick day against any one of them. They range in ages from Walter, 22, to Albert, three years old. Walter is married and is not living with the folks now. Genevieve, 21, is also married. John, 20, and Joseph, 19, shouldered the musket for Uncle Sam a few weeks ago and are now with the regulars. The others are all on the farm, though, and help to raise the crops.

Mr. Walker came to America from England about twenty-eight years ago and for several years worked on farms in Dane county. After marrying he rented a place and by hard work and careful saving earned enough to purchase the 119-acre farm he is living on now. Not all the land is tillable; in fact, the greater portion of it is marsh, but Mr. Walker manages to make a few acres do the work of many. The main source of income is tobacco. Of late years, however, raising plants of all kinds under glass for the early trade in the spring has paid exceedingly well. The tobacco fields yield each year about $200 per acre and as there is no expense for outside labor the money all stays in the Walker family. This year about fifteen acres have been devoted to the tobacco crop and prospects for a good yield were seldom better.

"Watching the pennies" has been one of the maxims Mr. Walker adopted early in life and he has successfully adhered to it all these years. Without being a hardship to anyone in the family this rule has made it possible for the Walkers to live comfortably and enjoy themselves besides paying for the farm and laying in a neat sum each year at the bank.

The children have everything they wish for. As each becomes old enough to attend school they not only finish the grades but also attend high school.

No serious illness of any kind has been a visitor to the Walker home to necessitate doctor bills or worry. Whenever one of the children shows the least sign of being ill Mother Walker is right on the job with some old-fashioned but effective prescription to shoo the symptoms away. Thus far she has been successful in each instance. The Walkers also believe in "an apple a day keeps the doctor away" and for this reason a small orchard is given every opportunity of doing its best.

Mr. Walker does not think of retiring. He is satisfied with earning his living and that of his family on the farm. With a few cows to furnish milk and a garden for vegetables and some hogs for meat he is convinced that though times may be hard and perhaps the general living conditions still worse than they are there will always be enough to eat for the man willing to work and watch for the foolish leaks so many households neglect to see. The little sums amount to a much larger figure than many of us imagine.

Mr. and Mrs. Walker have been married for twenty-three years. Mrs. Walker is American born.

MR. AND MRS. JOHN WALKER AND FAMILY OF SIXTEEN CHILDREN.

"Money Saved is Money Earned"

See Page 13

Read the advertisements in "The Farmers' Market" on page 2.

by the recent hot spell. Corn has made excellent progress since the favorable weather began. Potatoes, cabbage and other garden truck are fine. Pastures are getting short and as a result the flow of milk is falling off. Rain would help vegetation at this time.—Edward E. Straka.

Marinette County.—Crop prospects are excellent in all lines except corn, but a long fall will make a fair corn crop. The hay yield was above average and conditions for putting it up were much better than usual. The second crop of clover was retarded by dry weather, so that it will not be as heavy as the first crop. Potatoes are unusually fine and no late blight has appeared. Oats are being cut in the southern part of the county and a fair yield is promised. Hot winds in July damaged the peas to considerable extent. Pastures are good and many silos are being erected in this section, which will insure a prosperous dairy business. The county agricultural school has been conducting a cow-testing association and 550 cows have been tested. Berries have been a fair crop and there are a few apples. Hogs and calves are making fine growth.—W. E. Morton.

Oneida County.—Most of the hay crop is harvested. It made 80 per cent of a normal yield. Small grains are ripening. Oats are turning rapidly. Rye is already cut. In general the small grains will be better than they were last year. Recent heavy rains helped the potato crop about 25 per cent. A record yield is looked for. Many farmers treated the potato seed this year and sprayed with Bordeaux mixture. Warm weather during the last few weeks has improved the corn crop. Pastures are in good shape and look well.—Chas. H. Jewell.

Shawano County.—Hay crop has been good. The first crop is practically all harvested and put up in good shape. The second crop of clover is doing well. The hay crop is equal to a year ago and there is more being cut in marshes that were never cut before. Barley, rye, winter and spring wheat are unusually good. Wheat never looked better or of better quality than we have this year. Oats on heavy land is down; on the lighter soils it is A-1 quality and an average crop. Oats are much better than a year ago. Corn is doing well. We will have a good crop for silage. The chances are that on the lighter soils the crop of corn will ripen. Gardens were never better or more of them. The fruit crop, such as apples and plums is fine—more than average crop. Pastures continue good, owing to frequent rains. Potatoes and root crops will be excellent, according to present indications. They have never looked better. According to present indications, many fields will produce from 200 to 300 bushels of potatoes per acre.—M. J. Wallrich.

Wood County.—Most of the hay has been put up in good shape. The meadows of timothy and clover mixed made about one and one-half tons per acre. Oats are about half harvested and promise a big crop—perhaps 25 per cent greater than last year. Rye is normal on light soil and better than normal on heavy soil. The small acreage of wheat in this county is good. Barley made a normal yield. Corn is late, but growing well and if frost holds off we will get 70 per cent of a crop. All garden crops are good. Live stock are healthy, but few cattle are on feed. Farmers are giving attention to dairying, but in spite of the high prices for milk and cream there is little profit in the business at this time because of the cost of feed and labor. However, it keeps up the fertility of the land.—P. B.

The 1917 Wisconsin State Fair

Some Splendid Improvements Have Been Made Since the 1916 Exposition—Tractor Demonstration an Important Feature.

IMPROVED grounds and buildings, better and bigger live stock exhibits and an unexcelled array of farm machinery of every kind will make the 1917 State Fair, September 10th-15th, the best exposition ever held in Wisconsin.

This year's fair marks the third year that the exposition has been under the direction of the state department of agriculture. Many needed improvements have not been added heretofore because of the department's plan of cutting down the expenses for improvements as much as possible. However, this year the ground will appear in a new garb. The fourteen horse barns at the north end have been repaired, re-roofed and repainted so that they are now ready for housing the horse exhibit and perhaps part of the overflow from the cattle exhibit. The live stock pavilion has also been repainted.

LIVE STOCK PAVILION ON WISCONSIN FAIR GROUNDS.

The need of proper drainage on the ground has been apparent to the visitors of former fairs for a good many years. This year the fair patrons will no longer be able to find the creek which ran through the sheep barn and the center of the grounds. It has been enclosed in a concrete flume and low portions of the grounds filled in so that all the space can now be used. The management has arranged for space to park 20,000 cars on the fair grounds free of charge.

A new $25,000 poultry building has been erected with 16,000 square feet available for exhibits of poultry, pigeons and pet stock. This department is under the direction of George W. Hackett, of North Freedom, one of the well-known poultry men of the state. The new building will make it possible for Wisconsin to rank well up in the list of big poultry shows in the United States.

New fencing around the fair grounds has been added and the old board fence done away with.

One of the strong points in the handling of the exhibits of every kind by the secretary of the fair, Mr. Oliver Remey, has been to place each department under an expert. The cattle, horse, swine and sheep departments have been made especially strong this year and $5,000 added to the premium list over last year, making a total of $46,116 to be distributed in the form of cups, trophies and cash prizes among the winners. The entries have thus far exceeded those of last year, which was considered the banner year of state fairs.

Industrially the fair has also been augmented so that it ranks higher than other fairs in general in this respect. The tractor show in particular has always been a feature of the Wisconsin fair not to be found at any other state fair. Wisconsin is the only state which has taken care to provide her citizens with a demonstration of the use of the tractor for farm purposes. This year, above all other years, the tractor ought to prove a strong attraction. Owing to the present shortage of labor, which in all probability will increase as the war proceeds, farmers will do well to give the tractor their attention. More than 1,000 acres of ground have been set aside a short distance from the fair grounds for the practical demonstrations in plowing and tilling the soil. The mornings will be given over to the field demonstrations. In the afternoon the tractors will be on exhibition on the grounds on the space reserved for this exhibit. Proper arrangements have been made for the transportation of the crowds to the ground where the field demonstrations will be held.

Other lines of machinery, including all forms of barn equipment, will be on exhibition also. Every sort of labor-saving device will be demonstrated.

A new department established this year will be that of health, markets and food. This will be under the direction of Fred W. Luening, formerly deputy health commissioner of Milwaukee.

A food demonstration exhibit, dealing with "war" breads and different substitutes for wheat flour breads, will be conducted at the request of Food Administrator Hoover and under the direction of the State Council of Defense, state food conservation bodies and other special organizations with emergency powers that may have been created. Coöperating with these will be the agricultural college and organizations interested in food conservation. Different exhibits dealing with milk, fats, fruits and vegetables will also be prepared. This exhibit, which is in fact a government exhibit, is a part of the official message which Mr. Hoover desires to place before the people, a part of the campaign of food conservation already started. One reason why Mr. Hoover is obtaining the coöperation of the Wisconsin fair in this matter is because reports had come to him of many food conservation campaigns conducted in various parts of the country which are not based on solid principles.

Children's Day will be one of the features of the fair. A boys' and girls' camp under the direction of Prof. Thomas Bewick, of the University of Wisconsin, who is also the government representative in this work in the state, will be established. During the 1915 and 1916 state fairs the farm boys and girls showed great interest in this work. The boys and girls are taken care of during the entire week under ideal conditions. The Boys' Band, of Beloit, consisting of fifty young musicians, will head the parades of farm boys and girls. On Children's Day 30,000 youngsters will sing "The Star Spangled Banner," led by the Boys' and Girls' Department and the combined bands and orchestras of the fair.

The auto show, conducted by the Milwaukee automobile dealers, showing the products of 100 factories will exhibit in the automobile building. The show is larger this year than in previous years and the building, 150x350 feet, will hardly accommodate the many cars that are to be shown. The 1918 models of eighty Wisconsin dealers and exhibitors will be shown for the first time in the state at this show. Every automobile manufactured and sold in the state can be seen here. Two hundred models of the latest types of passenger cars and commercial vehicles will make up the exhibit. Factory experts will be on hand for the purpose of answering questions and demonstrating the engines in the different makes and types of machines. At this show the automobile owner is able to obtain more information of every kind than it is possible to get from the local dealer. Special decorations have been a feature of the automobile building each year and the 1917 show will not fall behind any in this respect. A band has been engaged to furnish music during the entire week of the show.

Clean and wholesome entertainment of a general nature has also been provided. In accordance with the rule laid down by the department of agriculture when it took over the state fair, nothing of the immoral has been allowed to creep in to offend the patrons. The Wisconsin Federation of Women's Clubs endorsed the performances of last year after carefully investigating each entertainment on the grounds. They will be asked to do so again this year.

It is gratifying to note the improvements that have been made in every department of the fair since the management has been put on a business basis.

THE NEW POULTRY BUILDING COSTING $25,000 ON THE WISCONSIN FAIR GROUNDS.

Eggs that have been washed or allowed to get wet spoil much quicker than those which have been kept dry. Moisture removes the gelatinous substance that covers the shell and helps to keep out air and bacteria. A dirty egg will keep better than a washed one. The best way is to provide clean, protected nests for the hens and gather the eggs regularly. Then they may be kept both clean and dry.

Farm Sanitation

Will Increase Your Profits by Keeping Live Stock and Poultry Healthy.

HOOVER'S WORD TO FARMERS

Administrator of American Food Supplies, Through More Than 100 Farm Editors, Takes His Appeal Direct to the Farmers of the United States.

THE government of the United States plans to make farming a safe, profitable business within the duration of the war. Knowing that many questions have arisen in the minds of farmers since the passage of the food law, and that rumors of price fixing, government control, etc., have to some extent been misunderstood and thus shaken confidence, Herbert Hoover, administrator of the food law, appeared last Saturday in Chicago before 100 farm paper editors, for the purpose of a heart-to-heart talk on the subjects in which farmers of the country are most interested. Mr. Hoover spoke freely and frankly. He answered without reserve all questions put to him. He asked the editors of farm papers to make the government's position with reference to food administration and control plain to their readers. It was the first time since his acceptance of the important post of food administrator, that Mr. Hoover had left his official duties and gone out to talk to the people. He feels that the work of his department must be made plain to the producers upon whom the government must now depend for help. It was, of course, impossible to call all the farmers of the country together for a talk. So he called all the editors of farm papers representing 12,000,000 readers and the editors agreed to explain his position, which is, of course, the position of the government, to their readers. The articles which will be published in the next few weeks in all the farm papers of America will call forth from their readers new questions. Mr. Hoover wants to answer these questions, too, and he only asks that producers of the country reserve their decision upon important matters until they are in possession of the facts. The Wisconsin Farmer has agreed to help secure facts for its readers, and when this article has been read, if there still remain perplexing questions in the mind of any reader, such reader is invited to direct his question to the editor, and an answer will be secured direct from the department. Mr. Hoover and his associates have agreed to help in this work.

In the first place Mr. Hoover explains that the food problem now characterized as acute, would have arisen in this country even if we had not entered the war. The diversion of millions of men from peaceful pursuits in Europe to war duties has resulted in a loss of 525,000,000 bushels of grain annually. Mr. Hoover and his associates have figured out that it is absolutely necessary for America to export 200,000,000 bushels of wheat and 400,000,000 bushels of other grains, if our allies are to have sufficient food. Our normal export, he says, is 78,000,000 bushels of wheat and 40,000,000 bushels of other grain. Thus it will be seen that we must furnish Europe with three times as much wheat and ten times as much other grain as we have exported in normal times. These facts create a condition which would have been a serious problem to America had we not entered the war and imposed upon ourselves the added moral obligation of fighting alongside of our allies by furnishing them with the most important munition of war-foods. It is of small importance relatively that Australia and India and the islands of the seas can furnish millions of bushels of grain. Under present shipping conditions it may be impossible to get this grain to Europe where it is most needed. America is closest to the allied armies—to our own armies at the front—hence it devolves upon us to carry most of the burden of food supply.

But the grain shortage tells only a small part of the story. Since the war started three of our allies alone in Europe have destroyed 30,000,000 head of live stock. In all of Europe there is a deficiency of 120,000,000 head of live stock. Europe has reduced the consumption of meats as much as possible, but still the shortage of meat and animal fats increases alarmingly. This means, in Mr. Hoover's judgment, and the judgment of his associates, that we must stimulate the production of live stock—in fact, Mr. Hoover asserted that these conditions must revolutionize farming in this country to the end that meat and fat production will be our greatest agricultural industry. Instead of a nation of grain farmers, we must become to a much greater extent a nation of live stock farmers. It will take many years after the war is over for Europe to recuperate its live stock losses. Even when the soldiers may go back to the fields they will become first grain farmers for the reason that they will not have the stock to utilize rougher feeds.

There is to be no attempt on the part of Mr. Hoover or his associates to fix the price of meats. Mr. Hoover said in the outset that the government must depend upon volunteers to stimulate production of meat and fat supplies. It is absolutely necessary for the government and the food administrator to have the confidence of the producers. A great deal has been said about fixing meat prices. Mr. Hoover said that the government has no power to fix meat or other prices. It is a mistaken idea that Hoover is a dictator and that he will attempt to run things with a high hand. In a democracy like ours, he says, no such thing is possible. The work of the department does not contemplate the fixing of meat prices, although the department does hope to stimulate production of meat and to get cheaper meat for the masses of people. This will be accomplished not by cutting off the profits of the producer, but by eliminating the waste between the producer and the consumer. Packers have met in conference and will undoubtedly agree upon the most rigid economies in handling meats from the time they leave the farm until they reach the table, or the ships for export. Men who have made millions in packing are now willing to cut those profits down to a minimum. In the near future we may expect to have a schedule of live-stock prices which will be commensurate with corn and other feed prices. The speculators must go. In a time of national emergency the government has no intention of simply urging the farmer to produce more and then sacrifice more than the middlemen and consumers must sacrifice. In fact, the whole great aim of food administration is to equalize the situation to the extent that the farmer-producer shall be well paid for his extra work and the consumer and our fighting armies and those of our allies shall receive meats and fats at the least possible cost.

All grains follow wheat in the markets of the world, hence the government's action on wheat is a fair indication of what the farmer may expect. The government will set a minimum price on wheat, which it is expected will be $2 or $2.10 per bushel, the price to be fixed as to central markets and graduated as to outside stations and elevator points and also as to grades according to the grading system of the department of agriculture. Every farmer will know just what the government will pay for wheat at any elevator in the United States. The government does not require any farmer to sell his wheat at the fixed price. If anyone wants to pay the farmer more than the fixed price, he may do so. If any farmer wants to sell at less than the government prices, he may do so, but this is, of course, ludicrous. Mr. Hoover objects to the words, "fixing the price." Price fixing in this case simply means that the government will buy at a stated price for a stated period of time, all the wheat which the farmers of this country will offer. It makes no difference how much wheat is raised, the price will be the same. It makes no difference how little wheat is raised, the price which the government offers will be the same. If the war should end in a month the government will continue to pay the price which it has fixed on wheat for a year to come, and all conditions usually affecting the market will be disregarded. The wheat situation elicited many questions from Mr. Hoover and he answered them all "open and above board." The first question asked was whether the government was not in effect reducing the price of wheat. Mr. Hoover said that on the contrary the government is not only putting wheat on a stable foundation for the period of a year, but that it is actually advancing the price to the farmers of the country. A few people will not understand this statement when they consider the $3 per bushel and higher wheat quotations of the past few months. But Mr. Hoover makes it plain, and we can all understand it if we stop and consider. Most of the 1916 crop was sold at less than $1.50. Much of it was sold at around $1 a bushel. But a large part of the bread made from the 1916 crop was made from $3 wheat—not $3 which the farmer got, but $3 and over which the speculator got. What the government is actually doing is eliminating that extra $1.50 per bushel or over. From and after the date that the government starts buying wheat at a fixed price, bread will be made from wheat which will cost the millers what the farmers get for wheat, plus the added handling cost, which is nominal when applied to bushels. Last year the farmer got $1 to $1.50 a bushel for wheat and the workmen of our cities bought bread on the basis of twice that cost for wheat. While the majority of farmers will actually receive 50 to 60 cents or more per bushel for 1917 wheat than for the 1916 crop, the makers of bread will get flour made from wheat which cost the millers on an average of 50 cents to $1 a bushel less than the first six months of 1917. Asked what assurance we may have that the millers will not take advantage of the situation and extort high prices for flour, Mr. Hoover quoted verbatim from a contract with the millers of the country. This contract provides that there shall not be a greater profit made on flour than 25 cents a barrel, nor a greater profit made on mill feeds than 50 cents per ton. The government hopes and expects through this administration of the food supply to give the farmer more for his wheat and get cheaper bread for the workingmen and soldiers. The millers' contract above referred to means cheaper flour, and furthermore, it will mean a readjustment of prices on milling feeds. Our dairy districts will be affected by this readjustment, especially on bran, which, it is apparent from the plans outlined, must be cheaper. For bran will come from $2 wheat (or approximately that), and the profit will not exceed 50 cents a ton, whereas many of us have bought bran during the past year from $3 wheat, with no limitation on the profit which the miller might add should he see fit. It is only fair to presume that the miller has caught the spirit of the times and added profits proportionate to those which have been added in other lines.

But what is to prohibit men paying a little more than the government prices for wheat and getting control of the supply and then selling it at any price which may suit them? The government has looked out for this. In fact, it appears that the eagle eye of Mr. Hoover has searched the innermost recesses of this wheat and general food problem. No man will be allowed to keep wheat in elevators more than thirty days. The government may keep wheat as long as it likes. Private concerns will not be allowed to hold wheat for speculative purposes. The government, of course, is not interested in speculation, but wants wheat for food for our home folks and our armies in the fields. No private individual can afford to buck the elevator movement proviso of the wheat control scheme. The government has considered everything and decided that a certain price is fair for wheat—fair to the farmer and fair to the millions who must have bread. The government is protecting the farmer against a glutted market. It has been this glut every fall that has run the price of wheat down. Our normal shipping capacity to handle grain from the Atlantic seaboard has been cut about one-third. This means that wheat will pile up in elevators all over the country this winter and the government proposes to control this wheat in elevators, to the end that the speculator may not have any chance at it—"not even a crack where he can poke his nose in," as Mr. Hoover remarked. The board of trade, to use another Hooverism, has been "interned for the war" and there are many who believe that it may never again be opened.

Mr. Hoover wants it understood that he has had no connection with the work of the price-adjusting board, which has been busy trying to establish a fair price on wheat for the year to come. "I have not, nor will I suggest what is a fair price," he said. There is a general opinion that the price will be about $2, and for the sake of convenience that figure has been used in this article. While addressing the farm editors in Chicago Saturday a statement was handed to Mr. Hoover to the effect that wheat had been fixed at $2.10. Mr. Hoover said he had no idea whether this was the government's established price or not.

Farmers are, of course, interested in cost of things they have to buy just as much as working men are interested. Mr. Hoover was asked whether the government will take a hand to protect the farmer as a consumer just as it is endeavoring to protect working men in the industries of the country, as consumers. Mr. Hoover replied that no favorites are to be played. He says there is no general panacea accepted by the food administration department for any existing evils. The hope is that the department will be able to cope with problems as they come up and settle them with satisfaction to the greatest number. The government, however, will not ask the farmer to work for poor pay any more than it will ask ammunition makers to work for poor pay. The government is endeavoring to put farming on a stable basis, unaffected by crooked speculators and market manipulators. The government is looking into the sugar situation and Mr. Hoover says that sugar will be reduced 1½ cents a pound, to 6½ cents, which will mean a saving of $30,000,000 in three months. The government has approached the wheat price on the basis of an increase of 140 per cent of the pre-war price. It expects to reach an agreement whereby suagr will be furnished at 40 per cent advance of the pre-war price and coal at not to exceed 90 per cent over the pre-war price.

Farming, in the judgment of Mr. Hoover, is not only to be a stable profitable business within the duration of the war but for many years after the war. It is his opinion that war prices, or nearly war prices, will continue for a long period of years, even though there may be some retarding effects on certain lines of industry after the war. The government feels that in a free country like this its plans must be agreed to and concurred in by the farmers, to make them successful. The conditions such as exist under German system, will not be undertaken in America. In Germany a superintendent of a given district parcels out the seed, tells each farmer just what he shall plant, and takes possession of the crop when it is harvested. In return the farmer is

Dairy Interests at the Fair.

Dairy displays are annually growing in interest and in proportion at our state fairs and expositions. From early in the summer until midwinter state fairs, sectional fairs or dairy shows are being held. It would seem that there is a dairy display within easy access of every man who is in any wise interested in any phase of the all-important industry.

Among the first impressions and at the same time one of the lasting impressions that a visitor gains is that dairying is a big, imposing and important industry. In the value of the animals, in the attractiveness of the exhibits and in the businesslike ability of the owners, the dairy division often exceeds the horses, beef cattle or hogs.

A dairyman may rightly term a trip to the fair a vacation. True, he is likely to spend most of his time with the dairy stock. However, he will do this through pure interest and not as in a sense of duty and will secure enjoyment therefrom. Herein lies the benefit and the pleasure of a vacation. He is relieved of the routine of the labor of his farm and barn. The very interest of the show arouses in him a feeling of pride and satisfaction in his business. This enables him to return to his home the better to enjoy his work and the better to get results gratifying to himself.

The dairy business does not permit one to see all of a large show in one day. It is too much a matter of details and important aspects. At one time there existed a type of state fair visitor who believed that he could see everything on the grounds during the forenoon of one day and could take in the races during the afternoon. Returning home late in the evening, he invariably felt that he had seen everything, yet it is to be doubted if any single lasting impression was carried away by him. The real open-minded progressive dairyman may not the first half day get through the barn where his favorite breed is sheltered. He is likely to spend several half days in the show ring watching carefully the judging. Hours and possibly days are spent in the manufacturing or in the machinery section. Silos and silo machinery claim his attention and perhaps he gets an idea concerning a new type of gate or other farm equipment as he studies the immense amount of commercial products on display.

Naturally a dairyman's chief interest centers around the cows. He studies the type of the great cows of the breed of his fancy and enjoys it immensely. He compares the show ring record with the record made at the home barn. There is an art and a science to fitting and showing dairy cattle. The dairyman who hopes later to show cattle of his own studies carefully the methods and manner of fitting and exhibiting as practiced by prominent and successful exhibitors. The thoughtful dairyman invariably is studying the methods of breeding as is shown in herds prominent in the winnings. Scarcely without exception when a dairyman wins in the classes for older stock he likewise gathers in numerous ribbons with his younger animals. To learn the secrets or the hard sense used to secure marked results encourages and helps any breeder of dairy cattle.

Dairymen meet old friends at the fair and are constantly making new acquaintances. Should a poll be taken of dairymen who visit fairs regularly it is probable that the majority would say that in meeting their friends and acquaintances lies one of the most enjoyable features and benefits of attending the fair. They visit and swap ideas and compare methods and directly and indirectly help and encourage each other.

Just as the dairy section of fairs has grown in proportion so has the interest of visitors grown. Dairying now constitutes one of the main lines of interest of fair goers. The dairy show is full of information and inspiration. The question no longer is, "Can I afford the time and expense necessary to attend the fair or dairy show?" but, "Can I afford to not attend the fair or dairy show?" Successful breeders and dairy cattle and successful, up-to-date dairymen have been persistent fair goers. Doubtless it pays in dollars and cents and in recreation.

Richland County Holstein Meeting.

To the Editor:—The Richland County, Wis., Holstein-Friesian Breeders' Association held their annual summer picnic August 14th at the home of H. A. Brace, near Lone Rock. The attendance was large, coming from three counties, and many new members joined, some from adjoining counties, until such time as their own county may organize a similar association.

Following a sumptuous repast, which, of course, always comes first at a picnic, Prof. G. C. Humphrey, of our state university, delivered an address, and then, going to the barns, demonstrated how to judge a cow and also the use of a score card.

Mr. R. R. Runke, emergency agent for Richland County Council of Defense, also addressed us on the subject, "Breeding and Feeding Holsteins," giving many excellent ideas as to how the dairyman can produce a more balanced ration on his farm without purchasing so much mill feeds at this time of almost prohibitive prices.

The ladies were highly interested in a discussion led by Mrs. C. C. Fries, of Richland Center, Wisconsin, on economy and method of canning. Mrs. A. T. Rundell gave a very interesting and instructive talk on the Red Cross Society and its world-wide work. The only feature to mar the pleasure was the fact that the day was altogether too short. A. H. Button, Sec.

Tighten the Cream Screw.

To the Editor:—Unless you have the cream screw set to skim a cream testing 30 to 35 per cent fat, every skimming will cost you money.

Many a Wisconsin dairyman loses from $50 to $100 a year because he skims less than a 35 per cent cream. Every pound of butter fat you sell, in cream testing less than 35 per cent (the ideal for high quality butter), is costing you money through the skim milk you lose.

You are paid not for the actual weight of your cream, but for the butter fat it contains. Result: 286 pounds of cream testing 35 per cent contains as many pounds of butter fat as 500 pounds of cream testing only 20 per cent. And the 35 per cent cream saves you 214 pounds of skim milk, worth 75 cents a hundred, in that case worth $1.60, for feeding calves, pigs and chickens.

Every skimming of cream that tests under 35 per cent costs you money. And it's so needless—so easily preventable. Just turn your separator cream screw in a little. A slight turn inward will increase the richness of the cream. You may be obliged to try two or three times before the screw is regulated just right.

Wisconsin annually sells about 500,000,000 pounds of cream to butter factories. If this cream tested 20 per cent and the test were increased to 35 per cent, about 200,000,000 pounds of milk could be saved—skim milk worth $1,500,000 as feed, the equivalent of a million bushels of corn.

Rather worth saving isn't it? Consequently the man who skims a rich cream makes money for himself and at the same time performs a patriotic service.

Keep more skim milk on the farm. It helps eliminate waste and the elimination of waste is patriotism.

Dairy Dept., College of Agriculture.

Alban and New Hope Association.

To the Editor:—The forty-five-pound list of the Alban and New Hope Association, Portage county, for the month ending August 4th, is as follows:

Owner, name and breed	Age	When fresh	Lbs. milk	Per cent of fat	Lbs. b'fat.
F. A. Nace					
Wisconsin Lass Aggie, Reg. Holstein	10	5-26-17	1350	4.0	54.0

CLAREL STOWE.

VIEW OF COLISEUM, COLUMBUS, OHIO.

The 1917 National Dairy Show, which will be held at Columbus, Ohio, from October 18th to 27th, will be housed in this new concrete, steel and brick structure 325 feet long by 202 feet wide. The show arena is 200 by 100 feet. This building has a seating capacity of 6,200 and can be made to seat 15,000 by utilizing the ring. It will be lighted by the most modern system of direct and indirect lighting that has yet been developed. The cost of this structure will be in excess of $200,000. Before being built, the architect of this building, Mr. H. C. Holbrook, visited every coliseum in the United States, so that it may be said to be the last word in this type of construction.

Sell Your CORN

and buy Unicorn Dairy Ration for much less money and get three times the milk value of corn or oats. Unicorn is pure, healthy, economical. It helps wonderful records for yearly production from 11,000 to 15,000 pounds average for the whole herd. Send for information and free copy of useful Cow-Testers' Manual at once. Free upon request.

CORN HARVESTER Self Cutting for cutting Corn, Cane and Kafir Corn. Cuts and throws in piles on harvester. Man and horse cute and shocks equal to a corn binder. Sold in every state. Price only $22 with fodder binder. The only self gathering corn harvester on the market that is giving universal satisfaction.—Dexter L. Woodward, Sandy Creek, N. Y., writes: "3 years ago I purchased your Corn Harvester. Would not take 4 times the price of the machine if I could not get another one." Clarence F. Huggins, Speermore, Okla. "Works 5 times better than I expected. Saved $40 in labor this fall." Roy Apple, Farmersville, Ohio: "I have used a corn shocker, corn binder and 2 rowed machines, but your machine beats them all and takes less twine of any machine I have ever used." John F. Haag, Mayfield, Oklahoma. "Your harvester gave good satisfaction while using filling our Silo."—K. F. Ruegnitz, Otis, Colo. "Just received a letter from my father saying he received the corn binder and he is cutting corn and cane now. Says it works fine and that I can sell lots of them next year." Write for free catalog showing picture of harvester at work and testimonials.

Ireland's farmers this year have produced a wheat crop 53.8 per cent larger than last year and 137.1 per cent more than the average crop for 1911-15.

PIPELESS CALORIC FURNACE

"Let Me Tell You About My C

Mr. F. S. Plasterer of Huntington, Ind., is a manufacturer of more than local fame. He has a wide acquaintance throughout northern Indiana, and is used to the best in his home.

LET US START WITH THE RECEPTION HALL—THE THERMOMETER SHOWS 72

Mr. Plasterer has permitted us to tell his own story of the Caloric Pipeless Furnace:

"My house has nine rooms and a bath. It was always difficult to heat it satisfactorily. We had a big baseburner in our living room, another one upstairs, a range in our kitchen, grates and gas heaters in our bathroom and the hall. Even then some of the rooms were too cold to be habitable during the winter months, and we shut up several of them.

"One day I was visited by an agent for the Caloric Pipeless Furnace. He told me he could heat my house. I didn't believe him, but when he undertook to explain the principles on which this furnace worked I became interested, and I later ordered one.

"That was one of the best things I ever did, because the comfort we have enjoyed every year since then has more than counter balanced the low first cost.

OUR FRIENDS SAID THE LIVING ROOM WOULD GET TOO HOT—THE THERMOMETER TELLS A DIFFERENT STORY

"But my neighbors didn't think I was doing a good thing. Several called on me and told me they thought I was foolish to try to heat a large house with one register. One neighbor said he would make an engagement with me for the first day the temperature was below zero and bring blankets with him to keep our family warm. We invited him to dinner that day and showed him every room in the house warmer than seventy degrees, and the furnace not running at full blast.

"If you will come with me through my home I think I can convince you that the Caloric heats the house very comfortably. Let us start in with the reception hall. It has two big windows, and the stairway runs up from it, and yet you can see by the thermometer that it is seventy-two degrees warm. All winter this hall has been very comfortable, and I tell you it means something to a man to come in from the cold streets to a house that is warm all the way through.

"Right at the side of the entrance hall is our parlor with three big windows. We have used it all winter without closing the doors, and it has been just as warm as the entrance hall.

"You can look through the doors of the parlor into our living room, where the register is. Our friends told us that the living room would be unbearably hot and the rest of the house cold, but the thermometer tells a different story.

"A door from this living room communicates with the kitchen, and it has another door from the dining room. We have used only a gas range all winter, and the kitchen has been very comfortable. We haven't had anything freeze, and the terror of freezing water pipes that used to be ours is now a thing of the past.

"You can see from the picture of the dining room that it has a big bay window. Before we put in the Caloric this bay window was always cold. Mrs. Plasterer did not dare put her plants in it, and the unlucky one of the family that sat with back to the bay window at meals wanted something more than house clothes. Now it is a favorite place for the cat.

"Now, let's take a look at the upstairs. The room I show you here is a large bed chamber with a big bay window. It faces the northwest, and whenever the wind came from that direction in the winter time my wife and I felt the necessity for more covering; in fact, sometimes we had to get up and go into one of the other rooms. You know our Indiana weather is cutting and our house faces the river, so that when the wind swept up over the ice it seemed to go right through the window panes. Now my wife's taste for flowers can be

E COLD—NOW IT'S CAT

s Furnace

gratified in any room in the house and our bedroom always has some beautiful plants.

"The hallway through the center of the upstairs seems to act as a runway for the heat. We leave the doors of the other bedrooms open and they are very comfortable; in fact, my daughters, who prefer a cold room, close these bedroom doors in the afternoon so that their sleeping chambers will be cool.

"At the far end of the hall is the bathroom. In the long winter nights, with the thermometer way down, this is always comfortable, and we have never had any possibilities of frozen water pipes. I refer to those frozen water pipes again because it was a pretty serious matter when we had two baseburners, a kitchen range and two oil stoves trying to heat the house

"Then, there is another feature that Mrs. Plasterer says is worth as much to her as anything else. We have a big attic over the whole house, and on rainy days and in cold weather this is where we hang our family washing. We just open the door leading to the attic stairway, and the furnace does the rest. It is so clean that the clothes are never dusty and never marred by coal smoke as they used to be when we had the stoves.

"Now that I have shown you where we live, let's go down and look at the furnace. I want you to see how little room it takes, and how we can use our cellar. The furnace keeps the temperature just above freezing. This enables me to lay in a nice stock of vegetables and fruits when prices are comparatively low, and to carry them through the winter with the perfect assurance that they will keep well.

"Another thing I like about the furnace is the cleanliness. The ashes and dust in handling the furnace are less than what I used to take from one of my baseburners. Nor have we any trouble with this furnace smoking. So the house is easily kept clean.

"You see I haven't a big coal bin. When I had the two baseburners I used to buy for them and the kitchen range fifteen to eighteen tons of coal, and I want to tell you that it was some job to carry that coal upstairs and to carry the ashes down. Now I reach from the furnace to the coal bin with my shovel and I put the ashes out of the window at the side of the furnace. It isn't any work at all.

"Besides, and this will be good news to the people who are thinking of furnaces, I don't burn as much coal by forty per cent. It is a very unusual winter that would require me to use nine or ten tons of coal. In fact, since the furnace was in, I have never reached that amount.

OUR BEDROOM—THIS ONCE COLD BAY WINDOW IS NOW A PLACE FOR FLOWERS

"Then I had another experience. In a building operation I had to remove a lot of piling that had been used to make a platform. The boys were going to burn that up, but I had a saw and I had this cut into chunks and stored in my cellar. Pretty nearly all of the winter I fired the furnace on this wood, that otherwise would have been wasted, and the fire kept just as well as it did with the coal. In fact we burn all kinds of trash in this furnace.

"Do you wonder, then, with my house comfortable at less than two-thirds of what it used to cost me in money, and less than one-third of what it used to cost me in labor, I am enthusiastic about the Caloric? To my mind it is the one best buy in heating devices, and I wouldn't be without mine for ten times its cost."

NOW LET'S GO DOWN AND LOOK AT THE FURNACE

Mr. Plasterer is not alone in this opinion of the Caloric Pipeless Furnace. We have hundreds of customers who will tell you stories equally as interesting.

You needn't suffer the inconvenience of stove heating another winter. The Caloric can be installed in any house, and the one register will not cut into your walls or make it necessary for you to incur a big bill for redecorating or replacing plaster and woodwork.

Perhaps there is a Caloric dealer in your town. See him. He will show you the furnace, explain to you why it is so successful and tell you about our strong guarantee. If you don't know him, write to us and we will send you our booklet, "Progress," that explains why the Caloric is so superior.

PIPELESS CALORIC FURNACE

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

Law Questions.

Death of Mortgaged Horse.

A Subscriber, Madison, Wis.—A owned a horse, and B had a mortgage on it, and the horse died. Will A have to pay B for the horse?

Answer.—The mortgage on the horse was given to secure the payment of a note or other debt which A owed to B. The death of the horse did not cancel such note or debt and A still owes the same to B and B can compel A by law to pay the amount of the note or debt.

Adjoining Lands—Tile Connection.

A Subscriber, Walnut, Ill.—A and B own adjoining farms in Illinois, B's land being on the higher ground. A tile drained his farm with four-inch tile. Has B a right to tile his farm with eight-inch tile and connect same with A's tile when the four-inch tile will not carry off all the water?

Answer.—B has no right to connect his eight-inch tile with A's four-inch tile without A's consent, and A can prevent him from doing so and disconnect the tile if he does.

Rental Contract—Liability.

A Subscriber, Fairfax, S. D.—B rented a store building from A for one year with the privilege stipulated in the contract that if B wished at the expiration of the year to continue he could have the building for a longer period for more than one year after the first year expired. (2) B sublet the building to C and D, each to pay $10 per month and this contract ran over the second year. B made an assignment before the year expired. Are C and D required to pay their part of the rent?

Answer.—(1) The contract was binding for only one year after the first year expired. (2) C and D are liable for the rent they agreed to pay.

Drainage—Injunction.

A Subscriber, Bunker Hill, Ill.—A and B own adjoining farms in Illinois. A's farm is on the higher ground, and slopes gradually towards B's farm. A public road is between the two farms. A tiled a portion of his farm to the road, and the water crosses the road through a culvert into a small draw on B's farm, which draw was previously farmed by B, but A's drainage water has made it too wet for cultivation. Has A a right to so discharge his drainage water and if not how can B prevent it?

Answer.—We are of the opinion that A has no right to so discharge his drainage water and that B can procure an injunction from the circuit court to prohibit A from doing so.

Private Road.

A Subscriber, Wheeler, Wis.—A owns three forties of land in Wisconsin, and has owned and worked it for thirty years. This land is eighty rods from the public road and A has to pass over B's land to go to the public road. A bought from B a right of way over B's land and the township board laid out a road for A thereon. B wanted a high bridge on the road so that cattle could go under it from one field to another. A was to put up the frame of the bridge and the town was to plank the floor of it. A built the bridge and asked the pathmaster to furnish a man to do scraping, but he refused, saying the road had not been established by petition and was not a legal public road. Can A compel the town to grade this road and work it?

Answer.—A cannot compel the town to work or grade said road, because it is merely a private road for A's use and not a public road.

Horse Trade—Stallion Service.

A Subscriber, Beloit, Wis.—More than a year ago, I traded a bay mare for a gray mare. Both mares were supposed to be with foal at the time of the trade. The man who owned the gray mare, and I, agreed in the trade that each one should pay the service fee of the stallion, for the colt he got. The bay mare had a colt in May, 1916, the gray mare did not have a colt. Who is required to pay the stallion service fee for the bay mare?

Answer.—According to your contract, the man you traded with should pay the service fee for the bay mare that had a colt, but it is doubtful if you can collect it by law, as the contract was merely verbal. Your trade had no effect as to the owner of the stallion to which the bay mare was bred. The owner of said stallion can collect the service fee from you and not from the other man.

Trees Near Division Line.

A Subscriber, Necedah, Wis.—A and B own adjoining farms, which are separated by a partition fence twenty rods long. A has large trees on his side of the fence and the branches extend over and above B's land and so shade it as to hinder the growth of crops on a strip twenty feet wide along the entire line. Has B a right to cut off the branches?

Answer.—B has a lawful right to cut off the branches of the trees exactly at the division line and throw said branches over on A's land.

Conditional Deed to Child.

A Subscriber, Champaign, Ill.—I wish to deed to one of my children a farm of 160 acres in consideration that it shall pay to me and my wife $3 per acre every year as long as we live, stating in the deed that such payments are to be made on the first day of July every year at a certain bank specified in the deed. Would such a deed protect me and my wife in case the child would fail to make the payments?

Answer.—Such a deed would not protect you and your wife in case the child would fail to make the payments. A conditional deed could be made to protect both of you. We advise you to employ a good, reliable lawyer to prepare such a deed, as it requires skill and care to do so.

Shade of Tree on Another's Land.

Mr. Chas. Weinkamf, Mukwonago, Wis.—My neighbor owns a lot of land adjoining mine on the south, and a maple tree stands on his land just inside the division fence. It is not near his house, and is not a pretty tree. The limbs of it overhang my ground, and I cannot raise anything on it under the tree, as it shades my ground most of every day. What can I do by law about it?

Answer.—You cannot compel your neighbor to cut down the tree, but you have a right to cut off the branches which extend over your land exactly at the division line and throw the branches over on his land. This is all you can do. You cannot get rid of the shade nor recover damages on account of it.

Notes—Deed—Mortgage.

A Subscriber, Medford, Wis.—(1) When is a promissory note outlawed in Wisconsin? (2) If interest on a note is kept paid up, when would such note be outlawed? (3) If a person owes a note, and has no property either real or personal, can the note be collected? (4) If a person has property and gives a note, and afterwards deeds his property to his wife or some other person, or gives a mortgage on his property, can the note be collected?

Answer.—(1) Six years after it is due. (2) Same time. (3) It cannot. (4) When a person owes money on a note and deeds away his property to his wife or other person or gives a mortgage for the purpose of avoiding the payment of the note such deed or mortgage may be set aside and the property taken to pay the note.

Thirty Years With the Brown Swiss Breed.

(Continued from page 1.)

that is the reason there are now and have been for thirty years and always will be, according to both Monte and H. W., Brown Swiss cows on Pleasant View Farm.

But not only in the show ring has the Ayers herd distinguished itself. A glance over the records of the various cows shows that their production compares favorably with that of any other breed of cattle both in milk and butter fat. Merney, one of the Ayers cows and one of the first cows of the Brown Swiss breed to have a record, produced as a four year old 10,503.9 pounds of milk and 417.6 pounds of fat. As a five year old she increased this to 13,653.7 pounds of milk and 554.49 pounds of fat. As a mature cow she was again put on test and produced 14,674.7 pounds of milk and 596.9 pounds of fat. She was sired by Mac Watch, one of the famous bulls of the breed. A daughter of Merney is Merry Merney, whose record as a five year old is 15,679.5 pounds of milk and 628.86 pounds of fat. A granddaughter of Merney, Merry of Allanhurst, has a record of 14,371.3 pounds of milk and 578.87 pounds of fat. A sister of Merney is Ion, with a record of 10,660.6 pounds of milk and 451.98 pounds of fat.

Another cow of the Ayers herd was one of the first cows brought onto the place. Her name is Alpha Girl, with a record of 12,989.7 pounds of milk and 534.85 pounds of fat as a three year old. A sister to her, Lady Farrand, has a record of 14,376 pounds of milk and 581.86 pounds of fat. Flora Duwire is another of the big yielders that the Ayers herd can boast of. Her record is 16,538.1 pounds of milk and 649.42 pounds of fat. Azure has a record of 14,236.6 pounds of milk and 531.94 pounds of fat. She is by the bull, Junker, an imported animal with a record for high-producing offspring. Molly P., a sixteen-year-old cow, produced under test 13,564.4 pounds of milk and 512.79 pounds of fat. She had fourteen calves, and of this number only two were bulls. She was bred and raised on the farm from one of the early cows of the herd. One of her daughters is now eleven years of age and has produced in that time nine healthy calves, every one a bull. Mr. Ayers called attention to this fact, as it is often said that when the grandam and the dam show a majority of their calves to be heifers the offspring will tend to produce heifers also. The heifer calves produced by this old cow have ranged from the extreme production of nine bull calves in eleven years to about half and half.

A dirty calf pail is one of the chief causes of scours in calves. If the pail is not cleaned out thoroughly after each feeding, the residue sours and becomes a medium for the growth of millions of bacteria. When these bacteria get into the digestive tract of the calf they cause trouble. For this reason it may be strongly urged to clean out the calf pail after each feeding and if possible sterilize it, so that bacteria cannot find a place to lodge and flies will not use it as a breeding place.

The federal farm loan board in its first year of service has put machinery for coöperative banking in every state. At present the rate of growth is about twenty-five new associations daily, each association representing about $50,000 in loans.

Pony Puzzle

Count the Dots and Win a Prize

Here is a Shetland pony covered with dots. By being careful any boy or girl can count the dots on this pony. If you can do this we will send you as a prize, a packet of five beautiful embossed postcards lithographed in rich colors, and also a certificate for 1500 Free Votes in our grand contest for a beautiful Shetland Pony. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

Beautiful Pony Given

Remember the pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in this great contest. In case of a tie for the pony one will be sent to each person so tied. Full particulars by return mail.

THE PONY MAN Dept. 22 3 Des Moines, Iowa

Equipment for Farm Sheep.

Adequate Protection for Flock of Sheep Is Possible at a Very Moderate Cost.

EQUIPMENT for raising sheep on farms need not be expensive, say specialists in the U. S. Department of Agriculture. Elaborate and expensive structures do not insure economy in management and are not essential to the welfare of the flock. In mild latitudes, little housing of any sort is needed, but, where winters are longer and more severe, some protection from storms is required. Under such circumstances, the buildings in which it is proposed to house the sheep should be dry, well ventilated and free from drafts, but no special provisions for warmth are required.

Where the flock contains 100 or more ewes, it is desirable to provide a separate building for it. Smaller flocks can be cared for in sections of barns which contain other stock. In Farmers' Bulletin 810, Equipment for Farm Sheep Raising, a new publication of the U. S. Department of Agriculture, a number of plans are given for different kinds of sheep barns, and also for such other equipment as pens, feeding troughs, hurdles and fences. A good supply of feed racks, grain troughs, etc., says the bulletin, can be provided at a small expense.

Because of the wide differences in climatic conditions under which sheep are raised, it is impossible to recommend a particular type of building for universal use. A few fundamental principles, however, should be followed, no matter what type of building is to be constructed. In the first place, the site should be dry and well drained. Ample yard space should be available adjacent to the main barn or shed, and it is desirable that this should have a southern slope with sandy soil. If, too, the sheep barn is located conveniently to the farmhouse or to other barns, much time will be saved in the performance of routine labor. This is important, because through a part of the year the flock requirs many times a day.

In planning a barn, it is well to remember that shade and protection from heat are necessary for sheep, and that these cannot always be obtained in pastures. The building that is cool in summer, therefore, will often give greater comfort to the animals than they can obtain out of doors. More important requisites, however, are dryness and light. Sheep cannot possibly thrive in quarters that are damp or dark. In fact, the flock should be shut in only during storms. One square foot of window to each twenty square feet of floor space is considered necessary. The windows should be placed at a height to insure a good distribution of light and, in particular, of direct sunlight for the lambing pens during the period the ewes are lambing.

The ewes suffer greatly if confined in poorly ventilated pens. It is, therefore, necessary to provide some means of securing fresh air without creating drafts. Where the building is very large with numerous doors and windows, it is sometimes advisable to build one or two partitions from floor to ceiling. By opening muslin-screen windows on the side opposite to that from which the wind is blowing, fresh air can be admitted without causing drafts. In very cold sections or where lambs are to arrive in the winter months, specially arranged outlets of foul air and inlets of fresh air will be necessary.

Level and well-drained clay-surfaced floors are cheap and satisfactory, the only objection to them being that they do not exclude rats. For alleys and feed rooms concrete floors are required.

In the bulletin already mentioned is a discussion, accompanied by drawings, of the plan of a barn intended for the exclusive use of sheep, designed to meet the needs of those permanently engaged in sheep raising on a large scale. The working drawings and bills of materials for this and for the other buildings discussed in the bulletin may be obtained from the office of public roads and rural engineering, department of agriculture, Washington, D. C. As the supply of the drawings for free distribution is limited, however, it is expected that only those will apply for them who are seriously contemplating building.

The building referred to has eight large pens, each capable of holding twenty ewes, allowing twelve square feet of floor space and fifteen inches of rack space for each ewe, and a small pen for the accommodation of four or five bucks. The partitions between the pens are formed by movable feed racks, so arranged that the attendant can walk down the center to distribute feed. Storage space for fifty-five tons of loose hay or straw is provided in the mow, and for 1,100 bushels of grain in the storage room on the second floor. This is enough feed, with the exception of silage, it is said, to carry for a period of five months all the sheep that can be put in the barn. The silo should have a capacity of thirty tons. The estimated cost of such a building with materials and labor obtainable at prices prevailing in May, 1916, should be approximately $2,400. These figures do not include feed racks, and the bulletin is careful to state that they should be considered only as a rough guide, because it is impossible to state exactly what the prices of material and labor will be in any locality. The amount of farm labor employed is also an important item in the total expense of construction.

Another set of drawings shows a combination horse, cattle and sheep barn, designed to accommodate ten horses, five cows and sixty-three sheep. Still another design calls for a simple type of closed sheep shed, which is especially adapted for farms in which the main barn has large feed capacity, but not sufficient floor space for the live stock. Allowing twelve square feet of floor space per animal, this shed will hold twenty-six sheep. This shed affords good protection for sheep under any condition and may be used for winter lambing if the width is increased from sixteen to twenty feet. This will enable detachable lambing pens to be set up next the wall and still leave room for a feeding rack for the other ewes.

The bulletin also discusses in detail with illustrations a number of designs for grain troughs, feeding racks, fences, hurdles, lamb creeps, and other equipment. Growers are cautioned that fences that will exclude dogs should be used, although a less expensive fence would suffice for the sheep themselves.

Hogs that are bothered with lice consume more feed for a pound of grain than those free from lice. Dipping or spraying will get rid of the lice and thus save feed. The advantage of this will be at once evident if a comparison is made between the cost of material and labor for dipping or spraying and the price of feed saved.

Studebaker

Prices of all cars advance September 15th

The FOUR Touring Car will be increased from $985 to $1050

The SIX Touring Car will be increased from $1250 to $1385

THE costs of materials and labor used in the manufacture of automobiles have been, and are, steadily increasing.

Studebaker uses only the highest grade materials throughout their car, including chrome-nickel and vanadium steels, genuine hand-buffed leather and other materials of the highest quality.

A year ago Studebaker made huge purchases and placed long-term contracts for materials, making it possible to continue the present low prices while other manufacturers of cars in the Studebaker class have already advanced their prices.

But the popular demand for Studebaker cars is rapidly exhausting the materials purchased at old prices, and therefore, prices of all models will have to be increased on September 15th.

It is an invariable Studebaker policy to subordinate price to quality — quality must always be maintained.

You will probably never have another opportunity to buy, for so little money, such a powerful, durable, accessible roomy and comfortable car.

Every Studebaker car is guaranteed for a full year from date of purchase.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Farm Women and the Liberty Loan.

There are thousands of women in the Middle West who are operating their own farms and making money at it, and there are thousands upon thousands of other farm women who provide themselves with a modest income of their own through the marketing of their poultry products, their butter, and the surplus of the orchard and garden, either fresh or canned. Some of these farm women have used the money so earned to supplement the family income and others have tucked it away in the bank and allowed it to accumulate against the proverbial rainy day. All of them have worked hard for the money they have earned and, being naturally cautious, not many of them have cared to risk their savings in any sort of investment. Now, however, a safe place for the investment of these savings is offered by the United States government in the second liberty loan. In fact, it is anticipated that the savings of the farm women will become an important factor in the success of the war.

The time for the second issue of the liberty loan has not yet been definitely determined, but it is certain to come before the close of the year. The season has been a profitable one for the farms and those farm women who have laid aside a nice sum of money could not hope to find a better use for it than the purchase of liberty bonds for the following reasons:

Liberty bonds are United States government bonds, guaranteed by the resources of the government of the United States, the richest and most stable nation in the world.

Liberty bonds pay a higher rate of interest than do savings accounts. In the first issue of the liberty loan the bonds pay 3½ per cent interest. The interest is payable in half-yearly installments.

Liberty bonds belong to the woman who buys them. Without her consent they cannot be transferred to the ownership of any other person. If, however, she wishes to raise money on them, she will find them the best security on the market. If she wishes to sell a liberty bond, she may dispose of it at the market valuation. Most government bonds sell at higher than par value, and liberty bonds are government bonds.

Liberty bonds are also certificates of the American citizen's desire to help the United States provide food, shelter and maintenance for the soldiers, sailors and marines who are fighting our war. There are two ways by which a government may raise money, by bond issues and by taxation. Taxation offers the citizens of the country no more immediate returns than does fire or burglar insurance. Bonds pay interest, as well as insure national protection.

That is why purchase of the bonds of the second liberty loan is the farm woman's chance to help herself and her country. The women of the farms of France saved the credit of that land after the German victory of 1871. They bought government bonds, and made their country financially secure and themselves financially independent. Now is the time when the farm women of the United States may do as well for their country and for themselves by buying, to whatever extent they can afford it, liberty bonds when the second liberty loan is announced by the secretary of the treasury.

Frying in Deep Fat is Most Economical.

If rightly done frying in deep fat is more economical than frying in a small amount. When fried in deep fat, the food does not, according to a member of the home economics department of the University of Wisconsin, absorb as much fat and so is more easily digested.

Fats for frying should be tried out ("rendered"). Beef drippings, lard, various commercial frying fats or even mutton fat may be used if they are carefully clarified. (To clarify, melt fat, add potato cut in thin slices and cook until slices are brown and crisp.) Mutton fat may be used for frying foods which are to be served hot, as potatoes, croquettes, meat balls, fish and similar foods. It hardens on cooling and, therefore, is not good for cooking foods, such as doughnuts and crullers, which are served cold.

Fat that has been used for frying fish, if it is carefully clarified, may be used for frying other foods.

Fats should not be allowed to become too hot during the frying process, because this not only wastes the fat but makes it unpalatable. For frying foods which have been previously cooked—meat balls, croquettes, potato balls—the fat should be hot enough to brown a one-third-inch cube of bread in sixty seconds.

Drain fried food carefully over the kettle of fat and then on soft, unglazed paper. Use enough fat to float the food, but be sure that the kettle is not too full.

A deep, heavy saucepan or kettle should be used for frying in deep fat. A small iron kettle called a Scotch kettle is most desirable. This is not easily upset and holds the heat. When fat has become very much discolored by repeated usings, do not throw it away, but use it for making soap.

Take Drying Precautions.

Drying of fruits and vegetables, although a simple and easy process, will result in failure unless certain necessary precautions are taken, points out the drying expert at Iowa State College. He emphasizes the facts that:

There must be a good, free circulation around a product while it is drying.

With products that are blanched, start the drying immediately after the blanching process or spoilage may result.

When peas become sticky during drying, it indicates that they are drying too slowly and may spoil. This often happens when sun drying is used during bad drying weather or when they are dried in a place with poor air circulation.

Place products for drying thinly on drying trays.

When artificial heat is used, take care the product does not become scorched or dry too hard.

In storing, never use air-tight containers until the product is thoroughly conditioned, that is, allow it to dry for several days by placing in a sack or open container, or the product may mold in storage.

Ham Baked in Dough.

To the Editor:—Last winter I saw an inquiry about how to bake a ham so that it will have a hard crust on it. I am not a cook and not a woman, but I can cook meats and hams. I am a butcher by trade and when I learned the trade it was different from what it is now. A man had to learn the trade from one end to the other, slaughtering, making sausage, tending shop, cleaning casings, cooking hams, etc. I will give you herewith my recipe for hams:

To bake a ham (smoked) make a dough of flour and water (nothing else) so it can be rolled out like biscuit dough, but make it thinner. Have the dough rolled out about an eighth of an inch thick and lay your ham, rind down, on the dough. Have the dough large enough so that it will completely cover the ham. You can season with garlic or spices over the top of the ham. Do not use too much garlic, as it will be too strong, and it should be chopped fine. Now fold your dough over the ham and press together so the juices stay in. Bake in a moderate oven one hour to three pounds of ham. Do not remove the crust until the ham is cold.

For boiled ham boil one hour to three pounds of ham. Put on the fire in cold water, otherwise your ham may crack open. Do not allow the water to boil, for that will make the ham dry. The water should only simmer. Use hams from young hogs. The best weights are from nine to twelve pounds, not heavier. Leave in the water until the ham is cold and you will have a nice, juicy, well-cooked ham.

Henry W. Ulman.

Corn in Place of Wheat.

To the Editor:—I have received so much help for years from this department I am ashamed to say this is my first contribution. I thought perhaps as wheat flour is so high in price you would like to know of ways to use something in place of it. Here is a recipe for corn oysters that we like very much: One cupful of sweet corn, shaved from the cob (not cooked), one cupful of sweet milk, and flour enough to make a thin batter. Salt to taste. Drop by spoonfuls in hot lard and serve while hot.

Another of my favorite recipes is johnnycake made from corn before it is ripe. As soon as corn can be shelled or rubbed from the cob, grind just enough to make a johnnycake the size you want. I use my food chopper to grind the corn. For the johnnycake use one cupful of sour milk, one teaspoonful of soda, one egg, salt, and enough of the ground corn to make a thin batter. Bake the same as any johnnycake.

Will someone tell us all about samp? How ripe should the corn be and how do you make it? What do you do with it after it is made? I have heard old people talk about samp, but never learned how to make or cook it.

Aunt Em.

Recipes.

Danish Pudding.—Two cupfuls white sugar six eggs, one tablespoonful flour, one cupful melted brown sugar, one and one-half quarts boiling milk, two teaspoonfuls vanilla. Beat the eggs well without separating the yolks and the whites. Pour the sugar into them and after mixing thoroughly, stir in the flour. Have the melted brown sugar ready on the stove and pour the egg mixture into it, stirring well all the time; pour this into the boiling milk in a double boiler and leave until it thickens. To make firmer, set in the oven in a pan of hot water, as in baking custard. Let cool and add vanilla. Chill or freeze as desired and serve with or without whipped cream.

Green Tomato Mincemeat.—One peck green tomatoes, one peck apples, three pounds sugar, one and one-half cupfuls chopped suet, two tablespoonfuls allspice, three tablespoonfuls cinnamon, two tablespoonfuls ground cloves. Wash, pick over and chop the tomatoes in small pieces. Peel apples and cut in small pieces. Place tomatoes in a colander, pour boiling water over them three times, draining well. Put all ingredients in a preserving kettle and simmer slowly until tender.

Watermelon Pickles.—Ten pounds watermelon rind, one quart vinegar, two pounds sugar, one-half ounce whole clover, one-half ounce cinnamon stick. Cube the rind, peel and remove all red part and let stand in cold water several hours. Boil in water till clear. Remove from liquid, drain and place in large porcelain vessel. Boil vinegar, sugar and spices ten minutes and pour over the rind. For three days drain off this liquid, heat and pour over the rind. Seal in sterilized jars.

Butterless One-Egg Muffins.—Two cupfuls flour, one teaspoonful salt, four teaspoonfuls baking powder, two tablespoonfuls sugar, one egg, one-half cupful milk. Sift together flour, salt and baking powder. Beat up egg with sugar until very light and creamy. Add milk and pour into the flour mixture Bake in well-greased tins.

THE YOUNG FOLKS

Snookums Adopts a Family.

Dear Young Folks:—I enjoy reading your letters very much and hope you will enjoy mine. I am ten years old. I live on a farm five miles from town. We have an old cat named Snookums. One time she had two kittens and an old hen killed them. Not very long after that we found a nest of young rabbits. We brought them to the house and put them in a box and put old Snookums in with them. She was very proud of the seven little rabbits and stayed in the box with them night and day and tried very hard to raise them, but they only lived about ten days. Now she feels it her duty to help raise her two grandchildren, and brings them up a half-grown rabbit every day.

Ramona.

Would Like to Have the Young Folks' Help

Dear Young Folks:—I have been reading your letters and want to write to you. I am a girl of eight and I live in the suburbs of a big city. We have forty acres of fruit and, oh, how I would have enjoyed having all the Young Folks help me pick strawberries, raspberries, blackberries and plums this summer.

Little Lila, I will try making some of your butterscotch candy some day. It sounds like it must be good.

There is a little girl next door that I play with. I would like to know some new games that two can play. Can any of the Young Folks tell me one?

Lucile.

Likes to Ride His Bicycle.

Dear Young Folks:—This is the first letter I have ever written to you and I hope you will like it. I am a farm boy and live on a 160-acre farm. We have fifty pigs, twelve horses, twenty-four head of cattle, and milk three cows. We have nine geese and about 300 little chickens.

For pets I have three cats and one dog.

I have a bicycle and when the roads are good I like to ride it.

I am ten years old and am in the sixth grade.

Carl.

Her First Letter.

Dear Young Folks:—I have never written to your page before, but I am going to now. I like to read your letters very much.

I am thirteen years old and I passed the eighth grade examination when I was eleven years old, but I have never gone to high school yet.

I sew all of my own clothes. I can crochet, tat and cook. I feel sorry for poor Vesta, as I know how she feels, for my mother is dead too. But I have a stepmother who is awfully good to me.

Georgia.

Complete Musical Instruction

The Centralizing Method of Music Teaching is based on the principle of personal efficiency. A thoroughly practical course that teaches the finest in music, either vocal or instrumental. Our record of no disappointed students has built this to be one of the largest schools in the West in nine years.

Elementary Courses that do more than teach scales to beginners. Develops and trains backward or incorrigible children. Endorsed by leading educators.

Finishing Courses for advanced students in all departments, make confident and perfect concert artists or parlor performers.

Normal Courses for advanced students, guaranteed to make successful teachers. We help you establish your school.

Dramatic Courses train for amateur or professional work. A special course for moving picture acting. Complete practice stage.

Write for book of courses and terms, indicating courses that interest you.

Bovee's Pipeless Furnaces

Sold at Manufacturer's Prices

The most practical heating plant used. Twenty years on the market. Saves 40 per cent on cost and 40 per cent on fuel. We manufacture five sizes suitable to heat from a small cottage to a large church including our old reliable No. 40 Pipeless with 28-inch combustion chamber and all fittings, for

$86.00

Easy to install in an old or a new house. No cutting of walls. Cool basement. We also furnish regular piped furnaces and fittings when required. Save big money by getting our free catalog.

Bovee Furnace Works 204 W. 8th St. Waterloo, Iowa

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Inclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date 1917 spring and summer catalog, containing over 550 designs of ladies', misses', and children's patterns, also some points for the needle. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

1924—Children's dress in empire style and with long or short sleeves. Pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 3⅛ yards of 44-inch material for a 6-year size.

2219-2202 — Ladies' costume. Waist 2219 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure, and requires 4⅛ yards of 36-inch material for a 36-inch size. Skirt 2202 cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. Size 24 requires 6½ yards of 36-inch material. The skirt measures about 2⅜ yards at the foot. Two separate patterns, 10 cents for each pattern.

2201—An attractive one-piece dress. Pattern is cut in 4 sizes: 14, 16, 18 and 20 years. It requires for a 16-year size, 5¼ yards of 44-inch material.

1969—Girls' dress, with sleeve in either of two lengths. The pattern provides a chemisette for high neck finish. The pattern is cut in 4 sizes; 6, 8, 10 and 12 years. Size 8 years requires 3 yards of 44-inch material.

1799—A practical, easily made apron. Pattern is cut in 3 sizes: Small, medium and large. It will require 4¾ yards of 36-inch material for a medium size.

2203—A serviceable model. Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 6¼ yards of 44-inch material, with ¾ yard of 27-inch material for the cap.

2036—Ladies' dress, with sleeve in either of two lengths. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7¼ yards of 36-inch material for a 36-inch size.

2023—Girls' guimpe with sleeve in either of two lengths, and with neck high, or in "V," square or round outline. Pattern is cut in 5 sizes; 6, 8, 10, 12 and 14 years. Size 12 years requires 1⅞ yards of 36-inch material.

2220—Girls' dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 years requires 3¼ yards of 44-inch material.

2222—Union suit with or without sleeves, for men and boys. Cut in 6 sizes: 28, 32, 36, 40, 44 and 48 inches breast measure. Size 36 requires 2⅞ yards of 36-inch material without sleeves. With sleeves, it requires 3⅛ yards of the same width.

2212—Girls' dress—Cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 requires 3½ yards of 44-inch material.

2051—Boys' Russian suit. Pattern is cut in 4 sizes: 3, 4, 5 and 6 years. It requires 2½ yards of 44-inch material for a 5-year size.

International Sunday School Lesson

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson For September 2, 1917.

The Shepherd of Captive Israel.

LESSON TEXT—Ezekiel 34.

GOLDEN TEXT—The Lord is my shepherd, I shall not want.—Psa. 23:1.

With the complete subversion of the kingdom of Judah, the national consciousness was largely crushed and the people were without heart for the common affairs of life. Ezekiel, though born in Jerusalem, prophesied in Babylon near the river Kebar. The object of his prophesying was to encourage the captives by placing before them God's promise of their return to their own land. His name signifies, "God will strengthen," which is very appropriate to the mission which in the providence of God he was called upon to fill.

I. Israel's Faithless Shepherds Denounced. (vv. 1-10). These false shepherds included the kings, princes, judges and priests. Ezekiel points out that the captivity was because of sin, but he shows that the greatest guilt obtains with reference to these leaders. They were placed in the position to care for and protect the sheep. The following indictments are brought against them:

1. They fed themselves instead of the flock (v. 2). They were essentially selfish. They ministered to themselves instead of the sheep. Too many today are filling public offices for the sake of private gain. Sometimes even ministers are found who are more concerned about themselves, their pleasures and profits, than they are about the souls of the people who support them.

2. They were cruel (v. 3). They were not only mere hirelings, guilty of looking after themselves, but they actually behaved like robbers, preying upon the flocks. All are guilty of this same sin who use their influence and power to the disadvantage of others. In the theocratic kingdom such behavior was peculiarly obnoxious, as the rulers and ministers were representatives of Jehovah himself. The minister and public officer today is acting in his capacity for God, not for himself, therefore, he should make the cause of heaven his chief concern.

3. They neglected the diseased, wounded, wayward and lost (vv. 4-6). As a result of their selfish cruelty the sheep were without food; therefore exposed to disease; had no bond of unity, were exposed to the ravages of wild beasts. God's flocks are in many places thus suffering and dying because they have not been fed. God's judgments are against such (vv. 7-10)

II. The Faithful Shepherd. (vv. 11-16). The Shepherd here is none other than Jesus Christ. The wonderful blessings here described will be realized by Israel in millennial times. This blessed condition will be ushered in by the second coming of Christ. How sincerely all should pray, "Thy kingdom come." When the true Shepherd comes:

1. He will seek his lost sheep (v. 11). Though they have gone astray through wilfulness on their part, and neglect on the part of faithlesss shepherds, Jesus will seek them out and save them. To save the lost was his peculiar mission (Luke 19:10).

2. He will rescue them from the power of their enemies (v. 12). God's sheep have real enemies and they have fallen into the enemies' hands, but the Faithful Shepherd is able to deliver them. "No one is able to pluck them out of his hands" (John 10:28, 29).

3. He will bring them back to their own land (v. 13). Poor, scattered Israel shall one day (may it be soon!) be brought back to their own land. This is the one unmistaken sign by which we may know the beginning of the end of this dispensation. Be assured that it is not wars, nor pestilences that mark the sign of the close of this age, but the movements of Israel.

4. He will feed them (vv. 14, 15). "I will feed my flock, and I will cause them to lie down, saith the Lord God. I will seek that which was lost, and bring again that which was driven away, and will bind up that which was broken, and will strengthen that which was sick; but I will destroy the fat and the strong; I will feed them with judgment."

5. He will seek that which was lost (v. 16). That which has been driven away he will seek and bring it back again.

6. He will heal them from weakness and suffering (v. 16). All the wounds which Israel has received these many centuries shall be healed.

III. The Golden Age (vv. 23-27). The vision of the world as it now is, is most disheartening. It is midnight darkness. In this blackness we wonder why God does not interpose. We wonder how he can be silent. While midnight is upon us we are hopeful, for we see the bow of God's promise of better things flung across the sky. This present order shall disappear before the new. In that new order:

1. Jesus Christ, David's Son, shall be king (vv. 23, 24). This new era of blessedness can only come into realization when God's Son shall establish his kingdom upon the earth.

Distribution is the world's greatest problem. Since the beginning of history the earth has produced each year many times the amount of food to supply every inhabitant in abundance. Nevertheless, there have been great famine and suffering. The trouble is lack of proper distribution. One region surfeits in plenty, while another starves. Wonderful as our system of commerce and transportation is, there is still much improvement to be made.

You Can Be Proud of the Baking

that you take out of the oven in an Eclipse JOY Range. All parts of the big oven get *even* heat. Fire box and flues are made in the *right sizes* to get the *most heat* from the least fuel. Can do an average baking with only *two* good sized sticks of cord wood. (Can use any kind of fuel.)

ECLIPSE

STOVES AND RANGES

This Eclipse JOY is the range with *many* big features. Hot-all-over top —heats all six lids. Saves money in fuel, saves time in getting up meals —gives you more cooking surface. Also note that the smoke pipe is *behind* the splasher back, which gives you more room for cooking utensils. Sliding damper gives you perfect control of the oven. Beautiful design, smooth finish with or without white enamel splasher back and oven door front. Made of cast iron—guaranteed never to rust out and are slow to wear out.

Write for our book of helpful recipes—shows many suggestions on getting up good meals at low cost. WRITE today.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Bicycle Headlight.

I have a bicycle headlight that runs fromh two dry cells. Do you think I could make it give more light by running it from four dry cells instead of two? How strong a bulb would it require?

Answer.—Naturally, you could obtain more light from four dry cells than from two. Use a two-candle-power, four-volt lamp if you connect the lights in series, that is, carbon to zinc. If you connect the lights in series-multiple, two in series, use a two-volt, two-candle-power bulb. If you connect all the zincs together and all the carbons together, in other words, if you connect the cells in parallel, use a one-volt, two-candle-power bulb.

Speed of Engine.

What rate of speed is easiest on an auto engine like the Ford engine? What effect has speeding or underspeeding on an engine?

Answer.—The higher the speed the greater the wear on the engine. A possible exception to this rule might be in climbing a hill in high instead of shifting into low gear when the pull has become so great that the engine almost stalls. In this case, the damage might come from straining the crankshaft by the heavy pull. The trouble most likely to result from speeding is the pounding out of the bearings, due to the hammering action of the pistons and connecting rods. This hammering action is greatly increased at high speeds. The only possible trouble from running slow is carbon trouble. At high speed the spark plugs keep cleaner.

Bosch Magneto.

Will you kindly give me the address of the firm that makes the Bosch magneto? I have a Ford car and am using a Bosch magneto on it. While on one of my trips, I lost the switch key, and am not able to purchase one in my home town. Is it advisable to use a Bosch magneto on a Ford engine?

Answer.—The Bosch Magneto Co. are located at 227 W. 46th St., New York City. Write to them at the above address and they will refer you to their nearest service station. The Bosch magneto is a high-grade magneto, and should give good service on a Ford car. The Ford ignition system is quite satisfactory, and it is questionable as to whether or not to use any other system on this car. The Ford Company suggest that owners write to the Ford Co., as to what not to put on a Ford car, the company taking the stand that the car is all right as it is. Nevertheless, many owners prefer to use shock absorbers, other ignition and lighting systems and other Ford type accessories.

A Reversing Switch.

Would you please publish a sketch showing how to make a reversing switch to run an electric motor off of two or more dry cells?

Answer.—The principle of the reversing switch is the same for both

FIGURE 1.

large and small motors. A reversing switch is an ordinary two pole, double-throw switch, wired as shown in Figure 1. The dotted lines represent wires connecting the corner poles diagonally. These wires remain in position all the time and are usually connected on the back of the switch.

Engine Overheats.

I have a 1913 Model Ford car. If I run this car about five miles at twenty so much that the water will boil. What is the reason it does this? I have cleaned out the carbon, washed out the radiator, washed out the crank case, and kept the spark advanced to the proper place. I have a master vibrator, and it sets as it should be, but still the engine heats What more can I do?

Answer.—Keep your fan belt tight and the fan bearings oiled and in good working order. Giving the fan blades a little more twist might improve the cooling capacity of the fan. Run with as lean a fuel mixture as possible, as too much gasoline will make a motor to overheat. The Ford engine has some tendency to heat, due to its high compression. Do not expect too much of your car. While twenty miles per hour for five miles is not an excessive speed, still it puts a pretty good pull on the engine and some heating may be expected. A loose fan belt will cause a motor to heat sooner than anything else except a tight bearing.

Plowshares Split at Point.

I have been having a little trouble with plowshares splitting at the point. Will you tell me how to sharpen them to prevent this?

Answer.—Your plowshares appear to be made of iron. Heat the point to almost a white heat and quickly hammer out the point in order to weld the fibers of the iron together.

Moving a Lever by a Magnet.

How can I pull a lever over six inches by an electro magnet? Can I make a magnet strong enough to do this? I wish to move this lever from a distance, using electricity to move it. How would you suggest? A pull of about twenty pounds is required at the end of the lever.

Answer.—Magnetism travels with difficulty through air. Six inches is quite a distance to draw a weight of twenty pounds. While the size of a magnet is more or less of an experiment, our rules for calculating the size of magnets would lead us to be-

FIGURE 2.

lieve that a magnet strong enough to fulfill the above conditions should have a soft iron core, two and one-fourth inches in diameter, bent horseshoe shaped, the legs of the shoe each being eighteen inches long. Each leg of the shoe should be wound with No. 14 double cotton-covered wire, enough wire being used to make a layer three inches thick. A high enough voltage must be used to force ten amperes through the coils. Instead of placing the magnet at the end of the long lever, it would be better to use a short lever. If your lever were shortened so that one inch of travel would be sufficient, you could probably use a magnet only one-sixth as large as the above.

Probably the most successful manner of operating the lever would be by an electric motor controlled from a distance by a switch. In Figure 2, A is the lever; B is a cord attached to the end of the lever and running around the idler pulleys, CC, all the pulleys being grooved to guide the rope. M is a grooved pulley on the electric motor. A weight, W, suspended from a pulley, D, keeps a tension on the cord. The amount of friction between the motor pulley and the cord can be regulated by varying the weight W. The friction should be great enough to move the weight easily, but should not be great enough to stall the motor when the lever hits the stop. The motor can be reversed by means of a reversing switch in the field circuit.

MEN WANTED

Now as never before, men are needed everywhere who know the gas engine line. Great armies as well as business, are dependent on gas transportation and gas power. The best opportunity in the world today for the man with a small amount of money is to learn automobiles, tractors and stationary gas engines.

We Teach With Tools, Not Books Be a Big Success as an Auto and Tractor Expert

We teach every detail of the gas engine: Motors, Electric Starters, Magnetos, Storage Batteries, Carburetors, Transmissions, Differentials, etc. Over 20,000 square feet of floor space filled with latest equipment, vulcanizing and welding plants for students to work on. Driving lessons and tractor operation included in course. Low tuition covers complete course. No extras.

Life Scholarship Free. Come to Iowa State Automobile and Tractor School—biggest and best in whole Northwest. Learn the gas engine business in seven weeks. There's a job ready for you when you are ready for the job. Ask me for free illustrated book, showing by actual photographs different departments of my school. Write today.

IOWA STATE AUTOMOBILE AND TRACTOR SCHOOL FRANK D. HENNESSY, Pres. 376 Pearl Street SIOUX CITY, IA.

$15 to $20 A Day Clear

Hoover's Word to Farmers.

(Continued from page 8.)

supplied with tickets which permit him to secure certain allotments of food for himself, his family and his stock once or twice daily. Such a system cannot be adopted in a free country like ours. "Every document of the food administrative department is open to the inspection of every American citizen," said Mr. Hoover. "We have absolutely nothing to conceal. America is engaged in a war where there are four matters of prime importance. One is money, another ships, another armies and another food. Our business is to see that the food is supplied."

Americans will be urged to eat less wheat and more potatoes. At this time the government has no intention of fixing a price on potatoes. But Mr. Hoover said that arrangements are perfected whereby the government will help, through federal reserve banks, to take care of potato paper, and, furthermore, to provide warehouses for storage of potatoes to the end that the market may not be glutted this fall. This is likely to result in a more stable price all the year around. Onions are to have the same attention from administrators of the food department.

There will be no government order to stop the killing of any class of live stock, but farmers will be urged to preserve young stuff which will become good breeding stock, and also to save the best females from slaughter. The report that there will be a general order against killing lambs and veal calves, Mr. Hoover says, is entirely erroneous.

Corn is not for the present included in the government's price offering plan. The theory is that corn follows wheat, and government food administrators expect to make a stable market by offering a fair price for all wheat farmers may have to sell. Mr. Hoover said that eventually there may be a commission to fix a fair price on hogs, but nothing is contemplated along that line as yet. The tendency, as before stated, is for the packers to volunteer to cut their profits to a minimum, and this will tend to hold up hog prices, and at the same time offer the working men and armies cheaper pork.

Agricultural implements, of course, must be furnished to the farmers of the country just as muskets and bullets must be furnished to the armies. Mr. Hoover says that an effort will be made to prove to proper government departments that steel is needed by implement makers and that at fair prices. It is the general belief that implement makers will be given steel at or near the price which the government pays, in which event there need be no fear of exorbitant prices on farming machinery.

Mr. Hoover believes that the armies of the country, in so far as possible, should be recruited from non-producing labor. He did not say that the active working farm owner or hand on a farm should be exempt from war service, at least for the present, but many farm editors read that into his rather guarded utterances. At all events, Mr. Hoover knows that we cannot produce the maximum of crops and live stock which the nation and our allies must have, if our farm boys, who are skilled labor in this industry, are taken away to war.

The government will not, at least for the present, interfere with the cheese and butter industry, but Mr. Hoover stated that he will make a strenuous effort to get a larger amount of cheese across the water to our allies.

Herbert Hoover is a clean-cut, clear-eyed, bright-minded man just past forty. He stands over six feet, talks plainly and distinctly, though with soft and well-modulated tone. He has a wonderful memory and an almost unbelievable capacity for detail. He gives an instant impression of sincerity and this impression grows as one talks with him. He serves the country without pay, and his associates work on the same basis. [illegible] and assistants in the food [illegible] live department get salaries.

DO YOUR OWN SHREDDING

with a ROSENTHAL Corn Husker and Shredder

No. 1 Cyclone

Most economical and satisfactory way of handling your corn crop. No delay, no extra help. Do it in your own spare time. Only 6 to 8 h. p. to run it. Built on same sturdy, success lines as our larger machines. Absolutely safe to operate. 19 years in the field.

Guernsey Dispersion.

LAST week we had the opportunity of looking over the Woodend Farm Guernsey Herd, which is to be dispersed September 19th and 20th at the Minnesota State Fair Grounds, commencing at 10 o'clock each day. There are over 40 head of A. R. cows in the herd, animals selected with the idea of building up a herd possessing size, good markings and consistent high-producing tendencies giving a rare opportunity to select foundation stock. The herd is also on the Minnesota accredited list, a guarantee against buying animals affected with tuberculosis. There are 30 daughters of Cora's Governor of Chulmark, that has 40 A. R. daughters, two over 700 pounds. Ten offered have A. R. records; two of them over 600 pounds. First Dawn of Woodend, 606.98 pounds, is a beautiful cow now on retest and had produced 408.54 pounds on her 181st day. She has a calf in the sale sired by Imp. Valentine Squire. Here is a calf worthy of investigating farther. Arabella of Woodcrest 2d, a class C cow with 482.10 pounds, is also on retest with 219.04 pounds in 115 days. She is likewise a striking individual. The three herd bulls now in use are Imp. Valentine Squire 28093; their May Rose bull, the second highest May Rose bred bull in America, and Imp. Major of Vimiera. Imp. Valentine Squire is out of the great Island cow, Valentine 3d 7514 P. S. She has the distinction of holding the highest record made on the Island of Guernsey, 783.10 pounds fat. She carried a calf seven months and 20 days during her test. She is likewise the dam of Imp. Sailor Boy, that sold for $1,700 at auction. Besides being a phenomenal producer and breeder she likewise has a matchless show record, as she has won many first prizes on the Island, including first prize and champion cup, also challenge cup for best cow in the show, Guernsey Farmer Show in 1914 and first and champion cup, reserve and Douglas cup and winner of challenge cup for best cow in the show R. G. A. and H. S. show, Whitsuntide King's cup, July 20, 1915. Imp. Valentine Squire, therefore, has license to be an exceptional sire. He is a large, showy individual with good style, possessing great depth and good carriage. We were greatly impressed with his get and have every reason to believe he has a great future. May Rose King 2d 13130 is a good individual, though different in type. He is splendidly marked and his get are very promising, especially those out of daughters of Imp. Cora's Governor of Chulmark. There are a number of excellent bull calves as well as yearling heifers and two-year-old heifers to be included in this offering. Write for catalog to Dr. M. B. Wood, Mankato, Minn. See advertisement on page 20.—Adv.

Champion Chesters of the Northwest.

THE biggest mistake a man can make this year is to put off buying that boar until late this fall. Owing to the high prices now paid for pork, breeders are castrating all boars that are not really high class in every respect. There was a natural shortage of pigs the past spring and this, together with the close culling, is going to make a scarcity of breeding boars this fall. Breeders report good sales and it behooves the man that wants good stock to buy early. H. A. Derenthal, Wyckoff, Minn., has one of the select Chester herds of the Northwest, in fact his Chesters have won more coveted prizes in the Northwest than any other. Good sows grace the herd and they are mated to boars that have demonstrated their superiority in the show ring and as sires of pigs that have been winners. It costs but a little more to get the real good ones and you will be proud of your purchase when the boar you buy arrives at your farm. The Derenthal Chesters will be exhibited at Hamline and La Crosse and your inspection is invited. In the meantime communicate with the owner and please mention The Wisconsin Farmer. See page 18.—Adv.

Whitmore Brothers' Recent Purchases.

WE have just received a letter from Whitmore Brothers, Lyons, Wis., stating that they have just purchased an under a year boar sired by Duke Champion 12th 206780, that is a litter mate to the 1916 grand champion sow. The name of their new boar is Handsome Champion 4th and was bred by E. J. Barker. They also have purchased a spring pig sired by Superb Emblem, one of the best sons of Superbus. Whitmore Brothers also state that their show herd has rounded up in good shape and we, therefore, predict that they will be heard from in the winnings at the various fairs this fall. The breeding and individuality of their herd is of a high order and their young boars sired by their famous herd header, Aldow Climax, should suit even the most discriminating buyers. See page 20.—Adv.

Some Great Chesters.

B. H. BABCOCK, Evansville, Wis., has a bunch of spring pigs that are rippers. To make a long story short, they are as good as any we have seen this spring. They are sired by King Kole by Chief Keokuk. This breeding is well known to Chester White men. One of the best litters is out of a Col. Huffy dam. Col. Huffy was by Col. Kent by White Rock. There is a fine April litter by the above boar out of a J. R.'s King dam. There are also some good pigs in this herd by Pay Streak. Mr. Babcock has some real good sows in his herd and they are producing the right kind. He recently showed his pigs at Janesville where he won his share of the prizes. We feel sure that our readers that wish to buy a Chester White boar can find what they want in this herd. See page 18.—Adv.

A Good Lesson for Beginners.

IN the fall of 1916 a herd of Durocs was exhibited at the Janesville Fair. This was the first time this firm had exhibited hogs of this breed and when they left home they thought they had Durocs "better than the other fellow." After the judging was completed at Janesville last year they found that they didn't even have hogs that could "get in the money." The junior member of the firm in question was not satisfied to be a follower. He realized that they didn't have the type or the breeding that produces winners and he made the remark, "We'll be back next year with Durocs that can win," and they did. The subject of this sketch is Riley Martiny & Son, Baraboo, and their doings of the past year are well known to the readers of The Wisconsin Farmer. They sold their original herd and last winter bought six of the best bred sows they could find. This is the important fact that we wish to bring out. They bought the best sows and started right. They realized that a few extra dollars for foundation stock was, in the long run, economy. Getting down to the present time the result of adventure proved satisfactory beyond expectation. During the past week they showed Durocs at the Janesville Fair, where they didn't get a look in last year and won in the following classes against the usual Janesville competition: First on aged boar; first on aged sow; first and second on yearling sow; first, second and third on boar pigs; first and second on sow pigs; first on aged herd; all firsts and seconds in the futurity and the grand champion Duroc sow of the show. The motive of this field note is not necessarily to boost the Martiy Durocs, but to show what can be done with good seed stock and proper care. What they have done others can do and if many of the Duroc breeders of the state of Wisconsin would sell off some of their inferior and cold-blooded brood sows their advancement as Duroc breeders would be far greater than it is at the present time. With pork at $18 per hundredweight this is the opportune time to clean house. Think this over. Then act! See advertisement on page 19.—Adv.

Morehouse Again.

FRANK H. MOREHOUSE, Lancaster, Grant county, Wisconsin, starts his usual boar card with this issue. Morehouse is the fellow that has those good Poland Chinas and he sure has the good ones again this year. Last year he sold some 50 spring boars; this year he will have about 25 to sell, besides a few good gilts, so those that want the Morehouse Polands will have to order early. His pigs are by Big Ben H., a good son of the Illinois boar, Big Ben. Other good ones are by Big Type Jim, a son of Jim Crow, the sire of the winners at Milwaukee last fall. Big Type Jim, by the way, is out of Big Type Bess, the sow that topped the Madison sale last winter. The sows in the herd are of the best big-type breeding, such as A Wonder, Goldengate King, Black Orange, Perfect Wonder, etc. We like to refer our readers to this herd of Polands, for Frank has good hogs and is absolutely on the square. His pigs must please and be as represented or you get your money back. Notice the advertisement that appears on page 19, and write for details.—Adv.

Notice the Short-horn Advertisements.

IF you want to buy a Short-horn bull or a few females notice the men who have cattle of this breed that are advertisers. If a man has Short-horns that amount to anything he will advertise them and get them in herds that will do him some good. The other class of breeders are satisfied to sell them to anyone they can and at almost any price they can get. It is a general rule that you will find the best stock in the advertised herds. Scotch Short-horns, Scotch-topped Short-horns and milking bred Short-horns are advertised in The Wisconsin Farmer by dependable breeders. This publication is glad to recommend their herds.—Adv.

Rock County Short-horn Association.

A RECENT inspection of some of the Short-horn herds in Rock county, Wisconsin, finds them coming through the summer in fine condition. The pastures have been good and the young stuff, especially, is doing fine. All the breeders report good demand for their stock, though there is not a great deal for sale at this time. Many of the breeders have young stock coming on that will be old enough to sell this fall. Some good young bulls will be offered during October. If you wish information relative to this Short-horn association, write J. E. Kennedy, Janesville, Wis. See page 18.—Adv.

Sir Bess Ormsby Mercedes.

WE have just had a letter from Geo. H. Comings, president of the Silver Springs Farm Co., Eau Claire, Wis., saying: "The calf you advertised has been sold. He went to Mr. Emil Haigh, Alma, Wis. The best we can do now is to book calves sired by Sir Bess Ormsby Mercedes, to be shipped when about a month old. There has been a wonderful sale business." The bull that is mentioned in the letter above is a fine individual of the very best breeding. His sire is Sir Pietertje Ormsby Mercedes 37th by Sir Pietertje Ormsby Mercedes, which is out of that great cow, Pietertje Maid Ormsby. The average of the records of this young bull's dam and sire's dam is 559.85 pounds milk and 28.11 pounds butter in seven days. He is a good bull and we feel confident that he is going to make a worthy sire. This firm will book your order for a bull calf out of their yearly record cows. Write them at once. See page 20.—Adv.

Model Major 2d at Milwaukee.

IF you want to see a Poland China boar that will actually weigh 1,000 pounds, three years old and without a wrinkle or crease on his body, see Model Major 2d at the Wisconsin State Fair. We don't believe there is a better aged Poland China boar in this state, but that point will be decided at Milwaukee. We will say that we have never seen a boar of his age that is as smooth. This boar is owned by E. W. Hendricks, Hazel Green, Wis., and Ed will be on the job to meet all his old friends and make new ones.—Adv.

The Date—October 2d.

ON the above date the Grant county Poland China breeders will hold their second boar sale at Lancaster, Wis. For this sale 30 spring boars and 10 open spring gilts have been listed. The tops from the several good Poland China herds in the county have been selected for this herd, and, as a representative of this paper has recently seen this offering, we are glad to recommend it to prospective buyers. Don't forget the date and watch future issues of this paper for detailed announcements.—Adv.

Quackenbush at Melrose.

WE wish all the readers of this publication that are interested in Poland Chinas could see the good herd on the farm of W. W. Quackenbush, Melrose, Jackson county, Wisconsin. He has some wonderful brood sows and they farrowed and raised some fine pigs this spring. These boars and gilts are for sale and they represent some of the best, well-known herd boars of the Northwest. If you are going to buy a boar or a gilt we gladly refer you to the above breeder. See page 19.—Adv.

Polands at Bangor.

R. MEINKING, Bangor, Wis., is too well-known as a Poland China breeder to need much comment at this time. We simply wish to say that the pigs he has for sale are in fine condition and we do not hesitate to suggest that you let Mr. Meinking tell you what he has for sale at this time. The pigs are sired by a litter mate to the yearling boar that will be heard from at Milwaukee. Bear this in mind. See page 19.—Adv.

A Competent Auctioneer.

ANYONE planning a sale this fall will be able to secure an entirely competent auctioneer by writing Chas. W. O'Neill, Bridgeport, Wis., whose advertisement appears on page 18 of this issue. Mr. O'Neill is acquainted with the live stock auctioneering business and knows how to sell stock for the highest prices. He can conduct your sale to your entire satisfaction. Write him about your plans today.—Adv.

Grant County—Angus Headquarters.

WHEN you see an Angus, think of Grant county, for the best cattle of this breed to be found in Wisconsin are in Grant county. There are many bulls and heifers for sale just at this time ad if you will write to Walter J. Steinhoff, Platteville, Wis., he can tell you all about the Grant County Angus Breeders' Association, and just where you can buy what you are looking for. See page 19.—Adv.

Homestead Farm Durocs.

M. H. O'KEEFE & SONS, Waunakee, Wis., can supply your wants in Durocs. They raised a nice lot of March and April pigs and are pricing them worth the money. Anyone that knows this firm is acquainted with their honesty and integrity and if this reputation coupled with good breeding stock is worth anything to you we hope you take advantage of it. See page 19.—Adv.

At Kilbourn, Wisconsin.

JULIUS PETERSON is located at the above town and he is the Poland China breeder that has those two good boars, sons of Blue Valley Quality and [illegible] Colorado [illegible] and he can sell you [illegible] sired by [illegible] they are picked [illegible] ment on page [illegible].—Adv.

M. V. Miller's Poland Sale.

A SPLENDID offering of 40 big type Poland Chinas will be sold at public auction by M. V. Miller, Lawler, Iowa, on Sept. 26th. Ten fall boars by Long Jumbo are good, lengthy, [illegible] backed fellows. Twenty spring boars and ten gilts make up the balance of the offering. These spring pigs are the tops of the crop raised this year. Mr. Miller has not spared expense in getting together his breeding stock. His herd boar, Timm's Wonder, is a great yearling by Fessey' Timm by Big Timm and the dam is by A Wonder and grandam by Long King, making him one of the very best bred boars of the breed. He is breeding beyond expectations. Mr. Miller's pigs are not fat, but they show length, bone and smoothness. One exceptionally good boar pig is by Timm's Wonder and out of Lady Nelson by Long Nelson 2d. A good boar pig is by Big Bob and out of a Big Master dam. Full particuars will appear later. Write for catalog, mentioning this paper.—Adv.

Owens' Poland China Sale.

G. W. OWENS, Lawler, Iowa, will hold his annual Poland China sale on Oct. 17th. About 40 head of spring boars and gilts, the best he has ever raised, will be offered the public. They are sired by the two great herd boars, I am Baron and Blue Valley, Jr., and one litter by Big Prince. Belle 2 has three great boars by Blue Valley, Jr. The Big Price litter of nine are hard to equal. The I Am Baron pigs are extra good. Mr. Owens offers to pay the expenses of anyone who attends his sale and is disappointed in the offering. Write for catalog, mentioning this paper.—Adv.

S. G. Courteen, Milwaukee, Wis.

MR. COURTEEN has recently decided to sell one of his herd bulls, Bob Rilma's Superior, whose dam is Imp. Belle Daisy Sarnia by Galaxy's Sequel. We had an opportunity of inspecting this bull about three weeks ago and consider him an exceptionally good individual. He is good size, well [illegible] easily handled and should attract the attention of a number of Guernsey breeders on the market for such an animal.—Adv.

Drewelow Bros.' Polands.

ON OCTOBER 23d Drewelow Bros., New Hampton, Iowa, will hold their annual sale of big type Polands. They sell 40 head of good spring boars and gilts all by Orphan Pawnee by Schug's Great Orphan by The Big Orphan. Keep this sale in mind. Get on the mailing list for a catalog. Mention this paper when writing.—Adv.

Jas. Derivan, Fox Lake, Wis.

THE above Poland China breeder is well known in this state and enjoys a good business in breeding and selling hogs of this breed. He can fill your order now, if you want a boar or a gilt and we are glad to recommend this herd. See advertisement on page 19.—Adv.

Fall Boars and Gilts.

HAROLD RUDE, Edmund, Wis., is offering for sale at this time four fall boars, three fall gilts—not bred and spring pigs. If Durocs of the above ages will interest you write Mr. Rude for further particulars. See advertisement on page 19.—Adv.

Hampshire Breeders Meet.

The Hampshire Breeders' Association will hold its annual meeting in the swine pavilion on the state fair grounds September 12th. This session will be held in connection with the general swine meeting. Important matters will be taken up, particularly in relation to the sale that will be held this winter. All persons who are in any way interested in breeding Hampshire hogs should plan to be in attendance at this meeting.

Field Men for The Wisconsin Farmer.

J. R. Garver, eastern half of Wisconsin. Address Room 291, Washington Bldg., Madison, Wis.

T. P. Shreve, western half Wisconsin and eastern Minnesota. Address 115 S. Main St., Janesville, Wis.

W. S. Steele, northwest Iowa, South Dakota, western Minnesota. Address Box 109, Sioux City, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

A. T. Cole, Missouri. Address 3900 Holmes St., Kansas City, Mo.

M. T. White, western Iowa and northeastern Nebraska. Address 4015 Ward St., Omaha, Neb.

JERSEY CATTLE.

CONSTANCE

DUROC JERSEY HOGS—Best of breeding and individuality. Everything guaranteed to please. Spring pigs for sale.
RED OAK STOCK FARM,
F. R. Constance & Sons, Props., Waupaca, Wis.

News of the Sale Ring.

McKerrow & Sons Co. Sale.

The sale of Shropshire and Oxford sheep held by the Geo. McKerrow & Sons Co. at their farm at Pewaukee on August 15th, was successful in every respect. There were a large number of out of state buyers for the show sheep, but on account of the rush of harvest time not so many buyers for the field sheep were in attendance as expected. The Shropshires were sold first. The first lot sold was the choice of three noted rams—Senator Bibby II, Senator Bibby 111, and Bibby Sensation. T. F. Jones, of Iowa, was the successful bidder and selected Bibby Sensation at $460. This ram is a wonderful type and was well worthy to top the sale. The other two rams were reserved for service at McKerrow Farms. The yearling Bibby ram secured by Messrs. Arthur Broughton & Sons, and W. F. Renk & Son at $400 is especially noteworthy as the ideal type of a prepotent sire. Perhaps the most lively bidding of the sale developed on the pen of four lambs by Bibby Champion. It finally developed into a duel between J. C. Andrews, of Indiana, and C. E. Willson, of Minnesota. The latter secured all four of them at $150 each, a record price for four lambs, the get of one sire. The 94 Shropshires averaged $114. Twenty-seven bred at McKerrow Farms and sired by Senator Bibby and Bibby Champion averaged $108. The Oxford sale immediately followed. J. C. Williamson, of Ohio, was the heaviest buyer. W. W. Niven, of Montana, secured the top price ram at $285. The list of buyers follows:

SHROPSHIRES—RAMS.

McKerrow's Bibby Sensation, T. F. Jones, Everly, Ia., $460; Senator Bibby XIV, Chas. Francis & Son, New Lenox, Ill., $205; McKerrow's Buttar's 442, Wm. Wrigley, Jr., Lake Geneva, Wis., $165; McKerrow's Bibby 389, T. F. Jones, $155; McKerrow's Bibby 390, E. M. Morrow, Glenwood, Minn., $130; McKerrow's Bibby 2, Arthur Broughton, Albany, Wis., $400; McKerrow's Bibby 3, Wm. G. Miles, Evansville, Wis., $300; McKerrow's Bibby 4, No. Dakota Experiment Sta., Fargo, N. D., $220; McKerrow's Bibby 5, T. F. Jones, $275; McKerrow's Bibby 7, H. D. Eddingfield, Mt. Pleasant, Ia., $215; McKerrow's Bibby 6, A. C. Sinner, Chalco, Neb., $195; McKerrow's Bibby 9, Herbert E. Powell, Ionia, Mich., $155; McKerrow's Bibby 8, T. F. Jones, $90; McKerrow's Bibby 648, T. F. Jones, $100; McKerrow's Buttar 651, Jess C. Andrew, West Point, Ind., $310; McKerrow's Buttar 649, Ira R. Leach, Durham, Mo., $100; McKerrow's Buttar 650, T. F. Jones, $95; McKerrow's Buttar 652, Anoka Farms, Waukesha, Wis., $90; McKerrow's Buttar 654, J. A. Feurt, Jameson, Mo., $95; McKerrow's Buttar 656, Anoka Farms, $90; McKerrow's Buttar 657, Ray Tener, Pleasantville, Ia., $95; Senator Bibby 16, Geo. Allen & Sons, Lexington, Neb., $210; McKerrow's 3353, Earl Cook, Plainville, Wis., $60; McKerrow's 3183, H. S. Bryan, Redding, Ia., $70; McKerrow's Bibby Champion II, J. W. Thrall, Picketts, Wis., $60; McKerrow's 3112, C. E. Willson, Minneapolis, Minn., $65; McKerrow's 3368, So. Dakota College, Brookings, S. D., $70; McKerrow's 3258, W. T. Hoyt, Rosendale, Wis., $55; McKerrow's 3346, Hugh R. Jones, Picketts, Wis., $65; McKerrow's 3342, W. J. Nankenman, Beardsley, Minn., $60; Hawthorn Farm 61, E. M. Shroyer, Millgrove, Ind., $70; Hawthorn Farm 74, Enoch Perry, Milwaukee, Wis., $65; Senator Bibby XV, Univ. of Minnesota, Minneapolis, Minn., $195; Senator Bibby IX, R. C. Yohe, Allerton, Ia., $110; Bibby Champion III, Iroquois Farms, Cooperstown, N. Y., $125; Senator Bibby X, R. F. Whitney, Eldorado, Wis., $55; Senator Bibby XVII, Jesse Billings, Fergus Falls, Minn., $55; McKerrow's 3225; A. Prasse & Son, Lena, Ill., $61; McKerrow's 3235, Geo. Zillig, De Soto, Wis., $75; McKerrow's 3223, Joseph Jennings, Lees Summit, Mo., $100; McKerrow's 3224, Lewis Lewellin, Waterloo, Wis., $120; Hawthorn Farm 139, Walter Lewis, Lake Beulah, Wis., $50; Hawthorn Farm 148, Boyd Dickenson, Lake Geneva, Wis., $50.

EWES.

McKerrow's Bibby 386, T. F. Jones, $180; McKerrow's 3382, Clarence Willson, $180; McKerrow's 3309, Wm. Wrigley, Jr., $100; McKerrow's Bibby II, T. F. Jones, $220; McKerrow's Bibby 13, Clarence Willson, $215; McKerrow's Bibby 10, John F. Weaver, Pewaukee, Wis., $200; McKerrow's Bibby 12, H. D. Eddingfield, $195; McKerrow's Bibby 14, Wm. Wrigley, Jr., $80; McKerrow's Bibby 15, Wm. Wrigley, Jr., $80; McKerrow's Bibby 36, T. F. Jones, $75; McKerrow's Bibby 23, Iroquois Farm, $110; McKerrow's Bibby 45, Iroquois Farm, $110; McKerrow's Bibby 38, Iroquois Farm, $110; McKerrow's Bibby 400, Claude V. Herrman, Steward, Ill., $110; McKerrow's Bibby 48, Iroquois Farm, $70; McKerrow's Bibby 18, Wm. Wrigley, Jr., $80; McKerrow's Bibby 34, Claude V. Herrman, $100; McKerrow's Bibby 37, Wm. Wrigley, Jr., $75; McKerrow's Bibby 396, Iroquois Farm, $70; McKerrow's Bibby 40, Iroquois Farm, $70; McKerrow's Bibby 395, Wm. Wrigley, Jr., $55; McKerrow's Bibby 43, Wm. Wrigley, Jr., $65; McKerrow's Bibby 25, Wm. Wrigley, Jr., $55; McKerrow's Bibby 41, Claude V. Herrman, $70; McKerrow's Bibby 35, Wm. Wrigley, Jr., $65; McKerrow's Buttar 679, Iroquois Farms, $110; McKerrow's Buttar 675, Iroquois Farms, $125; McKerrow's Buttar 659, Iroquois Farms, $110; McKerrow's Buttar 682, Iroquois Farms, $110; McKerrow's Buttar 684, J. B. Conley, Verndale, Minn., $75; McKerrow's Buttar 658, Iroquois Farms, $60; McKerrow's Buttar 664, Iroquois Farms, $60; McKerrow's Buttar 683, Wm. Wrigley, Jr., $55; McKerrow's Buttar 665, Claude V. Herrman, $90; McKerrow's Buttar 673, Iroquois Farms, $60; McKerrow 3413, Claude V. Herrman, $100; McKerrow 3440, J. B. Conley, $85; McKerrow 3406, Wm. Wrigley, Jr., $80; McKerrow 3674, Fox Bros., Seviersville, Tenn., $90; McKerrow 3414, J. W. Thrall, Picketts, Wis., $80; McKerrow 3612, Clarence Willson, $150; McKerrow 3672, Clarence E. Willson, $150; McKerrow 3673, Jess C. Andrew, $80; McKerrow 3614, Howard McLain & Son, Lima, Ohio, $80; McKerrow 3613, Clarence E. Willson, $150; McKerrow 3611, Clarence E. Willson, $150; McKerrow 3533, H. H. Pond & Son, Minneapolis, Minn., $80; McKerrow 3530, Jess C. Andrew, $95; McKerrow 3532, Jess C. Andrew, $95; McKerrow 3519, Iroquois Farms, $55.

SHORT-HORN CATTLE.

Short-horn Steers Break World's Record

FORTY SHORT-HORN STEERS, weighing 1,692 lbs., bred in North Dakota, fed in South Dakota, topped the Chicago market July 9th at $14 per cwt., averaging $236.88 per head. They were part of a shipment of eighteen loads of Short-horns, 263 head, which sold for $55,025.39, averaging slightly under $210 per head. Market authorities pronounce this performance without a parallel for all time and regardless of breed. The Short-horn is the breed for you.
AMERICAN SHORT-HORN BREEDERS' ASSOCIATION 13 Dexter Park Ave., Chicago, Ill.

POLAND CHINA SWINE.

100 BIG-TYPE POLAND CHINA SPRING BOARS AT $30.00 EACH

Double treated, and we record them. They will be worth $30.00 on the market by the time you are ready for their service. Farrowed in last of February, March and April, the greatest lot of high-class pigs we have ever raised, long and deep bodied, heavy boned, nicely marked and good backs.

They are from the most noted families of the great breed, sired by **Giant Jumbo 2d, the 700-lb. year-old son of Giant Jumbo,** whose sire was the 1,055-lb. Maid's Halvor 1st; his dam sired by the 1,000-lb. and over Big Bone 2d, his grandam by Mouw's noted Big Jumbo. There is no bigger breeding. Others by **Long Expansion, a 900-lb. two year old,** and **Pawnee Wonder, a 1,000-lb. son of A Wonder.**

The dams are sows weighing from 600 to 800 lbs. and over, of the most intense big-type blood lines. **Buy your boar now and save from $20 to $50.** Boars will be high and scarce this fall.

Send your check right with the order, tell us the kind of a boar you want and we will send him or return your money. Come and see our herd, one of the greatest in America, as well as one of the most up-to-date, pure-bred stock breeding establishments.

W. H. COOPER Hedrick, Iowa

130 Head of Large, Fine, Woodend Farm Guernseys at Auction Sept. 19th-20th

At the Minnesota State Fair Grounds, Hamline, Minn., commencing at 10 o'clock each day

This is the Greatest Opportunity Ever Offered Guernsey Breeders in the West

Because, the herd was founded and maintained 14 years to keep and not to sell.

Because, it was culled carefully and only the best retained for use.

Because, practically all of the cows have A. R. records, these go to 654 lbs.

Because, practically all of the heifers are out of A. R. cows.

Because, practically all of the young bulls are out of A. R. cows.

Because, the herd is accredited free from tuberculosis by the Minnesota State Board.

Because, there are 30 daughters of Imp. Cora's Govenor of Chulmark who has 40 A. R. daughters, two over 700 lbs., ten of these we offer have A. R. records and two of them over 600 lbs.

Because, there are fine imported cows with records.

Because there are three of the highest class service bulls that money could buy.

Because, there are sons and daughters of these bulls.

NOW WHAT ELSE COULD YOU ASK FOR?

The herd is the property of Mr. A. C. Loring, of Minneapolis, Minn. Take Como-Harriet cars from either St. Paul or Minneapolis—the cars stop at the Pavilion. Write for catalog, which will tell you the rest, to

THE WISCONSIN FARMER

VOL. XLVI. NO. 36. THURSDAY, SEPTEMBER 6, 1917. WHOLE NO. 1858

GOOD BEEF FROM WISCONSIN

Being a Few Pertinent Observations From the Blue Grass Section in Iowa County Where Good Stock is Raised.—By John L. Tormey.

WISCONSIN has done so much in the dairy business that the mere mention of live stock in the Badger state causes one to think of dairy cattle. The dairy interests have been well advertised, and the breeding of pure-bred dairy animals has proved lucrative to the state. In the face of the above facts, it may appear new to some that there is some of the best land in the state devoted to the growing, grazing and finishing of steers. There is a section of the southwestern part of the state around Mineral Point, Belmont and Dodgeville that is devoted largely to making beef.

Some of this land cannot be bought for $200 an acre. While much of it is rolling, large areas of it are level, and some of it reminds one of the corn-belt land of Iowa. The land is high, of limestone origin, well drained, and produces the best blue grass in Wisconsin, and as good blue grass as can be found anywhere. South and west from Mineral Point the land is quite rolling, and much of it can be devoted only to grazing. The ridges and the bottoms are well adapted to the growing of corn, oats or barley and clover. The best crop of clover that I saw this year was on a piece of drained bottom land on the farm of Mr. Louis Graber, of Mineral Point. Sufficient corn is raised to fill the silos, and the most of the progressive steer men in this locality are firm believers in the value of silage as the chief asset in wintering their cattle. Besides this, most of the men raise some hogs and have corn enough to feed the hogs.

IN A SOUTHWESTERN WISCONSIN BLUE GRASS PASTURE.

In this section are located the Marrs, Polskils, Grabers and Fishers, who do not raise many cattle, but scour the country to get the best of well-bred cattle that money can buy. Cattle are either bought in the fall and fed over the winter to be sold off the grass the spring following, or they are contracted for delivery about May 1st. Three-year-old cattle are preferred, or if younger cattle can be bought they are kept over until they harden into mature cattle and sold at the age of three years, weighing 1,400 or 1,500 pounds. It was from this vicinity that George Marr sent to Chicago last fall a load of heavy cattle that sold on the market for $12.40 per hundred. Blue grass and good cattle turned the trick. The cattle had to be good or Marr wouldn't have had them.

Mr. Graber tells me that land in his section of the district is about $25 to $40 per acre higher than similar land in some other sections of Iowa and Lafayette counties. When asked why, he said, "Everybody in this section wants land here and they can't bring any more land in." This is a pretty good explanation for the high price of land. Early in August Peter Polskil sent to Chicago the poorest load of his fifty head of big cattle. These cattle averaged 1,526 pounds in Chicago and sold for $13 per hundred and were the first load of 13-cent cattle out of Iowa county. Mr. Polskil has some big cattle. The big cattle left at home will average over 1,600 pounds and many of the steers will weigh 1,800 pounds right off the grass. Polskil is one of the heaviest operators around Mineral Point and always has good cattle.

THE SHORT-HORN IS POPULAR WITH MANY BEEF BREEDERS.

North of Mineral Point is a section of Iowa county that is known as the Bloomfield district, and in this section we find the Kellys, Skillicorns, Penhallegons, Pellows, Callows, Jewells and Thomases. These men brought with them from the United Kingdom the love and the eye for good cattle, sheep and horses. Extension work was not necessary to show them the value of good stock, and that it paid them always to keep only the best. No grade or scrub sires are allowed on these farms, and the land is too high priced to carry poor animals. The elder Jewell, for example, never went back on the Cotswold sheep, and has for over fifty years had some of the best sheep of the breed in Wisconsin, which is saying a great deal, when we consider the name of Harding in Wisconsin and in national Cotswold circles. The Jewells have also stuck to pure-bred Herefords and have made them pay. These facts alone show how faithfully and religiously they have stuck to their heritage from England. Irving Jewell, the active man in the business now, says his land cannot be bought for $200 per acre, and I wouldn't blame him for turning down the offer. It is a beautiful district. No drainage is necessary, there is no sand to bother, no sour lowlands to sweeten, no boulders to trouble. Beautiful homes, surrounded by nice groves, and in some cases beautiful hedges abound. It is a fine neighborhood to live in. What more should a man want?

Considerable corn and clover are raised in this section and practically all of the farms have silos. This testifies to the progressiveness of the men in the district, and it is throughout this district that they make use of considerable cottonseed meal in carrying cattle through the winter with silage as the heavy part of the ration. These men realize that a period of no gain is a losing period in feeding operations and they want the cattle to gain consistently through the winter. In some cases, cottonseed meal is fed throughout the winter, but in other cases the feeding of it is limited from three to six weeks previous to going on grass. This gets the cattle used to feed higher in protein and the change to the rich protein grass is less noticeable to the steers. Besides carrying on the pure-bred business, the Jewells also handle quite a number of steers and now have on hand some good cattle which they have carried over the winter, and have made them gain all winter long on a ration made up principally of silage. For dry roughage they fed oat straw, and in connection with the silage the cattle ate the straw up clean. Men who feed silage to cattle in the winter notice that there is a craving for dry roughage, and the appetite of the cattle for dry roughage is oftentimes as well satisfied with straw as with hay. Jewell's cattle were also fed about a pound of cottonseed meal daily in addition to the straw and silage. As spring approached the allowance of cottonseed meal was increased slightly and dispensed with entirely when the cattle were put on grass.

It was from the Bloomfield section that the first $12 cattle on the Chicago market came. Cattle had sold for over $12 on the market, but they were show cattle; and it might be mentioned that three cattle were sold by Ernest Graber, of Min-

(Concluded on page 12.)

A GOOD REPRESENTATIVE OF THE WISCONSIN GRASS FAT STEER.

CURRENT EVENTS

PRESIDENT WILSON'S reply to Pope Benedict's peace note is an emphatic declaration that the United States cannot consider any peace terms which do not mean an end to German autocracy and militarism. The president's note is dignified, yet extremely forceful, and bids fair to be one of the most historic state papers of the century. The president shows that he is not averse to an early peace, that he hopes and shall work for it, but he does not believe that a peace now will settle matters, that they can only be settled finally and positively when a quietus is put upon Germany's ambition to rule the world. He aserts, in most positive terms, that he cannot trust the kaiser's word or accept it as a guarantee for anything. The meat of his answer is found in these sentences: "The purposes of the United States in this war are known to the whole world—to every people to whom the truth has been permitted to come. They do not need to be stated again. We seek no material advantage of any kind. We believe that the intolerable wrongs done in this war by the furious and brutal power of the imperial German government ought to be repaired, but not at the expense of the sovereignty of any people—rather a vindication of the sovereignty both of those that are weak and those that are strong. Punitive damages, the dismemberment of empires, the establishment of selfish and exclusive economic leagues, we deem inexpedient and in the end worse than futile, no proper basis for a peace of any kind, least of all for an enduring peace. That must be based upon justice and fairness and the common rights of mankind. We cannot take the word of the present rulers of Germany as a guarantee of anything that is to endure unless explicitly supported by such conclusive evidence of the will and purpose of the German people themselves as the other peoples of the world would be justified in accepting. Without such guarantees, treaties of settlement, agreements for disarmament, covenants to set up arbitration in the place of force, territorial adjustments, reconstitutions of small nations, if made with the German government, no man, no nation could now depend on."

PRESIDENT WILSON has approved estimates of the navy department for the expenditure of an additional $350,000,000 for new destroyers to combat German submarines. The department has never made public the number of destroyers now building or the additional numbers contemplated in the new project. It is known, however, that when vessels now under construction have all been completed, which will be during 1918, the navy will have a destroyer force comparable to that of any power, while the new project will give the United States the strongest destroyer flotilla in the world. Navy designers have already worked out a standard type of destroyer on which the quantity production machinery will be employed. The new boats probably will not differ from the latest thirty-five knot, oil-burning type ordered for the navy. The vessels will be faster and more seaworthy and give more room for their crew than any now in commission. There is a general belief that if the seas could be rid of the German submarines it would not be long until Germany could be brought to her knees. As long, however, as she can inflict so much damage at sea she will continue to fight on, no matter what may be her temporary losses on land

ENGLAND, the arch enemy of Germany, must be beaten down at whatever cost, Emperor William told his troops while on a visit to the Flanders front last week. An official statement issued in Berlin says the emperor addressed deputations from all detachments which have had a share in meeting the British attacks. He said he felt impelled to express his thanks and his full recognition of the heroic gallantry shown by the troops from all parts of Germany in the hard fighting of the last week. The emperor referred to the marked contrast between the German and Anglo-French points of view, and continued: "It is in God's hands when, in his wisdom, he will give us victory. He has taught our army a hard lesson and now we are going to pass the examination. With the old German confidence in God we shall show what we can do. The greater and mightier the problem the more gladly we shall grapple with it and solve it. We shall fight and conquer until the enemy has had enough of these struggles. All Germans have realized who is the instigator of this war and who is the chief enemy—England. Everyone knows England is our most spiteful adversary. She spreads the hatred of Germany over the whole world, filling her allies with hatred and eagerness to fight."

TWO billion dollars may be added to the total bonds to be authorized at the present session of congress, making a total of approximately $21,000,000,000 available to the government during the fiscal year ending June 30, 1918. Secretary McAdoo has confided to members of the ways and means committee the extraordinary expenses to which the government is being put and the manner in which the fabulous amount asked is to be spent, a major part of it to go to the allies as loans. It is unofficially reported that the war is costing the United States $1,000,000 a minute. "It now seems probable," reports Democratic Leader Kitchin, "that the total amount of money needed for the fiscal year will be about $19,000,000,000. This estimate covers about $7,000,000,000 for loans to the allies, $3,000,000,000 of which already has been provided; $1,300,000,000 for current expenses, exclusive of war, leaving about $10,000,000,000 for war expenses. Included in the war estimate is $176,000,000 for the new insurance bill and $1,000,000,000 for the shipping board. The $21,000,000,000 would be raised as follows: Bonds for allied loans, $7,000,000,000; pending revenue bill, $3,000,000,000; war certificates, $4,000,000,000; bonds for domestic purposes already authorized, $2,000,000,000; proposed new bonds, $2,000,000,000; war saving certificates, $2,000,000,000, and regular revenue, $1,300,000,000."

WHILE the United States is at war with Germany, official declaration to that effect having been made by congress last April, war has never been declared between the United States and Austria, notwithstanding the fact that Austria is Germany's chief ally. That Austria may soon declare war on the United States now seems likely, because of the fact that this country is loaning money to Italy, which is one of Austria's main enemies, the Austrian armies having suffered severe defeats at the hands of the Italians within the last few weeks. At the same time, Austria is proving to be but a poor ally for Germany and there is repeated evidence that it would welcome an early peace. A dispatch from Copenhagen, Denmark, last week, asserted that an Austria which is literally crying for peace, which has discarded any thought of territorial expansion and is even willing to buy its way out of the war by territorial sacrifices on the Italian front and in Galicia; an Austria of frequent food riots, unable to last through another winter of war; an Austria whose population would rise in revolution if any reasonable peace offer were rejected by the government is pictured by a highly educated Austrian who has arrived there from Vienna. Austria has suffered severely in the war and is undoubtedly about ready to cry "quits."

THE fact that the United States is the first nation to answer the pope's peace letter is taken as evidence that the allied powers, fighting Germany, look upon President Wilson as their official spokesman and that their answers to Rome will follow the general tenor and nature of President Wilson's forceful answer. It is generally acknowledged that there is now no room left for compromise and that the allied nations must fight Germany to the limit, or until that country overthrows its military masters, a consummation which President Wilson believes is possible. A press dispatch from Washington adds these details: "Active exchanges have been in progress between the president, Secretary Lansing and the entente powers, mainly through the American diplomatic representatives abroad, regarding the answer to be made to the pope's proposals ever since they were delivered to the various foreign offices. It seemed by common consent that to America was confided the heavy responsibility of framing and delivering the first of the replies. The propriety of this course was apparent from the consideration of the fact that every one of the entente premiers and foreign ministers who had spoken publicly on the subject of peace had turned to the language of President Wilson's historic address to congress and his other public utterances on the subject, as disclosing their own conceptions of the proper basis of peace negotiations. And even more potent than this consideration was the conviction that America was best fitted of all nations to deal what it was hoped would be the death blow to autocracy of the Germanic type." The president has made his position plain. It remains now to organize, drill, arm and equip an immense army with which to back up the word of the commander-in-chief.

Hudson Super-Six Proves Endurance

A Test That Never Fails to Reveal Every Weakness and Prove Every Strength of a Motor Car

Stock Hudson Super-Six cars are deliberately sent through tests more trying, more destructive, than any the average driver could imagine.

For one hour, a fully equipped phaeton with top and windshield up and carrying five passengers, was sent at top speed. It averaged 70.74 miles an hour and established the best time for such a performance with a stock car. The test, officially observed by the American Automobile Association, was one of the many similar tests to prove endurance.

It was not a preconceived campaign of tests that we set out to make. Each test was thought sufficient in itself. But just as the giant is surprised as he realizes the ease with which he accomplishes each feat that he had felt would try his strength, so the Super-Six has so easily met every test that more trying and abusive trials have been devised.

We were sure that in the 24-hour test a stock chassis would break all previous records. But no one thought it would go 347 miles farther than any other car had ever gone in 24 hours. The Super-Six covered 1819 miles. It broke all records for a traveling machine.

So, too, when a seven-passenger Super-Six set out from San Francisco for New York it was with confidence that it would lower the time of all other transcontinental runs. It did so by 14 hours and 59 minutes. Then because the run had been made so easily and without special planning, the car was turned around and raced back to San Francisco. In the return trip it also did better than any other automobile had ever done in crossing the continent in either direction. Hudson's round trip required 10 days and 21 hours.

There is hardly any quality of a car that is so important to the buyer as that of endurance. Safety, comfort, reliability, low maintenance cost are all dependent upon endurance.

Every quality of motor car satisfaction is dependent upon power acceleration, speed and endurance. And every Hudson test proves that in these respects there is no car that equals it.

Convincing as the official records are, there is still further proof that no other car has to offer equal advantages. These proofs are furnished by 37,000 Hudson Super-Six owners. They have added their experiences to the official tests.

Others Have Increased Their Prices—Not Hudson

Other makers are now announcing price increases which bring the former $1,200 and $1,300 cars into the Hudson class. Until present material supplies are exhausted Hudson prices remain unchanged. So you can get for a limited time a Super-Six at a price not influenced by present high material costs. When the present allotment is exhausted then Hudson, too, must go up in price.

There are eight body types. The 7-passenger phaeton sells at $1,650 at Detroit.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

SOME STATE FAIR THOUGHTS.

I HAVE always held to the opinion that our various state fairs were educational factors second to none, that attending them was money well invested. I am more firmly of this opinion this year than ever before.

I attended the Iowa State Fair at Des Moines last week. I hope to be present at several of the other fairs here in the grain belt within the next few weeks. The Iowa fair always opens the grain-belt circuit. This week we are having state fairs in Nebraska and Minnesota. Next week come Wisconsin, South Dakota and Illinois, with the free state fair at Topeka, Kan.; to be followed, in quick succession, by the fairs at Hutchinson, Kan.; Sedalia, Mo., and Oklahoma City. We are exhibiting to the world the fruits of our labors this year, and the world cannot but applaud, for never were these fruits more abundant, never did they testify more eloquently to our efficiency.

We have about completed harvesting and threshing the heaviest oat crop we have ever produced. I have received letters from subscribers, within the last few days, telling of fields which threshed out 100 and even as high as 115 bushels to the acre. From Kansas comes the news that all records for acre production of winter wheat have been broken this year. The corn crop in the same state seems to have been saved by the recent rains. Iowa and Illinois are still hopeful of bumper corn crops. I have seen it estimated that the increase in the oat and corn crop in Iowa alone this year would pay the year's interest on the nation's two-billion-dollar Liberty Loan. Never were the prospects better for the live stock farmer; never were our dairy products in such demand or bringing such good prices. Whichever direction we look, the sunlight of prosperity is shining full and strong upon the farmer. Is it not fitting, therefore, that we should stop from our labors for a few days, mingle with our fellow workers and look at the results of our handiwork, as they are exhibited in pen and in case, in stall and on counter, at our various state fairs?

A new thought comes to me at this year's fair in overwhelming manner. That is the thought of the splendid patriotism rampant in the Middle West, and especially among our farmers. At Des Moines last week they ran the most beautiful banner the world ever saw aloft on a 125-foot flagstaff, while 5,000 soldiers stood at attention beneath it and 30,000 farmers and town folks cheered the banner to the echo, as it was flung to the breezes immediately in front of the grandstand. That banner was Old Glory. Immediately below it, on the tall flagstaff, they hung the British flag and the tricolor of France—bleeding yet triumphant France, to which goes out the love and sympathy of every one of us. These three beautiful silken banners topped everything on the grounds; they dominated the fair. There were thousands of smaller flags to be seen, the stars and stripes were everywhere. It is the same this week at Lincoln and Hamline. It will be the same next week at Madison, Springfield, and so on. We have flung Old Glory to the breeze, not only in America, but in Europe, and we are sustaining it by our bumper crops. We have sent an army of fighters abroad, but we have retained another army of fighters at home; men who fight in the field and feed lot to give the world bumper crops, that the world may be fed and clothed, soldiers alike as skilled, as well trained and as necessary as the men who go to their deaths in the trenches of Europe and in gallant charges across No Man's Land. We honor the flag, we salute the soldiers in their khaki uniform; equally should we salute the farmers who sustain this flag and those soldiers; equally should we honor the farmer's banner: the waving corn and oats and wheat. These are some of the things of which I thought as I looked at the flags in Des Moines last week and talked with soldier and farmer, brothers now in a service which would fail if it were not for the devoted, sacrificing service of both.

Our state fairs were always worth what they cost the individual who attended them; they are worth more this year than ever before. They display our prowess with the plow and the hoe, with the pitchfork and the separator; but they do not stop here. They display our patriotism, our determination to fight the good fight until He who rules us all and doeth all things well shall upraise His hand, and millions of fighting men shall fall upon their faces and make obeisance to Him and the everlasting, glorious, conquering peace which He typifies. If ever there was a year when the farmer may well be proud of the fair which exhibits his handiwork, and may well afford to attend that fair and mingle proudly with his fellow men, it is this year.

PROSPERITY AND PEACE.

WITH cattle bringing $15.50 and hogs $20 on the Chicago market last week; with old corn selling for $2 a bushel and this year's crop likely to bring 85 to 90 cents on December delivery; with oats ranging from 60 to 65 cents and fields yielding double their average, running as high as 100 to 115 bushels to the acre; it certainly does look as though the sun of prosperity were shining full and strong on the grain-belt farmer nowadays. With such topnotch prices it is difficult to recall the day and the prices of which the newspaper "poet" tells in the jingle:

I remember, I remember,
The quondam price of corn;
'Twas fifteen cents a bushel in
The state where I was born.
And well the eggs I used to hunt
With rapture in the hay;
Ah, me, nine cents a dozen then
Was all they brought in pay.

There is going to be plenty of ready cash in the grain belt this fall. Bank deposits are heavier than they have been for many years; there are more individual accounts than ever before. If only the awful war over in Europe could be brought to a speedy and permanent end, with what thankful hearts and well-filled pocketbooks would we approach this year's day of thanksgiving. Let us hope for such a peace, let us pray for it, let us work for it, what time is given to us from our labors of harvesting and storing the splendid crops which the good Lord has granted to us out of His wonderful goodness and mercy.

THE HEART OF A FARM MOTHER.

I HAVE given you my ideas on the possibilities of an early peace. You know how I hope and pray for it; how I would work, night and day, to bring it about, were it dependent upon my efforts. You know that I abhor war. You know that I have cried out, time after time, against sacrificing the flower of our young manhood upon the altar of Mars; how I have worked to have the farm boy exempted from the draft. All these things must by this time be plain to those who do me the honor to read what I write.

Yet while I abhor war and cry aloud for an early peace (in agony, at the thought of the suffering of millions of my fellow citizens) I believe that we have a duty to perform now, a duty which must be performed at whatever personal cost. That duty is to prepare for what may prove to be the inevitable; an armed conflict in which millions of boys from the farm and from the city may give up their lives. By preparing while there is yet time we are not minimizing the chances of an early peace, we are not prejudicing our hopes of arbitration; we are merely taking precautions (as one insures his farm home or barn against fire) while there is ample time.

With this brief preamble, or personal note, I am going to print a couple of letters received within the last few days from devoted "mothers in Israel" who have been called upon to kiss their children and their kin goodby, possibly never to see them again, yet who have kept shining faces turned toward their soldier boys and have heroically bade them go forth and fight the good fight, though the end may be deep down in a muddy, rat-infested trench in a foreign land. These letters breathe the heroic spirit of American motherhood. They are magnificent letters. I am proud that the women who wrote them are numbered among those who read what I write, that they belong to our family circle. Let the letters speak for themselves. Here is the first, as it comes to me from Mrs. N. A. Torgerson, of Mt. Sterling, Wis.:

Dear Mr. Pierce:—How gladly would we keep our sons at home! I am the mother of six boys. All except one, the youngest, a lad of thirteen, could enter the army. I am and always shall be a republican, so you see President Wilson received no support from my voters of four. But when he declared war and issued his call for volunteers my sons, all of them farmers, some hired help and one owning a farm, asked my advice as to entering the army.

"What would you do, mother, if you were a man?"

You can't tell how hard it was for me to tell those boys what I would do.

"Be true to your conscience, boys, and do what it tells you. Also be true to your country and God," I answered.

"But would you enlist, mother?"

"I would, for a drafted soldier never commands the respect that a soldier does who voluntarily gives his service to his country."

So four out of the six enlisted. The oldest did not pass, although he tried three different times to enlist. This was because of his false teeth, and he says he can hardly forgive the United States for turning him down. The youngest of the four, who was only eighteen, did not pass the examination owing to an undeveloped chest, but says he will try in South Dakota where he went to work. The other two passed the examination at Milwaukee and never came back. They are in different locations. One is at Fort Bliss, Texas, and the other, after being sent from Jefferson Barracks, Mo., to Columbus, N. M., spent about six weeks there in the desert and then was sent to Fort Riley, Kan., where he now is training in the cavalry.

I may never see my boys again, but I shall live in hopes that I will. Hope is all that keeps me up, and the love of my country and the Star Spangled Banner—long may it wave o'er the land of the free and the home of the brave.

I may add that I am a woman of fifty-four years. My husband is an invalid, not able to make a living for us, but I would not have my boys do any different. The second youngest, who is working at what he can get to do on the neighbors' farms, says, "Now that I am seventeen I shall enlist in the navy this fall after the farm work is done."

In giving my boys to my country I think I have not lived my life in vain.

I read that letter through blinding tears. How horrible, indeed, is war when it breaks up such a family as this, when it entails such a terrible sacrifice! And yet how heroically inspiring is this letter; how it makes the heart beat faster just to read it! But let me give you the other letter. It comes to me from Mrs. A. E. Gibbs, of Shepherd, Mich.:

Dear Mr. Pierce:—Let me tell you how the members of my family feel about serving their country. My husband's father enlisted in the service, leaving several small children at home for his loyal wife to raise as best she could, for they were very poor. He was the first volunteer from his township. He went through the civil war and came back to a long and useful life, and when he died, at the age of ninety years, he left for us an example worth following.

My own father, together with all of his brothers, went into the service of the United States when only seventeen years old, and although terribly wounded within two months of his enlistment, he recovered and was twice reënlisted. He is still living, at the age of seventy-two, and if his country could use him he would still be at her service. Another member of our family, the only son of his mother, and she a widow, went at the first call to the colors and never came back. But his mother, had she had more sons, would have sent them forth without a protest. We have many others of our near kin who have offered themselves on their country's altar, and of the mothers and sisters and daughters not one of them has ever offered one word of complaint or done one thing to stay them.

My sons are yet too young to serve, but I have a daughter whom I have raised in the right way. Today she is fully expecting her young husband to be called into the service. She has two small children that she will have to support as best she can. But not one plea for exemption from her! "If his country needs him we will not stand in his way," she says.

I take my little sons in my arms and together we sing, "We'll rally 'round the flag, boys, rally once again, shouting the Battle Cry of Freedom." And I tell them, "Boys, when Uncle Sam needs you, be on the spot," and they say, "Mother, we will."

Do you think I love my boys less than that mother whose letter you published? Before God, I believe that this is the only right way, for only in the path of duty and service is there to be found self-respect and a clean conscience.

And one word more—President Wilson didn't get us into this war. As a matter of fact, he kept us out of it till some of us were getting ashamed for our country. Prussian militarism got us into it and the only way we will ever get out of it is to fight our way out, with God's good help. It is going to need men, and where are we to get them if the wives and mothers of this land do not make the sacrifice?

What shall I say in way of conclusion; what need I say? Is it not like painting the lily, like refining pure gold, to make any comment? There is an unstudied eloquence about these mothers' letters which no writer, however many his tricks of rhetoric, could ever hope to equal. Do you not join with me in being proud that the grain belt, that the farm, has such noble mothers, that our great Middle West breeds such heroic daughters? The blood of the devoted pioneers is in their veins. Whether it be peace or whether it be war, the battle cry is sounded by these mothers; the last note will not die away until righteousness and honor and justice are once more enthroned among us, never to be dethroned again. I am proud of these women; I honor them with all my heart. May the great sacrifice not be demanded of them. May their sons and kin come marching home to them, to kneel at their feet and kiss the hems of their skirts—just homage to women to whom nothing is too great a reward, who desire nothing more than to have "their boys" back again in the family circle.

THE WISCONSIN FARMER, Madison, Wisconsin

Price of Wheat Fixed By President Wilson.

A price of $2.20 a bushel for the 1917 wheat crop was fixed by President Wilson last week on the recommendation of the wheat price committee headed by Dr. H. A. Garfield. This will be for No. 1 northern spring wheat delivered at Chicago. This is a compromise price between the $2.50 asked by representatives of producers who appeared before the price-fixing committee and $1.84 recommended by representatives of labor.

The price for the 1917 crop is 20 cents higher than that named for the 1918 crop by congress in the food control bill. In a statement accompanying the announcement of the price President Wilson declares it is the hope of the food administration and his own wish as well that the fixing of the price will stabilize the market and keep prices within moderate bounds for all transactions during the coming year. Three things were regarded as important by the committee, namely, the fact that the United States is at war, the need of encouraging the producer, and the necessity of reducing the cost of living to the consumer.

Naturally the price will not be the same for all grades of wheat and so far as possible the value of the various grades has been determined by the committee. The value of No. 1 dark, hard winter wheat is placed at $2.24; yellow winter, $2.16; soft red winter, $2.18; dark northern spring, $2.24; red spring, $2.18; amber Durham, $2.24; red Durham, $2.13. No. 2 of each grade will be three cents less, No. 3 six cents less and No. 4 ten cents less than the prices enumerated above.

The basic price of these various grades will be paid at such markets as Chicago, Galveston and New Orleans, while the markets at Kansas City and Omaha will be five cents per bushel less than basic; at Duluth and Minneapolis three cents less; St. Louis two cents less. With these fixed values in mind, wheat growers throughout the country can readily determine what the price will be at their own shipping point, as freight rates are constant factors and the dealer's profit will be practically fixed.

The prices referred to are, of course, fixed on government purchases only, the food administration through its wheat corporation, expecting to control the market without difficulty. The corporation will make all government and allied purchases and has under consideration plans to buy for millers. As it serves as a broker between the terminal markets and the flour mills, the corporation will become purchaser of virtually all of the country's wheat crop. Price boosting will be prevented by the fact that the storage of grain in elevators longer than thirty days is prohibited. There is nothing in the new rulings to prevent the grower from keeping his own wheat just as long as he likes, but the supply cannot be cornered, owing to the regulation referred to which prohibits storing.

Under the stimulus of an assured price—a price that we believe will be considered by the majority of wheat growers as a fair one—the acreage of winter wheat seeded this fall should be greatly increased, particularly in those regions where the crop is known to yield well. While the price of seed is high, it is nevertheless true that a large amount of seed per acre is not required, the exact amount ranging from four to seven pecks per acre. On thin land five pecks will answer every purpose, while more than six pecks per acre is seldom required. In case of winter-killing, land is still in ideal condition for oats or for corn and in that case the only loss will be the investment in the seed, which will be partly made up by the beneficial effect of the tillage on the crop that is seeded in the spring of 1918.

This Is the Time to Go into Live Stock.

In this issue Mr. John L. Tormey gives our readers a very interesting article on beef production in southwestern Wisconsin. He uses the bluegrass section of Iowa county as a setting for his article. In the light of world events greater attention must be given to live stock. The men who have been farsighted enough to see this and have developed good herds for breeding purposes or good pastures for feeding will certainly be "in clover" the next few years, even though their farms are heavy with blue grass. The demand for cattle in the next five years will be unprecedented in the world's history. At frequent intervals The Wisconsin Farmer has called attention to the shortage of beef cattle in our own country and the fact that other countries of the world cannot make up the shortage. Every argument which we have ever made in favor of raising more beef cattle; in fact, more good live stock of all kinds, still holds good. The only difference between the present-day argument and that which we made before the war is that 120,000,000 head of live stock have been permanently removed from the world's supply since the war started. A cow's hide is worth almost as much as the carcass was in days which not very old men can remember. While tons of literature is being sent broadcast through this country urging the production of more grain, we stop, not to discourage the increase in grain production, but to urge with all our strength the production of more live stock. Now is the time when individuals who have never made a specialty of live stock raising should branch out in so far as their land and financial resources will allow, into raising "more and better live stock." The quoted phrase just used has been borrowed for the occasion from the Wisconsin Live Stock Breeders' Association. It is the slogan of that association, and we wish it might be possible to emblazon it deeply upon the mind of every reader of this paper. Get into the live stock business if you have to start small, but start with a determination to grow up in the business. If you have a dairy herd and a scrub bull, plan to give the scrub bull his ticket of leave. Introduce better sires no matter what division of live stock you may have chosen as your favorite. To raise better live stock is just as important—even more important—than to raise more live stock.

Ensilage From Hailed Corn

A subscriber calls attention to the fact that his corn was considerably damaged by a hailstorm on August 24th. The leaves are pretty well stripped off and the ears are bruised to some extent. The question is, would it be safe to put this corn in the silo and thus save at least part of the crop? It is stripped so badly that it will not produce enough grain to be worth saving, but the parts of the leaves, stems and ears that are left would help out in supplying roughage this winter provided there is no great danger involved in feeding the product.

We do not believe that any better use can be made of corn that has been injured by hail than to put it in the silo. It should be allowed to stand, however, until it begins to approach maturity, which means until the lower leaves begin to turn brown. It is quite likely that this crop looks rather sick at the present time and there may be a temptation to cut it too early, but in that case it would be exceedingly succulent, and the ensilage made from it would be strongly acid. By allowing it to approach maturity the amount of acid that will form in the ensilage will be greatly reduced and the product will be improved just to the extent that it cures properly without the development of too much acid.

The ears on some of this corn may sour and mold and in that case a good quality of ensilage would not result. However, it will in all probability be three or four weeks between the time of this hailstorm and the period of putting it in the silo and if at that time the amount of moldy corn is not large it will be safe to fill the silo. The point is simply this, that immature ears will constitute so small a part of the total crop that one may safely run the risk of converting a product that would otherwise be completely wasted into material that has some feeding value.

Mr. Hoover Has Hard Job.

Who would like to be in Herbert C. Hoover's shoes? Do many of us have an idea what administrating the food supply of a nation means.

The working men say they cannot stand the increased cost of living. The farmers say they must have higher prices for foods because land is higher priced, implements are higher priced, labor is higher priced when obtainable, etc.

As near as we can figure it out Mr. Hoover's job is to satisfy both sides. It is up to him to so arrange matters that everyone can live while the war is going on. Mr. Hoover freely admits that the farmer must make good profits on his work and investment. He just as freely admits that it is next to impossible to accomplish anything in the way of successful food administration without the coöperation of the farmer. While he is trying to show the farmer that everything is going to be all right and that it is safe for him, the farmer, to raise every ounce of food possible, and while he is promising the farmer that he will get good prices and that farming will be safe and profitable, along comes the working man and grabs Hoover by the coat tail, figuratively speaking, and shouts, "I am getting the worst of it!"

Mr. Hoover is starting out on his big job by trying to do the one thing that is likely to please both sides—and that is to effectually stop speculation in foodstuffs. High prices for food never did the farmer any good if the high prices went to a chosen few who cornered the food supply when prices were low. So Mr. Hoover is smart enough to see that he must stop all unreasonable profits between the farm and the table. To do this he has to accomplish almost an economic revolution. Hoover is setting out to accomplish in a few weeks the greatest marketing feat of all history. If he does what he hopes to do his work will be the marvel of the times, strenuous as they are.

A few men are trying to make us believe that it is right to make a dollar a bushel profit on wheat from the time it leaves the farmer until it reaches the miller. We all know that it is not right and never was right and it remains for a war emergency day to open the eyes of those who have authority to this injustice which has been practiced on the farmer for years. If Mr. Hoover can stop unjust profits, due to speculation and pirating on American food supplies he can get much cheaper food for the working man and the soldier without injuring the farmer a bit. Who knows but what the economic innovations introduced by Hoover may revolutionize the distribution of foods for as long a time as any of us shall live?

In the judgment of The Wisconsin Farmer, Mr. Hoover deserves commendation for his determination to keep no secrets from the people. He has said that there is not a paper of any character in his department which is withheld from the public. "Any farmer who wants to see or know anything about the food administration department is welcome to the information any time," said Mr. Hoover at Chicago. "We have not one single secret from any part of the people covering any phase of our work."

More Food Agents for Wisconsin.

According to the food bill recently passed by congress, county emergency food agents will be available for every county in Wisconsin. All but twelve counties are now supplied, each with a county emergency agent or agricultural agent. Thirty-three emergency agents now paid through the state or county funds may be transferred to the federal service as soon as the different counties comply with the regulations imposed by the federal department of agriculture. Emergency food agents are to be retained for the period of the war only and are not to be confused with the county agricultural agent. Of course, it is hoped that emergency food agents will administer their work so well that farmers will demand county agents after the war is over.

According to the agreement of the State Council of Defense and the extension service of the college of agriculture emergency food agents will not be forced upon any county where they are not wanted. We would suggest, however, that our readers in local communities unite in requesting the services of an emergency food agent for every county. Such requests should be forwarded to the State Council of Defense at Madison or to K. L. Hatch, assistant director of the agriculture extension service, also of Madison.

Last spring the Wisconsin College of Agriculture sent nearly a score of its faculty members and extension workers into various counties as emergency agents. Reports to The Wisconsin Farmer show that these men have done valiant service. It would be a fine thing if Wisconsin could be 100 per cent efficient on this matter of emergency food agents.

Feeding Hogs in the Field.

To filthy feeding quarters may be attributed many ailments that the hog falls heir to. Every man has time and again seen cases where corn was literally shoveled into a mudhole for the hogs, and of course under those conditions it could not be eaten without an enormous quantity of mud gaining entrance into the intestinal tract. If there are germs in the mud, and there usually are, they find lodgment in the animal's system and do the most possible harm. Feeding floors in a measure solve the problem, particularly if these are kept flushed or cleaned off during periods of wet weather. One of our subscribers in the following communication outlines the system of feeding in the field, which he commends very highly.

Even if there is a regular feeding floor for hogs I find it convenient, handy and healthy for the animals to feed them through the fall and early winter months in some one of the small fields near the house. The equipment and management of such feeding is simple, the hogs grow and fatten rapidly, and all the waste of husks and cobs, and the manure, are left well scattered as the feeding season advances.

I first fell on this field plan of hog feeding because of two reasons. The first was because I had no place in pens or small lots to feed, but what would get very filthy and muddy in a short time. The second reason was that I found that by hauling out loads of corn and feeding each load in a new and fresh place in a six-acre field I could avoid feeding most of the time where there was an accumulation of mud and filth and the waste and manure would be well distributed over the ground without hauling. The small field was getting quite deficient in both fertility and humus. In the course of a couple of seasons, after I had fed all over the field, I found it thoroughly manured and ready for a fine crop of Irish potatoes.

I found this manner of hog feeding very satisfactory in most ways, but I discovered something new and added that to the plan. It was the addition of a large, light feeding floor. I made it so it could easily be dragged from one spot to another, and sixteen by twenty feet in size. This floor in position, I then by the use of an old wagon drawn alongside of it fed the hogs on it. It was necessary about twice a week to slide the floor over a little more than its width and also to frequently sweep it off. With such a floor moved regularly I had always a clean place to feed and the manure and waste was left well distributed.

This plan is certainly to be commended for those who do not have good clean feeding quarters. Corn may be fed on grass land if a new place is selected every time without killing out the grass, and there is the advantage of distributing the fertility there and then. In some localities

farmers are quitting the hog business for two reasons. In the first place they claim that corn is too high compared with the price of hogs and, secondly, they regard the hog as wasteful from the standpoint of maintaining fertility. If a considerable part of the feeding is done in the field then the latter objection to hog raising is overcome and it is quite worth thinking about. Of course, after all, the big factor is that of feeding under sanitary conditions and certainly no conditions could be more favorable than those found out on the open in a nice, clean pasture.

We Have Scarcely Begun to Save.

Our people have not yet made a good beginning in the matter of cutting down waste and conserving food. At the same time that Mr. Herbert C. Hoover was telling farm editors in Chicago recently of the urgent necessity of saving every possible pound of human and animal food, thousands of people in the city of Chicago were wasting food with reckless abandon. In one room of the Sherman House Mr. Hoover was saying that 120,000,000 head of live stock had been removed from the world's supply in three years' time. In other rooms of this same hotel on the same day people were ordering and eating big, thick, juicy steaks and meats of all kinds. Perhaps it is nearer to the truth to say that they were giving big orders for meat and eating about one-half of it. They are not content with three square meals a day; thousands of people of Chicago must have a midnight, after-the-theater lunch. This lunch, which in most cases is a big meal, is taken on at hours of the night or morning when good, honest farm folks are fast asleep. It is apparent that people generally have not yet come to realize that there is an actual necessity of conserving food. The campaign through the papers has accomplished something, but the American people are too prosperous to accept the note of warning that before long we are going to be short on "grub." They read the warning, but they do not believe it. Even the high prices have failed to diminish the oversupply of food that people put into their stomachs. Unfortunately, it is not the hard-working class which gets the quantity and quality of food.

As a nation we are on a war basis, but as individuals a great many of us fail to realize it. To such, who are unable to control their appetites, the pinch will come all the harder when it does come. We are inclined to believe that, if as a nation we are careful of the food supply, there will be a-plenty. This country has by no means obtained the maximum of production.

Badger Farmers Worry Over Labor Shortage.

In another column of this issue will be found resolutions passed by the farmers of Pierce county who met in convention at the court house in Ellsworth, having been called together by Assemblyman Hanson. These resolutions raise again the farm labor problem in this state. The Wisconsin Farmer is inclined to believe that the farmers of Pierce county are sincere in the resolutions whch they have passed.

We cannot conceive that their sole purpose is simply to keep the boys from joining the army. There may be some that imagine the farm labor problem is used as an excuse. But such do not understand that for a number of years there has been a constant drain in rural communities of the young people and more especially the young men. Just at this time labor is scarce in all states and the young man who has been used to hard work is in a position to command a good salary almost anywhere. In a county like Pierce there are no large towns. The county has actually lost in population in the last ten years. We believe that there is a large measure of truth in the claim that it will be almost impossible to conduct farming operations on an efficient basis in this county if the full quota of young men drafted are taken in the army. The first draft might not result so seriously, but when it comes to the second, third and fourth call, the available farm labor will be cut down to such an extent as to make the situation a very serious one.

Farm paper editors and others interested in agriculture throughout the country are worried more over the farm labor problem than they have been willing to admit. Several suggestions are offered to remedy the situation. One is that the boy labor of the country be utilized, and that all boys between sixteen and twenty-one years of age be mobilized for farm work. Those that advance this theory admit that the boys should have a year or more apprenticeship before they will be able to accomplish much as farm hands. There are others who believe it will be possible to recruit farm labor from the unemployed in each state, and that this should be done by conscription by the government. The fault of this system is that we would be taking our skilled labor from the farm and putting unskilled labor in its place.

Mr. Hoover says we must produce more. He lays emphasis on increased production of live stock. Experienced workmen are needed to accomplish this. Facing as we do a labor shortage to begin with, it is a very serious question how many of the actually working young men on farms the government can afford to take into the army at this time.

Urges Tiling of Land.

The following communication has been received from a man who has just had his first experience in tilling wet lnad:

I have had an experience this season in tiling out my eighty-acre farm that I want to relate for the benefit of Homestead readers who might be similarly situated. The soil is a clay loam with a clay subsoil, and it is almost level, but there is plenty of fall for drainage. When the season was favorable I have always raised a good crop, but in years like 1915 I didn't raise half a crop, due to the fact that the soil was wet and cold late in the spring. This spring I was persuaded by a man who does considerable tile draining to put in a system of drains. It was necessary to run one eight-inch tile diagonally across part of the eighty acres and a seven-inch tile through another part of the land. These were used as mains into which the laterals were emptied. After these were put in we decided that four-inch tile were large enough in most instances, so I bought 10,000 fours and 500 fives. Most of the work was finished up by the time I got the small grain in, so that I really have had the benefit of the tiling this season.

What was the result? We had just enough rain in this locality to keep land similar to mine good and soggy during the latter part of April and in May, but the growth of my crops was never impeded and even in the lowest parts of the field the oats and the corn remained vigorous and healthy. My oats threshed out fifty-two bushels per acre and while the crop was generally good in our locality I have two or three neighbors who got less than thirty bushels per acre, and I have no hesitation in saying that on my land I harvested 500 bushels more oats than would have been harvested had no tiling been done.

I have one forty-acre field of corn and while I cannot estimate at this time what the yield will be, I can only say that the growth is uniform, it is well eared and there is a splendid stand. There would have been many acres of this field completely drowned out if I had done no tiling, but as it is there is not a waste foot in the field and I believe if conditions are normal for another month the crop will average sixty bushels per acre. Land of this character would not have yielded more than thirty bushels per acre had it not been tiled, so I feel that I am ahead 1,200 bushels of corn and 400 or 500 bushels of oats.

My whole tiling bill, including the cost of the tile, the labor and boarding the men, was $950, so you can see that this is a case where the tiling actually paid for itself in one crop's increase. I do not know how many thousands of dollars I have lost in past years in handling this wet land, but in all it would amount to a lot of money. My neighbors who have done no tiling have taken a special interest in my crop and I think there will be a great many carloads of tile buried next year and I am thankful to have had the good fortune to have started the movement.

The results obtained in this case are very striking, indeed, and particularly so when one considers the value of grain. Those, however, who have had experience in handling tiled land will not be surprised at the statement that the tile in this case paid for itself in one year. Taking the seasons as they come and go, we believe it would be safe to say that two years out of five the beneficial effect of tiling would be as striking as in this case. Not only on level land, but even in cases where the land is rolling a few strings of tile will take sourness out of the soil quicker than anything else. Where it is possible to do so it is always advisable to put in a thorough system of tiling right from the start, but, on the other hand, it is entirely practicable, if there is an outlet, to tile out the worst spots in the beginning and supplement the system from time to time. A close study of the crop in any field will very quickly reveal where the tile is needed and those who do not have faith enough in the draining of land to sink a considerable amount of money at one time are surely justified in getting their wet places drained. A hundred bushels of corn will buy a lot of tile and we have no hesitation in repeating that on certain types of soil no investment will pay as large dividends as that involved in the removal of water by tile drainage.

THE PAUL REVERE OF TODAY.

Possibilities of the Small Farm.

One of our subscribers, who is at the present time an employe on a dairy farm, asks for information concerning the practicability of making a good living for himself and family on a twenty-five or thirty-acre farm. He has in mind making dairying his main work and refers to the fact that he would, of course, build a silo, and the question with him is whether on such a small acreage one could divide up his crops and plan his work so that there would be a reasonable margin of profit at the end of the year.

The carrying out of this program is entirely practicable and the degree of success attained will depend wholly upon the ability of the owner. Plenty of instances could be cited where individuals have been eminently successful in farming a small acreage on the dairy plan and it is possible to handle it so that it will carry one cow per acre. Some grain will have to be purchased, to be sure, and the area of pasturage would be limited, so that reliance must be largely placed on ensilage during a considerable portion of the year

Some hogs should be raised every year, because on a place of this kind, which, presumably, will be fenced hog tight, they will convert waste products into revenue. By using forage crops for the growing pigs and for the old sows relatively cheap pork can be made.

The horse item is important on a farm of this size and in starting in it would be the essence of wisdom to purchase a pair of good drafty brood mares. These mares would on the average raise at least one colt a year, and if they are of the right stamp these colts will go a long way toward paying the feed bill of the work horses. Of course, it goes without saying that poultry should also have a place on a farm of this character, and in all likelihood one of the laying breeds will produce more real profit than the heavier general-purpose breeds. Small fruit and vegetable growing should also receive attention and if there happens to be a good market near at hand a nice revenue can be obtained from these sources. All in all, we have no hesitation in saying that the right kind of a hustler can take a farm of this kind and make it net him through a series of years just as much money as many quarter sections are returning to the owner. It is a question of intensive rather than extensive farming.

Business men and farmers of Waterford, Racine county, have arranged to entertain the business men of Racine September 19th. In a sense it is a reversal of the old order of things, for this time the country people are inviting the city people out for a day's entertainment. The spirit which prompts this interchange of relationships is commendable.

As secretary of the Wisconsin Live Stock Breeders' Association, Andrew W. Hopkins, agricultural editor of the University of Wisconsin, has forwarded the following telegram to David F. Houston, secretary of agriculture:

Accept congratulations upon selection of Glover and Hill to committee to mobilize nation's live stock industry. Why not have Wisconsin's important sheep, swine and beef interests also represented?

And sure enough, why not? Wisconsin has splendid men who could represent these interests and who would do efficient service for the government in this hour of need.

Buying Bull on Partnership Plan.

Better Stock Available if Several Good Breeders Will Pool Their Bull Funds—How It Works in Waukesha County, Wis.

WHEN Dave J. Howell took over his father's farm twelve years ago he took over with it a herd of scrub cows, a red bull and an idea that there was money in dairying with scrub cows. After trying out the cows, the bull and the

Brookvale Ormsby Netherland, with record of 27.33 pounds butter in seven days.

idea for four years and not being able at the end of that time to locate the longed for and expected profits he decided that the idea of scrub cattle being profitable was wrong, that the red bull was no good for a dairy farm and that the calves from scrub cows were no better than the bull. He had not lost faith in dairying, but he realized that profits from dairying call for dairy cows and dairy sires, but especially dairy sires.

He had his mind made up to buy as nearly the best sire as his cash would

Johanna Korndyke Countess, dam of $2,150 heifer sold at Waukesha sale.

allow. The scrubs had not made him overly rich. Being short on cash and long on expensive ideas has ruined the plans of a great many men. Mr. Howell soon learned that the good ones cost money—much money, and he wanted a good one or none at all. So he hit upon the plan of a bull partnership, wisely figuring that the money of two people would go twice as far, buy twice as good a bull and give the same satisfaction as if purchased by one person.

This plan has worked out so well that in the eight years he has been in

Berty Netherland Piebe occupies the stall of a former scrub cow.

the pure-bred business he has never owned a bull independently, yet at the same time the calves at Brookvale Farm can boast of better ancestors than the young stuff on many an older establishment.

When the red bull was disposed of, Hillvale Sir Ormsby, a Holstein, took his place. His sire, Sir Ormsby Hengerveld De Kol, did not have the reputation then which he enjoyed later on, and Dave and his brother Henry were able to buy Hillvale Sir Ormsby at a figure within their reach. The daughters of Sir Ormsby started soon after to make records somewhat out of the ordinary. One of his granddaughters, Duchess Skylark Ormsby, is now holding the world's butter record, 1,506 pounds. Hillvale Sir Ormsby proved himself a worthy member of the family during the time he was at Brookvale. Most of the cows in the herd were still grade cows at that time, but the calves from the first cross milked far heavier than their dams. A few records were made by calves from registered cows which had been sired by Hillvale. The best of these was 27.33 pounds of butter in seven days, made by Brookvale Ormsby Netherland. Other records well above twenty pounds followed. When the first crop of calves had grown to breeding age it became necessary to get a new herd sire. The bull, Hillvale Sir Ormsby, had increased in value through the performance of his daughters and the daughters of his sire and he was sold for some $500 more than the purchase

Maplecrest King De Kol 2d, purchased for $1,000 by Howell, Muckleston Bros. and Wm. Swartz.

price. Pure breds were beginning to show profits.

This time the choice fell on Maplecrest King De Kol 2d, a sire coming from a long line of producing ancestors, and the price was $1,000. Again the partnership plan made it possible to purchase an animal which might seem too high priced to the individual breeder. Muckelston Bros. and William Swartz were the partners. During this time other records were being made by the offspring of the first bull. Another purchase was soon made by the same partners and a still higher price paid for the bull, Pabst Blackberry Korndyke. This bull is sired by Korndyke Segis Johanna, a $12,500

Woodcroft Perfection, $5,000 bull purchased by Mr. Howell in partnership with Aitken Bros., Baird Bros., Muckleston Bros. and S. A. Baird & Son.

bull by Johanna McKinley Segis, a forty-pound bull, and out of a thirty-eight-pound dam. The price paid for him, $1,600, was well worth while.

The latest move of Mr. Howell was to purchase an interest in a $5,000 bull calf, Woodcroft Perfection, tracing far back to high-producing cows and closely related to a host of record animals. Woodcroft Perfection is owned jointly by Aitken Bros., Baird Bros., S. A. Baird & Son, Muckelston Bros. and Mr. Howell, all Waukesha breeders.

The wisdom of the partnership plan, which enables Mr. Howell to have highly bred sires at the head of the

Pabst Blackberry Korndyke, purchased for $1,600 by Mr. Howell, Muckleston Bros. and W. Swartz.

herd, has proved itself again and again. Sales of animals have been numerous and the prices received have been good indications of how other breeders regard the stock bred and raised at Brookvale. The better the ancestors the higher the price. At the recent sale of the Waukesha breeders three head from Mr. Howell's herd

The owner of a pure-bred herd feels a pride in looking over his cattle which the owner of a scrub herd cannot possess.

Powerful as Five Horses

Costs Less than Four Horses

Here is the kind of a tractor you've been looking for—one that not only plows, but does ALL farm work that horses can do, besides supplying power for belt work. Not a big, heavy, cumbersome tractor, that plows while your horses loaf and eat, then leaves the rest of the work for your horses to finish; but a tractor that does EVERY job a horse can do—does it better—faster—easier and cheaper.

It costs less than four horses, yet plows 4 to 12 acres a day; pulls a two plow gang harrows, discs, plants and CULTIVATES corn or other hill and row crops—16 to 20 acres a day. Is as easy to drive as a team—a REAL ONE-MAN TRACTOR.

MOLINE ORIGINAL 2 WHEEL TRACTOR UNIVERSAL TRACTOR

Note the big advantage of its two-wheel construction—ALL ITS WEIGHT IS TRACTION WEIGHT. ALL its weight goes into the PULL. That's why we can build it lighter; why we eliminate almost a ton of excess dead weight necessary on tractors of the three and four-wheel types. Notice how you operate both tractor and implement from the implement seat. All your work is plainly in view. No craning or straining of your neck looking back to watch the farm tools—no extra man needed. Easy to back up with tool attached; easy to make quick and short turns; to work close to fences; to do all work as well and as easy as with a team. Write for our free catalog-folder today.

MOLINE PLOW COMPANY

Money-back Guarantee with every sale

Send today for Galloway's wonderful 1918 Book of amazing values. Learn what you can save on your farm supplies and how and why I can do it. My great 1918 Book climaxes my fifteen years of success in direct-to-you bargain giving. In it you will find prices lower than you ever thought possible—especially now when prices are soaring. There is no mystery about my low priced, high quality goods—no magic, nothing but good, sound reasoning. It's a plain business proposition. I am the manufacturer. I own and operate a chain of factories here in Waterloo where I turn out thousands of Gas Engines, Spreaders, Tractors and Separators every year. These I sell to you right off the factory floor with just one small manufacturer's profit based on an enormous output. I pioneered this direct-to-you method of selling and it has won me the friendship of hundreds of thousands of farmers everywhere because I *save them money.*

Owing to the rising costs of materials I cannot promise my present low prices to last.
Wm. Galloway

Every sale is backed by a $25,000 Bond

The secret of real savings—direct dealing between maker and user

I built this vast manufacturing business on the plan of no lost profit between manufacturer and user. I cut out all waste from the raw material to the finished product and from the time the product leaves the maker's hand until it gets to the actual consumer. I built the first really high quality Gas Engine and sold it direct from the factory at a most reasonable price—the same with Separators, Engines, Tractors, etc.

My new 1918 Book tells the whole story. It answers your every question about the great Galloway institution and policies. You must read this great book and learn how **buying direct from the maker** gives you the finest grade implements and saves you 25 cents to 40 cents on every dollar you spend. Send for the book today—use the coupon.

SEPARATORS — BEST EVER FOR 1918

My new 1918 Sanitary Model outstrips them all. There is no other separator built to compare with it for fine construction, beautiful finish and down-right, clean skimming efficiency. Because my price is so low don't compare my 1918 Sanitary Model with those cheaply built-down-to-a-price separators. My Sanitary is compared only with the finest and best built separators—the ones that usually are 20 to 40% higher than mine. Stand them side by side. Test them for every separator feature and see how the Galloway is unsurpassed.

Buy on 180 Milkings Test Let this 90 day working test prove its worth on your own farm. Be certain it's the separator you want before you decide to keep it. Note how sturdy and strong—how easy it is to wash and clean—how close it skims—and a hundred other separator points that mean so much to you in dairy profits. Write today for book.

ENGINES — ADVANCE 1918 MODELS READY

My complete 1918 Engine line is all ready—from the light engine for pumping—the small portable 4 to 6 H. P. for doing light power jobs—the 9 to 12 H. P. Heavy Duty type, to the big, powerful 16 H. P. Mogul Models for the toughest and heaviest jobs. No matter what kind of power service you want, there is a Galloway Engine just built for your purpose. You don't have to be an engine expert to see how skillfully Galloway Engines are designed—how scientifically they are built—how masterfully machined or how beautifully finished. Behind this wonderful exterior is the greatest inside engine efficiency ever produced. My big 1918 Book gives you engine facts that will pay you to know and save you much of your engine money. It posts you on every engine question—will keep you from paying too much. Send coupon for the book now.

1¾ h.p. to 16 h.p.

Light work or heavy duty models

25% to 40% Savings Guaranteed

TRACTORS — MY LATEST 12-20 MODEL

The great new Galloway Tractor is now the accepted type for all light models. It is not a freak, but a general all-around portable farm power house. It is built like an automobile. It has anti-friction bearings. Twenty-one sets of Hyatt roller and ball bearings save the engine's power for the draw-bar and the pulley where the power is needed. Dynamometer tests show Galloway Tractor to take only 13½% of the engine's power to pull the tractor without implement. This is about ⅙ to ⅓ the power required by other tractors. Has a four cylinder valve in the head, modern motor, water cooled. **Exclusive** patented transmission. Will pull three 14-in. bottoms 8 to 9-in. deep in clover or timothy sod. Will do any portable engine job—sawing, silo filling, corn shelling, shredding, handles a 28-in. grain separator, any kind feed grinder, pumping or irrigation plant. **Double chain drive.** Get Tractor facts in my new 1918 Book.

SPREADERS — With Next Year's Improvements

Here for 1918 is my greatest spreader triumph. It's my master model—the best I ever built since I made my first spreader. See what these features mean on your field in actual work—proof that the Galloway is the spreader you want. It's low down—with light draft. Two horses handle it anywhere without killing the team. Has wide spreading V-rake—strong beater teeth that tear the toughest clumps into shreds and makes possible even and easy spreading. The patented roller feed—the reason for its light draft—is an exclusive Galloway Feature and one that you would gladly pay $25.00 more to get—but costs you nothing extra on the Galloway. The patented automatic stop, uniform clean-out push board are other important features that spell real spreading efficiency with the Galloway. Write for my big 1918 Book and get the story complete. Send for the Book NOW—use the coupon.

Spreader has V-Rake Steel-Beater. Spreads from 4 to 24 loads per acre

Mark a circle around implement you are intending to buy

averaged $1,050. The highest price realized was $2,150, incidentally the highest price paid in the sale ring for a dairy cow in Wisconsin.

About twenty-five animals are milking all the time. A milking machine has been in use on the farm for the last three years and has never made the owner the least trouble of any kind. The test cows are milked by hand until they finish their weekly or monthly test. The rest of the lactation period they are milked with the machine the same as any other cow in the barn. Not one case of garget, sore teats or damage to the udder in any way has occurred since the milker has been installed. According to Mr. Howell, the big mistake usually made with milking machines is that the new owner will expect a cow to be milked perfectly dry by the machine. This is not reasonable, in his estimation. Following up the machine and seeing for yourself how the cow is getting along is necessary at any rate and the stripping takes but little time. The milker does not fit every cow alike, but most cows let down the milk fully as readily with the mlker as when milked by hand. The fact that one or two cows will not get used to machine milking is not enough to disqualify it. All of Mr. Howell's cows except two do as well with the machine as with hand milking.

Even during the period of scrub dairying Mr. Howell had found the silo indispensable. He put up a silo the same year he took over the farm. In the following winter he had enough surplus to haul a few loads to town occasionally while his brother with the same acreage and with no more cattle, trying to do without a silo, found himself short before the winter was over. The demonstration, however, convinced the brother of the merit of the silo and he put one up the next year.

About 160 acres of land, part of it recently made tillable through drainage, furnish the crops for the herd. There are three silos on the farm and in another year Mr. Howell plans to barn feed the year around. The pasture land will be put under the plow to produce more feed for the growing herd.

In improving his herd Mr. Howell did not get rid of scrubs with one grand flourish. That would not have been wise. Instead he proceeded gradually and he has only this year come down to the last grade cow.

The herd sire, however, must be a pure-bred dairy sire in order to produce heifers able to milk abundantly over long periods. From grade cattle to pure-bred cattle is a big step, but most people, once they have seen the wonderful improvement a good dairy bull will bring about in a herd, do not hesitate to continue the work of herd improvement until the entire herd has become pure bred. It pays to do so.

Canning in Wisconsin Forty Years Ago.

To the Editor:—I have been greatly interested, and at times greatly amused, at the canning directions that have been published in the papers, magazines and bulletins the past few months for the benefit of the women of Wisconsin. I wonder if these "experts" realize that there are tens of thousands of capable housekeepers in Wisconsin who can "can" from beginning to end of the canning season without looking at directions of any kind.

I can remember forty-five canning seasons in Wisconsin. My earliest recollection is of my mother's big brass preserving kettle that was always polished until it shone like gold. It was well worth a day of good behavior and several errands to have the first chance at that kettle on preserving day.

Canning would commence on the old home farm very much in this way: We boys would be following father to the house at dinner time of a glorious day toward the end of June. As we approached the house we would hear father chuckle and then say, "Boys, mother has a job for us." The "job" would be two or three heaping pails of green gooseberries standing on the porch, and on each of those gooseberries was a little green stem and a brown blossom that had to be pinched off before the canning could commence. After dinner had been eaten father would draw back his chair and say in his cheery way, "Boys, we must give mother a lift with her berries." Father never used tobacco and the time for his "noon smoke," as he called it, was always spent in reading or in doing some little job about the house. He would pick up a pail of the waiting gooseberries and, seating himself comfortably, would commence cleaning them, a signal for everyone to get busy. After half an hour or so father would get up, saying, "Well, mother, we will help you again after supper."

After supper when the chores were all done the whole family would be out on the porch and everybody would be cleaning gooseberries. Very soon some remark by one of the younger children would start mother to telling about "when she was a girl." Mother came to Lafayette county in 1840, when there was no fruit but that which grew wild and there were many interesting stories about "berrying" and "plumming" in those early days. The long evening would pass quickly and just as it began to get dark and the first little head began to droop sleepily someone would announce with a shout, "All done," and then what a scampering for bed.

Next morning the cleaned berries would be canned for winter pies and sauce. From then on until after frost had come, every week, and sometimes it seemed almost every day, there was something from garden or the orchard that had to be canned, or pickled, or preserved. Some days there would be a table covered with glasses of bright-colored jellies. Father would always take one up and hold it upside down to see if it would drop out and mother would always smile because it never did. At last would come the day when mother would proudly say, "My canning is all done. Come down in the cellar and see how nice it looks." And then, with father and mother in the lead, the whole family would go trooping down to see that wonderful display of preserves, canned fruits and vegetables, jellies, catsup, pickles with a dozen different names and I don't know what. Just such a cellar full of condensed goodness as has been duplicated in 10,000 Wisconsin cellars every fall since.

Teach Wisconsin women canning! Well, did you ever! A. P. J.

Ergot in Rye.

To the Editor:—Ergot in rye is the disease which is shown by black, horn-like bodies that come in place of the kernels. These may be about the size of a kernel or several times as large. The ergot threshes out with the grain and cannot be perfectly removed by the fanning mill. The ergot with the seed is the main source of trouble for the next crop. The unaffected rye kernels do not carry the disease.

Ergot is lighter than rye and will float in a salt solution in which rye will sink. Clean the seed as thoroughly as possible with a fanning mill. Then separate out the remaining ergot as follows: Make a salt brine of about 20 per cent strength, i. e., dissolve forty pounds common salt in twenty-five gallons water or in that proportion. Have this solution in a tub, barrel or other suitable container. When the salt is well dissolved pour in the rye slowly and stir vigorously at the same time. The ergot and light seeds will rise to the top and the sound rye kernels will sink to the bottom. Skim off the ergot or add rye until the solution runs over the side of the tub carrying with it the ergot when assisted by hand or skimmer. If the ergot does not float strengthen the solution by adding more salt and stirring until it dissolves.

A convenient arrangement is to have two tubs or half barrels, one set above the other, so that the overflow containing the ergot will fall into the lower tub. Cover this lower tub with cheesecloth to catch the ergot and let the solution run through so that it can be used over again. It is good as long as it lasts. When the ergot is all out pour off the solution and dry the grain by spreading out on a floor or canvas. Sow at once or dry thoroughly and store. There is nothing about this treatment which in any way injures the grain for milling or feeding purposes.

Ergot also occurs on a number of wild grasses, such as quack grass. Therefore, these grasses should be kept mown down or pulled up around fields to prevent the disease from spreading to rye.

Ergot does not live over winter in dry grain in storage so that old seed is safe to sow without treatment.

Ergot poisoning is dangerous to live stock, frequently causing abortion. —[Wisconsin Station.

Over there on my car is a set of Federal Tires that have given me not only good wear, but safe travel.

I bought them because I know how they are built on the inside. That's the important point.

Up hill or down, through ruts and holes, and the worst kind of going, those tires stay on the rims, and give perfect traction.

Experience has taught me the value of equipping a car all 'round with Federal Tires.

In the base of each Federal tire four strong steel cables anchor the tire safely to the rim against the hardest kinds of strains. Yet they slip off easily when necessary.

Made in white Rugged and black Traffik non-skid treads. Sold by leading dealers everywhere.

The Federal Rubber Company of Illinois (4)

Factories, Cudahy, Wis.

Manufacturers of Automobile Tires, Tubes and Sundries; Motorcycle, Bicycle and Carriage Tires; Rubber Heels, Fibre Soles, Horse Shoe Pads, Rubber Matting and Mechanical Rubber Goods.

Cow-Testing Reports.

From Richland County.

To the Editor:—Please publish report of our Buena Vista Association. Mr. J. W. Martin took honor for high cow with 59.9 pounds of butter fat and only one-tenth of a point over the second high cow owned by Mrs. J. E. Schmitz. Mr. Martin's Red Polled cow is a granddaughter of the famous Red Polled bull, Corporal. The forty-five-pound list for the month ending August 1st follows:

Owner, name and breed.	Age.	When fresh.	Lbs. milk.	P.C. fat.	Lbs. b'fat.

Value of Summer Silage.

To the Editor:—During the month of August 621 cows were under test of which thirty produced forty pounds of more of butter fat. It is seldom that one herds holds all the honors of a month, but Harry Veith's herd of grade Holsteins claim the highest average of butter fat for the herd, the high cow for the month and the greatest number of forty-pound cows. The herd average was 990 pounds of milk and 37.2 pounds of butter fat. The high cow gave 1,364 pounds of milk, testing 3.9 per cent and running 53.1 pounds of butter fat. Seven cows in this herd produced better than forty-one pounds of butter fat. Mr. Vieth feeds summer silage. At the end of our fourth month of testing twelve unprofitable cows been disposed of, three pure-bred sires bought to replace scrubs, three pure-bred heifers bought, three separators repaired, and one member has erected a modern dairy barn and another is building a silo. Our forty-five-pound list for August follows:

Fitted Especially for Pipeless Heating—not merely a pipe furnace with the pipes left off

THIS picture shows exactly how the Mueller Pipeless Furnace is equipped so as to give the greatest efficiency and economy in pipeless heating. The warm air rises direct from the furnace within the inner casing or jacket and ascends through the circular register which is enclosed within the square. This warm air rises and circulates throughout all the rooms of your house. The simple law of physics—that warm air rises and cold air falls—is familiar to every school-boy.

As this warm air becomes cooler it falls to the floor and descends through the outer or square part of the register into the outer casing or jacket of the furnace, and thence into the inner compartment, where it is reheated by coming in contact again with the heated casting.

Pipeless heating is an assured success. It places the comforts and advantages of furnace heat within the reach of many who prefer to heat their homes by this simple method.

But it is not possible to derive satisfactory results in pipeless heating by merely using a pipe furnace with the pipes left off. The remarkable success of the Mueller Pipeless Furnace has been due to the scientific skill with which it is fitted for pipeless service.

The Mueller Pipeless Furnace is of exactly the same construction as the old reliable and well known Mueller Furnace, but without pipes or flues and with the special casings which equip it for pipeless work. The entire furnace is of solid cast iron, the radiator is one piece, the grates are of the triangular duplex pattern, the ash pit is large and high and the triple jacket is rust-proof.

It is a real furnace, the result of 60 years of experience in the building of heating systems of all kinds, and it has behind it the Mueller name and reputation. It has the unequalled heating efficiency and fuel economy of the nationally known Mueller warm air, hot water, steam and vapor systems.

MUELLER PIPELESS FURNACE

Thousands of dwellers in stove-heated homes are installing the Mueller Pipeless. It frees them from the discomforts and disadvantages of putting up and taking down stoves in the different rooms every spring and fall, and of carrying fuel into the different rooms and lugging ashes from them.

It enables them to enjoy the comforts and conveniences of furnace heat without the expense of tearing up the walls to put in pipes, and in homes in which the installation of a pipe furnace or other heating system would be impractical.

It heats the entire house from one central heating plant located in the cellar, where it belongs, out of sight and out of the way, yet doing its work quietly and efficiently.

The Mueller Pipeless Furnace furnishes a constant supply of moist, warm air which continually circulates through all the rooms, keeping them at a comfortable temperature. It burns hard or soft coal, coke or wood, and saves 35% in fuel.

It is quickly and easily installed and is especially adapted for houses having small or partial cellars. Even if there is no cellar at all, it is an easy matter to dig a pit large enough to accommodate it. It does not heat the cellar—does not prevent the storage of fruits and vegetables.

Thousands of homes were kept warm and comfortable during the unusually cold winter of last year by the Mueller Pipeless Furnace.

The Mueller Pipeless Furnace is the ideal heating system for thousands of homes, but there are homes of certain types for which other systems are better adapted. Our heating experts will advise you, free of charge and without obligation on your part, whether the Mueller Pipeless Furnace will give you greatest comfort and convenience in your home or whether some other system is best for you. Their advice will be entirely unprejudiced, since we manufacture all types of heating systems.

Write and tell us of your requirements, or mail this coupon for our interesting booklet about pipeless heating, with name of nearest dealer who can tell you all about the Mueller Pipeless.

Badger Live Stock at Iowa Fair.

Advance Showing at Big Iowa State Fair Last Week Makes a Creditable Record for Wisconsin Breeders.

WISCONSIN live stock breeders who exhibited at the Iowa State Fair this year succeeded in bringing home a good share of the blue ribbons and sweepstakes prizes. In the dairy cattle show they furnished some of the best herds, a fact that was fully demonstrated when the awards were made. The Iowa fair begins the live stock show circuit in the Middle West and comprises one of the largest stock exhibits in the country. Breeders from several states are among the exhibitors, and competition is always very keen. For this reason Wisconsin breeders may justly be proud of their winnings.

SHORT-HORN BULL, LORD CULLEN, OWNED BY CARPENTER & CARPENTER, BARABOO, WIS.

The strongest Wisconsin showing was made in the Ayrshire cattle by the herds from the Ferndell Farms, of Ladysmith, and the Adam Seitz farm, of Waukesha. All the purple ribbons except one went to the Seitz herd. Cavalier's Roseberry was made senior champion bull and Cavalier's Lord Stuart junior and grand champion bull. In the female sweepstakes, Imp. Oldhall Beauty won the senior and grand champion ribbons. Although the Ferndell Farms did not get into the sweepstakes, they captured a good number of other prizes on individuals of exceptionally high quality.

In the Jersey division, W. S. Dixon & Son, Brandon, Wisconsin, and Chas. A. Peterson, Rosendale, Wisconsin, secured well in the list of awards. Oxford Majesty Maid, a junior yearling heifer of the Dixon herd, pushed into the sweepstakes class and took the junior champion heifer trophy. In addition to this prize, twenty-seven other trophies were taken by the two herds mentioned, in classes that were closely contested from start to finish. The Jersey show was of high quality, and, although no larger in number of entries, was considered by many to be superior to the showing made in Des Moines a year ago.

Ira Inman, of Beloit, Wisconsin, was the only exhibitor of Brown Swiss cattle at the Iowa fair. His herd of sixteen head was in excellent condition and would undoubtedly have won heavily even with strong competition. The aged bull, Lot of Lake View, that was made senior and grand champion, is an especially good animal of splendid size and type.

In the beef cattle ring several good herds upheld Wisconsin's reputation. They were all Short-horns, there being no Hereford entries from the Badger state this year. Among the exhibitors were Anoka Farms, Waukesha; Carpenter & Carpenter, Baraboo; Eben E. Jones, Rockland, and J. E. Kennedy, Janesville. Thirty-one prizes, not including sweepstakes, were taken by these four exhibitors, among which were four firsts, five seconds and four third prizes. In the sweepstakes, Carpenter & Carpenter took senior and grand champion female trophies on Maxwalton Queen, an aged cow of wonderful Short horn character, style and carriage. Many observers thought that the junior futurity bull calf, Anoka Champion, of the Anoka Farms, should have been given more attention in the contest for junior champion, which might have credited another purple ribbon to Wisconsin. As it was, the Badger state may well be proud of its place in the Short-horn showing.

R. Connor Co., Auburndale, Wisconsin, were big winners in the Shire division of the horse show, carrying away thirteen prizes, including two championships. Dray King Fashion, the three-year-old filly of the Connor stud, was an outstanding winner and captured the junior and grand champion ribbons in the female sweepstakes. Connor Company was the only exhibitor from Wisconsin in the horse show.

In the swine show there were no Badger state entries.

The showing made by Wisconsin breeders at Des Moines this year is entirely creditable to them, especially so considering the fact that fitting for the show ring is a big task this year when feed and labor are scarce and excessively high priced. It is hoped that this good showing will be continued and improved upon as the fair season advances.

SENIOR AND GRAND CHAMPION AYRSHIRE BULL, CAVALIER'S LORD ROSEBERRY, OWNED BY ADAM SEITZ, WAUKESHA, WIS.

FIRST-PRIZE SENIOR BULL CALF, ANOKA CHAMPION, OWNED BY ANOKA FARMS, WAUKESHA, WIS.

Corn Profit Nearly Doubled

NOW is the time to place your order for a **Deering** or **McCormick** husker and shredder.

The corn will soon be ready for harvesting. The ears must be husked — by hand or by machine.

The cost of husking is about the same either way. If anything, the husker and shredder does a better job of husking, and besides, at no extra cost, it shreds the two to three tons of stalks, leaves and husks that grow on every acre and blows this valuable shredded stover under cover, to be used during the winter as a first-class substitute for high-priced hay.

Three sizes of **Deering** — 2, 4, and 6-roll, and four sizes of **McCormick** — 4, 6, 8, and 10-roll, give you a chance to select a size suitable to your corn crop. The larger sizes can also be used for custom work. Capacities range from 150 to 1,000 bushels per day. The power required ranges from 6 to 25 Mogul kerosene H. P.

Every feature that makes for efficiency, economy and safety is contained in these machines. This year a **Deering** or **McCormick** husker and shredder will pay well on any corn-raising farm. Get your order in early. Write us at the address below for complete descriptions.

Army and Navy Packet for You

If You Solve this Puzzle

Here are seven ponies in a pen. By drawing three straight lines you can put each one in a pen by himself. If you can do this we will send you as a prize, a packet of five beautifully colored Army and Navy postcards showing our gallant boys in action. These cards are new and novel, every one a beauty. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing. We will also send you a certificate for 1500 free votes in our grand contest for a beautiful Shetland pony.

Fine Pony Given Away

Remember the Pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in the great contest. In case of a tie a pony will be sent to each person so tied. Write me today.

THE PONY MAN Dept. 118 Des Moines, Iowa

Driver Agents Wanted

Drive and demonstrate the Bush Car. Pay for it out of your commissions on sales. My agents are making money. Shipments are prompt. Bush Cars guaranteed or money back. Write at once for my 48-page catalog and all particulars. Address J. H. Bush, Pres. Dept. 9-BI

BUSH MOTOR COMPANY, Bush Temple, Chicago, Illinois

FARMERS' MARKET

Wanted---For Sale---To Exchange

THIS department is to bring the buyer and the seller together. You may have live stock, poultry and eggs or machinery for sale. You may want to sell or buy a farm. Write your copy for the advertisement. The rate is six cents per word, each insertion.

The Wisconsin Farmer, Madison, Wis.

FARM LANDS.

ALABAMA ALFALFA LAND. Demopolis Section—No part of America equal of this in the great combination of alfalfa, corn, velvet beans and grass. Rolling lime land, fertile, healthy country, artesian wells, tick free. Lands are cheap, quality considered. Full information and photographs. C. C. Chase Alfalfa Land Co., Demopolis, Ala.

HARDWOOD cut-over land, silt loam, clay subsoil. Not sandy or gravelly. Close to towns. Good roads. In the heart of the dairy country. You deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 9. North Western Lumber Company, Land Department, Stanley, Wis.

WOULD YOU SELL YOUR FARM if you got your price? Sell direct. No commissions. Particulars free. Charles Renich, G-2, Woodstock, Illinois.

165-ACRE FARM—Good land, good buildings 47 miles from Chicago, 14 miles south of Gary, Ind. $140 per acre. J. W. Sherburne, LeRoy, Ind.

GOOD FARMS in a good country. Always sure crops; no destructive storms. Good bargains are yours by writing Geo. C. Rice, Webster, Wis.

HOLSTEIN BULL FOR SALE.

REGISTERED Holstein bull, ready for service. Two of his dams averaged 108 lbs. milk in one day and 34.95 lbs. butter in seven days, officially. Price $125. Wisconsin Live Stock Association, Appleton, Wis.

REGISTERED Holstein bull, ready for service. Three of his dams average 106 lbs. milk in one day and 34.75 lbs. butter in seven days officially. Price $100. R. M. Harriman, Appleton, Wisconsin.

MONEY TO LOAN.

MONEY TO LOAN on Wisconsin farms in amounts of $5,000 to $25,000. Security must be twice the amount of the mortgage. 6% with privilege of paying $100 or more at any time. Address 206 Washington Bldg., Madison, Wisconsin.

LIGHTNING RODS.

LIGHTNING RODS that are guaranteed protection, $250.00 to find a building burned by lightning with our rods. L. F. Diddie Co., Marshfield, Wis.

LEARN TELEGRAPHY.

TELEGRAPH OPERATORS IN DEMAND—One superintendent writes: "Can use 25 operators tomorrow." Ladies or gentlemen. Wisconsin School of Telegraphy, Oshkosh, Wis.

LEARN TELEGRAPHY—Positions guaranteed; Young men and women. Write Northwestern Telegraph School, Eau Claire, Wisconsin.

PERCHERON STALLION FOR SALE.

PURE-BRED imported Percheron stallion, Eutonia (69032) 50785. Price reasonable. Address H. A. Bender, Route 3, Cambria, Wis.

TIMOTHY SEED.

TIMOTHY SEED—$4.00 per bu. High purity and germination, first class in every way. Timothy-alsike mixture, $4.50 per bu. Satisfaction or your money back. Henry Field, Shenandoah, Ia.

SALESMEN WANTED.

SALESMEN WANTED—Owing to draft and enlistment we have a few well-worked territories open and will be pleased to hear from interested persons. Applicant must be exempt from draft. McConnon & Company, Dept. T, Winona, Minn.

SPAN OF MARES FOR SALE.

FOR SALE—One span mares, 6 and 8 years, 3,000 lbs., sound and steady workers. For sale or trade for pure-bred or high-grade Holstein cattle. Also have a pair of three year olds, one gelding, one mare. Anton O. Olsen, B. R. Falls, Wisconsin.

HELP WANTED.

WANTED—Experienced farm hand. State wages. John J. Mueller, Montfort, Wis.

POULTRY AND PET STOCK.

FOR SALE---S. C. RHODE ISLAND REDS

GOOD BREEDERS from exhibition and trapnested laying stock. Write for prices. **WINNEBAGO POULTRY YARDS, A. J. Schloerb, Mgr., R. 23, Omro, Wis.**

BARRED PLYMOUTH ROCKS and Buff Orpington ducks; Chicago winners; great layers; established 1892; eggs for hatching: $1.50, 15; $4.50, 50; $8, 100; prompt delivery and good hatch guaranteed. G. Earl Hoover, R. 24, Matthews, Ind.

HATCHING EGGS; prize-winning S. C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W. F., Fond du Lac, Wis.

HATCHING EGGS—S. C. Reds, prize-winners all leading shows. Eggs, $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

RHODE ISLAND REDS—Setting of 15 eggs from pure-bred prize-winning Rhode Island Reds, $2 per setting; three settings for $5. Hildebrandt & Vea, Stoughton, Wis.

APRIL hatched Single Comb Buff Leghorn cockerels and pullets, from choice laying strain. Chas. Schmit, Hortonville, Wis.

A RANCH BARGAIN—3,680-acre ranch, Lincoln County, Neb., on main line U. P. R. R., 4 miles from loading station. 600 acres cultivated, well improved. A money maker. $12.50 per acre. Terms. Henry H. Genau, No. 1317 South 31st Street, Omaha, Neb.

STOP! LISTEN!—90-acre, imp. farm, $1,500; terms; free list. McGrath, Mountain View, Mo.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Few Poultry Foods Contain Protein.

"We cannot procure the meat rations needed in our village stores," says a valued reader of this paper. "Could we use a poultry condiment in the feed to take the place of beef scraps? Our stores keep ——— powder and insist that it is fully as good as the beef scraps. In the meantime, can you tell me where to get a dependable brand of beef scraps?"

There is not a particle of protein in the article mentioned. Beware of condiments masquerading under the guise of feed. Oftentimes serious trouble results from overstimulating the egg organs. This is not to be understood as condemning all poultry powder. Some of it is very good for certain things, but not as a feed; rather as a stimulant or appetizer.

The hen is a meat-producing fowl, and to produce eggs with anything like a profit she must have meat in some form or the equivalent to furnish protein. Fowls that have free range can garner their own meat ration in the form of insects that do harm to our crops. The writer has a pretty intimate acquaintance with a flock that follows the plow, disk harrow and cultivator, up and down every row, devouring the grubs which we do not want and turning them into perfectly good eggs that we do want.

In the case that all meat is withheld in some form the hens will lay through the natural laying period and quit. At an experiment station a couple of years since, it was found that when fed some form of meat the hens returned a net profit of nearly $1.50. When the meat was withheld the loss was something like 30 cents each.

This condiment question brings to mind a happening of some fifteen years ago. A young man, who was something of a dreamer, read that for $1 he could buy "poultry secrets" which would instruct him how to make his hens lay at any and all times of the season and on a minimum of feed. He sent his dollar and carefully read the "instruction book."

The hens were to be fed some kind of drug one day and then to alternate with something else the next, and a lot more such rot. As the big fellow happened to be the writer's brother, we knew all there was for it was to let him run the length of the rope. He did. The result was one of the worst disgusted boys you ever saw.

Many times oviduct trouble can be traced to this very thing, as well as abnormal eggs, infertile eggs and so down a long line of disasters. To produce an egg the hen must have the elements that compose an egg. There is a certain amount of protein in grain, but not enough; there must be too much grain consumed to get the required amount, which is both a waste and not conducive to health. Milk takes the place of meat, but a great deal is required, comparatively speaking, to give the balance. However, milk in any form is splendid for fowls and the surplus can be utilized to no better advantage than for laying hens and growing chicks.

Your grocer, grain dealer or meat market should be able to procure the beef scraps for you. The catalog houses, whose yearbooks fill a corner of the living room, can supply you, but we have had a complaint lately that the stuff procured from them was not satisfactory. Have never patronized them in this line, so cannot say positively. About the best place we can recommend is a wholesale poultry supply dealer or poultry supply house. The latter sends out literature and you may procure anything in the chicken line from an incubator to a chick feed, and meat scraps as well.

Sanitation in Stables.

F. B. Hadley, of the Wisconsin College of Agriculture, in Bankers' Bulletin No. 49, gives the following regarding sanitation in stables, yards and pastures:

Nearly all disease-producing germs are effectively killed by sunlight.

Feed boxes should be kept clean and sweet by prompt removal of waste and occasional washing with liquid disinfectant.

Remove soiled bedding from stables each day. A well-bedded, clean animal will not only thrive better, but will also sell for a better price.

There should be frequent application of air-slaked lime to previously well-scraped barn floor.

Provide adequate drainage of barnyard paddocks and open pens, and see that wallow holes are filled in.

Drinking water should be pure and fresh and supply plentiful. Yellow, green scum which appears on troughs in summer is not of itself harmful, but it may catch and hold dangerous microbes. Empty out the water and thoroughly scrub the trough with 5 per cent solution of blue vitriol (copper sulphate) from time to time and this vegetable growth will be killed.

Keep pastures well fenced.

The eggs and grubs of many internal parasites of animals, such as stomach worms, are passed out and lodge in stable manure. This is particularly true of sheep. Therefore, pastures should not be top-dressed with sheep manure when they are to be used for grazing these animals the following season. The long continued pasturing of one class of animals upon the same pasture or overstocking is a certain way to infect stock with parasites which are injurious and which may cause death.

Several varieties of plants that are poisonous to live stock grow in wild pastures and are sometimes seen in tame grass pastures. In Wisconsin the scouring rush, water hemlock and wild cherry are the most common. When there is plenty of feed, animals exercise considerable discretion in selecting what they eat, but when forage is scarce they will consume plants that would otherwise be refused. Experience shows that poisoning occurs most often when cattle and sheep are changed from dry feed to pasture.

To prevent poisoning and to reduce the danger from bloat which is likely to occur when a sudden change is made from a dry ration to pasture, or from a poor pasture to a better one, or from grass to clover or alfalfa, a full feed of dry roughage should be given before turning out the stock; then allow them to remain on the pasture for a short time only each day for a week.

The practice of rotating pastures is recommended as a means of controlling parasites. Moreover, by supplementing the permanent pastures with green forage crops whenever possible, both live stock and pastures may be kept in better condition.

Bogs and swamp holes in pastures should be tile drained or fenced off, because they act as breeding places for harmful germs of various kinds and animals often become mired in them and are not found until exhausted or dead from their efforts to get out.

The very common practice of using the pasture as a burying ground or rotting place for the carcasses of animals cannot be too strongly condemned. The best way is to burn carcasses. However, burying is safe if a hole at least six feet deep is dug and the remains are well covered.

Look For the

"A Perfect Trench at One Cut"

BUCKEYE Traction Ditcher

At Your State Fair

It's a marvelous machine. Makes "a perfect trench at one cut," true to grade and ready for tiling. 100 rods to 150 rods a day with a "Buckeye" is not uncommon.

If you have wet land, the Buckeye Traction Ditcher will drain it quickly and cheaply. If you are looking for a profitable business--spare time or full time--contract ditching with a "Buckeye" will net you $10 to $20 a day clean money.

THE BUCKEYE TRACTION DITCHER will be demonstrated at the following State fairs:

Indiana, Indianapolis, ... Sept. 3 to 7
Minnesota, Hamline, ... Sept. 3 to 8
Wisconsin, Milwaukee, ... Sept. 10 to 15
Kansas, Topeka, ... Sept. 10 to 15
Michigan, Detroit, ... Aug. 31 to Sept. 9
Canadian National Exhibition, Toronto, Ont., Aug. 25 to Sept. 10.

Competent representatives will demonstrate the machine and explain it fully.

The Buckeye is adding to National and individual wealth by reclaiming thousands of productive acres annually. Can it help you?

Write for our bulletin, "Dollars in Ditches"--or get it at the fair.

The Buckeye Traction Ditcher
1718 Crystal Ave. Findlay, Ohio

NOTICE

The *Walsh* Harness has **NO** buckles, **NO** snaps, **NO** billets, **NO** loops, **NO** holes in the straps and **NO** wear on the straps.

It looks better, fits better, is four or five times stronger and will last longer than the present harness. The price is the same.

It will fit any horse from 800 to 1800 pounds, is made to stand heavy work and will last about **thirty-five (35) years.**

It took eight and one-half years to perfect it.

The *Walsh* Harness will be shown on a team at the Wisconsin State Fair (in the center of the grounds.)

IDEAL heating makes a home out of a house

Put in AMERICAN Radiators and an IDEAL Boiler right away and have plenty of heat all winter with a great saving of fuel and labor. Not necessary to have basement or water pressure

Any building *old* or *new*, in country or city, can be successfully heated with an IDEAL Boiler and AMERICAN Radiators. The economy of IDEAL heating outfits is known to all users. They cannot say enough about the great fuel savings, the splendid comfort, the lack of repairs, the little attention, the cleanliness, and the every-day good, solid service that they get from their IDEAL Boiler and AMERICAN Radiators. They have made *homes* out of their *houses*.

AMERICAN RADIATORS & IDEAL BOILERS

Especially this year you should choose an IDEAL heating outfit for its *great fuel saving features.*

***Any fuel anywhere* can be burned with greatest heating results.**

The IDEAL heating outfit will last forever. We have never heard of one wearing out. Repair bills are unknown and the attention is so slight for getting plenty of heat day and night that you will wonder why you do not have to look after it more than once a day.

IDEAL Boiler fuel pots mix the air and coal gases as in a modern gas mantle, extracting ALL the heat from the fuel.

Save fuel this year with IDEAL heating

If everyone would use IDEAL Boilers in their homes, we would have no high priced fuel question. You can burn the low priced fuels of any localities and IDEAL Boilers and AMERICAN Radiators are such great savers of fuel that you will soon save the first cost of the outfit.

Phone or call on your heating dealer today and get estimate for putting in an IDEAL heating outfit.

Send for this book (free)

Write today for copy of "Ideal Heating." We want you to read this book through, for it gives you the truth about the heating question and shows why we want you to have IDEAL heating to change your house into a *home*.

Sold by all dealers. No exclusive agents

PREPAREDNESS LECTURE

THIS war is awakening men to the truth about a lot of things besides Preparedness—and chewing tobacco is one of them. Soldiers are strong for W-B Cut and the facts are right before you. These shreds are *all* tobacco, no gummy sweetening—*rich* tobacco—more sap in the leaf than in ordinary tobacco by a long shot. That's why it's so satisfying and so economical—a little bit goes a long way.

Made by WEYMAN-BRUTON COMPANY, 1107 Broadway, New York City

Good Beef From Wisconsin.

(Continued from page 1.)

eral Point at that figure previous to the sale made from the Bloomfield section by H. J. Kelly. To Mr. Kelly go the signal honors of having the first large bunch of cattle that ever sold on the open market for beef for $12 per hundred. The bunch of thirty-five cattle were about equally divided between Herefords and Short-horns, and were sold in Chicago in November, 1916. A few words about the treatment of these cattle will show that Wisconsin blue grass is useful in making good cattle, and that it is possible to make good cattle without spending too much money on high-priced feed.

The cattle were native Wisconsin-bred cattle bought in Grant county in the fall of 1915, weighing about 1,000 pounds. They were pastured until the winter set in. During the winter they were fed about thirty pounds of silage per head daily and what mixed hay they would eat. About three weeks before going on grass they were given a ton of cottonseed meal and were turned onto grass about May 1st. Mr. Kelly allows about two to three acres of pasture per steer. The last sixty days before marketing, the steers were given corn—first green fodder, then snapped corn and later husked corn. They were on a full feed of corn in about three weeks. For the first thirty days of the feeding period they were on grass, and during the second thirty-day period they were given clover and timothy hay and all the corn they would eat. At the time of selling they weighed 1,505 pounds, making an average gain of about 500 pounds per head for the year.

Turning south at the Sunnyside school, on the military road between Cobb and Montfort, one breaks into one of the finest pieces of farming land in Wisconsin. Men with foresight got into this section at an early date and the land has remained in the hands of good workers. While some of this land was early cropped heavily and crops were cashed, the soil has been rejuvenated in recent years by more carefully worked-out rotations and by raising and feeding live stock. In this section are the farms of Thomas, Heuer, Dieter, Trankle and Gruenenwald's. Some of these farms that some years ago would not raise profitable crops are now growing good crops of clover, corn, oats, and, in some cases, wheat. Liming has been resorted to in some places and more lime will be applied in the near future.

The operations of George Chamley might be taken as those of a typical beef cattle man in this section. Later we will have something to say about the operations of some of the men who raise their cattle and market fat steers that have never been on but one farm. It would be safe to say that George lives on an ideal stock farm. The home farm consists of 399 acres of gently rolling land less than a mile east of the village of Livingston on the Chicago & North-Western Railroad. In addition to this, the Chamleys have 200 acres of pasture and hay land west of the village of Livingston. This year on the home farm George has 110 acres of corn and, unlike many of the farmers in Iowa county, he has plenty of help and can keep four or five cultivators going in the corn all the time the weather permits. The corn shows the good treatment, too. Sixty acres, at least, of this corn will be put into the two concrete silos (one 20x36 and the other 20x38) which Mr. Chamley considers the most indispensable buildings on the farm. He says he couldn't raise anything on the same amount of land to grow the same amount of feed.

There is no hard-and-fast rule in the operations as to time for buying and selling, although it is intended to raise as much on the farm as possible so as to winter all the cattle for grazing at least part of the winter. The aim is to get the cattle some time from the first to the middle of February if possible, though this may vary. The cattle are then fed on hay and silage and sometimes a little cottonseed meal until about the first to the middle of May, when they are turned onto the grass. This year Mr. Chamley had, all told, 186 head of steers on hand. Of these, eighteen were hay-fed cattle bought in Chicago late in January. Being somewhat plain in quality, they were fed on grass and shipped out about the first week in August, the aim being to avoid competition with the western cattle. In one pasture of 160 acres were sixty three-year-old cattle, and in this lot were fifty head of branded Wyoming cattle bought in Omaha in February. These cattle are well-bred White Faces, and will get a corn finish from October 1st to November 15th. By that time Mr. Cham-

A FEW OF THE BIG ONES IN THE THOMPSON AND MASTERS PASTURE, LINDEN, WIS.

ON THE JOHN BLOTZ FARM, IOWA COUNTY.

ley expects them to weigh 1,500 pounds and they ought to sell well, because they have the quality and smoothness. Unless compelled by breaks in the market to run these cattle into the winter they will get no silage, and unless silage is fed they will get no cottonseed meal.

The general system as explained by Mr. Chamley is to buy in January and February sometimes locally in the fall, if there is grass and feed to carry the cattle over the winter. He likes to get about 100 days of winter feed on the cattle—hay and silage and cottonseed meal being the principal feeds. By buying in the winter, Mr. Chamley gets the grass shrink out of the cattle, and he is not paying for any soft waste which shrinks away. The cattle are generally lighter in the middle of winter than they are in the fall. Hogs are allowed to follow the cattle, and by the system about 100 hogs are raised on the farm and marketed annually.

East from Mineral Point is located what is known as the Waldwick Prairie. Here are located some of the best cattle men in southwestern Wisconsin. The land is more rolling than in the Bloomfield and Livingston sections, but not so rolling as some of the sections west of Mineral Point. Good crops of corn can be raised, but in many places there is not much tilling of the soil done, pasturing cattle being the principal use to which much of the land is put. The system is not different from that practiced near Mineral Point. The aim of those actively engaged in the cattle business in this section is to get the cattle at a time of the year when cattle are cheap. Provision is made to winter as many cattle as possible. At the present time the labor problem is solved, but increasing prices for land and ever-rising taxes are forcing the people to consider the question of getting more feed off the land. This will in time decrease the amount of land devoted to pasture, and will cause the owners of the land to cast about for crops that will return more feed per acre. While silos are not very common in the Waldwick section, the question of building silos is receiving attention, and they are going up rapidly.

In this section of the country live the Jacksons, Whites, Rosses and Harkers, who own considerable land and turn off good cattle. Mr. R. G. White, of Waldwick, had a load of cattle on the Chicago market August 20th that were good enough to bring $13.50 per hundred in the face of a run of 30,000 cattle. This demonstrates the value placed upon Wisconsin grass-fat cattle by the Chicago buyers.

Around Linden and Mifflin, Wisconsin, are also good cattlemen. Logan Thompson, of Linden, is considered one of the best cattlemen in the district, and this year has on hand a load of heavy cattle that should bring a high figure at Chicago. Thompson is a stickler for quality and a firm advocate of the use of silage in making winter gains.

It remained for Grant county, though, to send out the record-breaking grass-fat cattle so far this fall. It falls to the credit of Grant county also that the cattle were produced there and had never left the county until sold to go to Chicago. This load of sixteen cattle were fed by Griswold Brothers, of Livingston. They were bought in Grant county last September around Patch Grove and Platteville, weighing around 1,000 pounds at about $100 per head, carried over the winter on silage, cottonseed meal and hay, and were sold off the grass the week of August 15th at $225 per head. In Chicago they averaged about 1,650 pounds each and sold for $14.50 per hundred.

It is estimated that there are at least 1,000 cars of good cattle on grass in the southern part of Iowa county. Good prices for fat cattle are holding these men in the steer game, although in many places the cattlemen have been replaced by dairymen. Scarcity of good feeding cattle in the sections where they could once be obtained is one of the perplexing problems confronting the cattle men. Feeders can be obtained at the central markets, but this involves two freight charges and two shrinks, which are expensive.

The grass-fat cattle from the Mineral Point section are the best grass cattle that go to Chicago.

Pierce County Farmers Resolve.

It Is the Sense of Farmers' Meeting at Ellsworth That Young Men Are Sorely Needed at Home to Work on Farms.

THE question of farm labor is agitating many good Badger farmers and especially those whose boys or hired men are subject to conscription. A meeting to consider this subject was held Saturday, August 18th, in the court house at Ellsworth, Pierce county, and Assemblyman C. E. Hanson was chairman of the gathering. A committee was named to visit the district board at Ashland and present to this board the farmers' needs along labor lines. This committee was given a courteous reception at Ashland and advised that their representations would be given serious consideration. In stating the object of the Ellsworth meeting, Assemblyman Hanson said that the gathering was not met for any unpatriotic purpose. Mr. Hanson announced that a United States marshal was present in town and was probably in the audience, and that inasmuch as the farmers had nothing to conceal he hoped the marshal would come to the front where all could see and hear him. Pierce county farmers claim they are in worse position from the labor standpoint than farmers of other sections of the state, by reason of the fact that the county has lost population in the last ten years and the male population of conscription age is low because so many young men have moved away to the cities. The resolutions passed by the meeting are as follows:

United in our love for America, we are convinced that we can serve our country by urging upon those who control the reins of government, the adoption of the following resolutions and policies:

Resolved, That this is a war of endurance. Men and money are important, but food counts the most. Soldiers who fight must eat. So must their dependents at home. The world must be fed.

Every acre of unharvested crop or the inability of the farmers to secure the greatest possible returns from their farms on account of a shortage in farm help will deprive many mouths of food, aid the enemy and lessen our chances of success.

That since the farmers in response to the call of the government have increased their acreage of productive crops to the utmost necessary for the maintenance of the military establishment, or the effective operation of the military forces, or the maintenance of the national interest during the emergency, they find it necessary more than ever to retain their present help to operate and manage their said farms.

Resolved, That since the male population of military age in Pierce county is far below the average as compared with the other counties in the state and nation, and since the entire county has decreased nearly eight per cent during the last ten years, due to the fact that the young men are leaving the farm for the city, the farmers have found it difficult to manage their farms and will find it more so unless they can retain their present help, and that the taking of the farmers of military age, who have spent their entire lives on the farm and who have become skilled and accustomed to farming and dairying, results in a direct material substantial loss in the effective operation of the agricultural industry, the only industry in Pierce county, but in spite of this and against the promises of the press, our young men are being drafted without discrimination. As we are informed, only two farmers out of 54 were discharged from military service. If this percentage continues, the farms will not produce what they should, for the reason that unskilled help will have to be called upon or drafted in order to carry on the management of our farms:

Wherefore, We request the following:

1. That the district board of division No. 2, for the western district of the state of Wisconsin, investigate the economic conditions of this county and other counties of the said district as it is the duty of each district board to ascertain by its own methods the existing conditions and ascertain as near as possible the labor supply available in this district.

2. That if farm help will have to be drafted to take the place of those who are called, why not, instead, leave those on the farm who have spent their entire lives in the occupation of farming and get the greatest possible efficiency?

J. F. Larson, Chairman.
E. J. Fitzgerald, Secretary.
Oscar J. Gilbertson.
L. H. Place.
Wm. Hintzman.

In publishing these resolutions passed by a representative company of farmers, The Wisconsin Farmer has no thought of arousing any feeling against the draft. The resolutions were signed by 164 farmers. They insist that they will not be able to raise maximum food supplies demanded of them by the government, and urged upon them by the several governmental departments, if their supply of labor is curtailed by taking boys away to war. The farmers believe that maximum production is not possible with unskilled and untrained labor.

BUILT on common-sense lines—nothing freakish or experimental about it—no guess-work about what it can do. It's a tried-and-proved tractor—built on approved principles only and backed by 17 years of manufacturing experience.

You can put the TURNER SIMPLICITY tractor in the field and know that it will do your plowing, discing and harvesting just as dependably as a team of horses—and much quicker and cheaper.

Use it for hauling and your belt jobs, too—it's an all-around tractor, light, powerful and economical.

Burns either kerosene or gasoline. Waukesha Tractor Motor; Hyatt Roller Bearings. Simple gear shift control, working parts enclosed, running in a bath of oil.

Find out all about this successful tractor. *Send today for large, three-color folder with full description and specifications.*

TURNER MANUFACTURING COMPANY
114 LAKE STREET PORT WASHINGTON, WIS.

Tear out this ad, write your name and address on the margin and mail for big, three-color tractor folder. Mark a X under other products, if interested.

Simplicity Blower-Cutter noted for its great capacity and economy of operation. Many exclusive features which insure efficiency and durability.

New Simplicity kerosene engine. Throttling governor insures smooth running. Special carburetor provides perfect mixture. Burns kerosene without smoke or carbon.

FREE AIR
SAVES HIGH PRICED FEED
Ventilate your barns and buildings. Air costs nothing—worth dollars and cents to you in health to your stock and and saving of feed and veterinarian's bills.
All-Steel Cupola Chief
Insures fresh air—plenty of it—in any building where installed. Scientifically designed—draws in fresh, pure air constantly. Steel throughout. Strong. Durable. Can't rot or rust. Write for booklet.
Shrauger & Johnson, Dept. 100 Atlantic, Iowa

KENDALL'S SPAVIN TREATMENT
has saved thousands of dollars and thousands of horses. The old reliable treatment for Spavin, Ringbone, Splint or Lameness. For sale at all druggists. Price $1 per bottle, 6 for $5. "Treatise on the Horse" free at druggists or write to Dr. B. J. KENDALL COMPANY, Enosburg Falls, Vt., U. S. A.

LANDS AND HOMES FOR SALE

ARE YOU GOING TO BUY LAND?
IF SO, GET A COPY OF OUR JOURNAL FIRST. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25 cents for one year's subscription or $1.00 for five years. Department F, Farm and Real Estate Journal, Traer, Iowa.

FARM WANTED
WANTED to hear from owner of good farm for sale. Give cash price and description. Write JOHN H. OAKS, 432 Main St., Oshkosh, Wis.

PATENTABLE IDEAS WANTED. Manufacturers want Owen Patents. Send for 4 free books; inventions wanted, etc. I help you market your own invention without charge. Richard B. Owen, 37 Owen Bldg., Washington, D. C.

ENGRAVING Halftones made from pictures or drawings of stock for your letterheads, post cards, catalog advertising. Quick service, best work, reasonable prices. Write for information. THE HOMESTEAD COMPANY Engraving Dept. Des Moines, Iowa

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Warts on Cow's Teats.

Can you tell me any way to remove or cure warts on the teats of milk cows?

These can oftentimes be removed or helped by a few applications of olive oil. This should be applied after milking. If this fails they should be cut off with a sharp pair of scissors and the wound touched with a stick of lunar caustic.

Mastitis.

I have a cow about eight years old which every few weeks has trouble with one quarter of her bag getting caked. The teat seems to be closed up and the milk is not good for several days. It has been that way since the first of April.

This seems to be mastitis and probably of an infectious nature. We would advise you not to use the milk from her, at least when affected.

Rheumatism in Pigs.

On the farm where I am working the small pigs have a peculiar disease. Their leg joints swell and they get lame. Their eyes get sore and sometimes burst out of the head. What is the cause? Also, quite a few cattle have watery sore eyes. Some have a white covering form over the eyeball and I believe they go blind. Is it pink-eye?

The leg swelling may come from rheumatism or may even be due to injury caused by pigs and old hogs piling up in sleeping quarters. These pigs should have the best of care and quarters and too many should not be allowed together. The eye trouble in the pigs and cattle seems to be some form of pinkeye. About all that can be done where large numbers are affected is to inject some antiseptic wash, such as boric acid, in saturated solution into the eye. There is danger of a number of the animals losing their eyes with this disease.

Simple Mastitis.

We have a cow, lately fresh, which we bought. This cow has a caked udder caused by not being properly milked. Three of the teats milk freely, but can only get a few drops from the other one.

If this quarter is caked and hard it may be there will be abscess formation and if abscess forms it will have to be treated by a veterinarian. If it is in a simple state of inflammation, however, several applications of camphorated oil and frequent milkings will probably bring results.

Scab.

Could you give me any advice concerning a sort of itch on my six-weeks-old Short-horn calf? I noticed it first about a week ago when I saw that the upper part of the skin seemed to split open and sort of peel off, leaving the under surface exposed and tender and sometimes bleeding. It seems to be spreading quite fast, although it heals but slowly. It started first on the shoulder and is spreading to different parts. Am enclosing a specimen of the discarded skin which comes off the patches. A few days ago I noticed that the same itch is starting on one of my two-year-old heifers. Have not given any treatment so far. Am feeding calf s' im milk and the heifer is in pasture. The calf has the range of the pasture also.

From the appearance of the patch of skin sent in letter we would judge there was some one of the scab mites present. We would advise you to have this calf and any other affected animals examined by a competent veterinarian and he may be able to find mites present, in which case he could help administer proper treatment.

Destroying Worms in Hogs.

To the Editor:—We would like to give the hog raisers who read The Iowa Homestead our formula for pigs infested with worms. Dozens of farmers and breeders from different states have asked for it and so far all are getting good results. For several years we lost too many pigs at weaning time with worms. We tried everything we heard of, but nothing did us any good till we fed this formula. The first time we fed it was three years ago. We lost less that year than before feeding the formula. Two years ago we lost still less and last year our loss was very small. This year we have no signs of worms.

The formula is as follows. Santonin, two and one-half grains; areca nut, one dram; calomel, one-half grain; sodium bicarbonate, one-half dram. This amount constitutes one dose for one pig that weighs fifty pounds. Larger or smaller hogs should be fed in proportion. Feed should be withheld for twelve to eighteen hours before giving the mixture.

It is sometimes necessary to repeat the dose in eight or ten days. The medicine should be dissolved in water or milk for six to ten hours before feeding, and then fed in a good thin slop. Care should be taken that each one gets his share and no more. None should be left in the troughs. Keep the pigs on a clean, dry floor for twenty-four to thirty-six hours and feed their regular feed of loosening feed. After thirty-six hours take all straw, litter and worms and burn them. Then disinfect the floor. It may be necessary to do this for two or three years before the farm is free from worms. Dobson & Eastman.

Grant Co., Wisconsin.

Be sure to feed silage fast enough to prevent mold and deterioration in the silo. Otherwise sickness and loss in stock will follow. The top layer should be removed to the depth of one inch daily in wintertime. This would amount to 350 pounds from a twelve-foot silo, 500 pounds from a fourteen-foot and 700 pounds from a sixteen-foot silo. If silage is fed at a rate of forty pounds a day to dairy cows, these amounts would supply respectively nine, twelve and seventeen head of cattle.

MAN—To wear one suit, get an agent; big pay, easy. Banner Tailoring Co., Dept. 738, Chicago.

Today's Housewife Decreases the Cost and Increases the Joys of Living

Two Great Magazines Now Published as One

TODAY'S HOUSEWIFE is the new title of Today's Magazine with which has beeen consolidated The Housewife. The new magazine, *Today's Housewife*, is bigger, brighter and better than either was alone. Every issue of *Today's Housewife* will afford you and your entire family many hours of pleasure and in addition the inspiration and encouragement that always make both present and future brighter. In brief, *Today's Housewife* is the homemakers' magazine of both helpfulness and happiness.

Today's Housewife Is Especially needed by every homemaker in the present war crisis, because the seven Courses in Domestic Science now running in the magazine help housewives to better select, prepare and conserve food supplies, to cut down waste, and at the same time to add to the health and welfare of the entire family.

Every Housewife Needs Today's Housewife

The minute any housewife looks over a copy of Today's Housewife, she can see that the magazine is just suited to her needs. It is hard to imagine any intelligent woman examining any recent number, and not realizing that *Today's Housewife* would be a big bargain if it cost twice the present price of 75 cents per year. Where, for a fraction over six cents per month can any ambitious housewife get so much of practical information, delightful entertainment and real inspiration?

Any Woman Who Fails to Get at least $5.00 value from a year's subscription for *Today's Housewife* is letting pure gold slip through her fingers. One woman aptly remarked that if she invested all her money as wisely as that spent in subscribing for *Today's Housewife*, she would soon own a bank.

Save Money and Be Happy

Today's Housewife is enthusiastically endorsed by over one million progressive housewives who have discovered to their delight that it is a big, helpful and entertaining magazine that decreases the cost and increases the joys of living. Why not subscribe for this wonderful magazine now so you will receive the wealth of information and entertainment in each coming issue.

If Your Newsdealer Is Sold Out

Send 10 cents for the large, attractive October issue or better still send 75 cents for a year's subscription or $1.00 for a two-year subscription. All your money back on request if you decide after receiving three issues that *Today's Housewife* is not worth at least twice the price. We know you will love the new *Today's Housewife* with its fashions, fancywork, stories, etc. Address

TODAY'S HOUSEWIFE, Farm Dept., CANTON, OHIO

A Bumper Oat Crop in Wisconsin

All Small Grains Are Yielding Well—In General Hay Has Done Well—Live Stock Are Thrifty in Spite of High Feed Prices.

WISCONSIN.

Adams County.—A light frost visited this section on the night of the 24th, but no damage was done. Grain crops are all harvested and threshing returns indicate a normal crop. Buckwheat will be good if frost holds off for a while. Pastures are good on the lowland, but on high land they are not so good on account of drouth. Potatoes look promising. Cattle on pasture are in good shape.—Louis Wollert.

Burnett County.—All grain is in the stack, but no threshing has been done. Pastures are dry and brown. Farmers are selling off all cattle that cannot be wintered. Corn has done well and will make good silage if it does not ripen. Potatoes are fine and will yield well. The weather has been too dry for a second crop of hay.—Fred Larson.

Chippewa County.—Grain is ready for threshing and some has already been threshed. Oats are making about fifty bushels per acre, barley about thirty or forty bushels. Corn is looking much better than it did a few weeks ago and will be all right for silage. There will not be much seed corn. The potato crop looks fine and is still growing. Garden truck is fairly good. Live stock show good condition, but pastures are getting short.—Gustave E. Rheingans.

Clark County.—A slight frost occurred on the 24th, but did no damage to growing crops. Threshing has commenced with a little better than an average run of grain. Potatoes are showing signs of rot. All live stock are in good health. Dairy cows are giving a good flow of milk for this time of year.—Fred Ackerman.

Grant County.—Most of the grain is being threshed out of the shock this year. Oats are making from sixty to seventy bushels per acre. Corn has not done well recently on account of dry, cold weather. Potatoes will make a fairly good crop. Pastures are getting dry and short. Live stock are in good health, but feeding operations are decreasing. There will be only a few varieties of apples.—P. R. Stoffel.

Iron County.—Old meadows will make about 65 per cent of a normal hay yield and new meadows about 85 per cent of one. Pastures are good and rainfall is plentiful. Potatoes look well and if frost holds off we may expect a big crop. Cattle on feed are increasing. Farmers in the neighborhood of Hurley have built a creamery which is expected to be in operation in another month. The apple crop is about 25 per cent normal. All live stock are doing well and there is no disease.—H. P.

Kewaunee County.—Barley is all cut and will be a fair crop. Oats are being cut in some sections of the county. Corn for silage will make about 60 per cent of a normal crop. Pastures are very short on account of the drouth and there will be a reduction in the milk flow. The new seeding of clover looks fine. Quite a number of new silos are being put up in the county. Cattle, hogs and horses are thrifty.—W. C. Katel.

Lafayette County.—Hay went in in extra good shape, since the weather was very favorable for harvesting. Oats are a bumper crop. The threshing which has been done shows very heavy yields of all small grains. Corn is doing well, but needs rain. More silos were built this year than ever before. Potatoes are a good crop and all garden truck is above the average. Live stock of all kinds are thrifty. Pastures are getting dry.—W. J. Martin.

Marinette County.—This section is having more rain and cool weather than it should have at this time of year. Pastures are fine. The second crop of clover is not as heavy as usual. Oats are nearly all cut and a good yield is promised. Spring and winter wheat and rye are all good. Corn is doing nicely, but needs several weeks more of warm weather. Early potatoes made a good yield. Late potatoes look well. There is about the usual number of cattle and horses, but hogs are scarce. Many silos are going up, as well as barns, machine sheds and granaries. The apple crop is short.—W. B. Sanderson.

Monroe County.—With good weather threshing is progressing rapidly. Grains are turning out well in both yield and quality. Many cows are going dry now because farmers here milk them in the winter. The creamery does not get as much cream as it did in the summer.—D. J.

Pierce County.—All harvest work is done and threshing is in progress. More shock threshing is being done this year than usual. Rye is making from eighteen to twenty-five bushels per acre, barley from thirty-five to forty-five bushels and oats from sixty to ninety bushels. Corn will need all of September in which to mature. The nights are too cool at present. Potatoes are doing well, some fields have been blighted. Pastured are short and fewer stock will be wintered this year than usual. Hogs are scarce and in poor condition.—T. B. Eaton.

Oconto County.—Haying is done and the crop is good. Grains are about half cut. Oats are very good and barley is making about an average crop. Corn looks fine. Potatoes are looking well and there will be a big yield of them. Pastures are a little short, because the ground is dry. The apple crop is very poor.—M. J. Hinker.

Outagamie County.—A splendid crop of hay was secured in fine condition. All grain crops are good, especially oats. Corn is backward and will require all of September in which to mature. Potatoes never were so good or the area planted so large. People are even beginning to talk of 25 and 50-cent potatoes. Pastures and new seeding were never better at this season. Fruit is abundant. Threshing will begin this week. Stock buyers who travel through the country say we never had so promising a year for good crops all around. Live stock are healthy. Dairying is the chief business here and farmers keep a good cash balance in the banks. Hogs and pigs are not plentiful and they need more corn for fattening. Old cows and calves are going to market. Little cattle feeding is in progress.—Peter Tubbs.

Taylor County.—Oat cutting is in full swing and the crop promises to be a good one. Rye also is good, but barley will make only half a crop. Potatoes never were better. The second hay crop is poor and only a little of it will be cut. Pastures, grass and meadows are good. Live stock look well. The hay crop in general will be about three-fourths normal, but the quality will be good. Garden truck is excellent. The horse market is poor. Milk cows are scarce and high priced. Sheep are scarce and selling for high prices. As soon as rain and cooler weather come in farmers will begin fall plowing.—E. H. Dehne.

Trempealeau County.—This county has banner crops of all small grains as well as hay. Threshing is in progress and many farmers are shock threshing while the weather is fine. Corn is fine and will make a fair crop, although not a heavy one. Potatoes and other vegetables are good. Pastures are rather dry, but farmers can soon turn stock into the fields. Rain must come before much fall plowing or planting can be done. Tobacco looks fine and commands a good price.—C. G. Kremes.

Walworth County.—The weather is dry and cool most of the time. Corn needs more warmth and a late fall in which to mature. Threshing has begun. Oats, barley and rye are yielding well. Some of the wheat is only half a crop due to the rust. Pastures are getting short and look brown.—Arthur Ewing.

Washburn County.—Harvesting of small grain is done. All grains are good. The hay crop was good and potatoes promise a big yield. Corn is very backward and should have no frost during September. Three successful coöperative creameries are having a good first year. Pastures are short and many cattle are going to market. Greater interest in pure-bred stock, coöperative buying and live stock shipping associations are three progresive movements for 1917. A rather heavy white frost occurred on August 24th, but did little harm.—John W. McCulloch.

MINNESOTA.

Mower County.—All crops are good except corn, which will require five or six weeks more in which to mature and make even half a crop. Wheat is yielding thirty bushels per acre. Oats are making as high as sixty bushels per acre and their quality is good. Pastures are holding out well. Cattle look well. Hired men are hard to get.—Walter H. Martin.

DELCO-LIGHT

INCREASES FARM EFFICIENCY

Superior Features of DELCO-LIGHT

SELF CRANKING

SELF STOPPING

AIR COOLED

THICK-PLATE LONG-LIVED BATTERY

ONE PLACE TO OIL

BALL BEARINGS

NO BELTS

BURNS KEROSENE

With shorter days comes the need of feeding the stock and doing many other chores after dark.

DELCO-LIGHT provides plenty of safe, bright electric light.

DELCO-LIGHT current operates an electric water system, washing machine, churn, separator and other labor saving appliances.

DELCO-LIGHT saves time for every member of the family every day in the year. Delco-Light is like an extra hand. Yet it works for a few cents a day and quickly pays for itself.

Price $350 and $420 f. o. b. Dayton, Ohio except Western U. S. and Canada

Be sure to see the DELCO-LIGHT exhibit at your State or County Fair

The Dane County Fair.

Dane county's annual fair and live stock exposition, held August 28th-31st, proved what her sponsors wished it to be, "The fair of fairs." Excellent weather helped to bring the crowds. The highest attendance was estimated at 25,000 on Madison Day.

The live stock show was good in every department. Beef cattle, dairy cattle, hogs, horses and sheep were entered. Cost of feed and scarcity of labor caused many breeders who had made entries to withdraw at the last moment.

In the beef cattle Short-horns predominated. Gerald Arnold, of Galesville, Wisconsin, took besides eight other firsts the grand championship for bull of any age on Richmond Villager. Rogers & Sons, of Union Center, took championship on their aged herd and were awarded grand championship honors for female any age on Clover Leaf Myra. Six other firsts also went to the Union Center breeder. Dan Grady, of Portage, was awarded first prize on aged cow.

One herd of Polled Durhams exhibited by Boynton Bros., of Janesville, had things to themselves, as they were the only representatives on the grounds. Only one herd of Herefords was entered, the Rott herd of Wonewoc, but they were excellent representatives of the breed. The owner expects to finish up the circuit this year at the International in Chicago with enough ribbons to his credit to make expenses.

In the dairy cattle exhibit Holsteins were present in greater numbers than the other breeds. John L. Fisher, of Janesville; Kirkpatrick Bros., of Reedsburg, and F. B. Fisher & Son, of Evansville, were the exhibitors. Kirkpatrick Bros. landed six firsts and the grand championship honors on the bull, Senator Johanna White, a splendid individual. F. B. Green & Son also came away strong and received grand championship honors on female any age. John L. Fisher received seven firsts, showing up well both in the male and the female classes.

Jerseys were represented by W. M. Knight's herd from Eagle, Wisconsin, and Guernseys by L. P. Martiny's herd from Chippewa Falls.

The swine exhibits were good for each breed represented. John L. Fisher, of Janesville, came out an especially heavy winner in the Duroc Jerseys. Five firsts, besides grand championships for boars and sows, came to him. Showing against him was the excellent herd from O'Keefe & Sons, of Waunakee.

In the Poland China class three exhibitors, L. P. Martiny, of Chippewa Falls; Madson & Son, of Madison, and John F. O'Brien competed. Mr. Martiny got away with five firsts, O'Brien with one and Madson & Sons with seven besides the championship for boar and sow. There was some excellent competition, but the grand championship honors were never in doubt.

In the Chester White, Walter George and Charles Rogers & Sons, of Union Center, furnished the competition. The latter got away with four firsts, while Mr. George took three firsts and grand championship on his herd boar. Grand championship honors for sows went to Rogers & Sons.

In the Hampshires two exhibitors, A. L. Damon, of Richland Center, and J. C. Wixom & Sons, of Milton, showed some excellent individuals. The Damon herd got away with most of the honors, securing eight firsts to Mr. Wixom's one. In a competition between the Hampshires, Berkshires and Chester Whites, Walter George was awarded grand championship on his herd boar and Rogers & Son similar sonors for the best sow. The Berkshires were represented by Leslie O'Brien, of Madison. Professor Jas. G. Fuller was the judge.

The sheep exhibit this year was an especially large one and of excellent quality, W. G. Miles, of Evansville; M. F. Hogan, of Waunakee; W. F. Renk, of Sun Prairie, and E. Crall & Son, of Evansville, Wisconsin, were the exhibitors. The Crall flock consisted of forty-eight head and they were representatives of every breed except the Southdown and Shropshire in the exhibit. Twenty-two firsts were the total winnings, with five championships for the various breeds besides. Mr. Renk showed some exceptionally well-bred Shropshire rams. Honors were divided up pretty evenly among the exhibitors, but competition was fairly keen in every respect. Mr. Renk's yearling ram put up a good fight for the championship against the Miles ram recently purchased for $300 at the McKerrow sale.

In the draft horse classes some good specimens of Percherons, Clydesdales and Belgians were entered. Grand championship honors, however, for the best stallion any age and best mare any age went to the Belgians. They were exhibited by E. W. de Bower, of Dane, Wisconsin, who has an excellent string of Belgian horses.

Free attractions and the horse races were of the highest class, the racing program being especially good. Machinery exhibits and educational exhibits were plentiful and better than in previous years.

Rye sown early, say before September 10th, with favorable weather conditions will make considerable growth in the fall. In a leaflet sent out by Mr. R. A. Moore and Mr. E. J. Delwiche it is noted that such rye fields may be pastured with cattle, but care should be taken to keep animals off the land in wet weather. Winter wheat should not be pastured, as a rule, as the growth is needed to protect the roots from frosts and freezes of winter. Many a good field of winter wheat has been spoiled by fall pasturing.

The government will take a hand to help the farmers dispose of apples and potatoes this winter to the best advantage. A campaign of education to interest our people in using more potatoes and less wheat bread is likely to cause a greater demand for potatoes and help to keep the price up so that the farmer will make a profit on spuds, notwithstanding the big crop.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Happy Homes Built Around Living Room.

By Laura B. Breese, Department of Farmers' Institutes of the University of Wisconsin.

The living room of today was the parlor of yesterday. Now it is the room in the home where the family circle gather "to live together." Then it should be a most comfortable and inviting room—a room that by virtue of its charm will "draw" the family members into it.

It may have, as the center of interest, a large fireplace of brick, one that will permit of the burning of wood or coal—for these fuels lend a cheer and glow and crackle good to witness and to inspire.

There is no reason why the furniture for this room should be in "sets" of sofa, rocker and chairs, all alike. Such sets are hard to use without giving an appearance of awkwardness and stiffness. Odd pieces of harmonious or the same wood make a pleasing selection. All furniture for this room should express firmness, comfort and delight.

Better get the pieces good as they can be afforded, with one piece fitting with the other, rather than purchase a number of cheap pieces at once. A cheap piece gives satisfaction but once—only when we pay the bill.

We want a couch and chairs in the living room that are comfortable rather than formal, serviceable rather than showy.

We need a table large enough to hold a few books, magazines and a reading lamp. A table rather plain in type, and so built that there will be no danger of children upsetting it.

Bookcases, either portable or built in, should be part of this room's furnishing—their shelves filled with the best books of interest to each of the family members.

A piano, and perhaps a victrola, are necessary for this living room, for music uplifts and inspires and will create a bond of sympathy between all members of the family.

The color for a living room preferably should be an unobtrusive one, and one that will not soon become uninteresting. Tones of brown, or green, or rich old rose are safe and pretty for this room, which will be occupied so much of the time.

Few pictures and ornaments are needed. Better have a few good ones than a dazzling number of these. One or two good pictures of meaning and truth upon the walls will be more attractive and useful in the room than a number of small ones of inferior study. Pictures, like books, are silent teachers in the home and may have a subtle and refining influence upon the family. Choose them with this thought and aim in mind.

Winter Goodies.

It is a wise housekeeper who converts part of the summer fruits into winter "goodies" to fill the call for candy or "rush order" desserts. Fruit paste so common in the tropics is little known in America. Old-time Virginia housekeepers put up peach and damson "leather," a similar product.

These pastes make a delightful dessert served with cream cheese or nuts. They can be used to garnish cakes, custards and platters of cold meat or eaten as a candy.

Fruit paste is made by boiling down fruit pulp, adding sugar, and drying out slightly:

Peach Paste.—Cook peaches tender and rub through colander after draining off juice (this can be bottled and used as a fruit sirup). Allow one-half pound of sugar to one pound of fruit. Cook over slow fire till very thick. Pour paste out in thin sheet on flat dish or marble slab which has been rubbed over slightly with salad oil. Place in sun or draft for two days, covered to protect from insects. It should be dry enough not to be sticky, but by no means hard or leathery. Cut paste in fancy figures or in any way desired, place on wax paper, sprinkle with granulated sugar, stand in draft two days more. To store, dip again in granulated sugar and pack in boxes or jars like candy with layers of paper between.

Damson Plum Leather.—"Damson leather," as it is known in Virginia, is made without straining, the skins left in dried as above. The sheet of leather is then sprinkled with granulated sugar, rolled like a jelly roll, and cut into slices. Dip these slices in granulated sugar and pack in jar.

Apple Conserve.—One pound apples to three-fourths pound sugar and one-half pint water. Simmer apples, quartered and peeled, in sirup till clear. Dry in sun till no longer sticky. Roll in granulated sugar and pack in tin boxes or glass jars, in layers with wax paper.

Damson Plum Conserve.—Four pounds plums, three pounds sugar, one pound shelled nuts, two oranges, one pound raisins. Remove the seeds and chop the plums. Peel the oranges and slice thinly one-half of the peel. Discard the other peel and the seeds. Mix chopped plums, orange pulp, sliced peel, sugar and raisins. Cook all together rapidly until bright and thick as jam. Add nuts five minutes before removing from the fire. Remove from fire, cool, and pack into jars.

Fancy Variations.—These are only a few suggestions; there are endless varieties and combinations that can be worked out with these pastes. Use different fruits or pastes, dry partly, and arrange in layers like layer cake. Or vary the layers by adding finely cut citron, candied peel or blanched nuts. With apple pastes different colorings and flavors can be used. Where fruit is abundant, fancy packages of these pastes might be put up for Christmas presents or church bazaars.

Inexpensive Dress Form.

To the Editor:—As I am a reader of your good paper and like to "help the other fellow" when I can I will reply to "Subscriber," who wishes to know about a dress form.

I have been a dressmaker for many years and used different kinds of forms. I am now on the farm, having recently moved from down "south in Dixie." To make an inexpensive dress form get a body form such as merchants use for displaying waists. Get a medium size, say thirty-six-inch bust measure. It should cost about 75 cents. Have someone who is handy with carpenter's tools make a pedestal about thirty-one inches high when finished. Attach this to the bottom of form. At the lower end of pedestal put two crosspieces and on the four ends fasten casters. When finished it should measure, from waist line to floor, about the medium skirt length. When the carpenter work is done, make a plain waist of muslin (or clean flour sacks will do). Fit the muslin waist to yourself, then put it on the form and fill out all looseness with cotton, straw or excelsior. Then put on a discarded petticoat or dress or skirt and you have your form ready to use.

I have in mind a sewing stunt that may be helpful. When sowing seams that need to be stayed, use a loosely twisted cord instead of a strip of goods. I always use old-fashioned "tidy cotton," the coarsest number, No. 8. It spreads as the needle goes through and does not show through thin material. It presses flat so the seam is smooth. The strip of goods makes the seam heavy.

I hope my letter may help someone, because I may want to come again seeking advice about farmer housekeeping. Mrs. H.

Brussels Sprouts.

To the Editor:—I am a stenographer in the city of Cincinnati, Ohio, and, having had a few spare minutes, I picked up your magazine and saw the inquiry of Mrs. J. C. M. regarding Brussels sprouts, and since I know how mother fixes them I thought perhaps I might be able to help her out in this.

Of course, you must wash them off and see that no worms are on them. Leave them whole and boil them just as you do cabbage. When they are well cooked you can make a cream or butter sauce for them. I am sorry that I cannot answer the rest of Mrs. J. C. M.'s questions, but hope that this one will help her. Let me assure you that I think Brussels sprouts cooked in this way are delicious. They are rather expensive up here and we don't have them very often. So if you can have them often I sure do envy you.

Did you ever try using the stems of cauliflower as a salad? Just cut them up in squares and boil until soft. Then make any kind of dressing for them. This is good, and saving as well.

Helene Tuxworth.

Would Not Be Without Dress Form.

To the Editor:—I have been a silent reader of the Home page for some time and enjoy it very much. I would like to tell the subscriber who wanted to know about dress forms that I have had one for over a year. I like it very much; in fact, I would not be without one now. My dress form is adjustable. There are a great many people who do not like a non-adjustable dress form and there are also people who do not like the adjustable ones. If one makes the right selection in buying a dress form I am sure she will be as pleased as I was the first dress I made on mine. Mabel.

Recipes.

Chocolate Pudding.—One pint milk, two eggs, one-fourth cupful fine, dry bread crumbs, one and one-half squares chocolate, scant half cupful sugar, one-eighth teaspoonful salt, eight baked apples, one egg white, one tablespoonful sugar. Soak the crumbs in the milk for thirty minutes and then add the chocolate and scald. When the latter is melted, add the sugar and salt, and pour onto the eggs, which should be slightly beaten, and cook for fifteen minutes in a double boiler. For the top dressing, sift the apples and beat the egg white stiff. Add to the latter the apple pulp and the tablespoonful of sugar, and beat together until fluffy; heap over the pudding and serve very cold with or without cream. A few drops of vanilla may be added to the chocolate custard if desired.

Corn Fritters With Whole Wheat Flour.—Two cupfuls whole ground wheat flour, three teaspoonfuls baking powder, one teaspoonful salt, one and one-half cupfuls cooked corn cut off the cob, one and one-fourth cupfuls cold water, one teaspoonful shortening. Mix the flour unsifted, baking powder and salt thoroughly together, add the corn, and the cold water gradually to form a drop batter. Stir in the shortening melted. Drop by spoonfuls into fat heated very hot. Drain on paper.

Potato and Onion Omelet.—Season a quart of mashed potato with three tablespoonfuls of bacon fat, a teaspoonful of salt, a little pepper, and a half cup of hot milk. Add two cups of boiled onions, chopped fine, and beat until light, then spread smoothly in a frying pan containing two tablespoonfuls of bacon fat and cook until well browned. Fold and turn on a hot platter.

Fruit Puffs.—One pint of flour, two teaspoonfuls of baking powder and one-half teaspoonful of salt. Sift all together, then rub in one tablespoonful of shortening and stir in enough sweet milk to form a thick batter. Put a tablespoonful of this batter into buttered cups until one-half of the batter is used. Place on it any kind of fruit, fresh or canned, put a spoonful of batter on top and steam for twenty minutes. Serve with sugar and cream or with a sauce made of the fruit juice.—Delia.

THE YOUNG FOLKS

Bess, the Milkmaid.

Dear Young Folks:—I am a great story teller and I am going to tell you the story about Bess, the milkmaid. You have all heard the old saying, "Don't count your chickens before they are hatched." Well, that is what this story is about.

Once there was a little girl named Bess who worked on a farm. One day her master gave her a pail of milk and she put it on her head and started to market to sell it.

On the way to market she thought what she could buy when she sold the milk. She said to herself that she could buy some eggs and a chicken and then the chicken could hatch the eggs. She would sell the chickens and buy a new hat, a dress and a jacket. "And then," she said, "I can go to the fair and look as fine as anyone in my new clothes. Baxter will come to meet me, but I will just put up my head, like this—" and she put up her head and down came the pailful of milk and spilled on the ground.

So she lost her new hat and dress and jacket, and she went home crying and saying to herself "Don't count your chickens before they are hatched."

Agnes.

A Little Traveler.

Dear Young Folks:—This is my second letter to the Young Folks' page. I enjoy reading the letters very much. I am visiting in Wisconsin now, but my home is in Iowa.

I am on a farm of 240 acres. We have eight horses, forty-three head of cattle and twenty-two sheep. We have thirteen lambs and they are awfully cute. One of our horses is twenty-nine years old and we still use her.

I have been across the Mississippi river eight times and across the Missouri twice. I went to Colorado Springs two years ago. We visited in Manitou and I tasted the iron and soda water while there and, oh, it was very bitter. My sister graduated from college in Colorado Springs that year and I went to the commencement.

I have three canaries, four cats, three goldfish and a dog for pets. I have a cow, also.

I can crochet and tat, but I have done very little this summer. We take sewing at school and once every year we have an exhibition of our work.

We girls play basketball at school. We enjoy playing tennis and croquet, also.

I send my best regards to the Young Folks. Betty.

Has a Playhouse.

Dear Young Folks:—I live on a 320-acre farm nine miles from town. I am twelve years old and in the eighth grade. I have three brothers and four sisters. We have two miles to go to school, but we drive an old horse and it does not seem far.

We have had a lot of fun through the vacation. We have a playhouse and we have a good time in it. We have two small puppies and we put them in a doll buggy and they go to sleep.

I like to go to school and I expect to graduate in the spring. Mary.

Bovee's Pipeless Furnaces

Sold at Manufacturer's Prices

The most practical heating plant used. Twenty years on the market. Saves 40 per cent on cost and 40 per cent on fuel. We manufacture five sizes suitable to heat from a small cottage to a large church, including our old reliable No. 40 Pipeless with its mach combustion chamber and all fittings, for

$86.00

Easy to install in an old or a new house. No cutting of walls. Cool basement. We also furnish regular pipe furnaces and fittings when required. Save big money by getting our free catalog.

Bovee Furnace Works 204 W. 8th St. Waterloo, Iowa

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Enclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date fall and winter 1917-1918 catalog, containing 550 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating thirty of the various simple stitches), all valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

1950—A new ladies shirt waist. Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 2¼ yards of 44-inch material for a 36-inch size.

2225—Ladies dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 6⅛ yards of 44-inch material. The dress measures about 2⅞ yards at the lower edge, with plaits drawn out.

2210—A dainty dressing sack. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires for a 38-inch size 3⅜ yards of 36-inch material.

1987—Ladies' house gown or negligee. The sleeve is finished at elbow length, with a shaped cuff. The pattern is cut in 4 sizes: 34, 38, 42 and 46 inches bust measure. It requires 7 yards of 44-inch material for a 38-inch size.

2209—Girls' dress. Cut in 5 sizes: 6, 8, 10, 12 and 14 years. Size 12 requires 4½ yards of 44-inch material.

2015—Girls' one-piece dress, with sleeve in either of two lengths. Pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 4¼ yards of 44-inch material for a 10-year size.

2198—A jaunty dress. Pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 years. Size 10 will require 4¾ yards of 36-inch material.

2207—An ideal work dress. Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires for a medium size, 6¾ yards of 44-inch material.

1967—Ladies' comination corset cover and drawers. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3 yards of 36-inch material for a medium size.

1806—A simple, natty suit for mother's boy. Pattern is cut in 4 sizes: 3, 4, 5 and 6 years. It requires 2¾ yards of 44-inch material for a 4-year size.

1823—Girls' dress, with sleeve in either of two lengths, and with round or square neck outline. Pattern is cut in 4 sizes: 1, 2, 4 and 5 years. It requires 2⅜ yards of 44-inch material for a 4-year size.

1883—A good, sensible ladies' apron. Pattern is cut in 3 sizes: Small, medium and large. It requires 4¾ yards of 36-inch material for a medium size.

International Sunday School Lesson

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for September 9, 1917.

Benefits of Total Abstinence.

LESSON TEXT—Daniel 1.

GOLDEN TEXT—But Daniel purposed in his heart that he would not defile himself with the portion of the king's meat, nor with the wine which he drank.—Daniel 1:8.

The book of Daniel, with the great prophecies, fulfilled and unfulfilled, is one of the most interesting and important in the Bible. Without a grasp of the prophecies of this book it is absolutely impossible for one to know the New Testament and the times in which we live. Daniel gives an outline of the entire period of time from the passing of supremacy to the Gentiles in Nebuchadnezzar to the final overthrow of the Gentile dominion, to the establishment of the millennial kingdom. The course, character and end of Gentile dominion are given. It is that period known in Scriptures as the "times of the Gentiles" (Luke 21:24).

The book of Daniel falls into two parts: Part I (chapters 1 to 6), in which the prophet appears as the divinely chosen interpreter of dreams; part II (chapters 7 to 12), in which the prophet appears as the mouthpiece of God, setting forth in visions, not dreams, the times of the Gentiles. The book is written in two languages, Hebrew and Aramaic—chapter 1:1-2.3 and chapters 8 to 12 (Hebrew); chapters 3:4-7:28 (Aramaic). The part which concerns the Hebrews was written in their own tongue and the part which concerns the empires of the world is written in their tongue

I. Daniel's Home Leaving (vv. 1-4). He was carried away to Babylon by Nebuchadnezzar in the first siege of Jerusalem. This was a great trial for his own heart. He seems to have been about fourteen years of age.

II. Daniel's Trials and Difficulties (vv. 5-13). It was the custom for the best of the captives to be selected and trained for service in the land of captivity. They usually selected those of the royal house for such training.

1. Change of name. Among the Hebrews names were given to children, which were significant. Daniel means "God is my Judge." The significance of the name then was that all problems of life were submitted to God for decision. This was the secret of Daniel's life. This purpose of his parents seems to have been instilled into his very life and being. So thoroughly did he imbibe this spirit that in all things he made God arbiter of his plans and purposes. The object no doubt in the change of name was to obliterate his national and religious connection and identify him with the heathen people. The king of Babylon evidently liked Daniel's appearance and scholarship, but was averse to his religion. It is the same today. Nations and individuals are perfectly willing to recognize and utilize the scholarship and efficiency of Christian ministers and missionaries, but are not willing to embrace their religion.

2. His conscience tested (vv. 5-8). It was with reference to the king's meat and the king's wines. It is ever to be borne in mind that conscience is the groundwork of human character. It is the law which must be followed. No doubt Daniel was taunted and laughed at for his fidelity, just as all men and women today who are loyal to their convictions must experience, for all who will live godly in Christ Jesus shall suffer persecution.

3. His religious life. This involved his refusal to eat meat and drink wine which was contrary to his teaching. Also it involved his praying three times a day.

III. His Success (vv. 14-21). 1. Physical health (v. 15).

Godly and temperate living pays. The king's meat and wine would have been pleasant to the palate, but would have meant compromise of conscience.

2. Mental growth (v. 20). He was ten times superior to his comrades. It is always true that those who abstain from indulgence in the use of wine have clearer minds and are mentally better equipped for their work than those who indulge.

3. Social. Daniel stood before the king. No higher position of honor could have been given him.

4. Temporal. He became president of The College of Wise Men and prime minister of the nation. This position he continued to hold through several dynasties.

5. Spiritual (v. 17) Because of Daniel's loyalty to God, Nebuchadnezzar's dream was revealed to him and he was giving visions sketching the whole history of the world.

IV. The Secret of His Success. The following may be set down as the things which made Daniel successful:

1. He was conscientious. If we would succeed in the world, let us see to it that in all things we live in good conscience.

2. Loyalty to God. He made God the judge of everything that pertained to his life. No pleasure was indulged in or problem disposed of without its submission to God.

3. Decision of Character. With him that which had been submitted to God and was shown to be right before God, was the law of his life.

Tractor Repair Service.

At a meeting held at Fremont, Nebraska, during the tractor demonstrations, many letters were read from farmers all over the Middle West, describing their success or difficulties with various tractors. While the general tone of the letters was favorable, it was nevertheless clearly brought out that the tractor used may suffer serious loss due to a breakdown in the middle of the plowing season, and that a well-organized repair service must be developed by the manufacturer before he can entirely satisfy his customers. The success of the Ford, the Overland and other well-known makes of automobiles has been due in a great measure to the ease with which the owners can obtain repair parts, and the same rule will doubtless hold good when it comes to tractors. The company with a large number of branch houses carrying a complete line of repairs will have an immense advantage over the firm that is not in a position to furnish repairs quickly. And, regardless of how well constructed a tractor may be, repairs will be necessary sooner or later. It is only a question of whether the farmer can phone in to his dealer and have his tractor running next day, or wait a week during the busy season while the dealer writes to the factory for a spare part, which the factory is in no hurry about sending. Every dealer should carry all the usual repair parts, and any part whatever should be obtainable on twenty-four hours' notice. The farmer should insist on this when buying his tractor. He should not only consider the tractor itself, but he should also consider the ability of the company to keep him going. It is going to be considerably up to the farmer as to what service he gets, and he should go after this point strong.

The letters referred to above also brought out another point well worth considering. In one case where the tractor had been a dismal failure so far as the plowing season was concerned, due to a breakdown, the owner appeared to still be well satisfied with his machine. The manufacturer of his machine had given him such prompt and courteous attention that he was well satisfied and willing to give the machine another trial. A little courtesy on the part of both the dealer and the farmer will be a great aid in developing the tractor. The maker and dealer need the farmer's help to improve the design; the farmer needs the coöperation of dealer and maker in order to get the most out of the machine. The farmer who goes up in the air and threatens to sue for damages the first time anything goes wrong is at best a poor loser. Yet all manufacturers are hampered to some extent by this class of trade. The thing to do is to all pull together; and if the tractor has not yet reached perfection, help put it there.

Questions and Answers.

Motor Overheats.

I have a Chevrolet light six car, 1915 model. I am having trouble with it overheating on drives of forty to fifty miles, driving at the rate of twenty to twenty-five miles per hour. It has no water-circulating pump. Is it practical to put one on? Will it help? I get from ten to twelve miles on a gallon of gasoline. Could I do better if the motor would not run so hot?

Answer.—It is possible that you are running on too rich a mixture, which would account for your large fuel consumption and also the overheating. This would also be indicated by a sooty smoke coming from the exhaust; and if you were to remove the exhaust pipe and allow the engine to exhaust into the air the flame will be red if you are using too much gas and blue if the mixture is correct. Running with the spark too far retarded, or with a loose fan belt, will also cause overheating. Wash out the radiator and see that the cylinder water jackets are not filled with mud and lime. It would be practical to install a water pump, but it should not be needed and a pump is more or less a source of trouble, especially in winter, when it is almost sure to freeze.

Power for Arc Lamp.

How strong a generator is required to run an arc light in a moving picture machine? Would an 800-candlepower gasoline light be strong enough? How many candlepower is an arc light?

Answer.—An ordinary arc light is about 375 candle power, and consumes about one-half kilowatt of electrical power. We have never heard of a gasoline light being used for a motion

picture machine. For portable outfits where electricity is not available a calcium light is generally used. This light is produced by heating a calcium oxide bar—a substance that is almost pure lime—to a brilliant white heat by the flame of an oxyhydrogen blowpipe. The oxygen and hydrogen are purchased in steel tanks.

Rings Leak.

I have a 1914 Model Buick car, B36. The compression seems to be getting low, as it does not pick up readily. I want to put in "leak-proof" piston rings. Should I put more than one to the piston? If only one ring is used, in what groove should it be placed? What size piston rings does this engine require? How can I grind the valves of a Buick motor? Is there any way to tell if the piston rings are worn out without taking the cylinders off?

Answer.—You can tell whether your rings leak or not by removing the breather pipe from the crank case and listening while someone cranks the motor over, placing your ear close to the opening. If the rings leak seriously you can hear the compression blow through. To test for leaky exhaust valves, remove the exhaust manifold, place the ear near the exhaust port and have someone crank the motor, making sure that the spark is off so that the motor cannot fire. The intake valves may be tested in the same manner.

The surest way to remove carbon is to take the cylinders off and scrape the carbon out. Many garages are now equipped with apparatus for burning carbon out without removing the cylinders. Considerable carbon may be removed by putting a tablespoonful of kerosene in each cylinder when the motor is to stand idle for several days. The kerosene will loosen the carbon and it may then be blown out by accelerating the motor rapidly a few times.

To grind the valves remove the valve cage from the cylinder and then remove the valve from the cage. Clean the carbon off the valve and valve cage. Put some valve-grinding compound, thinned with oil so that it will run slightly, on the valve seat. A good grinding compound is made by mixing emery flour and oil. Rotate the valve on the seat, using a very light pressure and only turning the valve about a quarter of a turn back and forth. Lift the valve from the seat every few turns. A valve can be ground in about ten minutes unless it is in very bad condition. To test the grinding of the valve, make fine chalk marks all around the seat crosswise of the seat. Place the valve in the cage and very slightly rotate it, using a little pressure. If the valve is perfectly ground all the chalk marks will be rubbed off.

When replacing rings it is best to replace all the rings on the piston. As old cylinders are generally more or less worn it is best to determine the size as follows: File a stiff iron wire, not less than one-eighth of an inch in diameter, pointed on the ends, the point being about one-sixteenth of an inch in diameter. File it to an exact length so that it just touches both walls of the cylinder when placed in the cylinder crosswise. Send this gauge to the dealer and order rings for a cylinder of that diameter. Less than half a thousandth part of an inch can easily be detected by such a gauge.

How to Solder.

Please tell me how to properly tin a soldering iron; also how to solder successfully as a beginner.

Answer.—Properly tinning the iron is the first step toward successful soldering. To do this, file the point of the iron where you wish to tin it nice and smooth. Obtain a piece of tin about six inches square and bend it V-shape. In the bottom of the V, put some solder and sal ammoniac. Heat the iron in a clean fire, such as the blue flame of a gasoline torch or a coke or charcoal fire. It should be heated just hot enough to melt solder easily, as too high a heat will prevent the tin from sticking. Then rub the hot iron in the tin and sal ammoniac and the tin will stick to the iron nicely. When heating the iron to solder, be careful not to heat the iron too hot. As soon as the tinning on the point of the iron begins to turn blue, the iron should be removed from the fire. The iron should be kept hot enough to melt the solder easily, though, as a cold iron makes a rough job.

The success or failure of soldering depends to a great extent upon how the surfaces to be soldered are prepared. They should be scraped or polished bright, as solder will not stick to dirty, rusty surfaces. Then the surfaces should be given a wash with soldering fluid, and, if practical, heated to near the melting point of solder, after which apply the solder, rubbing it on the surfaces with the hot soldering iron. If the solder is inclined not to stick, apply a little more soldering fluid to the joint with a small, stiff brush. One of the best soldering fluids is made by dissolving as much zinc as possible in muriatic acid. While the zinc is dissolving, a gas is given off that is explosive if ignited. A prepared soldering paste may be purchased if desired. As a rule, better results can be obtained from the above soldering fluid than from the paste.

If the soldering iron becomes overheated, the tinning can often be saved by dipping the iron in cold water. The wire form of solder is the more convenient, but is more expensive than the stick solder. A good solder for iron, tin and copper plates is half tin and half lead. Aluminum cannot be soldered with ordinary solder. A special aluminum solder is required, and it must be handled in a manner very different from ordinary solder. To solder cast iron, brighten and clean the surface carefully, wash it with a solution of blue vitriol, which will give it a light copper plate; then heat quite warm and apply the solder.

Champion
Toledo
Dependable Spark Plugs

Every Ford car is an advertisement for the efficiency of Champion Spark Plugs. They have been standard Ford equipment since 1911.

Their durability, dependability and ability are responsible for their use by the largest manufacturers of motor cars in the world.

The vital importance of the tiny jet of flame, which issues from the plug, cannot be over-emphasized.

Because the spark plug *is* so important, avoid the risk of substitutes by making sure they say Champion *on the porcelain* as well as on the box. You can get Champion Spark Plugs everywhere.

Champion Spark Plug Company, Toledo, Ohio.

There is a Champion Spark Plug designed for every type of stationary engine, tractor, motorcycle and automobile.

Silo Filling Time is Near

Are you going to have the usual trouble after your corn is cut waiting to have it put in the silo? Or are you going to do it yourself with the

AUTO UTILIZER

Just Back Car Onto Runway—No Jacking up, Nothing to Attach

The Auto Utilizer will cut your corn and blow it up into your silo just as fast as you can get it fed into the filler. It enables you to fill your silo the right way—cut as the corn is ready, fill a few feet, let it settle and then fill some more. With it you can meet every power requirement on your farm.

Easiest thing a Car was ever set to do.

Car stands level and runs exactly as it does on the road. Positively no strain on its construction or working parts. Because the Auto Utilizer is so simple and everlastingly strong, it's the only practical means of using a car for farm power. Unit construction makes it easy to move about. All steel and iron. Only two simple revolving parts—running in long Hyatt Roller Bearings. Find out all about it and you won't do without it.

Ask your dealer if he has seen it—if he is going to demonstrate it. Send today for complete descriptive literature.

THE AUTO UTILIZER CO.
Dept. W. F.
Burlington - Wis.

Make Your Ford Do Your Gas Engine Work—

If you own a Ford you own a power plant, reliable as your Ford engine, portable as your Ford car. All you need to get this added service is a

Schluter AUTO BELT ATTACHMENT

Saves you $150 to $200 on 8 H.P. engine

Guaranteed to do all that any 8 H. P. gas engine can do. Runs 4-hole corn sheller. Sells complete for only $22.50. Regular gas engine costs $200 and up. Guaranteed not to damage your Ford engine or injure your car in any way.

Does not interfere with your Ford touring. Only permanent change you make in your car is to remove crank, attach Schluter stub crank shaft and use detachable crank furnished with attachment.

Can be put on in less than 15 seconds without jack, nuts, screws, or bolts. When through work, jerk Schluter off, throw it in your car and drive away without stopping engine unless you want.

WRITE FOR BIG CIRCULAR OF FACTS—We will send it by return mail. You need a Schluter to get all the service your Ford can give you. Send now for complete facts and name of nearest dealer.

Collected by Representatives of The Wisconsin Farmer

Attention, Swine Breeders.

NO doubt most of the pure-bred swine breeders of the state will be at the state fair for at least one day, and if it is only possible to be away from home one day, let that day be Wednesday. On Wednesday night at eight o'clock during fair week a joint meeting of the different swine breed associations will be held in the swine pavilion and it is important that as many breeders as possible be present at that time. The motive of this meeting is to talk over the feasibility of holding swine sales at Madison during the coming winter and to decide on a date that would be satisfactory to all concerned. If you find it impossible to attend this meeting, tell some of your neighbors or fellow breeders your disposition in the matter. If you are in favor of a combination sale, similar to the one held at Madison last winter, and you cannot be present write the secretary of your state association and let him know that he can depend on your cooperation and also advise him how many sows you wish to consign to the sale. This will help materially toward the success of this meeting. The average breeder in the state does not appreciate the amount of work that falls on the secretary, of an association of this kind. He has accounts to keep, collect dues—and, by the way, it is some job to get this small sum from many of the breeders. He has many letters to write in answer to information wanted from young breeders. In fact there are a hundred other "little" things that he must attend to. You breeders don't think much about this, but the secretary's time is just as valuable as yours, yet he does all this extra work for the good of the breed, and without any pay. If he makes one little error he gets censored for it, but no doubt he has written some of the men reading this article many letters asking for information, and you have not even showed the courtesy of a prompt reply. Do your part and we are sure the secretaries of the various swine breed associations will do theirs. —Adv.

Breeding Hampshires for Sale.

DELLBROOK FARM, Richland Center, Wis., is offering for sale a fine lot of breeding Hampshires, which will please the most particular buyer. The Dellbrook herd comprises more than 200 head with the following well-known boars: Dellbrook Lad, Messenger Boy and Progressive Kidd. The latter boar was reserve grand champion at the 1916 fairs. Leading boars of the breed are named in the breeding of the sows, so that the highest quality is maintained in the herd throughout. Hampshires are recognized as economical pork producers on pasture and should be particularly valuable at this time when grain prices rule high. If you want a good purchase and a square deal write at once for prices and descriptions, addressing Mr. A. L. Damon, of Dellbrook Farm, Richland Center, Wis., and mentioning The Wisconsin Farmer. See advertisement on page 22.—Adv.

Big Type Jim.

THE above is the name of the Poland China boar pig that was first in class and first in the futurity at Wisconsin and he was "some boar." O. C. Olson, Strum, Wis., bought this boar at a good figure last fall and although he was unfortunate in losing this boar this spring, Mr. Olson was fortunate in getting a fine lot of pigs sired by him. In all he has around 100 head of pigs farrowed in March and April. He has six litters sired by Big Type Jim, out of daughters of Mc's Chief, the grand champion Poland China boar of Wisconsin in 1916. He also has a good litter by the good boar, Model Major 2d. Olson also has 16 sows bred to farrow this fall. If you want some good spring pigs write O. C. Olson and he will try hard to send you a boar or a gilt that will please you. Please mention The Wisconsin Farmer when writing. See page 23.—Adv.

R. C. Church, Elkhorn, Wis.

WE believe that R. C. Church has the largest yearling Duroc boar in the state if he had been fitted. He is sired by Great Chief, that in turn was a son of Cherry Chief, one of the greatest sires of recent years. This boar has wonderful underpinning, a fine arched back and plenty of stretch. He is a real 1,000-pound prospect. The cry now is for big types and this boar should certainly increase the size of any herd. His pigs show that they will be big and if you want that kind get in touch with the above breeder at once before the tops are all sold. When writing mention The Wisconsin Farmer. See page 23.—Adv.

Wm. Hauk, Cassville, Wis.

WE were pleasantly surprised when we saw the Poland China hogs that Wm. Hauk has raised this spring. He raised about 50 head and he has sorted out a dozen boars and the same number of gilts that are suitable to ship on mail orders and we are glad to say, that they should give satisfaction. The pigs are sired by Hauk's Orange, a son of Mc's Big Orange, and one litter by Matchless Wonder. Their dams are sired by Monster Big Bone and Wisconsin King. We recently made a trip among the breeders of Grant county and will say that Wm. Hauk's pigs are good in every respect. His price is certainly very reasonable—write him. See page 23.—Adv.

Secures Great Holstein Bull.

KIRKPATRICK BROS., Reedsburg, Wis., have recently added to their Holstein herd the good bull, Senator Johanna White, and he is a wonderful individual. He is out of a 31-pound dam with a yearly record of 1,146-pounds. This bull will be used on the daughters of King Pontiac Korndyke Champion, which is a son of a 31-pound son of King or the Pontiacs. This should make a good cross and should help this good herd materially. Owing to the fact that they have so many daughters of the last-mentioned bull in the herd, they cannot use him to advantage any longer and he is being offered for sale at a very reasonable figure. Investigate this good breeding bull. If you want some choice cows with A. R. O. records write for information relative to the cows this firm has for sale. They are bred to Senator Johanna and will calve this fall. They are good cows and are being sold for no fault. Their price is from $175 to $200 and they will certainly please the man that sees them. They will weigh 1,500 pounds or more and if this is the kind of registered Holsteins you are looking for, this firm can fill your order to your satisfaction. A part of the herd was on exhibition at the Dane County Fair where they won several firsts and also had the grand champion bull. Their herd will be on exhibition at Watertown and Milwaukee. Make it a point to see this firm or communicate with them. Don't forget to mention The Wisconsin Farmer. See page 21.—Adv.

Frost's O. I. C. Hogs.

WHEN S. D. & B. H. Frost, Kingston, Mo., succeeded their father in breeding O. I. C. hogs they started with a foundation well laid by one of the breed's foremost breeders. At the World's Fair held at St. Louis, they showed Jackson Chief, a boar bred by their father, winning grand champion. In 1913 and 1914 they showed at various state fairs, winning 86 ribbons, including several grand champion prizes. Gage's Leader headed the show herd and was returned a champion. Triumph was shown in 1914 and returned a grand champion. Other champions that have done service in the herd were O. K. Mikado II, and Mitchell 37750. They also showed the under year champion sow, Bridget III, and have six of her daughters in their herd also descendants of all their show boars. Leader, by Gage's Leader, is retained. Very few such mellow-fleshed boars are found and best of all he sires that kind. A Combination-Wonder bred boar that promises to make a half-ton boar is also in service. He, too, is a good one. The 30 spring pigs left in the herd are by these boars. There are good ones among them, boars and gilts. About 100 summer pigs are doing fine and as many more are due soon. The spring pigs and summer and fall pigs are being priced right. See page 22 for their advertisement and do not delay placing your order if you want some of these good O. I. C. hogs.—Adv.

Hampshires and Shropshires—W. F. Renk & Son.

W. F. RENK, Sun Prairie, Wis., is one of the real sheep men of the state and he has one of the best herds in the state. He has a breeding herd and does not make a practice of going out each year and buying his show sheep. He has a winning herd and his winnings have been made on sheep of his own breeding. The fact that Mr. Renk has been selected to judge the Shropshires at the Chicago International next winter speaks very highly for him as a judge of sheep. Just at this time he is offering for sale Hampshire and Shropshire yearlings and ram lambs. Individually they are suitable to head the best of pure-bred flocks. If you are interested in either of the above breeds you will be interested in what W. F. Renk & Son can tell you about their flocks. Sun Prairie is located near Madison. Write them at once for prices and description of the rams they have for sale. Note their advertisement that appears on page 21 of this issue.—Adv.

Guernseys and Durocs a Good Combination.

ALLIC S. KNUDSON, Brodhead, Wis., is well known as a breeder of Guernsey cattle and Duroc Jersey swine. Just now he offers some excellent yearling bulls from A. R. dams and by A. R. sires, that will please the most critical. In Durocs he will sell boars or gilts at a reasonable figure if taken at once. In a later issue we will have more to say about this herd, breeding, etc., but in the meantime you can write Mr. Knudson and he will go into details about the breeding and individuality. See page 23.—Adv.

The Old-Fashioned Spotted Polands.

THE exhibits of Spotted Poland China swine being made at the leading state fairs this fall is attracting much attention. The annual association fall sales will be held this year at Crawfordsville, Ind., October 19th and Kalona, Iowa, October 29th. Comprehensive literature regarding the Spotted Polands can be secured by addressing the association secretary, Fred L. Obenchain, Bainbridge, Ind. Kindly mention this paper when writing. See page 23. —Adv.

The Great E. C. Schroeder Herd.

A DAY on the E. C. Schroeder farm recently gave us another opportunity of viewing a remarkable long-distance record work which is in progress at this farm. It is commonly known that the E. C. Schroeder establishment scarcely has an equal when it comes to size, individuality, breeding and seven and thirty-day records, and semiofficial yearly work. While looking over the herd, we were shown a number of splendid cows which were the dams of bulls heading herds in the state of Wisconsin. It will be remembered that Mr. Erickson has a son of Spring Brook Bess Burke 2d, a 38-pound cow, that is also the dam of King of the Ormsbys, a young bull sold last year to the Alamuchy Farms, New Jersey, for $10,000. Such noted herds as Wm. J. Gillette, Rosendale, Wis.; J. J. Reid & Son, Oconomowoc; Mrs. Maria Gunderson & Sons, Oconomowoc; George Schuster, Mukwonago; Charles Wlil, Menomonee Falls; W. H. Reed, Palmyra; all have sires from this noted herd, as well as many minor herds throughout the state. The most sensational animal at the Schroeder farm at present is a four-month-old calf out of a two-year-old daughter of Spring Brook Burke 2d; this calf is sired by John Irwin's noted herd sire, which gives ths young animal the strongest possible backing, including great seven-day work, semiofficial yearly backing that cannot be equaled, as well as size and individuality that is of the very best. The dam of this calf is, in our estimation, the best animal Mr. Schroeder has ever bred and is unquestionably the finest two year old we have ever had the opportunity of inspecting. When you remember the phenomenal record of the E. C. Schroeder farm in the show ring in the fall of 1914, you can form some conception of the quality of the dam of this calf. —Adv.

Who Wants Hampshires?

FOR the benefit of those interested in Hampshire swine, we wish to call your attention to the advertisement of A. L. Damon, Richland Center, Wis., that appears in this issue. Mr. Damon has, we think, the largest herd of this breed in the state and it is made up of the most popular blood lines known to the Hampshire breed. For instance the herd boar, Dellbrook Lad, is sired by Messenger Boy, said to be the greatest show and breeding boar the breed has ever produced. Mr. Damon has pigs for sale sired by Dellbrook Lad. Progressive Kid is a son of Mose Messenger, a boar that was a grand champion wherever shown last year. Some choice pigs in this herd are sired by Progressive Kid. The sows in the herd are by such boars as Bunn's Pattern, a grand-champion boar of note. Messenger Boy and Cherokee Lad are second to none as sires as well as Cherokee Pattern. This is a wonderful array of breeding and if you want to buy a trio of pigs you can get the right start from this breeder. If you want a few good sows that will farrow within the next months, write for information. Mr. Damon had some 200 spring pigs and f you want Hampshires, Damon is the man to buy from. Mention this paper when writing. See page 22.—Adv.

J. H. Williams, Waukesha, Wisconsin.

WE learned the other morning while looking over Mr. Williams' herd that he has decided to sell several of his most promising young cows. We, therefore, recommend these animals to breeders who are looking for something exceptional. They are the kind which should be used for foundation purposes, as they are from high-producing dams and possess superior individuality. It will be remembered that Mr. Williams gave a splendid account of himself at the fairs a few years ago and he made the statement that the animals previously referred to are as good individuals as he ever bred. We are confident that if they were shown this fall that it would take something extraordinary to defeat them. Two of these heifers are by his noted May Rose bull, Rata's King of the May. Mr. Williams has a good number of his daughters in the herd and is so well pleased with this particular strain that he wishes to continue in the same line of breeding in order to increase the standard of his herd. Breeders looking for something out of the ordinary would do well to get in touch with Mr. Jones concerning these great heifers. —Adv.

Fred G. Matthes, Viola, Wis.

IN Durocs the above breeder will ship you boars and gilts that he guarantees to please you. He has a good litter by Pathfinder 2d, a son of Pathfinder, and out of a Lee's Defender-Marion's Wonder dam. Two litters are sired by a son of Cherry Chief's Wonder, the sire of Tommy Doyle. Their dam is by Cook's Defender. Another litter is by King the Col. Again by King the Col. Matthes will describe his pigs just as they are and he will guarantee you will find them just as represented. See page 23.—Adv.

Grahamholm Holsteins, Rochester, Minn.

WHILE visiting the Grahamholm herd recently we were entertained most courteously by Mr. Boynton, who has had charge of this herd for many years. There are several things which impresses one very forcibly when looking over this herd. First, is the good judgment used in selecting herd sires. Another is the splendid condition of the herd sires. Another is the splendid condition of the young stock in the herd. We have not had an opportunity of seeing calves in better condition any place than was witnessed at the Grahamholm farm. There are also a number of very outstanding cows in the herd which have much to do with the high quality of young stuff on the farm. The two herd sires which impressed us most were Sir Winana Beets Segis, a good individual son of King Segis, and the sire that is very prepotent, as shown by his offspring. And Segis Johanna Grahamholm, the noted show bull that was first-prize aged bull, senior and grand champion at the Minnesota State Fair in 1914. We believe that this bull is looking much better now than he did then, as he has developed more capacity and has well developed in splendid shape. It has been stated by an eminent judge that there is not a bull in the country today that could defeat him in the show ring. The cows that we noted with particular notice were Griselda Inka, a 28-pound cow, that is not only a high producer, but a very choice cow. Arcady Pontiac Nazli Mercedes, Barbetta Orleans De Kol and Skylark Ormsby Hengerveld, as well as Pauline Govers De Kol 2d, are animals that would claim attention in any herd. Mr. Boynton stated that they would sell a yearling son of Pauline Dovers De Kol 2d that has a 30-pound record and we are in a position to know that this young bull is practically a faultless individual and should claim the interest of breeders in a position to use such a sire.—Adv.

Note the Breeding in the Madson Herd.

WITH this issue those old reliable breeders of Poland Chinas, M. Madson & Sons, Madison, Wis., start their advertisement calling attention to their spring pigs that are now ready for shipment. The Madsons never had a crop of pigs sired by better big-type bred boars than they are offering this year. Big Pfander, the sire of some of the pigs is by King of Wonders, one of the best boars ever used in Iowa. Defender is by the good Minnesota sire and show boar, Choice Expansion, and the pigs by this boar are great and he is some boar himself. Big Bone Bob is by Big Ben one of the leading big boars in Illinois. Big Buster is by Big Carver. With this assortment prospective buyers should be able to choose a line of breeding that they most desire. Write them for any information you desire. They will sell boars or gilts. Don't forget to mention The Wisconsin Farmer. See page 23.—Adv.

Floyd Selck, Hanover, Wis.

THE above Duroc breeder showed a good litter of spring pigs at the Janesville Fair that were in the money and they were good in every respect. Mr. Selck has about 25 head of March and April gilts for sale. They are in nice condition and the price he asks is only a little over the present market price. The pigs are sired by King's Defender's Equal, he by the Wisconsin Champion, King Defender. Mr. Selck also has some sows in his herd by the same sire as King Defender. He also has a good sow of Chief's Col. breeding. One sow is out of the dam of King Defender, so you can see, that he has a champion line of breeding. He can't use his herd boar to advantage any longer and he is also for sale—here is a good boar for someone. Write this breeder for details and please mention this publication. See page 23.—Adv.

The Marquart Short-horns.

IT IS hardly necessary for us to say much about the Marquart Bros., of Milton Junction, Wis., as breeders of milking Short-horns. Anyone that is interested in this breed is acquainted with what these boys have done in the past few years. The fact that they now have a few bulls for sale is enough said. We only have to advise our readers that "Marquart offers milking bred bulls." Their reputation as breeders does the rest. They have recently purchased a bull in the East to use in their herd. He is sired by Duke of Clarence 3d by Oxford Record, a noted show and breeding bull in England. The dam, Daisy Joy 2d, was imported by H. E. Teuer, of New York, and is now in his wonderful herd. Get in touch with the Marquart Brothers and let them give you details about the young bulls they have for sale. See page 22.—Adv.

Chesters by the Hundred.

HARRY T. CRANDELL & SON, Cass City, Mich., has one of the largest Chester White herds in the country and it is headed by grand champion boars. Crandell has sold boars to head some

Feed the Fighters! Win the War!
Harvest the Crops! Save the Yields!

On the battlefields of France and Flanders the United States boys and the Canadian boys are fighting side by side to win for the World the freedom that Prussianism would destroy. While doing this they must be fed and every ounce of muscle that can be requisitioned must go into use to save this year's crop. A short harvest period requires the combined forces of the two countries in team work, such as the soldier boys in France and Flanders are demonstrating.

THE COMBINED FIGHTERS IN FRANCE AND FLANDERS AND THE COMBINED HARVESTERS IN AMERICA WILL BRING THE ALLIED VICTORY NEARER

A reciprocal arrangement for the use of farm workers has been perfected between the Department of the Interior of Canada and the Departments of Labor and Agriculture of the United States, under which it is proposed to permit the harvesters that are now engaged in the wheat fields of Oklahoma, Kansas, Iowa, North Dakota, South Dakota, Nebraska, Minnesota and Wisconsin to move over into Canada, with the privilege of later returning to the United States, when the crops in the United States have been conserved, and help to save the enormous crops in Canada which by that time will be ready for harvesting.

Help Your Canadian Neighbors When Your Own Crop Is Harvested

Canada wants 40,000 Harvest Hands to take care of its

13 MILLION ACRE WHEAT FIELD

One cent a mile railway fare from the International Boundary line to destination and the same rate returning to the International Boundary. High wages, good board, comfortable lodgings.

An Identification Card issued at the boundary by a Canadian Immigration Officer will guarantee no trouble in returning to the United States.

AS SOON AS YOUR OWN HARVEST IS SAVED, move northward and assist your Canadian neighbor in harvesting his; in this way do your bit in helping "Win the War."

For particulars as to routes, identification cards and place where employment may be had, apply to Superintendent of Immigration, Ottawa, Canada, or to

HILLSIDE HOLSTEINS

SENATOR JOHANNA WHITE, 31-lb. herd bull. Four A. R. O. cows for sale, bred to freshen this fall. Price $175 to $250. Several heifers and young bulls, from A. R. O. dams. Write for detailed description.

KIRKPATRICK BROS. - - - - - - - - Reedsburg, Wis.

of the best herds in the country and he can sell you a boar that will give satisfaction. It is to your interest to get his sale catalog. Kindly mention The Wisconsin Farmer when writing for information. See page 22.—Adv.

The Fennimore Durocs.

READERS of this paper are familiar with the fact that 10 of the best Duroc sows sold in Wisconsin sales last winter were purchased by breeders living near Fennimore. The men were fortunate in raising good litters and Wm. Edge, of Fennimore, is offering boars that will compare with any we have seen in the state. Will is a good feeder and caretaker and his boars have more size than those found in the average herd this year. His herd represents the most popular breeding, namely, Cherry Chief, Crimson Wonder Again, High Model and The Professor. His boars will be shown at several of the county fairs in the western part of the state and if you want to see good boars that can be bought worth the money, watch for them at the fairs. If you don't see them, write him for details and prices. His advertisement appears in this publication and we are glad to recommend the Durocs from this herd. See page 23.—Adv.

Union Center Chesters.

FOR those that want to buy fast, just write Chas. Rogers & Sons, Union Center, Wis., relative to their Chester Whites. They have about 50 head of March, April and May pigs that they want to sell at once and the price they are asking for them is far below their worth, but they are priced to sell, so get busy if interested. The boars and gilts are all right, and will give satisfaction, in fact they guarantee them to please you. The Rogers are well known as Short-horn men, having shown and raised cattle of this breed for a number of years. Their herd bull, Collynie Archer, is sired by Village Baronet, a son of Villager. His dam is a good Violet Bud cow. His cattle were heavy winners at the Dane County Fair, competing with other good herds of the state. When you want Chesters or Short-horns, remember this herd. When writing please mention The Wisconsin Farmer. See this page.—Adv.

Hauk Bros., Cassville, Wis.

HAUK BROS.' name is familiar to cattle men, as they are breeders of Angus cattle and have one of the best herds in the state. Just now they are offering Poland China boars which are in keeping with the reputation they have established as Angus breeders. The 14 boars that they are offering at this time are sired by Hauk's Orange, Timm Wonder, a son of the champion, Big Timm and Mac's Big Bone. The dams are sired by Monster Big Bone and Waterloo Giant, a son of Wisconsin Giant. The Hauk pigs have been well grown and at the price they are asking, they will certainly please their buyers. We are glad to recommend this herd, for we know the Hauk boys will stand back of their stock. Write them and say you saw the advertisement in The Wisconsin Farmer. See advertisement on page 23.—Adv.

YOUR CHANCE

50 CHESTER March, April and May pigs, either sex, priced for QUICK SALE. Don't hesitate, they must go.

CHAS. ROGERS & SONS Union Center, Wis.

SHROPSHIRES AND HAMPSHIRES

YEARLING RAMS, ram lambs. The Renk guarantee with every sheep. Write

W. F. RENK & SON Sun Prairie, Wis.

Higgins at Gotham.

REMEMBER that Isaac Higgins, Gotham, Wis., is the Duroc breeder that went to some of the best known herds last year and bought some sows of the most popular blood lines of the breed. Their produce is for sale and if interested you should write him. See page 23.—Adv.

Wm. M. Jones, Waukesha, Wis.

MR. JONES has just returned from the W. W. Marsh herd of famous Guernseys. Waterloo, Iowa, in search of a herd sire. The question of selecting a herd sire for a herd that has reached the development of that of Mr. Jones' herd is no easy matter, and is one of the most difficult problems a breeder has to face because the future progress of the herd is greatly influenced by the choice of the sire. Some men blindly stumble on to a sire that makes them famous while many breeders who have endeavored to choose wisely have nevertheless chosen an animal that pulled down the standard of their herd. In view of these facts we are not surprised at the cautious manner Mr. Jones has taken in selecting a bull that was worthy of his herd. Mr. Jones has been honored this fall by being invited to judge Guernseys at the Minnesota State Fair, which is a compliment to his skill as a judge and his integrity as a breeder.—Adv.

Gray at Mt. Hope.

EVERYONE in Grant county and many outside that county know Abe Gray, the fellow that breeds the Chester Whites. He sells a lot of them each year and if you are going to want a boar or a gilt write A. L. Gray, Mt. Hope, Wis. See page 22.—Adv.

OCONOMOWOC, WIS. BOX R

RUST BROS.

OFFER the richly bred Holstein bull, Sir Isa Lotta Hengerveld 188663, born Aug. 18, 1915. Ready for service. His dam, Ida Lotta Hengerveld, at 3½ years made 21.34 lbs. of butter in 7 days, 31 days after calving. She is from a long line of heavy producing ancestors, records of her three nearest dams averaging 27.20 lbs. butter in 7 days. She has inherited this heavy producing ability, and transmits it. Sire of bull for sale is Daisy Johanna 5th, 1st prize two year old at Wisconsin State Fair, 1915. His dam has two A. R. O. daughters. Arthur Rust, West Allis, Wis.

REGISTERED HOLSTEIN BULL

AND heifer calves sired by Pabst Canary Pontiac Champion 142885, and out of well-bred heavy-producing cows. Call and see our herd or write

POLAND CHINA SWINE.

100 BIG-TYPE POLAND CHINA SPRING BOARS AT $30.00 EACH

Double treated, and we record them. They will be worth $30.00 on the market by the time you are ready for their service. Farrowed in last of February, March and April, the greatest lot of high-class pigs we have ever raised, long and deep bodied, heavy boned, nicely marked and good backs. They are from the most noted families of the great breed, sired by Giant Jumbo 2d, the 700-lb. year-old son of Giant Jumbo, whose sire was the 1,055-lb. Maid's Halvor 1st; his dam sired by the 1,000-lb. and over Big Bone 2d, his grandam by Mouw's noted Big Jumbo. There is no bigger breeding. Others by Long Expansion, a 900-lb. two year old, and Pawnee Wonder, a 1,000-lb. son of A Wonder.

The dams are sows weighing from 600 to 800 lbs. and over, of the most intense big-type blood lines. Buy your boar now and save from $20 to $50. Boars will be high and scarce this fall.

Send your check right with the order, tell us the kind of a boar you want and we will send him or return your money. Come and see our herd, one of the greatest in America, as well as one of the most up-to-date, pure-bred stock breeding establishments.

W. H. COOPER — Hedrick, Iowa

CHAMP. BRED DUROCS

MARCH PIGS, $40 UP—Sired by KING DEFENDER'S EQUAL by the WISCONSIN CHAMPION. For sale also, price $200. Write for description.

FLOYD SELCK — Hanover, Wis.

SALABLE DUROCS

ONE LITTER by PATHFINDER 2D, two litters by son of CHERRY CHIEF WONDER, one litter by KING THE COL. AGAIN. What do you want in Durocs?

FRED G. MATTHES — Viola, Wis.

Grant Co. DUROCS

THE GILTS AND BOARS I have for sale will please. Some of the most popular breeding. Satisfaction guaranteed.

ROY HORSFALL — Mt. Hope, Wis.

Particular Breeders

DUROCS of Cherry Chief, Royal King, Orion Cherry King Jr., Chief Advancer breeding. Write. Good blood for good breeders.

J. W. HIGGINS — RICHLAND CENTER, WIS.

REO

The GOLD STANDARD OF VALUES

All PRICES *are* F.O.B. LANSING *and subject to increase without notice*

Reo Quality is Uniform in all Reo Models

AND REO QUALITY at Reo Prices and backed by the Reo guarantee, constitutes "The Gold Standard of Values"—each model in its class.

WE SHOW HERE SIX Reo Models, comprising Fours in Touring and Roadster types; Sixes in Touring and Roadster; and the two Reo Commercial Vehicles — the 3/4-Ton "Speed Wagon" and 2-Ton "Heavy Duty" Truck.

IN THIS ADVERTISEMENT we have space only for a brief paragraph pertaining to each Model—lest you forget the line is so complete that you can find the car you desire, in the type you prefer, and in a Reo.

REO THE FIFTH, "The Incomparable Four," is America's most famous automobile. Standard in practically its present form for now eight seasons—"going on nine." At its present price, $985, this car is verily "A gold dollar for ninety cents."

TO REO THE FIFTH more than to any other, is due the movement that is now so apparent—the return to the Four-cylinder type in all cars listing at less than $1000.

THE FOUR IS THE ULTIMATE type in that price class. Economy of upkeep, as demonstrated by this Reo model, has done much to prove the superiority and ruggedness and economy of the Four in that class of car where the buyer must count the cost and yet demands the service and the roominess.

THE FOUR ROADSTER is the handsomest model of its type you'll see on the road—at any price. And, for the present, you can get it for $985 and freight from the factory.

OF THE SIX ROADSTER the same is true, plus the extra luxury it affords the owner at the extra cost—$1385 f. o. b. Lansing.

THESE TWO ROADSTERS are of similar design and identical construction, and are conceded to be the handsomest cars of the type—price aside.

FOR THE FAMILY that needs a car of greater capacity than five and yet of moderate upkeep, the Reo Six Touring Car—also $1385 for the present—knows no equal.

NO MATTER WHAT YOU PAY you cannot obtain a 7-passenger car of better design; one that represents sounder engineering; more experience; better materials and workmanship than enter into the making of this Reo Six.

THAT'S A BROAD CLAIM, but we make it unhesitatingly—and you know that the word of Reo passes at par everywhere.

OF THE REO MOTOR TRUCKS the same is true. The 3/4-Ton "Hurry Up" Wagon at $1,125 (chassis $1050); and the famous 2-Ton Reo "Heavy Duty" Truck at $1800—each is the leader in its own class—demand greatly in excess of factory capacity.

BUT THAT IS TRUE of all Reo models, without exception.

THAT'S WHY WE SAY "Reo Quality is Uniform in all Reo Models," the uniform over demand for all Reo models justifies the statement.

ORDER NOW if you'd have your Reo soon. Present prices obtain only from day to day, and are subject to increase without notice.

VOL. XLVI. NO. 37. THURSDAY, SEPTEMBER 13, 1917. WHOLE NO. 1859

Minnesota Fair a Record Breaker

MINNESOTA is producing great crops this year. But it does not propose to stop with this. It is taking steps to conserve these crops, so that none of the hungry shall go unfed. One could not spend a half hour on the state fair grounds at Hamline last week without being impressed with the fact that conservation was ranking alongside of production and patriotism. "Hooverize, eat more vegetables;" "Several apples a day will save wheat and meat;" "Help win the war by conserving wheat;" "The kitchen is one key to victory"—so on and on read the signs everywhere, teaching the willing people of a great state to share the bumper products of their herds and fields with those who are in need or who must be sustained in order that the world may be kept safe for democracy. Production, Patriotism, Conservation—these were the keynotes sounded over and over again at Hamline last week. Minnesota is producing splendid crops this year; they are bringing good prices. But the state does not stop here. The flags of all the seven great allies fighting the Teutonic nations flew from the immense grand stand, topping everything on the grounds. Old Glory flew from every other building, thousands of flags waving a greeting to the crowds below. Five hundred soldiers, members of the First Minnesota infantry, were encamped on the grounds and gave daily exhibitions, guard mount, manual of arms, and so on. The patriotic show at night, showing the manner in which modern warfare is conducted, gave these soldiers a chance to display their efficiency and aroused loyal cheers from the thousands who witnessed it. But this was not all. Production will not suffice, if there is to be waste later. Minnesota is going to economize not only on money, but on food and the things which sustain life, both in peace and in war. That was the great lesson at Hamline: That a great people are not really and truly great until they become absolutely unselfish, thinking of others more than they think of themselves. If the 1917 Minnesota State Fair leaves any one big, overwhelming impression on the minds of the visitors it will be this: Save, save, save.

The management was extremely fortunate in having splendid weather for the big opening day. The result was that all attendance records were smashed. When the gates closed Monday night it was found that 116,555 people had passed through during the day, 23,978 more than had attended the corresponding day last year and 15,763 more than had passed through the turnstiles the biggest day prior to that, which was Labor Day in 1912. Never had the Twin Cities turned out such crowds; never had the trains and automobiles brought so many farmers, from all over Minnesota and from the neighboring states of Wisconsin, Iowa and North Dakota, for the Minnesota State Fair is in reality a sort of northwestern exposition, showing not only the agricultural productions of one state, but of many; not stopping with farm products, but taking in all manner of industrial exhibits and showing what it has been which has made the wheat belt such an empire and what there is behind the empire today to prove that it is a stable one, subject to no revolutions. "War and agriculture's preparations to meet it" was the reason offered by Sec. Thomas H. Canfield for the record-breaking crowds the opening day. "Everybody wants to see the soldiers, the military demonstrations and the other war-time features of the program," he added. The management was hopeful of an attendance passing the 400,000 mark before the close of the gates for the week. If this figure is reached it will mean that 33,000 more people visited the fair this year than ever attended before in any year. And, what is more to the point, the fair was so much bigger and better than usual, it deserved the record-breaking attendance.

ALL RECORDS FOR ATTENDANCE WERE BROKEN MONDAY, LABOR DAY, WITH AN ATTENDANCE OF OVER 116,000.

Minnesota is a great agricultural state already, the annually recurring fairs prove this. But it does not propose to rest on its oars. Ranking first in the Union in the production of barley, second in wheat and butter, third in oats, rye and flax and tenth in corn, it proposes to keep on with its agricultural efforts till no state shall surpass it in anything. There was a new slogan around Hamline last week. It ran in this fashion: "4,000,000 people and $2,000,000,000 production of our farms in 1925." Minnesota has mapped out a big program; it may not get it all accomplished in eight short years, but there is a determined citizenhood behind it. Enthusiasm is contagious at Hamline; one gets to using superlatives after a few days there. But there is hardly any superlative which is not possible to a state which made the splendid display that Minnesota made at Hamline this year.

The agricultural building was better filled with interesting products and exhibits this year than ever before. It gave a kaleidoscopic review of what Minnesota has done the past year. To begin with, there were the county exhibits, twenty-one altogether, the following counties having well-arranged and convincing exhibits showing their agricultural wealth and possibilities: Morrison, Chicago, Todd, Washington, Red Lake, Wadena, McLeod, Renville, Dakota, Olmsted, Cottonwood, Sibley, Nicollet, Beltrami, Cook, Kittson, Lake, Becker, Mahnomen and Hubbard. No state pays more attention to county exhibits than Minnesota, the result being unusually effective this year. Then there were the splendid exhibits of school work. Minnesota has good reason to be proud of its educational supremacy. It has five normal schools, 230 high schools, 200 consolidated rural schools, 243 graded schools, 463 semi-graded schools and 8,000 rural schools. Its unrivaled school fund is now larger than that of any other state in the Union, while the royalties on iron ore will, within thirty-five years, increase it $50,000,000. Eventually the fund is expected to reach $200,000,000. With this immense amount of money, judiciously expended, Minnesota has forged ahead in an educational manner in such a way as to make the state rank second to none. The school displays in the agricultural building this year were good evidence of the splendid results being achieved. The public schools and the University of Minnesota deserve credit for what they are accomplishing and for the splendid showing they made at Hamline, an exhibit as instructive as it was interesting. The displays of farm products raised by the Indians in the state, the parcel post exhibit and the booths of the state department of weights and measures, the state grain inspection and weighing department, and the state board of immigration were likewise interesting and instructive. There is no building on the grounds which better repays frequent extended visits than Agricultural Hall.

Minnesota never took more interest in gardening, or expended more energy on it, than it has this year. The result was in evidence on every hand in the Horticultural Building. Box after box of apples testified to the fact that, while Minnesota has never taken high rank as an apple state, there is a better time coming soon. A rather diminished crop around the lake region is more than offset by a splendid crop of apples in the southern part of the state this year. Varieties are being found which will do well in various parts of the state, to the extreme northern line,

(Continued on page 6.)

CURRENT EVENTS

THE first of the conscript, or national army, assembled at their respective camps, or cantonments, last week, on call from the war department. They are the vanguard of the new army of 600,000 men which Uncle Sam will train for possible service in France, to be sent overseas after the former state guards, now in the federal service, have been sent across. The grain-belt army camps (at Des Moines, Battle Creek, Rockford and Fort Riley) all saw men coming to them without any military training whatever, their names having been drawn on June 5th and the exemption boards having found no reason why they should be excused from military service. The various cantonments where they are to be trained are not all completed, but work is being rushed as rapidly as possible, so that by the time snow flies all the men should be in camp and quite comfortably situated. In the meantime the guards are being rushed to Long Island and other eastern points to be prepared to go across to Europe in a few weeks. General Pershing has moved his headquarters to the actual fighting line and it will not be many days before the first American troops go into action, if, indeed, such is not the case by the time these words are read. The United States has gone into the war and is now about ready to make its showing.

PRESIDEN WILSON, practically every member of congress and the diplomatic representatives of the nations allied with the United States against Germany honored the men who are drafted for army service by a notable procession, review and demonstration in Washington last week. The men drafted from the District of Columbia marched with regularly trained soldiers and sailors and were given the place of honor in the line. A press account of the parade gives this picture of the president and his associates in the parade: "The president of the United States, head erect, chest thrown out, eyes forward, marched today at the head of the most impressive parade ever seen in the streets of Washington, leading America's new army into the war against Germany. Behind the president, for the first time in history, congress also marched in honor of the men of the new national army, who began to mobilize last week in every community of the United States. Although the celebration here was directly a tribute to a thousand stalwart young men drafted from the District of Columbia, the president and congress took this occasion to make it one of Godspeed to all young men of the nation about to plunge into the vortex of the world conflict." The parade was so long it took two hours to pass the stand, where the president reviewed it after marching on foot for much of the distance himself.

THE day before the soldiers of the new army were summoned to leave for their training camps President Wilson issued this greeting to them: "To the soldiers of the national army: You are undertaking a great duty. The heart of the whole country is with you. Everything that you do will be watched with the deepest interest and with the deepest solicitude not only by those who are near and dear to you, but by the whole nation besides. For this great war draws us all together, makes us all comrades and brothers, as all true Americans felt themselves to be when we first made good our national independence. The eyes of all the world will be upon you, because you are in some special sense the soldiers of freedom. Let it be your pride, therefore, to show all men everywhere not only what good soldiers you are, but also what good men you are, keeping yourselves fit and straight in everything and pure and clean through and through. Let us set for ourselves a standard so high that it will be a glory to live up to it and then let us live up to it and add a new laurel to the crown of America. My affectionate confidence goes with you in every battle and every test. God keep and guide you! Woodrow Wilson." The eyes of the United States, and of the whole world, will be upon this new army, for upon its success or failure depends the success or failure of the war in Europe. France has about reached the limit of her man power, Russia is but a poor ally at best, so it is to the United States that the anti-Teutonic forces look for success, if it is to come. Six months will be devoted to whipping the men into shape, so that early next spring they should be going abroad, unless present plans fail.

PLANS for purchasing and storing in Chicago 1,000,000 bushels of potatoes for use after January 1st have been started by the middle western section of the national food administration. The potatoes are to be sold to consumers at cost, the price to be fixed after all expenses, including interest on the capital required to finance the deal, have been determined. According to the plans, the working capital for starting the project will be advanced in the form of a loan by the city of Chicago, the sum necessary to make the first purchase to pay freight being estimated at $200,000. The federal reserve board already has approved a plan by which warehouse receipts on potatoes stored under certain specified conditions may be used for collateral for loans at federal reserve banks. After the first lot has been purchased and safely stored away a loan may be made on the warehouse receipts and more potatoes bought. The process could then be repeated until the entire million bushels are in storage.

INDICATIONS that the United States intends to ration the northern European neutral countries in the strictest fashion were seen in the admission that the exports administrative board had disapproved of an arrangement suggested by the Dutch minister and the Belgian relief commission for division between Holland and Belgium of the nearly 100 Dutch grain cargoes held in American ports. The exports board, it was learned, will let no food cargoes go to European neutrals for at least two months, or until the American government has ascertained its own food requirements for the year and the size of crops to be harvested. All of the neutrals, it is held, can feed themselves without difficulty until this information is available. The United States wishes to know also the size of the 1917 crops in the neutral countries. It was made clear that the United States has no intention of letting neutrals go hungry, but emphasis was laid on the fact that the government feels its fist obligation is to the American people and to the allies.

MAJOR GENERAL PERSHING declares in connection with the plans for the coming winter that the people of the United States must learn the meaning and value of patience and not expect that the expeditionary forces landed in France can be rushed immediately to the front line trenches. To put an inadequate, insufficiently supplied force into actual combat, he said, would merely be making a mistake which the Germans unquestionably have hoped and expected the United States would make. It is the determination rather that when America does take her place in the line shoulder to shoulder with the other allies next year, she will be fully prepared to go through the summer campaign and make the Germans feel the full weight of her military power. "We came into the war without an army," said the general. "We always have been a peace-loving people, and undoubtedly the great majority of us hoped we should be spared war. So now we must build an entire new organization and build it so big and so strong that we can take our place along with our allies, who already have had three years' time and experience."

POPE BENEDICT has not given up hopes of restoring peace to Europe, notwithstanding the declination of his tentative proposals by President Wilson. Upon receipt, and translation, of the president's message the pope is said to have remarked on the "lofty sentiments expressed and also the kindly, humane spirit and manner" used by the president in rejecting the vatican's proposals, but as to the answer received he was unable to repress his disappointment that his efforts as yet were unsuccessful to check the war. It is not yet known whether the pope will make immediate answer to certain points in the note or wait until all the powers have replied and then give the same general answer to all. However, it is certain that the pope is daily preparing an immense amount of documentary testimony to prove that his principal points are those already admitted or agreed to by all the belligerents. The point emphasized in President Wilson's note that no one can have faith in the honor of the German rulers or accept their signatures to a peace treaty is a problem that has focused the attention of the pontiff. It is evident that he is not content to cease his peace efforts, but will continue their discussion in further notes, probably for the next four or five months until he shall gain ground or else become satisfied that the task is hopeless. It has been suggested that by such a method the pope might reach with the warring nations a preliminary ground of discussion and might eventually become represented at the final peace conference.

Courier of Soldier and Civilian

Our troops are now on the firing line in France. While at home every instrumentality of our government and private industry is being urged at top speed to insure victory. The telephone is in universal demand as courier, bringing to the front men and the materials of war.

From the farms the telephone courier brings foodstuffs; from the mines the telephone courier calls forth metals; from the factories this courier gathers manufactured products. The telephone courier leads troop and supply trains to the front; summons fighting flotillas and transports; and, in fact, leads practically every contributing unit of supply to the firing line.

At such a time, when the government is straining at its task and every industry is loyally contributing its energy, this national courier is constantly being used to call up the reserves. It is at the base of every contributing activity.

The right of way must be given to the military for the direction of troops and to the government for the marshaling of endless supplies. To do this, and also make the telephone serve all other needs, both patriotic and private, all must economize.

Pony Puzzle

Count the Dots and Win a Prize

Here is a Shetland pony covered with dots. By being careful any boy or girl can count the dots on this pony If you can do this we will send you as a prize, a packet of five beautiful embossed postcards lithographed in rich colors, and also a certificate for 1500 Free Votes in our grand contest for a beautiful Shetland Pony. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

Beautiful Pony Given

Remember the pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in this great contest. In case of a tie for the pony one will be sent to each person so tied. Full particulars by return mail.

THE PONY MAN Dept. 223 Des Moines, Iowa

One Man Alone Pulls Biggest STUMPS

Kirstin One-Man Stump Puller instantly gives you a GIANT'S POWER—makes you master of any stump! Many Kirstin owners pull stubbornest stumps in 4 to 10 minutes!—AS CHEAP as 6 CENTS per stump!

Kirstin

Just a few **pounds** on the handle means **tons** on the stump. When stump starts, throw machine into high speed and out comes the biggest stump, roots and all. Positively no other machine like it. Has special, patented features. Recommended by leading Agricultural Schools and Forestry Bureaus.

Why have stumps when you can now pull them so easily, quickly and cheaply?

Amazing Offer To prove these claims, we will ship you any size or style Kirstin on THIRTY DAYS' FREE TRIAL—**not one penny in advance.** Return it if not pleased. If pleased, pay low price in **small monthly payments.** Kirstin Pullers as low as $50. One-man style or HORSE POWER—all sizes. Three year guarantee with each machine.

Write! Don't endure stumps any longer. Send postal now for most valuable Stump Puller Book ever published—pictures—prices—terms—letters from Kirstin users and all about our **Special Agent's Proposition**—all Free. Write!

Langlade Potato Show.

To the Editor:—Langlade county will have a potato show this fall. The date is November 14th. This was decided on at a meeting of the officers of the Potato Growers' Association held at the office of county representative on Monday evening. Silver cups and cash prizes will be given on the seven leading varieties recognized by the state Potato Growers' Association.

There will also be a silver cup and cash prizes on potatoes grown by school children.

The place of holding the show has not been decided on, but will probably be in some hall or vacant store building on Fifth avenue. Several of the strongest available speakers on potatoes will be invited to be present to give talks.

An attractive musical and literary program is planned for the evening of the show. To secure the fullest cooperation of potato growers of the county a special committee consisting of the following men was appointed: Anton Follstad, Elcho; Henry Diercks, Bryant; Adam Guenthner, Rolling; Oscar Nelson and W. J. Kiesaw, Antigo.

F. G. Swoboda.

The Wisconsin Farmer

THURSDAY, SEPTEMBER 13, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

LIBERTY BONDS ABOUT READY.

I AM asked by many of my readers when the Liberty Bonds, to which they subscribed liberally a few weeks ago, will be delivered to them. I believe I am safe in saying that about the first of October they will receive their much-coveted bonds, testifying to their ability and willingness to help their country in its hour of peril. The situation is a little involved, however, as I shall attempt to show, briefly.

The day on which this was written (Thursday, Sept. 6th) the lower house of congress passed a new war-credits bill, authorizing the issuance of over eleven billion dollars in bonds and certificates. This is in addition to the seven billion dollars authorized some months ago. Included in this new authorization are over seven billion dollars' worth of new government bonds, to pay war expenses. These new bonds are to bear 4 per cent interest, instead of the 3½ per cent interest which the first issue of Liberty Bonds bear. Of this seven billion dollars' worth of new bonds, two billion dollars' worth will be for the purpose of retiring the bonds authorized by congress in the spring and which the farmers of the grain belt bought so liberally.

Let me try to make the matter a littl plainer. When the government announced its $2,000,000,000 issue of 3½ per cent Liberty Bonds, it promised that if bonds bearing higher interest were issued during the war these Liberty Bonds should automatically have their interest rate increased until it became equal to that borne by the later bonds. Now, the government proposes to issue 4 per cent bonds, so all those who subscribed to Liberty Bonds will receive 4 per cent instead of 3½ per cent, which means they will get $5 a year more on each $1,000 than was promised or expected. In order to simplify matters the government may exchange the new 4 per cent bonds for the 3½ bonds which were bought by the people, but which have not been delivered to them as yet. These bonds are now being engraved and delivery is promised on or about October first. By that time, however, it is highly probable the new issue will be ready to announce and within a few months new bonds will be given by Uncle Sam for the first Liberty Bonds, bringing ½ of 1 per cent more to the investors. Already, what are known as "interim certificates" have been issued, a sort of substitute for the real bonds, and these are being distributed to those who have paid for their bonds in full. I have received my certificates for the amount I have paid in full and have only to exchange these certificates, at the bank, for the real bonds when they are finally engraved and distributed, in three or four weeks now.

I realize the proposition is a little involved, but two things are certain: the bonds, in some form, will be distributed shortly; and Uncle Sam is going to pay back more than he promised, when we bought the Liberty Bonds of him a few weeks ago. We not only performed a patriotic duty whole-heartedly, but we made an unusually good financial investment at the same time.

PATRIOTISM IN THE POCKET.

I READ a sentence the other evening which struck me as containing much sound sense. It was this: "Good financing can not win a war, but modern wars can not be won without good finance." I do not think the author intended this to be an injunction to our bankers and financiers only; it is applicable to us all. In the end, the war will undoubtedly be won by the nation or group of nations which finds its money and its credit unexhausted. Therefore, it behooves us all to guard our finances well these days, for thereby we are performing a patriotic duty. The farmer is receiving good prices for his products; he should exercise unusual care in the expenditure of his money and see to it that not a cent is wasted on any unwarranted extravagance or frivolity. The times are good, they are far from being hard; yet a nation of spendthrifts would be a nation disloyal, remember that, please.

FARM LIFE NOT SORDID.

I KNEW when I printed the extract from the magazine article asserting that farm life is sordid, and the letter from the Wisconsin farm woman admitting it, that I surely would receive a great number of letters. I was not prepared, however, for such an avalanche.

Great as the number has been, I have read each one with interest and only wish I could print them all. They have proved two things to me: First, that the women folks on our farms do me the honor to read what I write; second, that they can write better letters than the men folks. Never in all my career as a newspaper publisher (and I have been working at it for well on toward fifty years) have I received so many good letters as have come to me from farm men and women within the last few months, letters on such subjects as the war, the hopes of early peace, the necessity of exempting farmers from the draft, the nobility and happiness of farm life, and so on. I want to say that there is more genuine, uplifting, ennobling thought emanating from the farm today than from any other part of our entire country. I am proud, indeed, to be the recipient of these letters.

But I did not intend to take up so much time and space in introducing two letters I want to print this week. They are both on this question, "Is farm life sordid?", both written by women and both on the same side, namely, that farm life is far from being sordid, except as we make it so for ourselves. Let me quote first from a splendid defender of farm life, in general, and farm life in Kansas, in particular, Mrs. W. C. Wilcoxen, of Ford, Kan., a most charming correspondent from whom I hope to hear often, on various subjects. Mrs. Wilcoxen writes me as follows:

Ford, Kan., R. F. D. 1, August 31, 1917. Dear Mr. Pierce:—I have read with interest the article, "A Libel on Farm Women," and the letters it called forth, and I would very much like to add my few words.

I live in southwestern Kansas, on a grain farm; have lived in this community since my marriage seven years ago, and feel that I know conditions of the farm woman's life well enough for my opinion to be sound.

As for the charge that farm women are ignorant, that is ridiculous. Of the women of this community, at least half were teachers before their marriage, many were high school graduates, a few college graduates and all take pride in keeping up with the current events of the world.

We work hard, it is true, but no harder than our husbands. I doubt very much if you could find a dozen women in our county who wash with a washboard. A washing machine is considered as much a part of the necessary home equipment as a dish pan, and many of us have power washers with a gasoline engine to run them. On this farm, and those adjoining, the women of the farm are no more expected to milk, feed the calves and hogs than they are to go to the field to plow.

We, most of us, have large families, but when our babies arrive we have help as long as we feel we need it, though most of us are strong enough by reason of right living that we do not need help more than a few weeks; and quite often there is a trained nurse whose sole duty is to take care of mother and baby.

The farm women here are dressed as well as the town dwellers. I know one woman who has borne ten children. Her husband is a large farmer and employs much help. The wife does most of the work, employing help only during the busiest seasons, and when she has a small baby, yet that woman is one of the best looking and best dressed women of the neighborhood in which she lives.

Of course, I do not say that all this is true of farm wives everywhere, for I do not know, but I do know that it is true of southwestern Kansas. However, I think the Kansas man must be more chivalrous than many others, for I notice that the wives of many farmers who move here from other states have much more outside work to do than the rest of us, at first, but they soon fall into the customs of the rest of the country.

It is my belief that families like that pictured by "A Wisconsin Farmer's Wife" would be the same, wherever they were placed, whether their lot fell on the farm or in the city. With such a husband, how much better off would she be in the city?

It is human nature that makes life sordid or happy, not merely environment.

I can only say, briefly, in passing, that I wrote Mrs. Wilcoxen thanking her for her good letter and informing her that I had four sisters, each one of whom was a country school teacher, two of whom married farmers, so that I appreciated the situation in her community, where school teachers abound in such number. It is impossible to think of farm life being sordid when the percentage of literacy is higher here in the agricultural heart of America than anywhere else in all the nation, when prosperity is at such high tide among our grain-belt farmers, and when such splendid letters can be written by those who lay no claims to being talented above their neighbors.

But let me quote another letter, from another farm woman, Mrs. W. H. Chumbley, of Indianola, Iowa, an equally good and convincing letter, as follows:

Indianola, Iowa, R. F. D. 5, Sept. 1, 1917. Dear Mr. Pierce:—I am a farm woman past three score years and believe that I have a right to speak. I was born and raised on a farm. I was educated in the rural schools and taught in the rural schools. I married a young farmer and from the day of our marriage our slogan was, "He that worketh not neither shall he eat." We always have worked to each other's interests, whether it was in the house or out of doors. Our home was happy from the beginning, although there were discouraging times, but always we kept in mind the old proverb, "There is no excellency without labor." Thirteen children have blessed our home and eleven of them have grown to manhood and womanhood, the youngest now being seventeen years of age.

In raising my family I had a small amount of hired help. I have always done my own work, including washing, cooking, gardening, sewing, canning, knitting stockings and mittens for the children until they became large enough to help themselves, and many times found time to help someone else. And at no time in my forty years' experience have I found farm life sordid. I have always raised my own chickens and marketed my own eggs and produce. The money was used to cover the needs of the family, and at no time did my husband ever question how I spent my money. He has confidence in my judgment that I would spend it wisely, and we have worked on until we now have in our possession 280 acres of land. It consists of three farms and was vacated by people who found other pursuits. We always felt sorry to see the neighborhood depopulated, but we thought to keep up the farms and buildings and maybe sometime our own children or someone else might occupy them.

I do not say that I have done better than anyone else, but I have done better than some. But had I my life to live over I could profit by the many mistakes. I can say, as Zacharias did, "If I have taken from any man by false accusations I will return unto him four-fold." A good many people think farm life is sordid because they are not able to keep up with the people who have worked a lifetime and are able to own their automobiles and have all of the modern conveniences in their homes. And while these inventions are good, I find the old proverb that "Contentment with Godliness is great gain" and take pleasure in doing whatever my hands find to do. We have never owned an automobile, not because we could not afford one, but for several reasons; one, that they are expensive and dangerous and, in most cases, they are a hindrance to the progress of a farm rather than a help, as in many instances the farm work is left undone in order to get the time for a ride in the automobile. We raise horses, lots of them, some for all kinds of work, draft horses for the heavy work. If we want to go to town or visit our neighbors we have our driving team.

The thing that farmers are most in need of today is high thinking in their homes. By high thinking I mean the big things of life, character, kindness, intelligence, virtue and respect for all that is pure and noble.

A short time ago some people made us a visit who were our neighbors thirty years ago. In the time that had passed since we were neighbors we have built houses and barns, grown groves and orchards on the same ground where they had tilled the soil. We gave them a bounteous dinner in the house for the old people and had a table set under the trees for their children and our grandchildren, and all signified they had a good time and we enjoyed a good visit with old neighbors once again. Our children are scattered from Canada to Colorado, but we still have our reunions once a year. The old extension table is at its full capacity and not one has forgotten his old place at the table, and when we count we still have the "bakers' dozen," thirteen. The blessing returned, the joy begins and lasts from one reunion to the other, as they return year after year and the children rise up and call us blessed. I cannot see how farm life is sordid.

There is little that I can, or need, say in comment or conclusion. We cannot read such letters and not be convinced. Poverty may exist in isolated sections of our fertile, productive grain belt; but not in one-millionth degree as much as in our cities. There may be farm homes which lack the necessary conveniences and comforts, but for every one such farm home I can show you a hundred thousand in our cities. If there are any who doubt my statement I can take them, in my automobile, within fifteen minutes' ride of where I am writing, to such scenes of poverty and squalor as no farmer or farmer's wife ever imagined possible; men, women and children huddled together like rats, in miserable quarters, with insufficient air and clothing, not knowing where the next meal is to come from, unless charity supplies the deficiency. And, remember, too, this is in a grain-belt city, not in one of our large eastern cities, where such scenes would be multiplied and magnified a hundred times over.

Mrs. Wilcoxen was right, indeed, when she said that it is human nature which makes life sordid or happy, not merely environment. The shiftless ones on the farm would be the shiftless ones in the city, dependent upon charity for food and shelter. We succeed within ourselves, as well as through persistent and well-applied effort. Happiness and success are mental attributes, as well as material accomplishments. The eye sees what it is trained to see; the brain thinks what it is trained to think. Let us make our eyes see the good and beautiful; let us make our brains think the ennobling and uplifting. Then, indeed, shall sordidness disappear from our hearts and our midst.

JAMES ATKINSON, EDITOR-IN-CHIEF

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter.

PUBLISHED EVERY THURSDAY

1912 Grand Avenue **Des Moines, Iowa** — 201 Washington Bldg. **Madison, Wis.**

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

THE WISCONSIN FARMER, Madison, Wisconsin

Food Administration in Wisconsin.

Magnus Swenson, of Madison, chairman of the Wisconsin State Council of Defense, has been named federal food administrator for this state. The appointment has been made by Mr. Herbert C. Hoover, who is national food administrator. Mr. Hoover and his associates dislike the word "dictator," and insist that their work is administrative rather than dictatorial. For the purposes of administration, as we understand the food control organization, Mr. Swenson becomes Mr. Hoover's special agent for Wisconsin. In fact, he is Wisconsin's Hoover, with all the power and obligations imposed upon the food administration by the recent acts of congress. Manifestly it would be impossible for Mr. Hoover to understand fully the duties of food administration in each state of the Union, and it becomes necessary for him to have a state food administrator in this, as well as each of the other states.

Following the oath of his office taken recently in Washington, Mr. Swenson attended a conference of state food administrators. Upon his return to Madison he made public the following interview:

The federal food administrator of the state is clothed with all the power provided by the new food law, and is expected to assist the administration in enforcing this law within the state. In doing so, however, it was the wish of Mr. Hoover that we should appeal to the patriotic coöperation of those engaged in the distribution of food supplies, to try to stabilize rather than disturb conditions. On the other hand, we were instructed to spare no one who for personal gain would hoard food or speculate in foodstuffs, or exploit the people in this time of war, when we should all be united for the purpose of helping the country. In such cases we were told to use all the drastic powers that were conferred upon us by the food administration, in conformity with the food law. Where certain dealers charge exorbitant prices they will be placed under a federal license which may be taken from them upon evidence of unfair dealing. No leniency will be shown toward food speculators. They will be compelled to sell at a reasonable profit or the government is prepared to take over all foods which are stored to force an increase in price or for purposes of speculation. Aside from this such conduct is liable to punishment by fine or imprisonment, or both.

One of the most valuable suggestions made at the conference was that the different state food administrators should keep each other advised as to the lack or excess of certain foodstuffs so that our public markets could be supplied direct and give the poor people a chance to buy the needed food at the lowest possible price. As an example of this, Louisiana has a large surplus of plantation sugar, which is all sold to the sugar trust. This can be obtained direct from the planter at a much lower price than the refined sugar and is as good or better for many household purposes. They have a large surplus of rice which is selling in Louisiana for $1.20 a bushel, or 2 cents a pound, while they need butter, cheese and potatoes, and an exchange of these commodities of which we have a large surplus would be of mutual benefit.

Administration of food supplies should not be too hastily condemned. The Wisconsin Farmer advises its readers to give Mr. Swenson a fair and square trial. We do not claim that his work will satisfy everyone. We do believe, from what knowledge we have been able to gather, that it is the sincere purpose of the government to give the farmers of this state, and of every state, a fair deal. Once we are convinced to the contrary we will have no hesitancy in saying so. Our patriotic support of the government does not extend to the point where we are tongue-tied in the event we see anything which deserves criticism. But war times are unusual times. It is necessary that we go out of our way to try and help the government. The spirit of criticism, just because this is a free country and we have a constitutional right to criticise, should not be fostered or encouraged. One of the first instances of interest on the part of the food administrator in Wisconsin is the advice to farmers not to let the big potato crop of 1917 get into the hands of speculators at too cheap a price. Potatoes, considering the world market and the world demand, are worth more money than some speculators have been offering for them. The government has already planned to issue through the federal reserve banks, potato certificates, and to help with the storage problem by securing storage houses. The aim of the government is to prevent the big crop now coming on from falling into the hands of men who will pay the farmer a small price and then turn around and rob the people who must buy potatoes for food. Furthermore, the food administrators will endeavor to educate people all over the country as to food value of potatoes and thus secure greater consumption. More than that, it will be possible to ship millions of bushels of Wisconsin potatoes into states where there is a small potato supply and where the price is better than it is here at this time. If the government by such administration can get fair prices for the growers and still hold down the price to the consumer, will it not accomplish a great deal toward helping both? Farmers should do all in their power this year to keep their product out of the hands of speculators. If some buyer comes along and says that the market has been "shot to pieces on account of the heavy crop," and wants to buy up potatoes or onions or any other crop at a low price, beware of him. Be sure that the price he quotes is right. It will take only a day or two to write to Mr. Swenson, at Madison, stating your case. Both Mr. Hoover and Mr. Swenson very much prefer that unusual cases be taken up with the government administrators. Mr. Hoover has said that the business of administrating the food supply is an open book. There are no secrets from anyone.

Corn Substitutes For Hogs.

It is especially desirable to save high-priced corn wherever this is possible and the national department of agriculture is making a special effort to disseminate information in regard to ways and means of feeding live stock in such a way as to effect a saving of corn. This matter is dealt with recently in connection with the feeding of hogs, it being especially desirable that stockmen, wherever possible, should find something with which they can make good gains on their hogs without confining them to a straight corn ration.

Attention is called to the fact that ground oats have three-fifths the feeding value of corn and they, therefore, can be substituted for corn profitably when a pound of ground oats costs two-fifths less than a pound of corn. It is not recommended that oats compose more than two-thirds of the ration during the early part of the feeding period and the proportion of oats should be gradually reduced until during the last four or five weeks when this grain is omitted altogether. Barley, when ground or soaked, can be substituted entirely for corn. When both feeds can be obtained at the same price per pound barley should be used. Barley, when costing nine-tenths as much as corn per pound, can be substituted for corn in the ration. As it is a hard grain it should be ground or soaked. If ground it is somewhat doughy in its nature and cannot then be fed dry to advantage, so that it is necessary to compound it into a slop.

There are many other products that can be used to advantage and even millet has three-fourths of the feeding value of corn. Wheat shorts or middlings can be substituted for corn even if the cost of this product is one-tenth greater than the cost of corn. This is due to the fact that it is rich in flesh-forming material. Generally speaking, it is better to feed middlings in supplementary quantities owing to the fact that it is somewhat heavy and pasty in its nature. In some localities weed seed waste from elevators is obtainable and this product has a feeding value equal to two-thirds that of corn. It goes without saying that this kind of material should be ground, well soaked or cooked before being fed.

A GOOD GAME SEASON.

Firm the Soil for Winter Wheat.

We desire to have a last word on the question of preparing the seed bed for winter wheat. There will be a larger acreage than usual seeded this fall and as seed is high in price it is exceedingly important that every condition be made ideal for the wintering of the crop. We have called attention several times to the urgent necessity of having a firm seed bed and in discussing this phase of the subject we have called attention to the advantage under a great variety of conditions of plowing the soil reasonably deep.

We find that in many parts of the Central West stubble land has been very hard and lumpy and much plowing has been done at a heavy labor cost. We have seen many five-horse outfits in the field pulling a one-furrow, sixteen-inch plow, and plowing under those conditions is, of course, expensive. Many a man has become discouraged over the difficulty of the task, but now that most of the acreage is plowed we believe that there will be general rejoicing because recent rains have made it possible to work the seed bed down into splendid condition. The big, stubborn clods that were left on the surface after plowing have been melted down by the rains and, fortunately, advantage has been taken of the conditions in most cases to use the harrow freely at a time when it would do the most good. Even the roller has been brought into play and this will smash the clods. In certain cases it will pay to even use the disk in order to cut to pieces the lumps that have been turned under. The surface may appear to be in good shape and yet the lower soil may not be in the best of condition and that is why it is frequently advisable to use the disk in order to make the plowed land fill in compactly on the bottom of the furrow slice.

Those who have never had experience in growing wheat can scarcely be made to realize the importance of taking special pains in getting their soil firm. More than any other feature it will prevent winterkilling, as a porous soil seems to contribute to heaving out of the roots, whereas a firm soil much more effectively maintains an embedded condition of the roots.

Where there is no danger of injury from the Hessian fly, reasonably early sowing is advisable, because there is a clearly defined advantage in having good top and good root development. However, if our decision were between the matter of sowing early or delaying a week or ten days in order to get the seed bed in better condition we would choose the latter. An extra harrowing or two will mean an increased yield next year, particularly so if the winter should be severe and the spring backward.

Hogs in the Cornfield.

Thousands of hogs will be finished this fall in the cornfields, this plan being followed in many cases because it will be the cheapest and best method of harvesting part of the corn crop. The plan is entirely practicable because not a kernel of corn need be wasted, nor will the hogs get off feed if they are accustomed to the corn before being turned in. In the following communication one of our subscribers who has had some practical experience in hogging down corn makes some good suggestions:

I like the plan of fattening hogs in the cornfield. It saves much labor, the hogs do exceedingly well, and the litter and manure is left to be plowed under. To get the best benefits from all such waste I want the ground plowed late in autumn, turning every-

thing under to decompose by spring. The humus added to the soil from the stalks and litter is as great for future crop production as the manure from the hogs.

Now, I favor feeding some of a crop of corn by turning the hogs in the field to do their own harvesting, but my plan is to keep the large hogs in one section of from two to four acres. This restriction is brought about by running a temporary strong wire fence across a field. As soon as the bulk of the corn is eaten run another string of the fencing across the field, taking as much space as at first.

When this is done, give the new section to the fattening hogs and then turn in the sows and pigs and small shoats to thoroughly glean all corn left from the ground so none goes to waste. I arrange the area of ground to correspond to the number of hogs, as it is poor economy to allow hogs to feed over too much space. The best that can be done, they waste too much grain. Confined as stated, and the waste eaten by the shoats, all do finely and there is great economy in the feeding.

The idea suggested here of using the old sows as gleaners after the best of the corn has been taken out is eminently practicable. Those who have never had experience in hogging down corn are apt to make the mistake of turning in a bunch of growing pigs along with the old sows that are in the herd. These lean, hungry creatures will simply devastate a cornfield, particularly if they are turned in before the grain has become quite hard. The best results will be obtained by turning in the spring pigs and keeping the old sows back in the pasture. If no part of the corn is lodged, it may be necessary for a time to cut down with a corn knife a few hills of corn every day, but in due time spring pigs weighing from seventy-five to 100 pounds will acquire the habit of knocking down their own corn. On the other hand, the old sows knock down entirely too much, so that for a time it is scattered on the ground and some of it even may be completely lost by becoming incorporated in the soil. It may be a little troublesome to keep the pigs away from the sows, but in the end it will pay and pay well, particularly so this year when grain is high in price and there is urgent need for using every available kernel.

Danger in Pasturing Young Clover.

Already there has been a heavy loss of spring-sown clover in various parts of the corn belt, this loss being due in some cases to lack of moisture and others to grasshoppers. Many cases have been reported to The Wisconsin Farmer where fields that looked well when the grain crop was removed are now absolutely bare and an examination reveals the fact that all the plants have been devoured by grasshoppers. However, from other sections comes the report that newly seeded clover looks well and many persons are banking on their new meadows for fall pasture. In view of this, a word of caution may be in order and a communication touches the point. He writes:

Overpasturing during the fall is a fruitful cause of failure with the clover crop. Many farmers who have succeeded in getting a good growth of young clover cannot resist the temptation to turn their stock onto it after harvest, allowing the animals to eat it down as close as they can. This is a great mistake, as the young plants need all their leaves at that time to gain strength for the next season's growth, as well as to protect them from being winterkilled. If there is any danger of the clover becoming so far advanced as to form heads, it would be better to run a mowing machine over the field, setting it to cut as high as possible so as not to injure the crowns of the clover plants. By removing the dividing board the cut grass will be spread even over the field. The ground is thus cleaned of weeds which may have sprung up since cutting the grain, and a mulch is formed which will aid in protecting the young clover plants during the winter. After the grain has been removed it pays to turn a few hogs or other stock into the field for a week or ten days in order that the waste grain may be gleaned; but don't pasture the young clover continuously from that time until late in the fall if a good growth of clover is wanted the following spring.

A good stand of clover is so important in the rotation that no man can afford to take a chance on killing out his crop because of the value that he can obtain from it as fall pasture. A good growth of top is needed for winter protection and, furthermore, if growth continues right up until freezing weather this means that the root will be more vigorous than will be the case where the new clover is cut in the fall. While clover is a comparatively sturdy plant and requires at least two years to go through all its life periods, it is nevertheless weakened when it is cut back the first year and excepting in rare instances where it blossoms we believe that it is better to let it alone so that the crop affords its own protection against the severe elements of winter and spring.

Cutting and Shocking Green Fodder.

One of our readers asks for information concerning how he should handle fifteen acres of corn that was planted late. This field was in full tassel August 31st, but conditions will have to be rather unusual if it matures. The question, therefore, is whether this fodder should be cut and shocked while it is still very green, or, on the other hand, should it be allowed to stand just as long as possible in order that the product may more nearly approach maturity? Mr. Carter fears that the product is liable to be frosted and thus very greatly impaired in its feeding value. He asks if green corn will cure out properly in the shock and when cured will it make a satisfactory feeding product. He has a considerable supply of hay in addition to this fodder, but as he is heavily stocked at this time it is naturally the wish to have as much good roughage as possible.

Under ordinary conditions it pays to allow late corn fodder to stand just as long as possible before cutting it. One can even afford to take the chance of having it frosted rather than to cut it too early, because in any event the freezing of fodder only slightly impairs its feeding value if it is cut and put in the shock soon after.

Two or three things must be kept in mind in handling a crop of corn fodder where the product is not converted into ensilage. One is weight per acre, and the largest possible weight is obtained by cutting the crop just after the lower leaves begin to turn brown. In the second place, a certain stage of maturity is desired because the fodder cures out better when put in the shock. Sappy, immature fodder will be so greatly reduced in weight by the curing process that the yield per acre will be very small, and while the product will be palatable, yet there will not be enough of it to justify the practice of cutting too early.

Retain and Improve the Breeding Herds.

If any of our readers are seriously considering selling off some of their breeding stock because of high grain prices they should think twice before taking steps in that direction. During the three years prior to the war our meat exports amounted to 494 million pounds annually. During the year ending June 30, 1916, we exported 1,339 million pounds, or nearly three times as much as during the pre-war period. European cattle, hogs and sheep have been decreasing at an alarming rate since the war began and they will continue to decrease as long as it lasts.

Though cattle have increased by 7 million head in the United States during the past three years, according to government statistics, and hogs have increased by 6 million head, our sheep have decreased to the extent of 3 million, but these comparatively large increases of cattle and hogs are insignificant as compared with the decreases that have taken place in Europe. Statistics show that the world's supply of cattle has decreased by 28 million head in the last three years, that the decrease in hogs amounts to 32 million and in sheep to 55 million head.

It is difficult to realize what this enormous sacrifice of live stock means. Europe has been consuming more meat since the war began because her armies have to be well fed and the millions of women who have taken the places of the men in field and factory, and who as a result are performing more severe labor than heretofore, have also been obliged to eat more meat. Furthermore, it will be remembered that the demand for meat during the last few years of the pre-war period was increasing faster than the supply, owing to the fact that the standard of living the world over was gradually being raised.

The enormous decrease in live stock referred to above not only means a shortage in meat, but also in dairy products, wool, hides and fats. It is a certainty that the world's herds of cattle, hogs and sheep cannot be restored to the pre-war basis half as fast as they have been reduced and the demand for meat products will no doubt be almost as great after the war as it is now because people will have to work more strenuously than ever in order to restore the devastated fields, factories, railroads, bridges, as well as whole cities. There will be an abundance of work and an abundance of people needing work. All will be busy, all will need to eat, and they will need meat more than ever to perform the arduous tasks in getting the machinery of production and transportation in motion.

In view of these conditions it requires no prophet to foretell that live stock prices the world over will be high for fifteen or twenty years to come, regardless of when the war closes. To sell off good breeding stock, whether of cattle, hogs or sheep, at the present time would look like a serious mistake. Let the American farmer not only maintain the number of live stock he now owns, but if possible let him increase his herds and by all means improve his breeding stock.

It is a self-evident fact that scrub stock cannot be made to pay with the present high level of grain prices, and cheap feedingstuffs cannot be expected for many years to come. Men with pure-bred herds of cattle, sheep and hogs will find an unusual demand for their surplus as soon as the war comes to a close, because every European country will have to build up new herds and the breeders of those countries will be looking for the best stock available, and a very large part of this will have to be found in the United States. There is a harvest ahead not only for the breeder of pure-bred stock, but also for the producer of cattle, hogs and sheep for the market. Stick by the breeding herds, for they are certain to remain profitable.

Federal Farm Loans.

We are reminded by the federal farm-loan board that it completed its first year of service on August 7th, and that farmers are taking advantage of the farm-loan act as rapidly as the land banks can take care of their demands. For many months the board devoted its time to organization work and the location of the twelve land banks, so it has really been approving loans for only a few months. So far the loans that have been approved aggregate 40 million dollars and over 800 farm-loan associations have been chartered. At the present time an average of twenty-five farm-loan associations are being chartered daily and the average association is borrowing $50,000, so the government is making arrangements for making loans to the extent of a million dollars a day.

As farmers come to more thoroughly realize the benefits of this cheap money which they can obtain from the land banks, no doubt the organization of farm-loan associations will be more rapid; in fact, the farm-loan board estimates that before the end of 1917 it will have made loans aggregating 100 million dollars or more. There are now over 200 federal farm loan appraisers in the field who are placing valuations on farms as rapidly as they can get to them, and the board has actually paid out to farmers the sum of five million dollars. Comparatively few farmers realize what this farm-loan act has in store for them and how much they will be benefited thereby if they organize farm-loan associations and take advantage of it.

The total farm debt in the United States amounts to about four billion dollars, and statistics show that the average rate of interest paid on this sum before the farm-loan act was passed was 7.4 per cent. If all these loans were transferred to the federal farm-loan system the farmers of this country would save annually 100 million dollars in interest. Besides, they would never have to worry about their mortgages falling due, because a loan made under the federal farm-loan system never falls due. It is paid off on what is known as the amortization plan, at the rate of 1 per cent a year, and at that rate it takes thirty-six years to pay off the entire debt. The interest rate is only 5 per cent and the paying of 1 per cent toward liquidating the debt makes a total of 6 per cent, which is still 1.4 per cent less than the average rate paid before this act went into effect, and that 6 per cent includes both interest and principal. Under the old system the average farmer paid 7.4 per cent for thirty-six years and still did not have his indebtedness reduced 1 cent; that is, he would still owe the original principal, but under the federal farm-loan system he can pay 6 per cent annually and at the end of thrty-six years he owes nothing; that is, the original indebtedness plus interest will have been paid in full by that time.

Those farmers who have money to invest will find that the farm-loan act will benefit them just as much as those who desire to borrow money. The land banks issue bonds against the farmers' mortgages. These bonds bear 4½ per cent interest and are exempt from all taxation. They are as safe as government bonds; in fact, nothing can be safer than these land bonds. They are, therefore, a fine form of investment. Bonds can be purchased in denominations as low as $25, so they are available to anyone who desires a safe form of investment for his surplus money. These bonds are very much in demand, as they are now selling rapidly at 101 1-8 per cent; that is, at a premium of 1 1-8 per cent.

Not only are farmers in states where interest rates on farm mortgages are high taking advantage of the federal farm-loan system, but so are also the farmers in states like Iowa, Indiana and Illinois, where land is high priced and interest rates relatively low.

The Potato Situation.

According to the latest government estimate, the potato crop—including Irish and sweet potatoes—will yield 553 millions bushels or 200 million bushels more than last year and 130 million bushels more than the average for the past five years. Of Irish potatoes alone the estimate for this year is 467 million bushels or 142 million bushels more than last year and about 100 million bushels more than the average for the past five years. Care should be taken not to flood the market with this big crop at digging time or the price is apt to fall so low as to compel growers to sell at a price that is below cost of production. This would not only be hard on the farmers, but also it would discourage planting a full acreage next spring. It is, therefore, to the interest of the government to see to it that a reasonable price be maintained.

Potato growers in the East recently held a conference at Boston, Mass., in which the whole potato situation was carefully studied and a plan of action pertaining to gradual marketing was outlined and agreed upon. The following plan was suggested and mapped out:

1. Marketing of only one-third of the crop at harvest time; another third to be marketed in ninety days or be placed in storage and later distributed as demand affords opportunity; the remaining third to be stored by the grower and marketed throughout the year.
2. All potatoes to be graded with care, taking out culls, cuts, cracks and any that are bruised. It was recommended that a wire screen grader be used—one and seven-eighths-inch mesh for oblong tubers and two-inch mesh for round ones. Graded stock then to be placed in good two-bushel sacks—115 pounds to the sack—and the sacks sewed tightly so as to prevent shucking and bruising.
3. Increasing the load in each railroad car from the normal 30,000 pounds to 45,000 or 50,000 pounds. That these cars be unloaded within twenty-four to thirty-six hours of their arrival at destination.
4. That municipalities and other bodies provide storage for as large quantities as possible at the peak of the harvest.

Facilities for financing stored potatoes was provided through the federal reserve banks, so that farmers may obtain ninety-day loans from the reserve banks through local member banks of the reserve system at a rate not to exceed 6 per cent. New England growers have already begun to take advantage of this provision. Unless a large proportion of this year's crops is put into storage for some time, profitable prices can hardly be expected to be maintained.

Minnesota Fair a Record Breaker.

(Continued from page 1.)

and the 3,400 members of the Minnesota Horticultural Society are confident that it will not be many more years before Minnesota ranks as one of the leading ten, or even half dozen, apple states of the Union. Certainly the display was a good one this year, conditions considered. The vegetable display was equally deserving. The Minneapolis and the St. Paul truck gardeners' associations carried on a spirited rivalry, as usual, St. Paul winning out this time. The displays were large and varied and showed a high- quality throughout. Especially was there much attention paid to the potato exhibits and to the potato possibilities of the state. The university experts pointed out, by striking exhibits and placards, that while the potato yield in the state is less than 100 bushels to the acre, on the average, it can be materially increased by controlling the insect pests and diseases which have cut down the yield in the past. They announced that spraying potatoes with Bordeaux for seven years resulted in an increase of sixty-three bushels to the acre; the use of seed plots from which to secure good, tested seed resulted in an increase of forty-four bushels to the acre; and that one man has earned as high as $40 a day by selecting and disinfecting seed potatoes. The following advice was given the farmer who wishes to make his potatoes yield better and is not afraid of a little work: Secure good varieties, select good soil and seed, disinfect the seed, spray the vines, rotate the crops and store the potatoes properly. If this is done there is no reason why Minnesota cannot and will not take much higher rank in the potato world. Further advice was given to store all root crops in a cool place, covering them with sand or leaves and to store pumpkins and squash in a dry, warm room. The gist of the advice given by the horticultural experts over and over again was this: The state can, and should, produce more, but of what is produced a still greater amount should be marketed properly and conserved by every possible effort.

The important part which women play in production and conservation, in preparing the nation not only for war but for those economies at home upon which the success of the war depends, was emphasized over and over again at this year's fair. Never was there so much interest manifest in home economics as now. This was particularly noticeable in the Women's Building and the section of the Agricultural Building given over to the work of boys and girls and farm women. The canning demonstrations and the bread-making contest aroused the greatest interest imaginable. Three thousand Minnesota girls are members of the various bread-making clubs and the competition is keen. Nor is it only the white bread to which prosperity has accustomed us, for there were demonstrations in making both potato bread and liberty bread, this latter being made of three-fourths wheat flour and one-fourth other cereal. "Help win the war by conserving wheat" and "The kitchen is one key to victory" were signs prominently displayed. Farm women mingled with the girl demonstrators and the agricultural college teachers and talked proteins, calories and energy value with an intelligence that shows how effective the campaign of the food conservation committee has been. One of the best displays of canned food and methods of conservation was that of the Home School for Girls at Sauk Center. These girls had canned vegetables, fruits, dried meats and a box of smoked fresh-water fish that attracted much attention. Economy in the home was the watchword everywhere. Over in the Women's Building there was a striking exhibit showing how much more cheaply a girl or woman can make clothing for herself than she can buy it ready made or have it made by a dressmaker. Any number of articles were shown, together with the actual making-cost at home. Something new and very attractive was the exhibit of modish clothes on live models, put on by the university extension service, called an "educational fashion review." The idea was to show both town and farm women what clothes were proper and best to wear on various occasions and how to wear them to get the best effect. The state has recognized at last that it is as important to teach people to dress in taste as anything else.

Minnesota has twenty-five cow-testing associations in active and successful operation. Hence, the exhibit at Hamline last week was timely as well as convincing. A dozen cows, belonging to members of the Stillwater Cow-Testing Association, were exhibited, with placards showing their production, the cost of their feed and their net money profit. The two extremes were Molly 2d, whose sire was a pure-bred Guernsey and whose dam was a grade Short-horn, which made an average profit, for a six-year term, of $122.16, her net profit last year being $174.40, and scrub No. 152, whose net profit was only $2.01 for the year. In between these two were grade Holsteins which returned net profits for the year of $62.45, $86.81 and $107.96; registered Holsteins which returned profits for the year of $102.02 and $100.10; a pure-bred Guernsey which cleared her owner $122.16 and grade Guernseys the net year's profit of which were $58.11, $59.26, $69.39 and $163.22. One cow exhibited, Charity by name, shows that it does not pay to mix breeds, she having a registered Holstein for a sire and a Jersey for a dam. Her net annual profit was only $6.25. This cow-testing exhibit was not only of interest as showing that it pays to weigh the product and keep books, but it went a long ways toward proving the ten points which the association heads believe absolutely true of their associations: That better methods of feeding make the rations more economical; that better care of the cows results in increased production; that a sire of better breeding is brought into the community by the association; that more silos and comfortable barns result; that the cows are freshed in the fall; that there is less loss in butter fat in skimmed milk; that the associations establish a value on cows according to their efficiency; that boarder cows are eliminated; that feeds are bought in large quantities and cheaper and that the associations attract buyers to the communities where they are located.

Minnesota made 6,320,394 pounds of cheese in 1916, receiving therefor $1,074,466.98. It was altogether proper, therefore, that a splendid display of cheese should be made this year, as well as of butter. Prize winners were announced by Supt. Andrew French, as follows: Walter Olson, Hawick, Minn., with a score of 96, led in the hand separator class, and Charles Gramith, of Waconia, was the winner in the whole milk class, each receiving a gold watch. Mrs. August Dundeen, Forest Lake, scored 93 and won the prize in the farm dairy butter class. W. Andrist, West Concord, won first place on American cheese, with a 97 score. Other prizes were: Brick cheese, Gottfried Meyer, Verndale, Minn., score 95; Swiss cheese, H. Moegger, West Concord, 97; best display of cheese, E. G. Hammer, Zumbrota, Minn.

Over eighty acres of ground were required to house the farm implement exhibits. Never were there so many time-saving and labor-saving devices exhibited. Forty kinds of tractors and over a half hundred models of automobiles were exhibited, arousing the most intense interest, proving that farmers are the best customers the machinery factories have nowadays. Machinery Hall was a busy place at Hamline, with every prospect that sales will be heavier the next year than ever before in the history of the state.

No fair in the Central West has equalled the record of Minnesota in the emphasis that has been placed by the management upon the importance of the implement display. It was the first fair of the entire list of fairs to house the principal exhibits, thereby making inspection agreeable to visitors regardless of the character of the weather. Improved machinery will take an even more important part in the agriculture of the future than has been the case in the past, and the management of Minnesota fair has been farseeing in the encouragement that has been given to manufacturers.

THE CATTLE SHOW.

The Gopher state always has a good cattle show. They expect 4,000,000 people and $2,000,000,000 annual production of various articles by 1925. Evidently cattle—both beef and dairy—will be expected to play their part in making the great northwestern commonwealth turn over her great stores of latent wealth to help feed the world. Interest seems to be well divided between the producers of milk and the producers of meat. One interest is as important as the other, and Minnesota has plenty of room for both. The fair management has always been progressive and has the spirit of the pioneer. It is an honor to show cattle at Hamline and this year cattle breeders who showed there have one of the best possible advertisements. Every animal on the grounds had been tested for tuberculosis previous to the fair and all were free from the disease. This rule was made by the fair association and there was no backing down from the rule. The pavilion was brilliantly decorated with flags of the allied nations in profusion and a band from Winnipeg deserves mention for its ability to furnish good music. All things helped to make the cattle show a good one. A unique feature of the show was a prize of $50 offered by the Minnesota Holstein Breeders' Association for the best county display of Holsteins. This was won by Washington county.

Short-horns.—Minnesota always has a good show of the good, old cosmopolitan breed, and keen interest always centers around the judging. Several of the entries at Des Moines appeared at Hamline and there met some new contenders from Minnesota, Wisconsin and South Dakota. Good Short-horns are not new in the Gopher state and the exhibits get better every year. Keener contests may have been staged, but poor animals were never fewer than this year. Craven Knight, from the Leslie Smith & Sons herd appeared on the scenes and defeated Maxwalton Amateur after considerable deliberation on the part of Dean C. F. Curtiss. Craven Knight defeated Royal Choice 2d, Herr Bros. & Reynolds' blue ribbon two-year-old bull for senior champion honors, but fell before Villager's Coronet for grand championship honors. Windsor Belle 23d, Kennedy's two-year-old heifer was made senior champion heifer, defeating Baroness Lady 7th, from the same herd for this honor. In the senior yearling heifer class, Miss Lovely, the bearer of the blue at Des Moines, was slated to win here, but met defeat when she met Violet Maid 8th, a smoothly turned and well-finished heifer from the Eliason herd. Violet Maid 8th was given the purple for grand champion honors. Money was quite well divided between Minnesota, Iowa and Wisconsin exhibitors.

Exhibitors.—Anoka Farms, Waukesha, Wis.; G. D. Arnold, Galesville, Wis.; Cleverburn Farm, Colo, Iowa; S. G. Eliason, Montevideo, Minn.; P. J. Fosse, St. Cloud, Minn.; Wm. Herkelman, Elmwood, Iowa; O. F. Henkel & Son, Kenyon, Minn.; Herr Bros. & Reynolds, Lodi, Wis.; Jackson & White, Hurley, S. D.; Eben Jones, Bangor, Wis.; J. E. Kennedy, Janesville, Wis.; Alex Mitchell, Jasper, Minn.; C. A. Oldson, Wall Lake, Iowa; Smith & Son, Leslie, St. Cloud, Minn. Judge, Dean C. F. Curtiss, Ames, Iowa.

Bull 3 years or over (2 shown), 1st Smith & Sons on Craven Knight, 2d Kennedy on Maxwalton Amateur; 2 years and under 3 (3 shown), 1st Herr Bros. & Reynolds on Royal Choice 2d, 2d Mitchell on Aldsworth Reformer, 3d Fosse on Heir Apparent; senior yearling (5 shown), 1st Uppermill Farms on Villager's Coronet; 2d Jackson & White on Dale Villager, 3d Herr Bros. & Reynolds on Ruby's Knight, 4th Henkel & Son on Crown Marshall, 5th Mitchell on Lavender Cumberland; junior yearling (12 shown), 1st Smith & Sons on Royal Cup, 2d Eliason on Gold Bug; 3d Oldsen on Moerness Hallmark, 4th Jones on Collynie Cumberland, 5th Smith & Sons on Lothian Lodestar, 6th Henkel & Sons on Standard Marshal, 7th Smith & Sons on Wizard of Nacmoor, 8th Fosse on Ashburn Sultan, 9th Smith & Sons on Balnakyle Brigadier; senior calf (15 shown), 1st and 3d Anoka Farms on Anoka Champion and Royal Stamp, 2d and 9th Eliason on Sunrise and Superb Lad, 4th Kennedy on Scottish Royal, 5th Uppermill Farm on Villager's Cardinal, 6th Herr Bros. & Reynolds on Master Bapton, 7th Jackson & White on Laird of Avondale, 8th Mitchell on Selected Cumberland; junior calf (9 shown), 1st and 8th Herr Bros. & Reynolds on Master Mariner and Brawith Master, 2d Anoka Farms on Rosebud Champion, 3d Mitchell on Cumberland Lavender, 4th and 5th Eliason on Superb Archer and Cumberland's Seal, 6th Cleverburn Farm on Orange Stamp 2d, 7th Henkel & Son on Marshal's Type, 9th Smith & Sons on Premier Knight.

Cow 3 years or over (4 shown), 1st Kennedy on Baroness Lady 7th, 2d Jones on Verbena of Oakdale, 3d Uppermill Farm on Cuckoo Beauty, 4th Fosse on Miss Myrtle; 2 years and under 3 (5 shown), 1st Kennedy on Windsor Belle 23d, 2d Smith on White Princess, 3d Herr Bros. & Reynolds on Woodburn Rosemary 2d, 4th Mitchell on Highfield's Parsley 6th, 5th Fosse on Lady Dorothy; senior yearling (11 shown), 1st and 3d Eliason on Violet Maid 8th and Lady Clara 9th, 2d Kennedy on Miss Lovely, 4th Herr Bros. & Reynolds on Goldie's Ruby, 5th Jackson & White on Lustre's Lass, 6th Smith on Maid of Orange, 7th Jones on Victoria Cumberland; junior yearling (11 shown), 1st Claverburn Farm on Sunny Maid 10th, 2d and 3d Uppermill Farm on Villager's Graceful 2d and Villager's Graceful, 4th Eliason on Miss May 5th, 5th Herr Bros & Reynolds on Village Belle 2d, 6th Henkel on Lindman Princess, 7th Smith on Marion 4th, 8th Jones on Collynie Belle, 9th Smith on Roan Blossom; senior calf (14 shown), 1st Jackson & White on Urbandale Duchess, 2d and 7th Anoka Farms on Fanny Anoka and Columbia Anoka, 3d Smith & Sons on Broadhooks Queen, 4th and 9th Eliason on Lady Clara 11th and Augusta of Northcote, 5th Herr Bros. & Reynolds on Averne 15th, 6th Uppermill Farm on Villager's Maurine, 8th Mitchell on Missie 2d; junior calf (18 shown), 1st and 6th Anoka Farms on Augusta Anoka 5th and Clipper Anoka 7th, 2d and 4th Uppermill Farm on Villager's Lassie and Villager's Clara 7th, 3d Kennedy on Oak Lawn Alice, 5th Herkelman on Lady Mildred, 7th Claverburn Farm on Princess Waterloo 4th, 8th Jones on Hillshade Marvel.

Senior champion bull, Smith & Sons on Craven Knight; junior and grand champion bull, Uppermill Farms on Villager's Coronet; senior champion cow, Kennedy, on Windsor Belle 23d; junior and grand champion cow, Eliason on Violet Maid 8th; graded herd (5 shown), 1st Kennedy, 2d Smith & Sons, 3d Herr Bros. & Reynolds, 4th Mitchell, 5th Fosse; young herd (7 shown), 1st Uppermill Farms, 2d Eliason, 3d Herr Bros. & Reynolds, 4th Smith & Sons, 5th Jones, 6th Mitchell; calf herd (10 shown), 1st Anoka Farms, 2d Eliason, 3d Uppermill Farm, 4th Jackson & White, 5th Herr Bros. & Reynolds, 6th Mitchell; get of bull (9 shown), 1st Eliason, 2d Uppermill Farm, 3d Anoka Farms, 4th Herr Bros. & Reynolds, 5th Alex Mitchell, 6th Jones; produce of cow (6 shown), 1st Eliason, 2d Jackson & White, 3d Mitch-

PARKER & SON'S GRAND CHAMPION DUROC JERSEY BOAR, KING ORION.

We Protest

Now and then we meet a man who says with some enthusiasm, "I am using Gargoyle Mobiloil and it works fine."

To our great disappointment we sometimes find that this friend is using the wrong grade for his engine.

We are too jealous of the results which can be secured from the proper use of Gargoyle Mobiloils to allow this careless practice to go on without a protest.

Naturally, because of their sheer *quality*, Gargoyle Mobiloils are bound to show good *lubricating* results. But we are aiming to furnish more than protection to the moving parts.

For this reason, we annually determine through our Board of Engineers, which *grade* of Gargoyle Mobiloils is best suited to each make and model of car.

The man who fails to use the *grade* of Gargoyle Mobiloils specified for his car stands to lose some of the greatest benefits which the oils offer him.

For example: Gas consumption depends a great deal on the piston-ring seal. The piston-ring seal depends solely on the "body" and character of the oil used.

In a given engine, oil of the very highest *quality* may be of wrong *body* for proper piston-ring seal. The result then is waste of gas and power with each piston stroke.

To assure your securing best results will you please look at the partial Chart at the right and see if you are using the correct grade for your car. If not, in justice to your own engine, will you, please, insist on being supplied with the correct grade.

Write for new 56-page booklet containing complete discussion of your lubrication problems, list of troubles with remedies and complete Charts of Recommendations for Automobiles, Motorcycles, Tractors and Marine Engines.

GARGOYLE

Mobiloils

A grade for each type of motor

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the Red Gargoyle on the container. If the dealer has not the grade specified for your car, he can easily secure it for you.

VACUUM OIL COMPANY, Rochester, N. Y., U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world

Domestic Branches: Detroit New York Philadelphia Minneapolis Boston Chicago Indianapolis Pittsburgh Kansas City, Kan. Des Moines

Correct Automobile Lubrication

Explanation: —The four grades of Gargoyle Mobiloils, for engine lubrication, purified to remove free carbon are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

In the Chart below, the letter opposite the car indicates the grade of Gargoyle Mobiloils that should be used. For example, "A" means Gargoyle Mobiloil "A." "Arc" means Gargoyle Mobiloil "Arctic," etc. The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

This Chart is compiled by the Vacuum Oil Co.'s Board of Engineers and represents our professional advice on Correct Automobile Lubrication.

Electric Vehicles: For motor bearings and enclosed chains use Gargoyle Mobiloil "A" the year round. For open chains and differentials, use Gargoyle Mobiloil "C" the year round.

Exception: For *winter lubrication* of pleasure cars use Gargoyle Mobiloil "Arctic" for worm drive and Gargoyle Mobiloil "A" for bevel gear drive.

ell, 4th Jones, 5th Smith & Sons, 6th Fosse.

Herefords.—White face lovers saw a good show at Hamline—good herds coming from Missouri, Minnesota and South Dakota. Quality and condition were much in evidence throughout all the classes. Extended comment is not necessary, as the top animals from the Yost herd appeared at Des Moines last week. Mr. J. H. Van Natta passed judgment on all classes in his usual able manner. Yost won most of the blues in classes and all the championships. Ardmore had no difficulty in taking the senior purple and defeated Duke Real 8th, the junior champion, for grand champion honors. Dorothy Donald 6th was made senior and grand champion female. Bonnie Doris, fifth-prize senior heifer at Des Moines, won the blue over Dorothy Hampton 23d, her stable mate which was given the blue and junior purple honors at Des Moines last week. Bonnie Doris was made junior champion at Hamline. Yost won all the blue in the group classes. Bereman, Sorenson, Biehl & Sidwell and Pettigrew all made good shows and came in for one or two blues in the single classes.

Exhibitors.—L. L. Anderson, Balaton, Minn.; Biehl & Sidwell, Queen City, Mo.; Jas. H. Bereman, Aurora, Ill.; Clinton Falls Nursery Co., Owatonna, Minn.; Giles E. Pettigrew, Flandreau, S. D.; W. H. Phipps, Atwater, Minn.; C. P. Sorenson, Balaton, Minn.; Robt. G. Waldron, Byron, Minn., and W. L. Yost, Kansas City, Mo. Judge, J. H. Van Natta.

Bull 3 years or over (2 shown), 1st Yost on Ardmore, 2d Pettigrew on Lord Generous; 2 years and under 3 (2 shown), 1st Bereman on Perfect Donald 2d, 2d Yost on Woodford 1st; senior yearling (3 shown), 1st and 2d Yost on Duke Real 8th and Fairfax 3d, 3d Pettigrew on Lelition; junior yearling (8 shown), 1st Anderson on Fairbanks, 2d Yost on Arranmore, 3d Phipps on Rupert's Improver, 4th Sorenson on Standard Lad 11th, 5th Bereman on Parader Perfection; senior calf (7 shown), 1st, 3d and 4th Bereman on Donald Disturber, Albany Columbus and Don Disturber, 2d and 5th Biehl & Sidwell on Annabel's Disturber and Earl Disturber, 6th Pettigrew on March Ion; junior calf (4 shown), 1st and 2d Biehl & Sidwell on Neal Disturber and Billy Disturber, 3d Yost on Beau Champion, 4th Sorenson on Beau Disturber 1st.

Cow 3 years or over (4 shown), 1st Yost on Dorothy Donald 6th, 2d Bereman on Dolly Fairfax, 3d Pettigrew on Nora S., 4th Waldron on Adell; 2 years and under 3 (4 shown), 1st Pettigrew on Standard Lady 17th, 2d Bereman on Prince Lass Britisher, 3d Yost on Belle Perfection 56th, 4th Clinton Falls Nursery Co. on Benita 19th; senior yearling (5 shown), 1st and 2d Yost on Bonnie Doris and Dorothy Hampton 23d, 3d Sorenson on Standard Lass 1st, 4th Pettigrew on Musada Gem, 5th Clinton Falls Nursery Co. on Aralia 4th; junior yearling (7 shown), 1st Yost on Bonnie Princess, 2d and 3d Bereman on Columbia March On and Prince Lass Columbus, 4th and 6th Sorenson on Standard Lass 3d and Standard Susie; senior calf (10 shown), 1st and 2d Yost on Bonnie Madeline and Bonnie Easter, 3d Bereman on Disturber's Fairy, 4th and 6th Sorenson on Disturber Pet and Dainty, 5th Biehl & Sidwell on Amy Disturber; junior calf (6 shown), 1st and 3d Bereman on Verna Disturber 2d and Begonia Wilton, 2d Yost on Bonnie Augusta, 4th Biehl & Sidwell on Bell Disturber, 5th Pettigrew on Queen Tow, 6th Waldron on Delia Donald.

Senior and grand champion bull, Yost on Ardmore; junior champion bull, Yost on Duke Real 8th; senior and grand champion cow, Yost on Dorothy Donald 6th; junior champion cow, Yost on Bonnie Doris; graded herd (3 shown), 1st Yost, 2d Bereman, 3d Pettigrew; young herd (3 shown), 1st Yost, 2d Sorenson, 3d Pettigrew; calf herd (6 shown), 1st Yost, 2d Bereman, 3d Biehl & Sidwell, 4th Sorenson; get of bull (5 shown), 1st Yost, 2d Biehl & Sidwell, 3d Sorenson, 4th Pettigrew; produce of cow (5 shown), 1st Yost, 2d Bereman, 3d Sorenson, 4th Pettigrew.

Aberdeen Angus.—Doddies made a good showing at Hamline despite the fact that they were not numerous. Congdon & Battles and C. D. & E. F. Caldwell furnished the top animals and captured most of the firsts and seconds, although good showings were made by two South Dakota exhibitors. Blackcap Bertram had no difficulty in taking blue in class and both senior and grand champion honors. Caldwells also had junior champion honors on a junior calf. Queen Milly of S. D., from the same herd, won the senior and grand champion female honors, the junior purple going to Congdon & Battles on Queen of Rosemere 5th. Caldwells won the blues in all the group classes.

Exhibitors.—Berry & Redfield, Hurley, S. D.; C. D. & E. F. Caldwell, Burlington Jct., Mo.; Congdon & Battles, Yakima, Wash., and John Lakings & Son, Hurley, S. D. Judge, W. H. Peters.

Bull 3 years or over (2 shown), 1st Caldwell on Blackcap Bertram, 2d Congdon & Battles on Knight of Rosemere; 2 years and under 3 (3 shown), 1st Congdon & Battles on Cherokeer, 2d Berry & Redfield on Blackwood Eric, 3d Caldwell on Blatant; senior yearling (1 shown), Congdon & Battles on Knight of Rosemere 2d; junior yearling (2 shown), 1st Congdon & Battles on Quality Lad of Rosemere 3d, 2d Berry & Redfield on Black Peer 2d; senior calf (6 shown), 1st and 2d Caldwell, 3d Congdon & Battles on Yakima Prince, 4th and 6th Berry & Redfield on Black Pudding Bob and Blackcap Jester, 5th Lakings & Son on Coy; junior calf (3 shown), 1st Caldwell, 2d Congdon & Battles on Yakima Black 4th, 3d Lakings & Son.

Cow 3 years or over (5 shown), 1st, 3d and 4th Caldwell on Queen Milly of S. D. 3d, Pride of Autumn and Esthonia 12th, 2d Congdon & Battles on Quissy of Meadowbrook, 5th Berry & Redfield on Blackbird Rose; 2 years and under 3 (4 shown), 1st and 4th Congdon & Battles on Kensington Lady E. and Pride of Rosemere 9th, 2d Berry & Redfield on Enamma 3d, 4th Congdon & Battles on Pride of Rosemere 9th; senior yearling (3 shown), 1st Caldwell on Esthonia 15th; 2d Berry & Redfield on Honey Dew, 3d Lakings & Son on Lake Dale Meta 4th; junior yearling (5 shown), 1st and 4th Congdon & Battles on Queen of Rosemere and Blackbird of Rosemere, 2d Caldwell on Blackcap Echo 3d, 3d Berry & Redfield on Evergreen E., 5th Lakings & Son on Lake Dale Blackbird 3d; senior calf (6 shown), 1st and 4th Caldwell on Blackbird 226th and unnamed, 2d Congdon & Battles on Pride of Rosemere 20th, 3d and 5th Berry & Redfield on Kensington of Momedale 40th and Edrina's Betsy 4th, 6th Lakings & Son on Lake Dale Betty 4th; junior calf (4 shown), 1st Congdon & Battles on Barbara of Rosemere, 2d and 4th Caldwell, 3d Lakings & Son on Dara Wren 2d.

Senior and grand champion bull, Caldwell on Blackcap Bertram; junior champion bull, Caldwell on unnamed; senior and grand champion cow, Caldwell on Queen Milly of S. D.; junior champion cow, Congdon & Battles on Queen of Rosemere; graded herd (2 shown), 1st Caldwell, 2d Congdon & Battles; young herd (2 shown), 1st Caldwell, 2d Lakings & Son; calf herd (2 shown), 1st Caldwell, 2d Congdon & Battles; get of bull (3 shown), 1st Caldwell, 2d Congdon & Battles, 3d Lakings & Son; produce of cow (3 shown), 1st Caldwell, 2d Congdon & Battles, 3d Lakings & Son.

Galloways.—Twenty-five cattle shown by Isaac Lincoln and H. & G. Croft, judged by W. H. Peters, of Fargo, N. D., constituted the Galloway show. Lincoln won all but three of the firsts in the bull classes and all of the firsts in the female classes. Croft had grand champion bull and Lincoln won all of the other purples and all of the blues in the group classes.

Exhibitors.—H. & G. Croft, Bluff City, Kan., and Isaac Lincoln, Aberdeen, S. D. Judge, W. H. Peters.

Bull 3 years or over (1 shown), 1st Croft on A. Carnot; 2 years and under 3 (1 shown), 1st Lincoln on General; senior yearling (1 shown), 1st Croft on Rex of Greenbush; junior yearling (1 shown), 1st Lincoln on Brusiloff; senior calf (3 shown), 1st and 2d Lincoln on Milford L. and Falcon L., 3d Croft on Frolic of Greenbush; junior calf (1 shown), 1st Croft on Eirod of Greenbush.

Cow 3 years or over (4 shown), 1st and 3d Lincoln on Fatema of L. F. and Beatrice of L. F., 2d Croft on Little May 2d of L. F.; 2 years and under 3 (2 shown), 1st Lincoln on Mandy, 2d Croft on Meadow Queen; senior yearling (3 shown), 1st and 2d Lincoln on Lady Florence 5th and Maud 5th, 3d Croft on Evelyn of Greenbush; junior yearling (2 shown), 1st Lincoln on Florence 6th of L. F., 2d Croft on Gwendoline 3d; senior calf (3 shown), 1st and 2d Lincoln on Meta May L. 6th and Marth L. 6th, 3d Croft on Vina of Greenbush; junior calf (3 shown), 1st and 2d Lincoln on Betty L. and Beatrice L. 7th, 3d Croft on Silvia of Greenbush.

Senior champion bull, Croft on A. Carnot; junior champion bull, Lincoln on Milford L.; senior champion cow, Lincoln on Fatema of L. F.; junior champion cow, Lincoln on Lady Florence 5th; grand champion bull, Croft on A. Carnot; grand champion cow, Lincoln on Fatema of L. F.; graded herd (2 shown), 1st Lincoln, 2d Croft; young herd (2 shown), 1st Lincoln, 2d Croft; calf herd (2 shown), 1st Lincoln, 2d Croft; get of bull (2 shown), 1st Lincoln, 2d Croft; produce of cow (2 shown), 1st Lincoln, 2d Croft.

Red Polled.—The showing of Red Polled cattle at Hamline this year lacked the numbers of former shows made by this breed in recent years. Quality among the top cattle was much in evidence. Jean Du Luth Farm made its usual strong showing and most creditable showings were made by John A. Curran and E. E. Novak. Jean Du Luth lost only one blue in classes. The aged bull class revealed Paul, who easily won the blue and later defeated Proctor Knott 4th for senior purple honors. Paul is showing in good form and a contest arose between him and Pilot Lee, a son of Teddy's Best and Pear, for grand championship honors. Pilot Lee is a junior yearling and Mr. Grout says he is the bull they have been praying for at Jean Du Luth Farm. Pilot Lee is not showing in as high flesh as Paul. He has great length and natural thickness and was finally made grand champion bull. A better prospect for the welfare of the breed would be hard to find. In female classes five good cows appeared. Lady Golden, the world's champion three-year-old, was showing with an empty udder, which detracted from her usually good showing form. Jean Du Luth Betty, a dry cow, near to calving, showed in good form. She is smooth, is a wonderful handler, has good depth and length and not only won blue in her class, but the purple for senior champion honors. Eva Falstaff 4th, shown by Curran, was one of the best type cows in the ring, but fell to second place because of a bad quarter. Jean Du Luth Betty was defeated for grand champion honors by the junior yearling heifer, Jean Du Luth Bamby, a heifer of unusual promise.

Exhibitors.—John A. Curran, Sechlerville, Wis.; Jean Duluth Farm, Duluth, Minn., and E. E. Novak, New Prague, Minn. Judge, Andrew Boss.

Bull 3 years or over (2 shown), 1st Jean Du Luth Farm on Paul, 2d Curran on Prince Luna; 2 years and under 3 (1 shown), 1st Jean Du Luth Farm on Proctor Knott 4th; senior yearling (1 shown), 1st Jean Du Luth Farm on Paul Junior; junior yearling (2 shown), 1st Jean Du Luth Farm on Pilot Lee, 2d Curran an Marham 2d; senior calf (4 shown), 1st Jean Du Luth Farm on Jean Du Luth Pacemaker, 2d Curran on Fellows, 3d and 4th Novak on Lakeview Peter and Lakeview Dan; junior calf (4 shown), 1st and 3d Curran on O. G. W. Wilson and Brilliant Lad, 2d and 4th Novak on Lakeview Ernest and Lakeview Martin.

Cow 3 years or over (5 shown), 1st and 3d Jean Du Luth Farm on Jean Du Luth Bettie and Lady Golden, 2d and 4th Curran on Eva Falstaff 4th and Daisy's Girl; 2 years and under 3 (2 shown), 1st Jean Du Luth Farm on Liza Again, 2d Curran on Isâbel; senior yearling (3 shown), 1st Jean Du Luth Farm on Jean Du Luth Bonny Belle, 2d and 3d Novak on Lakeview Hope and Lakeview Dauntless; junior yearling (6 shown), 1st and 2d Jean Du Luth Farm on Jean Du Luth Bamby and Jean Du Luth Bonny Zita, 3d and 4th Curran on Popular Lassie and Bessie; senior calf (4 shown), 1st Jean Du Luth Farm on Jean Du Luth Delight, 2d and 3d Curran on Irene and Dona's Ruth 2d, 4th Novak on Lakeview Fanella; junior calf (2 shown), 1s and 2d Jean Du Luth Farm on Jean Du Luth Fancy and Gipsy Maid.

Senior champion bull, Jean Du Luth Farm on Paul; junior and grand champion bull, Jean Du Luth Farm on Pilot Lee; senior champion cow, Jean Du Luth Farm on Jean Du Luth Bettie; junior and grand champion cow, Jean Du Luth Farm on Jean Du Luth Bamby; graded herd, 1st Jean Du Luth Farm, 2d Curran; young herd, 1st Jean Du Luth Farm; calf herd, 1st Jean Du Luth Farm, 2d Curran; get of bull, 1st Jean Du Luth Farm, 2d Curran, 3d Novak; produce of cow, 1st Jean Du Luth Farm, 2d Curran.

FAT CATTLE.

Exhibitors—Claverburn Farm, Colo, Ia.; C. D. & E. F. Caldwell, Burlington Junction, Mo.; Congdon & Battles, Yakima, Wash.; Eben A. Jones, Rockland, Wis.; John Lakings & Son, Hurley, S. D.; C. P. Sorenson, Balaton, Minn.; Herr Bros. & Reynolds, Lodi, Wis.; W. I. Yost, Kansas City, Mo. Judge, Andrew Boss, St. Paul, Minn.

Steer, spayed or martin heifer, 2 years and under 3 (5 shown), 1st, 4th and 5th Claverburn Farm on Improver, Ben and Doc, 2d Herr Bros. & Reynolds on White Velvet, 3d Lakings & Son on Lake Dale Prince; 1 year and under 2 (6 shown). 1st Sorenson on Standard Lad 4th, 2d Caldwell on Luckily, 3d Herr Bros. & Reynolds on Lightning Flash, 4th and 6th Claverburn Farm on Bobby and Johnny, 5th Lakings & Son on Lake Dale Dick; calf (9 shown), 1st Yost on Liberty Bond, 2d Caldwell on Kiahoga, 3d Herr Bros. & Reynolds on Benefactor 2d, 4th Jones on Hillshade Laddie, 5th Lakings & Son on Lake Dale Harry, 6th Congdon & Battles on Doc Yak, 7th Lakings & Son on Lakedale Harry.

Champion steer, Yost on Liberty Bond; steer herd (3 shown), 1st Herr Bros. & Reynolds, 2d Claverburn Farm, 3d Caldwell.

DAIRY CATTLE.

Holsteins.—Black and white cattle are favorites among Minnesota farmers where milk production occupies the center of the stage. Some of the best herds in America are located between the Mississippi and the Red River of the North. An agreement on the part of the "big fellows" leaves the showing to lesser lights. Even so, a better show was staged at Hamline than appeared in 1916. Sensations were not numerous, although the aged bull class was quite spectacular and brought out five good bulls at the top; and if there was a sensation in the show, it appeared in Sir Pietertje Ormsby Mercedes 14th, a deep, massive bull with lots of scale, high at the withers, strong in the heart and plenty of style. Dutchland Aggie Tidy Prince is a good bull in any company. Far Oaks Sir Violet Ormsby, a junior calf from the Culver herd, took the junior purple, but grand champion honors were easily conceded to the senior bull. The aged cow class brought out 13 good cows. Springbrook Darkness, blue ribbon cow at Des Moines, met new company at Hamline and fell to fourth place. Shilling Colantha Belle, blue ribbon cow at Grand Forks, was placed first in class and given the senior purple ribbon. Grand champion honors, though, were generally conceded to Edenwold Aggie Bess, the senior yearling heifer from the same herd and a real promising heifer.

Exhibitors.—Alfred Berglund, Albert Lea, Minn.; Brown Bros., Hartford, S. D.; V. S. Culver, Stillwater, Minn.; Wm. Jeans, Withrow, Minn.; Marloy & McCargar, Mankato, Minn.; Mayowood Farm, Rochester, Minn.; S. F. Ruble, Albert Lea, Minn.; Rogers & Kolliner Co., Stillwater, Minn.; A. F. Wendtland, Good Thunder, Minn. Judge, J. L. Smith, Spokane, Wash.

Bull three years or over (7 shown), 1st Marlow & McCargar on Sir Pietertje Ormsby Mercedes 14th, 2d Rogers & Kolliner Co. on Dutchland Aaggie Tidy Prince, 3d Culver on Peibe Laura Ollie Homestead King, 4th Mayowood Farm on Johanna Oneline Grahamhelm Lad, 5th Berglund on Buffalo Allerton Beets; 2 years and under 3 (2 shown), 1st Culver on Far Oaks Sir Ormsby Johanna, 2d Jeans on W. R. Korndyke Veeman; senior yearling (3 shown), 1st Mayowood on King Aaagie De Kol Grahamhelm, 2d Wendlandt on Mutual Paul Champion, 3d Jeans on W. J. Skylark; junior yearling (3 shown), 1st Jeans on W. R. Skylark Burke, 2d Wendlandt on Piebe Champion Boy, 3d Brown Bros. on King Johanna Segis Pietertje; senior calf (11 shown), 1st Jeans on Sir Ormsby Korndyke Pietertje, 2d and 3d Mayowood on Johanna Glenda Lad and Mercedes Ondine Jewel, 4th and 5th Rogers & Kolliner Co. on Dallas Hengerveld De Kol and Dallas Colantha Johanna Lad; junior calf (4 shown), 1st and 2d Culver on Far Oaks Sir Violet Ormsby and Far Oaks Sir Ormsby Champion, 3d Rogers & Kolliner Co. on Dallas Peitertje Lad, 4th Jeans on Willow Ridge King Clothilde Prilly.

Cow 4 years or over (13 shown), 1st, 2d and 5th Rogers & Kolliner Co. on Shilling Colantha Belle, Shilling Colantha Langtry and Madison Jennie Friend, 3d Wendlendt on Victoria Perfecta De Kol, 4th Culver on Springbrook Darkness; 3 years and under 4 (4 shown), 1st Berglund on Daisy Manor Cornucopia De Kol, 2d Wendtland on Pietertje Perfecta 3d, 3d Rogers & Kolliner on Eona Aaggie Tidy; 2 years and under 3 (9 shown), 1st Rogers & Kolliner on Edenwold Johanna De Kol Lilith, 2d and 3d Culver on South Side Inka De Kol 2d and Far Oaks Ideal Ormsby, 4th Mayowood Farm on Pietertje Perfection Soo, 5th Brown Bros. on Laverta Mantema Gerben; senior yearling (8 shown), 1st Rogers & Kolliner on Edenwold Aggie Bess, 2d Mayowood Farm on Johanna Ondine Soo, 3d Culver on Far Oak's Skylark Ormsby, 4th Ruble on Bessie Skylark De Kol Galis, 5th Berglund on Daisy Allerton De Kol; junior yearling (6 shown), 1st Rogers & Kolliner on Dallas Friend Madison Jennie, 2d Mayowood Farm on Johanna Woodcrest Ruth, 3d and 5th Culver on Far Oaks Lily Ormsby and Far Oaks Harriet Ormsby, 4th Brown Bros. on Laverta Canary; senior calf (15 shown), 1st Rogers & Kolliner on Rose Eona Aggie Tidy, 2d Mayowood Farm on Johanna Tritomia Mercedes, 3d Jeans on Woodcrest Echo, 4th Culver on Far Oaks Miss Ormsby Rue, 5th Ruble on Beauty Skylark De Kol Galis; junior calf (9 shown), 1st Culver on Pelagie Wayne Roy Apple King, 2d Rogers & Kolliner on Shilling Pieterje Prilly, 3d Ruble on Doris La Polka Boon, 4th Culver on Far Oaks Madeline Ormsby, 5th Mayowood Farm on unnamed.

Senior and grand champion bull, Marlow & McCargar on Sir Pieterje Ormsby Mercedes 14th; junior champion bull, Culver on Far Oaks Sir Violet Ormsby; senior champion cow, Rogers & Kolliner on Shilling Colantha Belle; junior and grand champion cow, Rogers & Kolliner on Edenwold Aggie Bess; grade herd (5 shown), 1st Rogers & Kolliner, 2d Culver, 3d Berglund, 4th Mayowood Farm, 5th Brown Bros.; young herd (4 shown), 1st Mayowood Farm, 2d Culver, 3d Ruble, 4th Brown Bros.; calf herd (4 shown), 1st Mayowood Farm, 2d Culver, 3d Ruble, 4th Brown Bros.; get of bull (5 shown), 1st Mayowood Farm, 2d Culver, 3d Rogers & Kolliner, 4th Ruble, 5th Brown Bros.; produce of cow (7 shown), 1st Mayowood Farm, 2d Berglund, 3d Marlow & McCargar, 4th Brown Bros., 5th Rogers & Kolliner.

Jerseys.—Minnesota and Wisconsin contributed to make a high-class show of island cattle at Hamline. Larger shows have been out in the Gopher state, but there was a lot of good stuff shown this year, 72 head taking part in making the competition keen. Competition was especially strong in female classes. Gamboze's Vellum's Majesty was placed first in class and made senior and grand champion bull to the satisfaction of those about the ring. The junior yearling, Rose's Elmhurst Jolly, was given the junior purple ribbon. All the female champion honors went to Wisconsin. Oxford Lena's Lass is a good type and annexed senior purple honors. Quite a contest developed over junior purple honors, the test centering between Oxford Togo's Jolly and Cupid's Oxford Panola. The decision went to the former, who was also made grand champion female of the breed.

Exhibitors.—C. R. Brackett, Long Lake, Minn.; W. S. Dixon, Brandon, Wis.; H. L. Elliot, Hopkins, Minn.; Jas. J. Grathwol, Excelsior, Minn.; J. W. Love, Wayzata, Minn.; C. J. Morck, Kenyon, Minn.; M. D. Munn, St. Paul, Minn.; Ruby Plank, Wayzata, Minn.; Chas. A. Peterson, Rosendale, Wis.; Geo. T. Slade, White Bear Lake, Minn.; H. C. Wagner, Excelsior, Minn.; Mrs. J. D. Anderson. Judge, C. T. Graves.

Bull 3 years or over (4 shown), 1st Munn on Gamboze's Vellums Majesty, 2d Dixon on Sultana's Oxford Rosette, 3d Morck on Noble of New [illegible] 4th Anderson on Emmet's Bobby; 2 years and under 3 (5 shown), 1st [illegible] on Ibsen's Chief, 2d Munn on Medora's Raleigh, 3d Love on Jolly's Eminent Boy, 4th Elliot on Combination Noble Judd, 5th Slade on Noble Prince Jolly; senior yearling (2 shown), 1st Peterson on Marguerite's Jolly King, 2d Love on Eminent Combination [illegible] calf (6 shown) 1st Dixon on [illegible]'s Oxford Togo, 2d Slade on Noble [illegible] Jolly, 3d Peterson on Chief Beauvoir, 4th Brackett on Princess Dandy Noble, 5th Grathwol on Donna's Noble Prince; junior calf (6 shown), 1st and 4th [illegible] on Noble Cacent and Rosinwette Plymouth Lad, 2d Peterson on Western King's Glory Lad, 3d Munn on Majesty's Mermaid's Lad, 5th Dixon on Oxford Unas Togo.

Cow 4 years or over (9 shown), 1st Dixon on Oxford Unas Lass, 2d [illegible] 4th on Columbia, 3d Munn on [illegible] Odell of H. S. F; 3 years and under 4 (3 shown), 1st Peterson on Ibsen's Pearl, 2d and 3d Munn on [illegible]'s Harriet and Burmb's Helen; 2 years and under 3 (5 shown), 1st [illegible] on Mon Plaisirs Goldin 2d, 2d Peterson on Glory's Pearline, 3d and 5th Munn on Burmb's Freda and Combination's Coulisse, 4th Dixon Cowslip's Brightness; senior yearling, [illegible] (4 shown), 1st and 3d Munn on Golden Fern's Tri-

Riding On Air

TWO of the transportation wonders of this age came in with the 20th century, the Wright aeroplane and the Firestone air-filled tire. It was in 1900 that Orville and Wilbur Wright designed their first flying machine, an invention destined to revolutionize the arts and sciences, in peace and war.

It was in 1900 that H. S. Firestone organized the Firestone Tire Company which, in 17 years, has brought to present perfection the tire that bears his name. He foresaw that on the rubber tire hung the future usefulness of the motor car, for pleasure or work, and Firestone creative and executive genius set about its development. Today the Firestone Tire represents that development in its most desirable combination, lightness with strength, reliability with speed. Firestone Non-Skid gives you travel-insurance, a certain grip with a massive body supporting it. Firestone rubber gives easiest possible riding with that protection to mechanism so vital in today's efficiency.

Public recognition has increased Firestone sales to an unparalleled height in five years. Result, volume of production which, with "know-how" and saving in manufacture and sales, brings down the price to you. Your dealer and the nearest Firestone Branch unite to give you the maximum of prompt, economical service.

Masters of Transportation

IN the hands of Orville and Wilbur Wright, the experimental "glider" developed into the first successful flying machine.

On the 9th of September, 1908, at Fort Myer, Virginia, U.S.A., Orville Wright made the record-breaking flight of 45 miles in 1 hour, 14⅜ minutes.

FIRESTONE TIRE AND RUBBER COMPANY
Akron, Ohio — Branches and Dealers Everywhere

Firestone TIRES

ungs and Tunas Lady Alice, 2d Dixon on Oxford Togo's Beauty, 4th Peterson on Oxford Glory Laverne; junior yearling (6 shown), 1st Munn on Combination Fox Carnation, 2d Morck on New Leland's Buttertub, 3d and 5th Dixon on Majesty's Oxford May, 4th Peterson on Glory's Oxford Belle; senior calf (12 shown), 1st and 4th Dixon on Oxford Togo's Jolly and Courisse Maj. Oxford; 2d Slade on Cupid's Jolly Pride, 3d Elliott on Mayflower's Cupid Pride, 5th Peterson on Chief's Glory Laverne; junior calf (17 shown), 1st Slade on Cupid's Oxford Panoa, 2d and 3d Love on May Mortland and Majesty's Queen, 4th Brackett on Dandy's Cora, 5th Dixon on May Oxford Majesty.

Senior and grand champion bull, Munn on Gamboze's Vellum's Majesty; junior champion bull, Wagner on Rose's Elmhurst Jolly; senior champion cow, Dixon on Oxford Unas Lass; junior and grand champion cow, Dixon on Oxford's Togo Jolly; graded herd (2 shown), 1st Dixon, 2d Peterson; young herd (1 shown), Dixon; calf herd (4 shown), 1st Slade, 2d Love, 3d Dixon, 4th Brackett; get of bull (4 shown), 1st Love, 2d Dixon, 3d Brackett, 4th Peterson; produce of cow (8 shown), 1st Brackett, 2d Dixon, 3d Peterson, 4th Elliott, 5th Wagner.

Guernseys.—The Guernsey show was an exclusive Minnesota affair and a good one—not large, but good, and 100 per cent better than any previous show made by Minnesota exhibitors. There was certainly a sensation in the Guernsey classes. Ladysmith Cherub, the champion at the dairy show last fall, is showing in still better form and is trained to the letter. He was the outstanding animal by far and was conceded senior and grand championship honors from the start. Caribou Romulus, a senior calf shown by Caribou Farms, was given the purple in the junior classes. The aged cow class showed eight good ones. There seems to be a tendency to play toward extreme quality, which detracts somewhat from the ruggedness one likes to see. Fanny of the Valles du Creux is not only a show cow, but demonstrates at the pail, making 704 pounds of fat for the year ending May 1st. Pearl's Dot, Tenney's two-year-old heifer, was made senior and grand champion female, junior champion honors going to Lady La Verne of Shorewood, a senior calf from the same herd. Wm. Jones, of Waukesha, Wis., passed upon the Guernseys and selected them with great care nad deliberation.

Exhibitors.—A. W. Bragg, Albert Lea, Minn.; Caribou Farms, Saginaw, Minn.; Jean Du Luth Farm, Duluth, Minn.; John P. Nelson, Stillwater, Minn.; Cyrus J. Ott, Albert Lea, Minn.; Victor Stiehl, Albert Lea, Minn.; W. R. Sweet, Albert Lea, Minn.; D. D. Tenny, Crystal Bay, Minn.; Wildwood Farm, Albert Lea, Minn. Judge, Wm. Jones, Waukesha, Wis.

Bull 3 years or over (4 shown), 1st Tenney on Ladysmith Cherub, 2d and 4th Jean Du Luth on Starlight's Excelsior and Austerlitz, 3d Stiehl on Roshampton Crossus; 2 year and under 3 (2 shown), 1st Caribou Farms on Caribou King Albert, 2d Jean Du Luth on May Rose Searchlight; senior yearling (4 shown), 1st Tenney on Sequel's Chesney Farms, 2d Jean Du Luth on Golden Noble of the Lakes; junior yearling (4 shown), 1st Tenne yon Sequel's Duke of Shorewood, 2d and 3d Jean Du Luth on Brilliant of Clara Cooper Farm and Lady Gree's May King of Jean Du Luth, 4th Skaar on Adeline's Perfection; senior calf (5 shown), 1st and 4th Caribou Farms on Caribou Romulus and Caribou Masher, 2d Jean Du Luth on Queenie's Austerlitz, 3d Nelson on Howard of Fairy Falls, 5th Stiehl on Navarinos Bob of Maplewood; junior calf (6 shown), 1st and 3d Jean Du Luth on Le Roy Starlight of Jean Du Luth and Frias Chene of Jean Du Luth, 2d Tenney on Altheas Pride of Shorewood, 4th Caribou Farms on Caribou Captain, 5th Nelson on Oliver of Fairy Falls.

Cow 4 years or over (8 shown), 1st Jean Du Luth Farm on Fanny of the Vallee du Creux, 2d and 6th Caribou Farms on Sequel's Maid of Schuylkill and Sequel's Maid of Beauty, 3d, 4th and 5th Tenney on Rosette of Marais Farm, Althea of Sarnia and Cora of Gerar; 3 years and under 4 (2 shown), 1st Jean Du Luth Farm on Jean Du Luth Coronet, 2d Caribou Farms on Caribou Celosia; 2 years and under 3 (5 shown), 1st and 2d Tenney on Pearl's Dot and Ma Chere Procris, 3d Caribou Farms on Pearl of Greenlodge, 4th Ott on Ivadell Mar of Wildwood, 5th Jean Du Luth Farm on William's May Rose; senior yearling, dry (6 shown), 1st and 2d Jean Du Luth Farm on Gree's May Rose and Chene's May Rose, 3d Caribou Farms on Caribou Berta, 4th, 5th and 6th Wildwood Farm on Lessing on Pine Ridge, Frosty of Pine Ridge and Primo of Pine Ridge; junior yearling (4 shown), 1st and 4th Caribou Farms on Caribou Rachel and Caribou Pulios, 2d Tenney on Bell Boy's Lassie of City View, 3d Jean Du Luth Farm on Jessican of Jean Du Luth; senior calf (10 shown), 1st Tenney on Lady La Verne of Shorewood, 2d Stiehl on unnamed, 3d Caribou Farms on Caribou Mary, 4th Jean Du Luth Farm on Mosrose of Jean Du Luth, 5th Skaar on unnamed; junior calf (5 shown), 1st Tenney on Pearl's Golden Secret Girl, 2d Jean Du Luth Farm on Marathon Rose Queen, 3d Bragg on Martha's Ruby Sequel, 4th Skaar on unnamed, 5th Caribou Farms on Caribou Channoute.

Senior and grand champion bull, Tenney on Ladysmith Cherub; junior champion bull, Caribou Farms on Caribou Romulus; senior and grand champion cow, Tenney on Pearl's Dot; junior champion cow, Tenney on Lady La Verne of Shorewood; graded herd (5 shown), 1st Tenney, 2d Caribou Farms, 3d [illegible] Du Luth Farm [illegible] 1st Jean Du Luth Farm, 2d Caribou Farms; calf herd (2 shown), 1st Caribou Farms, 2d Jean Du Luth Farm; get of bull (3 shown), 1st Jean Du Luth Farm, 2d Caribou Farms, 3d Wildwood Farm; produce of cow (2 shown), 1st Tenney, 2d Caribou Farms.

Ayrshires.—The Ayrshire show was made up by an exhibit from the Ferndell Farms, of Ladysmith, Wis. They were presented in good form and could have stood strong competition.

Milking Short-horns.—There was an unusually good showing of milking Short-horns made this year at Hamline. In the bull classes especially there was marked improvement over last year's exhibit, and the display excited much favorable comment and did the milking Short-horn interests a great deal of good in Minnesota. Hartford Welfare is a bull of the right sort. He has scale and great length without losing quality and Short-horn character. His son, Welfare's Champion, still a calf, defeated him for championship honors. Imported Christmas Rose is a cow of correct stamp. She swings a good udder, has good length and depth and retains the good old roan color and the straight lines that stamp her as a Short-horn. She had no trouble capturing the purple in female classes.

Exhibitors.—Finley McMartin & Son, Claremont, Minn., and Otis Herd, Willoughby, Ohio. Judge, Andrew Boss, St. Paul, Minn.

Bull 2 years or over (3 shown), 1st McMartin & Son on Hartford Welfare, 2d and 3d Otis Herd on British Prince and Corporal Clay; 1 year and under 2 (2 shown), 1st McMartin & Son on Royal Welfare, 2d Otis Herd on Corporal Peach; under 1 year (3 shown), 1st and 2d McMartin & Son on Welfare Champion and Bella Boy 6th, 3d Otis Herd on British Star.

Cow 3 years or over (4 shown), 1st and 3d Otis Herd on Christmas Rose and British Imp. Rose; 2d and 4th McMartin & Son on Meadowrill and Roan Maud 2d; 2 years and under 3 (3 shown), 1st and 2d Otis Herd on Glenside Lass and Rose Clyde, 3d McMartin & Son on Iris 2d; 1 year and under 2 (6 shown), 1st, 2d and 3d Otis Herd on Lady of the Glen, Winsome Lady and Loobagh Darling; under 1 year (4 shown), 1st and 3d McMartin & Son on Roan Maid 5th and Lucy Hartforth, 2d and 4th Otis Herd on Lady Maggie and Lady Rose.

Grand champion bull, McMartin & Son on Welfare's Champion; grand champion cow, Otis Herd on Christmas Rose; graded herd (2 shown), 1st Otis Herd, 2d McMartin & Son; young herd (2 shown), 1st McMartin & Son, 2d Otis Herd; calf herd (2 shown), 1st McMartin & Son, 2d Otis Herd; get of bull (2 shown), 1st McMartin & Son, 2d Otis Herd; produce of cow (2 shown), 1st Otis Herd, 2d McMartin & Son.

THE HORSE SHOW.

Horse shows have been larger at Minnesota and in some of the classes better animals have appeared in the past. The show this year was characterized, however, by absence of tailenders, and all would have stood well in more competition. The horse industry has always stood well in the Gopher state, but has never assumed the importance that it has achieved in her neighboring state. This is to be expected. Minnesota is still youthful as regards development. Iowa is a seed state. The night shows were well conducted and well attended. Wednesday evening especially brought out a good crowd from the twin cities. The University of Minnesota made strong showings in the Percheron and Clydesdale classes.

Percherons.—Percherons have always had a representative exhibit at Hamline and this year's showing was no exception. Exhibits were all furnished by Iowa and Minnesota breeders. Gopher state breeders made a strong show and came in for their share of the awards. Philix, from the Singmaster stables, again headed the aged stallion class, but failed to capture the purple. Keota Jalap looked better to David Fyffe and J. L. Edmonds, who passed judgment on all these classes. Both horses are worthy, but Philix is the draftier horse. The female classes disclosed some good Percherons. Sara Belle, Hurdcroft's yearling filly that won the futurity class, junior champion and reserve champion honors at Des Moines last week, was a strong contender for the purple, but not strong enough to defeat Fashion Vernon, a yeld mare shown by the University of Minnesota. The university's showing in the Percheron class was good. They won second in brood mare and foal class, second on filly foal and first and champion ribbons on yeld mare.

Exhibitors.—Chas. H. Babcock, Moville, Iowa; Finch Stock Farm, Fargo, N. D.; Hurdcroft Farm, Monticello, Minn.; Henry V. Nelson, Rochester, Minn.; J. D. Singmaster & Son, Keota, Iowa, and University of Minnesota, St. Paul, Minn. Judge, J. L. Edmonds, Champaign, Ill.

Stallion 4 years or over (7 shown), 1st Singmaster & Son on Phillix, 2d Babcock on Ivan, 3d Hurdcroft Farm on Kanton, 4th Finch Stock Farm on Mazas; 3 years and under 4, 1st and 4th Singmaster & Son on Keota Jalap and Eugene, 2d Hurdcroft Farm on Herber, 3d Finch Stock Farm on Grastón; Minnesota stallion 3 years or over (2 shown), 1st and 2d Hurdcroft Farm on Kanton and Mike; 2 years and under 3 (17 shown), 1st and 3d Singmaster & Son on Jock and Emerson; 2d Hurdcroft Farm on Promoter; 4th Babcock on Fernand; 1 years and under 2 (5 shown), 1st Singmaster & Son on Maplegrove Ledgermain; 2d Finch Stock Farm on unnamed; 3d and 4th Babcock on Wildair Jr. and Leheine; Minnesota stallion 1 year and under 3 (4 shown), 1st, 3d and 4th Finch Stock Farm on Roland, Wheeler's Pride and Superior; foal (3 shown), 1st Finch Stock Farm on unnamed; 2d and 3d Hurdcroft Farm on unnamed; five animals, property of one exhibitor (special), 1st Singmsater & Son, 2d Finch Stock Farm, 3d Babcock.

Mare and foal (5 shown), 1st Finch Stock Farm on Lumiere and foal, 2d University of Minnesota on Zanness and Ronzana, 3d and 4th Hurdcroft on Kasbah and foal and Cocotte and foal; Minnesota mare and foal (3 shown), 1st, 2 and 3d Hurdcroft on Kasbah and foal, Zona and foal and Cocotte and foal; yeld mare 4 years or over (2 shown), 1st University of Minnesota on Fashion Vernon, 2d Babcock on Betty; mare 3 years and under 4 (4 shown), 1st, 2 and 4th Hurdcroft on Pearl, Hillary Helix and Dorris, 3d Babcock on Odelade; Minnesota mare 3 years or over (4 shown), 1st, 2d and 3d Hurdcroft on Kasbah, Hillary Helix and Dorris; filly 2 years and under 3 (4 shown), 1st and 3d Babcock on Libelle and Majorette, 2d Henry V. Nelson on Hesther, 4th Finch on Irma; filly 1 year and under 2 (5 shown), 1st, 2d and 4th Hurdcroft on Sara Belle, Monticello Maid and Kionotte, 3d Babcock on Minnie; Minnesota filly 1 year and under 3 (2 shown), 1st Finch on Irma, 2d Hurdcroft on Kionotte; filly foal (3 shown), 1st Babcock on Queen, 2d University of Minnesota on Ronzana, 3d Hurdcroft on Unnamed; Minnesota stallion or filly foal (2 shown), 1st and 2d Hurd.

Champion stallion, Singmaster on Keota Jalap; champion mare, University of Minnesota on Fashion Vernon.

Get of stallion (2 shown), 1st Hurdcroft, 2d Babcock; produce of mare (2 shown), 1st Babcock, 2d Finch; breeder's group (1 shown), 1st C. H. Babcock.

Percheron Society Specials—Stallion 3 years or over, bred and owned by exhibitor, 1st Singmaster on Keota Jalap, 2d Babcock on Scheiner; stallion under 3 years, bred by exhibitor, 1st and 3d Singmaster on Maplegrove Ledgermain and Jock, 2d Babcock on Wildair Jr; mare under 3 years, bred and owned by exhibitor, 1st Hurdcroft on Sara Belle, 2d and 3d Babcock on Majorette and Minnie; champion mare, bred and owned by exhibitor, Hurdcroft on Sara Belle, reserve Babcock on Marjorie; five stallions, owned by one exhibitor, 1st Singmaster on Lagos, Philix, Keota Jalap, Jock and Nandau, 2d Finch on Mazas, Mike, Graston, Superior and Unnamed, 3d Babcock on Ivan, Scheiner, Fernand, Wildair Jr. and Schriner.

Belgians.—The Belgian show was much smaller than the 1916 show, and while all shown were worthy animals, the tops were not in keeping with those of last year. The show was made up principally by exhibits from the Finch and Lefebure stables. The best plums of the show went to the Finches. Hurcle, a big, toppy chestnut, with plenty of scale, thickness and Belgian stamp, was first-prize aged and champion stallion of the show, with Duke of Elmwood, Lefebure's first-prize two-year-old, as reserve champion. Clarion du Balcan, a yearling son of Anna du Balcan, that stood first at Des Moines in a large class of yearlings, was apparently lost by the judges and placed third in class and below some not ranking well at Iowa. Finch's brood mare, Deusy, a fine, big bay mare, was made champion female.

Exhibitors—Finch Stock Farm, Fargo, N. D.; H. Lefebure & Sons, Fairfax, Ia.; A. F. Noltimier & Sons, St. Paul Park, Minn., and Frank P. Shekelton & Sons, Lawler, Ia. Judge, David M. Fyffe.

Stallion 3 years or over (2 shown), 1st Finch on Hurcle, 2d Lefebure on Bonnot de la Courte; 3 years and under 4 (3 shown), 1st Shekelton on Reavedore, 2d Lefebure on Indigene, 3d Noltimier on Osanan; Minnesota stallion 3 years or over (1 shown), Nontimier on Asanan; stallion 2 years and under 3 (8 shown), 1st and 4th Lefebure on Duke of Elmwood and Echelen, 2d and 3d Finch on Marlborough and Pershing; 1 year and under 2 (5 shown), 1st Finch on Jupiter's King, 2d, 3d and 4th Lefebure on Expert, Clarion du Balcan and Fairfax Jean; Minnesota stallion 1 year and under 3 (3 shown), 1st, 2d and 3d Finch on Walker's Best, King and Buiscant; stallion foal (1 shown), 1st Lefebure on Fairfax Bunny.

Mare and foal (1 shown), 1st Finch on Deusy; yeld mare, 4 years or over (1 shown), 1st Noltimier on Sarah; mare 3 years and under 4 (2 shown), 1st Lefebure on Radius 4th, 2d Noltimier on Abby; Minnesota mare 3 years or over (2 shown), 1st and 2d Noltimier on Sarah and Abby; filly 2 years and under 3 (5 shown), 1st Lefebure on Nannette 2d, 2d, 3d and 4th Finch on Jupiter's Bella, Jupiter's Crevette and Jupiter's Mae; filly 1 year and under 2 (3 shown), 1st Lefebure on Lola's Betty, 2d and 3d Finch on Jupiter's Maud and Jupiter's Leota; Minnesota filly 1 year and under 3 (3 shown), 1st, 2d and 3d Finch on Jupiter's Crevette, Jupiter's Mae and Jupiter's Leota; filly foal (2 shown), 1st Lefebure on Fairfax Pudge, 2d Finch on Unnamed.

Champion stallion, Finch on Hurcle; champion mare, Finch on Deusy; get of stallion (2 shown), 1st Finch, 2d Lefebure; produce of mare (2 shown), 1st Lefebure, 2d Finch.

Clydesdales.—The Clydesdale show at Hamline was small, but poor representatives of the breed were absent. Quality prevailed and animals were brought out in good condition. Barron Bros. made the strongest showing. The Pinnacle won first in the aged class and also took the purple. Euphemia Walls, also owned by Barron Bros., was given the blue in yeld mare class and defeated Sweet Marie, shown by E. A. Jones, for champion honors. Sweet Marie has an abundance of quality and Clydesdale stamp, but lacks the substance found in the older mare. Barron Bros. won two blues and E. A. Jones one blue in the group classes. The University of Minnesota won second on yeld mare and second on three-year-old stallion.

Exhibitors.—Barron Bros., Elkton, S. D.; E. A. Jones, Bangor, Wis.; Rich F. Jones, Lake Crystal, Minn.; J. D. Slater, Winnebago, Minn., and University of Minnesota, St. Paul, Minn. Judge, David M. Fyffe, Columbus, Ohio.

Stallion 4 years or over (3 shown), 1st Barron Bros. on The Pinnacle, 2d Slater on Chief of Green Hill, 3d E. A. Jones on W. J. Bryan; 3 years and under 4 (3 shown), 1st R. F. Jones on Allworthy Baron, 2d Barron Bros. on The Harvester, 3d University of Minnesota on Sir Rollo; Minnesota stallion 3 years or over (1 shown), 1st University of Minnesota on Sir Rollo; 2 years and under 3 (2 shown), 1st Barron Bros. on Arcadia Prince, 2d E. A. Jones on Trooper's Baron; 1 year and under 2 (3 shown), 1st and 2d Barron Bros. on Davidson's Heir and Arcadia Edward, 3d E. A. Jones on Lloyd George; foal (2 shown), 1st R. F. Jones.

Mare and foal (4 shown), 1st and 3d E. A. Jones on Lady May and Grove Girl, 2d R. F. Jones on Lady of Lake; Minnesota mare and foal (1 shown), 1st R. F. Jones on Flora of Redwalls; yeld mare 4 years or over (2 shown), 1st Barron Bros. on Euyhemia Walls, 2d University of Minnesota on Minnesota Princess; 3 years and under 4 (2 shown), 1st E. A. Jones on Sweet Marie, 2d Barron Bros. on Elmona; Minnesota mare 3 years or over (2 shown), 1st R. F. Jones on Lady of the Lake; 2 years and under 3 (4 shown), 1st and 3d Barron Bros. on Arcadia Flower and Primrose, 2d E. A. Jones on Silver Bell, 4th R. F. Jones on Princess Abella. year and under 2 (4 shown), 1st, 2d and 4th Barron Bros. on Arcadia Rose, Myreen and Flower of Arcadia, 3d F. F. Jones on Rose Longmore; Minnesota filly 1 year and under 3 (2 shown), 1st R. F. Jones on Princess Abella; filly foal (2 shown), 1st E. A. Jones on Sweet Rose.

Champion stallion, Barron Bros. on The Pinnacle; champion mare, Barron Bros. on Euyhemia Walls.

Get of stallion (3 shown), 1st and 3d Barron Bros., 2d E. A. Jones; produce of mare (3 shown), 1st E. A. Jones, 2d and 3d Barron Bros.; breeders' group (2 shown), 1st Barron Bros., 2d E. A. Jones.

Shires.—The Shire show was made up of horses from the farms of R. Connor & Co. and the Finch Stock Farm. Connor & Co. won practically all the blues, but lost the purple on mare. Many of the exhibits could have well stood more competition.

Exhibitors.—R. Connor & Co., Auburndale, Wis., and Finch Stock Farm, Moorhead, Minn. Judge, David M. Fyffe, Columbus, Ohio.

Stallion 4 years or over (1 shown), 1st Connor & Co. on Royal Patch; 2 years and under 3 (1 shown), 1st Connor & Co. on Lumberman's Dray King; 1 year and under 2 (1 shown), 1st Finch Stock Farm on Fargo Pride; foal (1 shown), 1st Connor & Co. on Boro's Fuchsia.

Mare and foal, mare to count 50%, foal 50% (2 shown), 1st Finch Stock Farm on Kinsman Hazel and foal, 2d Connor & Co. on Fuchsia Boro's Fuchsia and foal; 3 years and under 4 (2 shown), 1st and 2d Connor & Co. on Dray Queen Star and Dray King Fashion; 2 years and under 3 (1 shown), 1st Connor & Co. on Queen of Fashion.

Champion stallion, Connor & Co. on Royal Patch; champion mare, Finch Stock Farm on Kinsman Hazel; get of stallion (1 shown), Connor & Co. on get of Salt Dray King; produce of mare (2 shown), 1st Connor & Co. on produce of Dunsey Fashion, 2d Finch Stock Farm on produce of June Beau-

from same crop!
The Appleton saves *all* the feed value of corn—while husking ears, it cuts (or shreds) stalks, leaves and husks into fine fodder that gives *twice* better feeding results than shock feeding.
GUARANTEED TO DO MORE WORK WITH LESS POWER
than any husker of equal size. Husks cleanest, shells least; has most efficient corn saver. Easiest, safest to operate.

Draft Geldings and Mares.—Exhibitors.—Henry J. Bardin, Minneapolis, Minn.; L. S. Donaldson Company, Minneapolis, Minn.; Finch Stock Farm, Moorhead, Minn.; Rich F. Jones & Sons, Lake Crystal, Minn.; A. F. Noltimier & Sons, St. Paul Park, Minn.; Twin City Hardwood Lbr. Co., St. Paul, Minn.; The Dayton Co., Minneapolis, Minn., and American Linen Supply Co., St. Paul, Minn. Judge, J. L. Edmunds, Champaign, Ill.

Gelding or mare 4 years or over (4 shown), 1st, 2d, 3d and 4th Bardin; 1 year and under 2 (2 shown), 1st Noltimier & Sons on Bess, 2d Jones & Sons on Bell; champion, Bardin.

Morgans.—Exhibitors.—A. G. Maier, Atwater, Minn.; Bertha Maier, Atwater, Minn.; Morgan Horse Co., Plainfield, Ia. Judge, A. S. Thompson.

Stallion 3 years or over (3 shown), 1st A. G. Maier on DeJarnette Jr., 2d Bertha Maier on Allen Franklin, 3d Morgan Horse Co. on Montgomery; 1 year and under 2 (2 shown), 1st A. G. Maier on Glen DeJarnette, 2d Morgan Horse Co. on Joe Fahrey.

Mare and foal (1 shown), 1st A. G. Maier on Princess and foal; 3 years or over (5 shown), 1st Morgan Horse Co. on Daisy Ranes, 2d and 3d A. G. Maier on Princess and Frances; 2 years and under 3 (2 shown), 1st A. G. Maier on Pansee DeJanette, 2d Morgan Horse Co. on Emaline; 1 year and under 2 (2 shown), 1st A. G. Maier on Princess Fairy, 2d Morgan Horse Co. on Evangeline; stallion or filly foal (1 shown), 1st A. G. Maier on Princess White Foot.

Champion stallion, A. G. Maier on DeJarnette Jr.; champion mare, A. G. Maier on Pansee DeJanette; get of stallion (1 shown), 1st A. G. Maier; produce of mare (2 shown), 1st Morgan Horse Co., 2d A. G. Maier.

THE SWINE SHOW.

With the exception of Chester Whites, every breed showed a falling off in numbers at the Minnesota Fair this year. But if the exhibits were smaller, quality was better throughout. In the Berkshires marked improvement was noticed in the hogs entered. There was less criticism on the lengthy animals, lacking depth and width or the deep, wide hogs lacking length. The same is true of the Chester Whites. Several years ago the short, chubby type of Chester White was more in evidence at the shows. This year every animal in the ring proved that the breeders have been getting away from this type and are aiming to raise a long, stretchy, but deep indivdual of the medium big type. The Chester Whites had the largest representation on the grounds in numbers of hogs. Every one of the exhibitors had animals entered in nearly every class. Especially worthy of mention is the fact that the pigs shown were bred by the exhibitors themselves. This made the futurity a complete success. In the under-year class competition was especially keen. Minnesota men are proud of the showing made in this year's futurity and are confident that in another year or two they will have as heavy a show as Iowa. Duroc Jerseys were better in quality than in previous years. Minnesota breeders did not have things all their own way in Durocs, as in the Chester Whites. Wisconsin breeders, L. F. Atwater and W. C. Jenkins, of Bangor, and E. H. Parker & Son, of Janesville, took a mighty slice of the prize money. W. C. Jenkins took first money in the aged boar class on Orion's Col. S. L. F. Atwater was first on the senior boar pig, Jack Orion 3d, and the junior boar pig, Model Wonder, and E. H. Parker, grand championship on the senior yearling boar, King Orion. Jenkins also was first in the aged and yearling sow classes. Grand championship sow was Art's Choice Again, owned by Reeve Bros., of Hampton, Iowa. Poland Chinas were shown with success by Wisconsin breeders. J. F. MacDonald, of North Bend, took grand championship on the senior sow, Miss Price 4th. She weighs 900 pounds, but is all quality in spite of her size. The MacDonald entries were especially typey, a junior sow pig, Wisconsin Lady, gives every indication of making it interesting for other entries next year. Scarcity of competent help and the high prices in general were given credit for cutting down the number of erhibitors this year. With few exceptions all hogs were well fitted, but it was evident that several of those entering their pigs did not begin as early as usual to fit their show stuff and consequently did not come out as well. The breeders took advantage of the difference between fitting the hogs to the limit and fitting them just good enough to win. There was no wasting of high-priced feed. General satisfaction on the part of the breeders with the decision of the judges is also worthy of mention. D. A. Gaumnitz of South St. Paul, Henry Dorr, of Remsen, Iowa, and H. W. Mumford, of Urbana, Ill., worked rapidly, but with the scrupulous care of the good judge whenever honors were in any way in doubt.

Poland Chinas.—An especially strong showing in quality, but a falling off in numbers of hogs shown marked the Poland China show at Hamline this year. Type and quality were more in evidence throughout. All the classes were close and Judge Henry Dorr had to get down to fine points in many cases to pick the winner. Wisconsin was represented by L. P. Martiny, of Chippewa Falls, and J. D. MacDonald, of North Bend. Of the two, MacDonald received the big money and he cut in for a good share of the money in all classes besides winning grand championship on the senior sow, Miss Prince 4th, a splendid example of the big Poland type. Kritzeck Bros., of Howard Lake, won grand champion honors on their aged boar, Big Prince Equal. The Poland Futurity proved a lively competition, though H. O. Tellier, of Farmington, got away with the big end. On one litter which was the only four pigs he had fitted for the show he won more money than any other breeder has heretofore won in a futurity.

Exhibitors.—John Devany & Son, Montrose, Minn.; Alva Farrell, Montrose, Minn.; Gerlich & Barker, Mankato, Minn.; J. M. Glasier, St. James, Minn.; J. W. Graham, Howard Lake, Minn.; Will Halling, Rochester, Minn.; Kritzeck Bros., Howard Lake, Minn.; Wm. McCoy, Rochester, Minn.; J. D. MacDonald, North Bend, Wis.; L. P. Martiny, Chippewa Falls, Wis.; A. E. Riehl & Son, Preston, Minn.; H. O. Tellier, Farmington, Minn.

Aged boar (3 shown), 1st Kritzeck Bros. on Big Price Equal, 2d MacDonald on Mc's Chief, 3d Devany on Mons Orange 4th; senior yearling (3 shown), 1st MacDonald on Oakwood Big Model, 2d Riehl on Riehl's Big Knocks, 3d Halling on Golden King, junior yearling (8 shown), 1st Graham on Black Cloverdale, 2d Riehl on Riehl Chief Jumbo, 3d MacDonald on Oakwood Giant, 4th Glasier on Black Orange, 5th McCoy on Exmore Pride; senior pig (7 shown), 1st Kritzeck on Big Price 3d, 2d MacDonald on Mc's Long King, 3d Glasier on Glasier's Jumbo, 4th Martiny on Long Giant, 5th Graham on Peter the Great; junior pig (18 shown), 1st MacDonald on Mc's Chief Price, 2d and 3d Tellier on Exmore Jumbo 3d and Exmore Jumbo 4th, 4th Martiny on Big Bone Jr., 5th Martiny on Big Bone Chief.

Aged sow (7 shown), 1st MacDonald on Miss Price 4th, 2d Farrell on Orange Maid, 3d Martiny on Miss Smooth Wonder, 4th Devany on Sievers' Choice, 5th Martiny on Major Hadley's Molly; senior sow (4 shown), 1st MacDonald on Mc's Giantess, 2d Graham on Graham's Best, 3d Martiny on Big Johanna, 4th Halling on Petunia Que; junior sow (5 shown), 1st Gerlich & Barker on Great Prospect, 2d and 5th Graham on Winning Queen and Lady Big Bone, 3d MacDonald on Houcherdale Girl, and 4th Martiny on Big Beauty; senior pig (12 shown), 1st Kritzeck on Black Lady Price, 2d and 5th Riehl, on Long Pollie 4th and Preston Giantess, 3d Martiny on Golden Gate Mabel, 4th Glasier on Lady Jumbo; junior pig (17 shown) 1st and 3d MacDonald on Wisconsin Lady and Miss Choice, 2d and 4th Tellier on Exmore Empress 4th and Exmore Empress 5th, 5th Martiny on Miss Big Bone.

Senior and grand champion boar, Kritzeck on Big Price Equal; junior champion boar, Kritzeck on Big Price 3d; senior and grand champion sow, MacDonald on Miss Price 4th; junior champion sow, Kritzeck on Black Lady Price; aged herd (3 shown), 1st Graham, 2d MacDonald, 3d Martiny; breeder's aged herd (2 shown), 1st Graham, 2d MacDonald; young herd (8 shown), 1st Kritzeck, 2d MacDonald, 3d Glasier, 4th Martiny, 5th Graham; breeder's young herd (8 shown), 1st Kritzeck, 2d MacDonald, 3d Glasier, 4th Martiny, 5th Graham; get of boar (7 shown), 1st Kritzeck Bros., 2d Tellier, 3d MacDonald, 4th Graham, 5th Glasier; produce of sow (7 shown), 1st Kritzeck, 2d Tellier, 3d MacDonald, 4th Graham, 5th Martiny.

Poland China Futurity—Senior boar pig (3 shown), 1st Kritzeck on Big Price 3d, 2d Glasier on Glasier's Jumbo, 3d Graham on Peter the Great; junior boar pig (14 shown), 1st and 2d Tellier on Exmore Jumbo 3d and Exmore Jumbo 4th, 3d and 8th Graham on Grand Price and Long Price, 4th and 7th Glasier on Jumbo's Master and Jumbo's Wonder, 5th Kritzeck on Equal Big Price, 6th Devany on A Jumbo; senior sow pig (8 shown), 1st and 5th Kritzeck on Black Lady Price and Miss Lady Price, 2d and 4th Riehl on Long Pollie 4th and Preston Giantess, 3d Glasier on Lady Jumbo, 6th Graham on G.'s Walkover; junior sow pig (13 shown), 1st and 2d Tellier on Exmore Empress 4th and Exmore Empress 5th, 3d and 4th Kritzeck on Lady Big Price and

The two most important elements in a battery are—the plates, and the insulation that keeps the plates apart.

Willard Threaded Rubber Insulation properly insulates the plates from contact with one another.

Electricity can't work through the rubber, the acid electrolyte can't corrode it. And thousands of tiny threads make possible the vitally essential movement of the electrolyte from plate to plate.

Write for the booklet H-9, "The Story of 196,000 Little Threads." It tells all about Willard Threaded Rubber Insulation and what it means to all car owners in added battery efficiency and economy.

big Price Best; 5th and 8th Riehl on Wonder Lady A. and Wonder Lady B., 6th Devany on Lady Jumbo 1st, 7th Graham on Lady Great; junior litter 1 (8 shown), 1st Tellier, 2d Kritzeck 3d Graham, 4th Devany, 5th r, 6th Riehl, 7th McCoy, 8th Hall-

Duroc Jerseys.—Fewer animals but higher quality marked the Duroc Jersey showing of this year's fair. Poorly fitted stuff was entirely absent. The big money was won by Wisconsin breeders, L. F. Atwater, W. H. Jenkins and E. H. Parker & Son getting the majority of the prizes. All firsts except honors for under six months classes, as junior sow pig and the futurity classes, to which outside breeders are not eligible were won by the Wisconsin men. The blue for senior yearling sow went to Reeves Bros., of Hampton, Ia., and she was later made champion and grand champion without argument. L. F. Atwater took most of the firsts in the herds and group classes. In the aged sow class, an 800-lb. sow shown by W. C. Jenkins took first money. E. H. Parker & Son landed grand champion honors in a walkaway on their senior yearling King Orion. King Orion is a son of Orion Cherry King Jr., the grand champion at Omaha in 1916, who recently sold for $3,500. King Orion was easily the outstanding hog of the show. He is the big type, long and stretchy, and has the necessary depth and width to balance up his size. The futurity was a district futurity and not a state futurity, only ten breeders entering. As twenty are necessary to make it a state show only half the money went to those district winners. Some of the under six months stuff was too highly fitted in the opinion of the judge to be able to carry the weight now or in the future without breaking down of pasterns. On the whole, the hogs were good in their feet.

Exhibitors.—L. F. Atwater, Bangor, Wis.; J. J. Cain, Skyberg, Minn.; John Hartle & Son, Owatonna, Minn.; W. C. Jenkins, Bangor, Wis.; C. F. Johnson, North Branch, Minn.; Fred E. Johnson, North Branch, Minn.; E. H. Parker & Son, Janesville, Wis.; Reeve Bros., Hampton, Iowa; F. S. Vanderhyde, West Concord; P. J. Fosse, St. Cloud, Minn. Judge, Prof. H. B. Mumford, Urbana, Ill.

Aged boar (2 shown), 1st Jenkins on Orion Col. S., 2d Cain on J. C. Illustratre; senior yearling (4 shown), 1st Parker on King Orion, 2d Atwater on Proud Chief Jr., 3d Fosse on I Am Golden Model, 4th C. F. Johnson on Big Grand Model; junior yearling (8 shown), 1st Vanderhyde on Long Wonder, 2d Parker on Principal 17th, 3d C. F. Johnson on Sensational King, 4th and 5th Fosse on Cherry Kingdom and Royal Defender; senior pig (7 shown), 1st Atwater on Jack Orion 3d, 2d and 3d C. F. Johnson on Tip Top Col. and Ringmaster, 4th Fosse on P. J.'s Defender, 5th F. E. Johnson on Hidestretcher; junior boar pig (12 shown), 1st Atwater on Model Wonder, 2d Cain on Minn. Illustrator, 3d and 5th Vanderhyde on Futurity King and Futurity Col., 4th Hartle on Model Gano.

Aged sow (3 shown), 1st and 3d Jenkins on Lady Topnotcher and Golden Tattle Tale, 2d Atwater on Marion Lady; senior yearling (5 shown), 1st Reeve Bros. on Art's Choice Again, 2d and 3d Atwater on Dinnie Queen and Proud Helen 2d, 4th Jenkins on Queen Crimson, 5th Fosse on Cherry Queen 31st; junior yearling (7 show), 1st and 3d Atwater on Queen Is High and Model Goldie, 2d Jenkins on Tattle Tale I Am 1st, 4th Johnson on Miss Rose, 5th Fosse on Crimson Golden Pride; senior pig (8 shown), 1st and 3d Atwater on Duchess 2d and Duchess, 2d and 4th Jenkins on Princess Tattle Tale and Lady Tattle Tale; junior pig (12 shown), 1st and 4th C. F. Johnson, 2d and 3d Atwater on unnamed and Chief's Queen, 5th Vanderhyde on Fancy's Actress.

Senior and grand champion boar, Parker on King Orion; junior champion boar, Atwater on Model Wonder; senior and grand champion sow, Reeve Bros. on Art's Choice Again; junior champion sow, Atwater on Queen is High; aged herd (4 shown), 1st Atwater, 2d Jenkins, 3d Fosse, 4th C. F. Johnson; young herd (6 shown), 1st Atwater, 2d C. F. Johnson, 3d Jenkins, 4th Cain, 5th Vanderhyde; breeder's young herd (6 shown), 1st Atwater, 2d C. F. Johnson, 3d Cain, 4th Vanderhyde, 5th Hartle & Sons; get of boar (7 shown), 1st Atwater, 2d C. F. Johnson, 3d Jenkins, 4th J. J. Cain, 5th Vanderhyde; produce of sow (8 shown), 1st Atwater, 2d C. F. Johnson, 3d Jenkins, 4th Cain, 5th Vanderhyde.

Special offered by American Duroc Jersey Swine Breeders' Assn. Herd under 1 year (3 shown), 1st Vanderhyde, 2d C. F. Johnson, 3d Foss; special Duroc futurity, spring boar (5 shown), 1st, 4th and 5th Cain, 2d and 3d Vanderhyde; spring sow (5 shown), 1st, 2d and 3d C. F. Johnson, 4th Vanderhyde, 5th Cain; Duroc litter (5 shown), 1st and 5th Johnson, 2d and 4th Cain, 3d Vanderhyde.

Chester White.—Probably the largest show of Chester Whites ever exhibited at a Minnesota fair was on hand this year. The numbers shown and the quality of the hogs was far in advance of anything exhibited previously. The strongest classes were in the aged sows and under year classes. In the latter 18 pigs were shown which were so nearly alike that it took considerable time for the judge to decide on which to hand the ribbons to. Minnesota breeders had things pretty near their own way throughout. They won everything in the classes under six months of age. There was an improvement in the type of Chester Whites. Instead of the short chubby type commonly seen around the circuit a few years ago, every individual this year showed ideal medium big type with more stretch and length to it. The excellency of the entries in the various classes was especially apparent in the young herd, get of boar and produce of sow classes. Here eight breeders showed their own bred stuff in one of the best competitions ever held. Grand champion boar was Chief Wykoff, owned by G. N. Smith, but bred by H. A. Derenthal, who ran him a close race for the honor. The grand championship sow was Highland Pride 4th, owned by W. T. Barr.

Exhibitors—Louis Anders, Jackson, Minn.; W. T. Barr, Ames, Ia.; Henry Bless & Sons, Wells, Minn.; H. A. Derenthal, Wykoff, Minn.; L. A. Howe, St. James, Minn.; J. Johnson, Sleepy Eye, Minn.; D. H. Lewis, Senesco, Ill.; Fred Luchsinger, Lake Elmo, Minn.; Wm. C. Scheibe, Burlington, Wis., and G. M. Smith, St. Charles, Minn.

Aged boar (7 shown), 1st Lewis on Prince Again, 2d and 4th Bless on William 2d and Leader, 3d Howe on King's Best, 5th Anderson on C. Booster; senior yearling (4 shown), 1st Barr on Highland Improver, 2d Lewis on Elmo Duke, 3d Derenthal on Minnesota Wonder, 4th Luchsinger on Elmo Boy; junior yearling (6 shown), 1st Smith on Chief Wykoff, 2d Derenthal on Fritz, 3d Barr on Pershing, 4th Lewis on Elmo Don, 5th Scheibe on Guy's Comet; senior pig (13 shown), 1st and 2d Smith on Wykoff Lad 1st and Wykoff Lad 2d, 3d Lewis on Model Prince 1st, 4th Derenthal on Ot. Lad, 5th Scheibe on Royal Thompson; junior pig (17 shown), 1st Derenthal on Big Cal, 2d and 3d Smith on Wykoff Lad 3d and Wykoff Lad 4th, 4th Howe on Famous, 5th Bless on William H.

Aged sow (12 shown), 1st and 4th Barr on Highland Bell and I. N. R. Maid 3d, 2d Derenthal on Wykoff Queen, 3d Anderson on C. Della, 5th Smith on Hanks 3d; senior yearling (5 shown), 1st Barr on Leonara Gem, 2d Johnson on Queen, 3d Derenthal on Empress, 4th Smith on Lenora Goods 7th, 5th Lewis on Mamie; junior yearling sow, 1st Derenthal on Prince 2d, 2d Smith on Smith's Jr. Lady, 3d and 4th Barr on Hiland Frankie 2d and Leonara's Prize, 5th Anderson on C. Bell; senior pig (16 shown), 1st and 3d Barr on Hiland Pride 4th and Hiland Pride 3d, 2d Johnson on Eliza 1st, 4th Lewis on Princess 1st, 5th Howe on Victoria Lady; junior pig (18 shown), 1st Derenthal on Callaway's Lady 1st, 2d and 5th Smith on Wykoff Lady 2d and Wykoff Lady 1st, 3d and 4th Johnson on Queen Marlo 3d and Queen Marlo 4th.

Senior champion boar, Smith on Chief Wykoff; junior champion boar, Derenthal on Big Cal; senior champion sow, Barr on Hiland Bell; junior champion sow, Barr on Hiland Pride 4th; grand champion boar, Smith on Chief Wykoff; grand champion sow, Barr on Hiland Pride 4th.

Aged herd (3 shown), 1st Barr, 2d Derenthal, 3d Bless, 4th Anderson, 5th Lewis; breeders' aged herd (4 shown), 1st Barr, 2d Derenthal, 3d Anderson, 4th Lewis; young herd (8 shown), 1st Derenthal, 2d Barr, 3d Johnson, 4 Howe, 5th Anderson; breeders' young herd (8 shown), 1st Derenthal, 2d Barr, 3d Johnson, 4th Howe, 5th Anderson; get of boar (9 shown), 1st Barr, 2d Derenthal, 3d Smith, 4th Johnson, 5th Howe; produce of sow (8 shown), 1st Derenthal, 2d Smith, 3d Johnson, 4th Barr, 5th Lewis

Chester White Futurity—Special boar (12 shown), 1st Derenthal on Big Cal, 2d and 3d Smith on Wykoff Lad 3d and Wykoff Lad 4th, 4th and 6th Howe on Famous and Star, 5th Bless on Wm. H., 7th Anderson on Grant; special sow (14 shown), 1st Derenthal on Calloway's Lady 1st, 2d and 5th Smith on Wykoff Lady 2d and Wykoff Lady 1st, 3d and 4th, Johnson on Queen Marlo 3d and Queen Marlo 4th, 6th and 7th Luchinger on Choice I Am and Choice Model; special litter, 1st Derenthal, 2d Smith, 3d Johnson, 4th Howe, 5th Luchsinger, 6th Bless, 7th Anderson.

Hampshires.—All-around improvement marked the showing of Hampshires this year. The individuals showed up better in their feet. Fewer animals showed the weakness in pasterns, which has been a criticism of the Hampshires in former years. There was more uniformity in the herds shown. The animals had size, yet thickness, which is necessary to produce a lard hog. Exhibitors have gotten over the idea of claiming bacon type quality for the Hampshire hog and the exhibits showed this in every class. While the bacon type requires length of body, it also requires thickness; when these two go together the lard type hog results. The showing of Clayton Messenger was the best that has been seen at the Minnesota fair for many years in the opinion of D. A. Gaumnitz, who judged all classes.

Exhibitors.—Clayton Messenger, Keswick, Iowa; Morris & Colbourne Mt. Vernon, S. D., and Zupp & Weber, Blue Earth, Minn. Judge, D. A. Gaumnitz.

Senior yearling boar (2 shown), 1st Messenger on Peerless Boy; 2d Morris & Colbourne on Traveler; junior yearling (4 shown), 1st and 3d Messenger on Hawkeye Star and Pilot Boy 2d, 2d Morris & Colbourne on Dakota Lookout; 4th Zupp & Weber on Oza Tonka Lad; senior pig (2 shown), 1st and 2d Messenger on Liberty Loan and Sioux Lad 2d; junior pig (6 shown), 1st and 3d Messenger on Scottish Lad 11th and Scottish Lad 12th, 2d and 5th Morris & Colbourne on unnamed; 4th Zupp & Weber on Lookout Perfection.

Aged sow (6 shown), 1st and 2d Messenger on Sioux Queen 3d and Lady Dawson 4th; 3d and 4th Morris & Colbourne on Ann and Myrtle; 5th Zupp & Weber on Miss Edith 3d; senior yearling (3 shown), 1st and 2d Messenger on Mayflower Lady 2d and Mayflower Lady 1st; 3d Zupp & Weber on Perfection 3d; junior yearling (5 shown), 1st and 2d Messenger on Lady Steele and Flora, 3d Morris & Colbourne on None Such Lookout, 4th and 5th Zupp & Weber on Miss Jane and Miss Oza Tonka; senior pig (4 shown), 1st and 2d Messenger on Sioux Lady and Sioux Lady 2d, 3d Morris & Colbourne on M. & C. Choice 1st.

Senior and grand champion boar, Messenger on Peerless Boy; junior champion boar, Messenger on Scottish Lad 11th; senior and grand champion sow, Messenger on Sioux Queen 3d; junior champion sow, Messenger on Sioux Lady; aged herd (3 shown), 1st Messenger, 2d Morris & Colbourne, 3d Zupp & Weber; breeder's aged herd, 1st Messenger; young herd (3 shown), 1st Messenger, 2d Morris & Colbourne, 3d Zupp & Weber; breeder's young herd (3 shown), 1st Messenger, 2d Morris & Colbourne, 3d Zupp & Weber; get of boar, 1st Messenger, 2d Morris & Colbourne, 3d Zupp & Weber; produce of sow, 1st Messenger, 2d Morris & Colbourne, 3d Zupp & Weber; special American Hampshire Swine Record Association trophy, Zupp & Weber.

Berkshires.—Only two herds were shown in the Berkshires, both from outside of Minnesota. The Brae Burn Farm, of Lake Forest, Ill., divided honors fairly evenly with Whitmore Bros., of Lyons, Wis. The Brae Burn herd was superior on sows and the Whitmore herd on boars. The senior and junior champion sows showed particularly good type. They had the points of the good feeding animal, long and deep bodied and smooth skinned. Several individuals showed the faults common with Berkshire hogs. While the demand is for a long-bodied hog, this often results in upstanding, slower maturing animals being bred. On the whole, however, Judge D. A. Gaumnitz, of So. St. Paul, pronounced the show of good quality.

Exhibitors.—Whitmore Bros., Lyons, Wis., and Brae Burn Farm, Lake Forest, Ill.

Aged boar (1 shown), 1st Whitmore Bros. on Aldoro Climax; senior yearling (2 shown), 1st Brae Burn Farm on Brae Burn Rival Emperor; 2d Whitmore Bros. on Berryton's Artful Rival; junior yearling (4 shown), 1st and 2d Whitmore Bros. on Climax Premier 2d and Aldoro Rival, 3d and 4th Brae Burn Farm on Brae Burn Master Rival 6th and Brae Burn Lee 2d; senior pig (3 shown), 1st Whitmore Bros. on Handsome Champion 4th, 2d and 3d Brae Burn Farm on unnamed; junior pig (4 shown), 1st and 3d Brae Burn Farm on unnamed; 2d and 4th Whitmore Bros. on Flossie's Aldoro 4th and Sallie's Duke.

Aged sow (4 shown), 1st and 2d Brae Burn Farm on Brae Burn School Mistress and Brae Burn Dutchess, 3d and 4th Whitmore Bros. on Rival's Fair Duchess and Joe's Lister; senior yearling (3 shown), 1st and 2d Brae Burn Farm on Brae Burn Grand Duchess and Brae Burn Grand Duchess 2d, 3d Whitmore Bros. on Artful's Matchless Lass; junior yearling (4 shown), 1st and 3d Brae Burn Farm on Minnesota Missie and Brae Burn Model Lady, 2d and 4th Whitmore Bros. on Aldoro's Black Girl and Aldoro's Black Girl; senior pig (3 shown), 1st and 3d Brae Burn Farm on unnamed, 2d Whitmore Bros. on unnamed; junior pig (4 shown), 1st and 3d Brae Burn Farm, 3d and 4th Whitmore Bros.

Senior champion boar, Whitmore Bros. on Aldoro Climax; junior champion boar, Whitmore Bros. on Handsome Champion 4th; senior champion sow, Brae Burn on Minnesota Missies; junior champion sow, Brae Burn Farm on unnamed; grand champion boar, Whitmore Bros. on Aldoro Climax; grand champion sow, Brae Burn Farm on Minnesota Missies; aged herd, 1st Brae Burn Farm, 2d Whitmore Bros.; breeder's aged herd, 1st Brae Burn Farm, 2d Whitmore Bros.; young herd, 1st Brae Burn Farm, 2d Whitmore Bros.; breeder's young herd, 1st Brae Burn Farm, 2d Whitmore Bros.; get of boar, 1st Brae Burn Farm, 2d Whitmore Bros.; produce of sow, 1st Brae Burn Farm, 2d Whitmore Bros.

Yorkshires.—Yorkshires were fewer in numbers also, but like the other breeds they were higher quality throughout.

Exhibitors.—B. F. Davidson, Menlo, Iowa; Harry J. Devine, Mapleton, N. D.; W. B. Lawrence, Donald, S. D. Judge, D. A. Gaumnitz, South St. Paul, Minn.

Aged boar (2 shown), 1st Davidson on L. F. Fashion, 2d Lawrence on L. P. Evensides 6th; junior yearling (5 shown), 1st and 2d Devine on L. P. Notable and L. P. Master 2d, 3d Davidson on Oak Ladge Sardis, 4th and 5th Lawrence on B. P. Jack 7th and B. P. Corrector; senior pig (2 shown), 1st Davidson on Deer Creek Lee 6th; junior pig (6 shown), 1st and 2d Davidson on Deer Creek Vernon 6th and Deer Creek Highclass 12th, 3d and 5th Lawrence on B. P. Jack 10th and B. P. Corrector 2d, 4th Devine on unnamed.

Aged sow (5 shown), 1st and 2d Davidson on Deer Creek Martha 5th and Deer Creek Classy Lass 5th, 3d and 4th Devine on Lake Park Verbena and Beauty 2d, 5th Lawrence on B. P. Princess; senior yearling, 1st Lawrence on Wild Rose Lassie 7th; junior years-

Old Faithful HEMLOCK

Photo courtesy James Mfg. Co., Ft. Atkinson, Wis.

We'll be glad to help!

Mr. Wm. Stoltz of Ripon, Wis. (and he's not the only one by a good many thousands) built his barn of "Old Faithful" HEMLOCK. We show a picture of it—and a mighty good and prosperous looking place it is. "Old Faithful" HEMLOCK makes it easy to build at reasonable cost a barn that will be the pride of its owner and will last as long as his son's sons and their sons can use it.

Mr. Stoltz (like those thousands of others) has set you a good example. He has built well of "Old Faithful," the farmers' standby lumber for over 200 years. If you are wise you'll do the same—and we'll be glad to help. Let us present you, through your local lumber dealer, with

FREE PLANS FOR PRACTICAL BARNS

This means complete working plans and specifications ABSOLUTELY FREE. JUST WRITE US for Hemlock Book No. 3. It contains some good reading with pictures and layouts of the barns. It also contains coupons good for plans free when presented to your lumber dealer. (Be sure to give your dealer's name when writing.)

"Old Faithful"

The Hemlock Manufacturers
(of Wisconsin and Northern Michigan)
Offices, 300 F. R. A. Building
Oshkosh, Wisconsin

We spread the good news about "Old Faithful" HEMLOCK but we do not sell it. Get it from your LOCAL LUMBER DEALER.

ling (3 shown), 1st Devine on L. P. Miss Hollingworth, 2d and 3d Lawrence on B. P. Princess 10th and B. P. Princess 9th; senior pig (5 shown), 1st and 4th Devine on The American Beauty 33d and The American Beauty 32d, 2d and 3d Davidson on Deer Creek Rena 5th and Deer Creek Rena 6th, 5th Lawrence on Princess 21st.

Senior champion boar, Davidson on L. P. Fashion; junior and grand champion boar, Davidson on Deer Creek Lee 6th; senior and grand champion sow, Davidson on Deer Creek Martha 5th; junior champion sow, Devine on The American Beauty 33d; aged herd (3 shown), 1st Davidson, 2d Devine, 3d Lawrence; breeder's aged herd (1 shown), Lawrence & Son; young herd (3 shown), 1st Davidson, 2d Devine, 3d Lawrence; breeder's young herd (3 shown), 1st Davidson, 2d Devine, 3d Lawrence; get of boar (3 shown), 1st Davidson, 2d Devine, 3d Lawrence; produce of sow (3 shown), 1st Devine, 2d Davidson, 3d Lawrence.

Boys' and Girls' Pig Club.—The third annual Boys' and Girls' Pig Club contest, held at the Minnesota State Fair this year, proved the popularity of this plan to interest Minnesota young folks in hog raising. More than 1,000 members distributed among 50 different counties entered the contest this year and the best 50 of the 1,000 competed for the state prize and the breed association prizes at Hamline, September 3d to 8th. Quite a number of girls had entries and a few of these showed that boys are not the only ones able to feed pigs successfully, but fed by boy or girl the pigs were uniformly well fitted. Many individuals might have won honors in the big classes. For this work, boys and girls between the ages of 10 and 18 are eligible. Hogs of any breed may be fed and fitted, but the pigs must be under seven months of age when shown. County contests are held at the county fairs, and where this is impossible the county agent decides which pigs are eligible for the state show. Cash prizes are offered by the state fair association and the Duroc Jersey and Poland China Record Associations. The Chester White association this year offered to the winners in the Chester class, a Chester White pig to each of the six highest contestants. These pigs, though they belong to the winner, must be entered the next year. The Chester White people are so well satisfied with the results that next year they have agreed to furnish a pig to each of the 10 best boys or girls. The champion hog of the show was a Yorkshire, fed by Theo. Hanson, of Graceville, Minn. Miss Mildred Pentz, of Faribault, won second prize in the Chester White class and fourth in the bacon class. She received a pure-bred Chester White pig from Julius Johnson, of Sleepy Eye, Minn. D. A. Gaumnitz, of So. St. Paul, judged the hogs. In charge of the work is L. H. Fudge, of the Minnesota Agricultural College. Only Minnesota boys and girls are eligible. The winnings: Bacon class (9 shown), 1st Theo. Hanson, Graceville; 2d Red Lake Falls entry; 3d A. Mosbak, Askov; 4th Carl Roise, Madison; 5th A. Carlson, Detroit; 6th Richard Bacon, Hastings; 7th Otto Dagill, Bejou; 8th L. Driscoll, E. Grand Forks. Lard class (41 shown), 1st Alec Crowe, Dassel; 2d Reinhardt Borgess, Waldorf; 3d Cecil Ryan, Cedar; 4th Mildred Pentz, Faribault; 5th Lester Strong, West Concord; 6th Lloyd Champine, Sherburn; 7th Royal Davis, St. Peter; 8th Russell Seath, Albert Lea. Grand champion hog of contest, a Yorkshire, fed and fitted by Theo. Hanson, Graceville, Minn., prize $30.

Breed association winners.—Duroc Jerseys, $50 pro rated among all entries (14 shown), 1st Cecil Ryan, Cedar; 2d Lester Strong, West Concord; 3d Wallace McKay, Delhi; 4th Dorothy Fosse, St. Cloud; 5th Bert Johnson, St. Cloud; 6th Raymond Wellner, Fairfax. Poland China, $40 prize (hogs must be registered), 1st Alec Crowe, Dassel; 2d Royal Davis, St. Peter; 3d Robt. Jude, Maple Lake; 4th Robt. Coleman, Elbow Lake; 5th Herbert Kannenberg, Renville. Chester White (one pig given as prize to six exhibitors), 1st Reinhart Burgess, Waldorf; 2d Mildred Pentz, Faribault; 3d Russell Leath, Albert Lea; 4th Raymond Lucksinger, Lake Elmo; 5th Grie Anderson, Jaconson; 6th Chester Marr, Adrian.

SHEEP.

The sheep show this year was considered by all, the best seen at a Minnesota Fair since 1911. Nine breeds of sheep were represented with each class showing heavy entries. Minnesota breeders came in for their share of honors, but Wisconsin and Iowa offered successful competition in most of the classes. The Shropshires, as usual had the largest representation. J. P. Ring, of Rogers, Minn., made the strongest showing with this breed, but Clarence Wilson, of Minneapolis, won grand championship honors on the ram, Richend Blanchard. In the Cotswold class, A. W. Arnold, of Galesville, Wis., and Richards & Richards, of Lodi, Wis., made a clean sweep. In the Southdowns, J. P. Ring, J. C. Heideman, both of Minnesota, and E. L. Bitterman, of Mason City, Iowa, divided the honors. In the Oxfords, Devons, Richards & Richards and A. J. Mahn, of Bloomer, took the prize money. Mohr was the heaviest winner. E. Crall & Son, of Evansville, Wis., showed successfully in the Hampshires, Cheviots and Lincolns. W. Woodard, of Bloomer, Wis., was able to take a considerable number of ribbons in the Shropshire and Southdown classes. Thos. G. Paterson, of St. Paul, judged the fine wool and H. Noel Gibson, of Dundee, Ill., all other breeds. There were about 500 sheep on the grounds this year and fuller classes were, therefore, shown in every breed exhibit.

A Good Hay Crop Harvested.

Good Yields of Oats Reported—Potatoes Above the Average in Acreage and Yield—Corn Rather Backward.

WISCONSIN.

Buffalo County.—Hay was a good crop in this locality and pastures have been fair. Oats are all stacked and some threshing has been done. The yield is from 50 to 60 bushels per acre and the grain is good. Potatoes are fine and most farmers have raised more than the usual supply. The corn crop promises to be a good one unless injured by early frosts. Gardens are good. Fruit of all kinds is scarce.—James G. Bates.

Calumet County.—The hay crop this year was fine. The yield per acre is about the same as last year. Oats are pretty heavy and long in straw. The yield per acre is about the same as last year. Barley is long in straw, but is very light. Rye and wheat are nearly all harvested and threshed. Garden stuff is nearly all dried up and we are sprinkling every day so ours will not dry up. Corn is back yet. There is a lot of live stock raised this year. Dairymen are making out good this year.—Joseph Buchinger.

Chippewa County.—The hay crop was very good this season, yielding from one to three tons per acre, with an average of about the same as last year. Quite a lot of clover is being left for seed, both second crop and first crop. Oats are averaging around 50 bushels per acre. Some farmers are getting up to 70 bushels per acre. Oats are better than last year and very heavy quality. Rye was good, threshing from 35 to 60 bushels per acre, with an average of about 45 bushels per acre. Potatoes are now being dug and the crop is good; will average around 225 bushels per acre. There will be a good crop of corn harvested this fall. A light frost froze some in the low places, but in the main the crop is good. The condensory has now started and paying $2.50 per 100, but the farmers will not deliver until $3 is paid.—Ernest Neitzel.

Door County.—The hay crop this year was the largest for the past five years. The harvest of grain is just about finished. The acreage is the largest for the last five years. Oats and peas are turning out fine. Corn is coming on fine the last few days and with a favorable fall will have some fields that will ripen. Most of the farmers are raising wheat enough for their own use.—L. E. Birmingham.

Dunn County.—Grain is all cut, and as far as threshing has been done, the yields are good. Buckwheat promises well. Corn is very late, although a crop of from 50 to 60 per cent normal is in sight. Rain must come soon in this section. Cattle look well and cows are keeping up production. Hogs are scarce. Silos are going up in this county and more farmers than usual are getting pure-bred bulls for their herds. The potato acreage is small, but all garden truck is plentiful.—Jas. A. Smith.

Iowa County.—Hay is of good quality and there was a good crop, showing an increase of at least 5 per cent over the last five-year period. Small grain is about half threshed and is turning out big and of an exceptional quality. Corn is poor in all sections of the county except the north, where they have a fine crop. Pastures are dead and there are no prospects of rain yet. Milk has dropped off far below the average and farmers, as a rule, are not feeding to keep it up. Fruit and gardens are only of a medium value.—Art G. Hoskins.

Iron County.—The hay crop was light, about 75 per cent of usual, averaging about one and three-fourths tons per acre. Small grain, mostly oats, about ready to harvest and is promising a good yield. Early potatoes are doing fine. Frost has done some damage to garden truck, also silage corn. Pastures are good and live stock in fine condition. Dairymen do not feed much high-priced feed at present.—J. A. Becker.

Juneau County.—Hay yield was average or above for this section, clover and timothy going from one and a half to three tons per acre. Small grain is nearly all in stack or threshed. Oats yielded from 40 to 80 bushels per acre, some winter wheat as high as 50 bushels per acre, and barley 30 to 50 bushels. Corn is very backward. The weather is cold and the ground too dry for plowing. Pastures are getting short. Live stock is normal. Early potatoes are good, but we need rain for the late ones.—C. W. Hale.

Marquette County.—Tame hay was a good crop. It went from a ton and a half to two and a half per acre. Marsh hay is light. There will be more acres of rye sown than last year. Rye went from eight to 30 bushels per acre. Oats went from 40 to 85 bushels per acre and would weigh 50 per cent better than the last five years. Some farmers are cutting the second crop of clover for hay, others are saving it for seed. Beans are a poor stand. Potatoes are fine, but it is too dry for all crops. Corn looks good in some fields, but it is all late. Wheat and barley are not growing much. Apples are poor, but gardens are fine. Live stock is all healthy, but fewer in number. Cows are falling off in milk.—J. M. Williams.

Portage County.—The hay crop this year was the best we have had for many years. Clover averaged about one and one-half tons per acre and timothy about one and a quarter tons. The oats were struck by a hot wave and some went down before the harvest, but anyway, better than the average for the last five years was harvested. Threshing is now in progress. Live stock is in good condition and farmers are contemplating buying feed. Much oats will be fed to dairy cows this winter. Fewer cows are fed this fall than last.—Arthur H. Peterson.

Price County.—The hay crop was an average one, about two tons per acre. Oats threshed out 40 bushels per acre. Corn was nipped by frost. Not much wheat is harvested in this section. Live stock is on the increase and in good condition. Potatoes are somewhat damaged by frost, so is garden stuff. The high cost of feed will not be felt here until cows are brought in from pasture.—C. F. Glissendorf.

Taylor County.—The hay crop is good. New meadows yielded at least three tons per acre. Old meadows not quite so good. The acreage was about the same as last year. The oat crop is very good. They are very heavy this year, about 10 per cent over last year. Barley is about the same as last season. Rye is good. What wheat was raised in this section looks good, also winter wheat is good. The corn crop will not amount to a great deal. Had a hard frost that caught the most of it. Potatoes will be an extra good crop this season, with increased acreage. Gardens are good, also all root crops and cabbage. Fruit is scarce in this locality. Pastures are fair so far. Stock is looking good. Dairy farms are not using a great deal of feed on account of high prices.—J. C. Hoffman.

Washburn County.—Weather continues dry, nights cool. Frost on the night of August 28th did considerable damage to crops on low lands. Corn is coming along fast, but fully two weeks late. Pastures are dry and short. Early potatoes are good, but it is too dry for the late-planted potatoes. Threshing is under way. Rye is not yielding up to former years. Spring grains are good. Good demand for cows at high prices. Hogs are scarce, as the spring crop of pigs was poor. Seed clover promises well, but acreage not large.—L. D. Gamhart.

Washington County.—Harvesting is completed and threshing has just commenced. The yield of all small grains in this locality will be better this year than for a number of years past. Alsike clover yield was very good in most places here. The third cutting of alfalfa will be nothing on account of no rain lately. Corn in this section will be poor, for it is only in the milk stage now and if it freezes early in September it will make nothing but silage. Potato prospects are very good. Early varieties yielding extra well and with a little rain the late crop will be large. Red clover for seed looks very promising. Apples are somewhat small and poor. Pastures are dried up all over this locality, so the flow of milk is small at present.—M. P. Salter.

Waukesha County.—Threshing from the field is the order of the day. Spring wheat will make from 20 to 35 bushels per acre, except where it was lodged by the heavy winds. Oats will make from 40 to 50 bushels per acre and barley also is yielding well. In some sections two good crops of alfalfa have been cut and a third will be ready soon if rain comes. Rain is needed for all growing crops, especially corn and potatoes. Cold weather and weeds have kept corn back. Hogs are scarce. Cattle sell at high prices and milk also brings a good price, but no more than it should. Hay crops were secured in good shape. A fine crop of small fruit was harvested, but apples turned out poor.—George Hodgson.

Waukesha County.—Hay was a good crop first cutting, but the second cutting of clover and the third cutting of alfalfa is very light. We are in need of rain to fill out the corn. Late potatoes will be less than half a crop if we do not get rain soon. Oats and barley were good, barley yielding about 40 bushels and oats over 70. Wheat did well where it was sown until near harvest, then it was touched with rust a little. There was no winter wheat around here. At the price of feed it will cost about $3 per 100 to produce milk this winter and the cow will have to be better than the average. The average cow is going to put her owner in the hole next winter if he feeds her.—W. J. Mann.

Wood County.—Hay was put up in fine shape, considering the wet weather at that time, making a good yield above the average. Oats are above the average yield for the last five years also, but will need to be, too, as the corn crop will be short if frost should come soon, as it will take all of three or four weeks yet to ripen most fields of corn. Gardens have done their best this year, but the fruit crop is small. Potatoes are very good. Feeding operations are decreasing here on account of high prices of feed.—Fred E. Weber.

DU PONT AMERICAN INDUSTRIES

Is the Enemy on Your Farm?

This is a war of endurance. Men and money are important but—*food counts most.* Soldiers who fight must eat. So must their dependents at home. The world must be fed.

Every idle acre of reclaimable land on your farm aids the enemy. Every acre of untilled soil deprives many needy mouths of food.

The sinking of each food ship is a disaster, but the idle acres of America could grow more food per year than all of the enemy's submarines can destroy. Fight the enemy now, with

WILMINGTON, DELAWARE

Winchester Model 12—Hammerless Shotgun, 12, 16 and 20 gauge

The gun with a dog's pointing instinct

A dog points by instinct. Its nose, body and tail come into line naturally—instantly. So with the hunter and his gun.

Armed with the right gun, he "points" it instinctively. If properly balanced, his gun comes up into line naturally, as easily as pointing a finger.

But if the gun is not right, if it has not been perfectly balanced in the shop, it won't work out well in practice, just as a dog, if not properly bred, will not work out well with its master in the field.

The Winchester Model 12 Repeater is a *thoroughbred* of shotguns. It has been classed by experts as "The Perfect Repeater."

Quick feeder, sure ejector. Throws empty shells to the side, out of your way

Its balance enables you to get onto fast flying birds instantly. Pointed right, it never fails to bring down the game.

Fifty years of the best gun making traditions have produced in the Winchester Model 12 a gun of almost human instincts.

The right amount of choke for different loads has been worked out after exhaustive experiment. Result: a pattern that spreads out evenly—neither too scattered nor too bunched—and lands with lots of steam behind it.

It is a triumph of guncraft. Nicely balanced, with its slim, graceful barrel, the Model 12 is a beautiful weapon, with a fascination about it that few sportsmen can resist.

WINCHESTER

World Standard Guns and Ammunition

Even spread, maximum penetration. Winchester shot pattern brings down the game.

The pattern that brings down the game

The remarkable game-getting pattern of the Winchester Model 12, shooting its own standard ammunition, is the result of infinite care taken in boring the barrel.

The barrel *is* the gun

Men who know guns realize that the accuracy and durability of a gun lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard quality of the barrels on the highest and lowest priced Winchester guns. With Winchester, the barrel *is* the gun, and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel. The same high quality of Winchester barrel is found on every gun made by Winchester. The great volume of guns sold makes this policy possible.

The Winchester barrel

The barrel of the Winchester Model 12 has been scientifically bored to micrometer measurements for the pattern it is meant to make. The degree of choke exactly offsets the tendency of the shot to spread. Until its pattern proves up to Winchester standard, the gun cannot leave the factory. The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that with proper care will last a lifetime. The Nickel Steel construction preserves the original accuracy forever.

What (PW) means

This mark on the barrel means *Viewed and Proved Winchester.* This stamp stands for Winchester's guarantee of quality, with fifty years of the best gun-making reputation behind it.

Every gun that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times with excess loads for strength, smooth action and accuracy.

At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment process.*

It is this care in manufacturing that has produced in the Model 12 a gun of unsurpassed game-getting qualities and whose grace, balance, beauty of lines, and never failing performances in the field have earned it the title of "thoroughbred of shotguns"—*the gun with a dog's pointing instinct.*

For those who prefer a hammer action gun, we have made the Model 97. It is built on exactly the same lines as the Model 12, but with hammer action.

Write for details of Winchester shotguns, rifles and ammunition

The Winchester catalog is an encyclopedia on shotguns, rifles and ammunition. Every hunter should have one. It gives detailed specifications of the Model 12 and describes at length the principles on which every one of the world famous Winchester shotguns and rifles is built. Write today. We will mail you a copy free, postpaid.

Mixing Feed With Brains.

Feeding dairy cows produces increasing numbers of perplexing problems. The high price of feed and its constant fluctuation is the big problem just now. Never has there been a time when it was so utterly inadvisable to lay down set rules for feeding. Feeds and combinations of feeds that today might be used to best advantage may tomorrow be absurdly expensive. With reference to grain does this particularly apply.

Two staple feeds have been the mainstay of dairymen and it will be well to put main reliance in them as heretofore. They are silage and alfalfa or clover. Silage must not be sacrificed because corn promises to be high for feeds that we shall buy on the market and there is no feed that will keep up the health tone of the dairy cow as will silage. We had best grant that the dairy cow must have silage as usual. Clover and alfalfa have yielded well this year and promise to be fairly normal in price. Consequently they may be used with great liberality to all dairy stock, especially dry cows and young animals.

With regard to grain we must grant that some concentrate is just as necessary as it ever has been. Successful dairying has never been conducted without grain. The problem is to feed for maximum efficiency in order that each pound of grain shall give the greatest returns in milk. The old plan of feeding one pound of grain for each three and one-half or four pounds of milk produced is very g[illegible] This is a time to study feeds and combinations of feed and prices of feed. A story is related that a young boy on whose farm feeding had not been successful stood watching a neighbor mix feed for his own herd that had always been profitable. The young man asked, "With what do you mix your feed?" The successful man replied, "Brains." Truly this is a time for the dairyman to mix his feed with brains.

Waupaca and Portage Holstein Breeders' Picnic.

To the Editor:—The annual picnic of the Waupaca and Portage County Holstein Breeders' Association was held at Ponderosa Farm, W. P. Kissinger, owner, near Waupaca, Thursday, August 30th. Fully 1,200 persons were present, Holstein enthusiasts from many miles around availing themselves of the opportunity of hearing the splendid program.

S. B. Bird, of South Barron, described the plan adopted by Holstein breeders near Fond du Lac for disposing of their surplus stock. The consignment sale was found to be the most satisfactory method and a two-day sale brings better results than a one-day sale. To make the sales a success and insure sufficient cattle it was thought best to include fourteen counties around Fond du Lac, so last spring plans were begun with this in mind. It was decided to have a pavilion 120 feet square with stall room on three sides and to incorporate for $25,000. Stock was sold to Holstein breeders in the fourteen counties and already, with only about half the territory canvassed, about $18,000 has been subscribed. At least three sales will be held annually and it is proposed to hire a sales manager permanently, his duties being to obtain sufficient entries and to aid the breeders in properly fitting their animals for the ring.

The building will be rented to other breed organizations when they wish to hold sales, and it is proposed to charge rent on the commission plan.

F. E. Paronto, of Waupaca county, next spoke favorably of the plan to include several counties in the sale circuit, for he said it was difficult to get sufficient animals consigned from one county to make a satisfactory sale, one which would draw buyers from other states.

A stock-judging contest for boys was of great interest and gave the crowd an opportunity to see four excellent cows and the same number of type bull calves from Mr. Kissinger's herd. The awards were made by Mr. Coyner, county agent of Portage county, and he ranked the boy judges in the following order: Myron Mather, Waupaca, first; Arthur Jorgenson, Waupaca, second, and Perry Miller, third.

A number of songs by Arthur Ritchie, R. J. Ritchie and Miss Ritchie were very well received.

R. T. Harris, of the department of dairy tests, gave an interesting talk emphasizing the value of the official test, both to the breeder and to the breed.

Dr. O. H. Eliasen, state veterinarian, urged the testing of cattle for tuberculosis and stated that at the present time in this state only 2 per cent of the cattle are tested regularly. He then explained the plan by which it is hoped to eventually rid the state of this disease. The first two counties which apply for a general "clean up" will receive an appropriation of $18,000 and more if necessary to pay for sending a force of men into these counties to test all the herds. When a county applies for this general testing it is necessary that the petition be signed by 50 per cent of the cattle owners in the said county. At the present time the various breed organizations of Waupaca county are cooperating to bring about the circulation of the petitions as soon as possible, in order that Waupaca will be among the first two to apply for the "clean up." D. R. Burnham, Sec.

Waukesha County Guernsey Association No. 1.

The herd having highest average for the month of July in Association No. 1, was that of Herman H. Wendt, Waukesha, 10 cows averaging 582.12 lbs. milk and 34.42 lbs. fat.

The next highest herd was that of Alvin Basse, 12 cows averaging 710 lbs. milk and 30.52 lbs. fat.

The highest herd average of our two associations here in the county was that of Mr. H. H. Wendt.

New Holstein Testing Association.

To the Editor:—During the month of July 413 cows were tested in the New Holstein Cow Testing Association, Calumet county. Four hundred and seventeen cows have been entered for this year. Of these 236 are grade Holsteins, twenty-four registered Holsteins, eighty-seven grade Guernseys, twenty-eight registered Guernseys, two grade Jerseys, two grade Durhams, seven grade Short-horns and thirty-one natives or unknown ones. A herd of Holsteins owned by Hugo Libke produced as an average 990.4 pounds of milk and 39.4 pounds of fat during July. John Kuhn owns the champion cow for the month, a grade Holstein. She produced 1,271 pounds of milk and 67.3 pounds of fat as a four year old. A registered Guernsey two years old owned by H. J. Duecker is the champion in her class. She produced in one month 885.6 pounds of milk and 46.9 pounds of butter fat. Owing to the shortage of pasture and excessive heat during July, many herds fell short of what was expected. Consequently our forty-pound list, which contained fifty-seven cows, was much smaller than the previous month. The price of fat ranges from 54 to 62½ cents per pound for butter fat. Our forty-five-pound list for July follows:

Owner, name and breed.	Age.	When fresh.	Lbs. milk.	P.C. fat.	Lbs. b'fat.

ATLAS EXPLOSIVES

Blow Out Those Stumps It's Easy, Quick, Cheap

"Farm Powder is the easiest, quickest and cheapest means of removing stumps," repeated tests have proved. The Minnesota Experiment Station found explosives "blew stumps entirely out and broke them into pieces easily handled." Clear your stump land with

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

—Made especially for farm use and sold by dealers near you. Convenient—costs little—no experience needed—no money tied up in expensive tools. It will help you make idle acres pay a profit.

Use it to blast holes for tree-planting and watch the trees outgrow those planted with a spade. Use it for subsoiling or for digging ditches. It is the cheapest, fastest, hardest working farm hand you can get.

Send Coupon for Farm Book—FREE
Our illustrated book "Better Farming" will be helpful to every land owner. It shows how to improve soil, raise bigger crops, blast stumps and boulders, and do all kinds of work with Atlas Farm Powder. Mail the coupon *now*.

TRAINING GIRLS FOR SERVICE

(1) Domestic economy students learning home dressmaking. (2) How to furnish a home cheaply, simply and beautifully is a problem worthy of much study. (3) Power machinery in the laundry takes the drudgery out of washing. (4) In this practice dining-room students are taught to combine simplicity, beauty and utility.

SUCCESS in any line depends to a great extent upon the preparation one has made before taking up his chosen work, and upon the degree to which he keeps posted in the matter of up-to-date methods of conducting his business. If this is true of other occupations, why is it not true of housekeeping?

Colleges and universities are paying high salaries to experts who devote their entire time and attention to the solving of problems that beset the farmer and his wife. The farmer is taking advantage of this opportunity to learn newer and better ways of performing old tasks. He is attending short courses and institutes; he is sending his boy to the university to acquire up-to-the-minute knowledge of stock raising and general farm problems; and he and his boy together are putting this knowledge to practical use on the farm.

Why cannot the farmer's wife and her daughter do likewise? The same opportunity is afforded the farmer's wife as the farmer himself. The home economics department of the University of Wisconsin takes an active interest in Wisconsin farm women and girls and it is bending every effort to be of practical service to them in solving their household problems.

The instruction given in this department is not theoretical, for the girls are given practical experience in housekeeping, and this experience is gained under the most ideal conditions.

This does not mean that when a girl has finished her course in domestic economy and returned to her mother's home or started her own housekeeping establishment she will require a model house, expensive outfits and elegant furniture. No, indeed! It does mean, however, that if she must start in working in an inconvenient, poorly arranged house with no labor-savers to help her out she will know how to go about making improvements and little by little remodeling, rearranging, readjusting, until her ideal is reached. It means that she has learned the value of personal efficiency in running a modern household on economical lines. It means that she has learned the immense importance of even minor labor-saving appliances in their relation to her own health and strength. Perhaps she cannot with one wide sweep modernize her house from top to bottom, but she will know where to begin making improvements, and, moreover, she will have made a thorough study of the expenditure of the family income so that she will know how much she can afford for any one thing.

Personal hygiene is another phase of the girl's education that is given its full share of attenton, and this, certainly, is one thing that will stand her in good stead if she must take up heavy duties. Most of us know what to do when illness overtakes us, but how much better it is to know what to do to keep well. Instruction on how to live in order to keep perfectly fit physically should have a place in every girl's education. The strong, healthy girl is anxious to retain her bloom and vitality, and her less robust sister is more than anxious to improve her physical condition.

Many a housekeeper who has never had any previous experience is obliged to do her own sewing. And do it she does. Some find that they have a natural knack with the needle and, therefore, the usual difficulties are surmounted without any trouble. But alas for the girl whom nature forgot to endow with this gift, whose mother before her did not know how to sew, and who finds herself squarely up against it when she undertakes to make herself a gown. What a boon it would have been if she could have had a few lessons on how to draft patterns, how to use commercial patterns, how to cut her material to advantage; if she could have had a hint about the hundred and one tricks of the trade which make sewing less of a nerve-racking business. Not only do the girls in the home economics department study dressmaking, but they study textiles, color harmony in dress, and the appropriateness of different materials and styles for various wear. At the Minnesota State Fair the extension department of the University of Minnesota gave a practical demonstration of the value of such training. Frocks for different occasions were exhibited on live models. Simplicity was the keynote and those who viewed the gowns were favorably impressed with this proof that the American girl can make herself attractive and winsome with simple clothes made by her own hands.

The home economics student, when she has finished her course, not only knows how to keep house, but she and her fellow students and her instructors have worked out the best, the easiest and the most efficient ways of doing household work. She has learned to systematize her work and save her strength. She has studied housekeeping from a scientific standpoint. She has acquired some useful knowledge about how to build a home, how to buy for it and how to furnish it, not only beautifully but economically. She has learned food values so that she can prepare a meal for the family that will answer all the needs of the human body—just as her brother has learned feed values so that he can compound a balanced ration for the stock. If it is worth the farmer's time to learn how to feed his animals for best results, how much more is it worth the time of the farmer's wife and daughter to learn how to feed the family?

Housekeeping in all its phases, from building and furnishing the home to feeding and clothing the family is studied by home economics students with a view to the greatest efficiency and economy, and the making of the home beautiful and livable and helpful to right and happy living is not the least of the aims of this department.

It seems to us that every girl is entitled to this training. We do not mean to belittle the training she receives in her own home—the two go hand in hand and the one is doubly valuable through the influence of the other. Every girl longs to go to college and if she is domestically inclined she could not spend her time more happily or profitably than by taking a course in domestic economy. She will be learning lessons that will be of great benefit to her later on and at the same time she will enjoy to the limit the college atmosphere. We firmly believe that the farm mother and daughter can make as good use of a college training as can the farm father and son.

Plan Your Bulb Bed Now.

If you are planning to have a bed of tulips, hyacinths, jonquils or other bulb flowers for next spring you should begin thinking about it now, because next month is the time to make the bulb bed. The best place for these spring flowers is in some location where the bed can be used, after the bulb flowers have had their day, for other plants that do not root deeply. Phlox, petunias, geraniums or pansies can be planted in the bulb bed and when the season for them is over they can be removed without in the least disturbing the bulbs.

A few points should be remembered in planting bulbs. Always set the eye side up; the other end will show root fibers. A handful of sand around each bulb will keep away the worms. After the bulbs are all planted cover the bed with a thick layer of wood or leaf mold. Manure should never be used on the bulb bed, because it heats the soil so that the bulbs may sprout before the danger of hard freezing is past.

Tulips, hyacinths, crocus, iris, jonquils, narcissus, as well as some of the lilies, should be set out in October. Hyacinths should be set at least four inches below the surface and five or six inches apart. Jonquils and narcissus should be set at a depth of five inches and three inches apart. Crocus should be two or three inches deep and three or four inches apart. In the case of iris the bulbs should be three inches deep and eighteen inches apart, this distance being necessary from the fact that the iris multiplies rapidly.

There is immense satisfaction in a bulb bed. For one reason, once established, the bed takes care of itself for three years. After this length of time the bulbs will have to be divided to keep them from overcrowding and thus dwarf the blooms.

Pennsylvania Apple Butter or "Snitz."

Take perfectly sweet apple cider and boil down to one-half the quantity. Have your apples pared, cored, quartered or smaller. Cook the apples in the cider, in a large kettle, adding more apples and more cider as the mixture "boils down," to keep the quantity up. Cook until it thickens, stirring constantly all the time. Before taking the apple butter off, add sugar to taste, about forty pounds to one-half barrel kettle. Some use a little spice, such as cinnamon. When cooked too long the butter is dark. It is most appreciated when a rich golden red. The butter is generally put in stone or earthen crocks and the openings tied with waxed paper. When thoroughly cooked the apple butter should keep well all winter or longer. Should it show signs of fermentation it can be freshened by heating thoroughly again.

Making apple butter is a job "from sun to sun." It is generally made in a half-barrel copper kettle, over a wood fire. Constant stirring is necessary; also constant cooking. The apples are generally pared the night before and steeped in water in tubs.

To make a one-half barrel kettle of apple butter, upwards of a barrel of sweet cider can be used and a like quantity of apples.

Simple Test for Wool.

The laws of our country at present offer no protection to the purchaser of textile materials. If the price of "all wool, a yard wide" goods is paid and later it is found that the material is half cotton, there is nothing left for the purchaser to do but to enter it as "loss" in her profit and loss account. To be sure, there are any number of stores where the dealers are truthful about the textile materials handled, but nevertheless a knowledge of a few simple tests may not come amiss.

Sometimes sleazy, thin cotton material is made to look quite firm and attractive by the use of sizing or dressing. By rubbing a corner between the thumbs, the sizing is removed and the real quality of the material is apparent. In very thin materials the sizing may be detected by holding the cloth to the light. The starch will show between the threads.

An examination of the raveled warp and wool threads will often reveal much. Cotton fibers are short and broken ends of cotton threads will appear fuzzy. Linen fibers are long, and consequently broken ends of linen threads are more pointed than those of cotton.

Some woolen materials are "made over," that is, old woolen rags and short, broken fibers, and the clippings from broadcloth are used in its manufacture. Sometimes this can be detected by unraveling the end. The short fibers are loosened and fall out. —Beryl Dixon.

Recipes.

Creamed Carrots and Onions.—Four or five carrots, two medium-sized onions, one cupful milk, two tablespoonfuls butter, two tablespoonfuls flour, salt and pepper to taste. Wash, scrape and cut carrots into small pieces, slice onions, and boil together until tender. Make a white sauce with the milk, flour and butter; add salt and pepper. Drain carrots and onions and stir into the cream sauce. Serve hot.

Tomato Succotash.—Four large tomatoes, three large ears of green corn, one-half green pepper (chopped), one teaspoonful salt, one small onion (chopped), two tablespoonfuls butter, one tablespoonful sugar, one-fourth teaspoonful paprika. Fry the pepper and the onion in butter till soft. In the meantime have the corn cut from the cob and the tomatoes skinned and sliced, cooking together. Add to the latter the fried pepper and onion and the seasoning. Cook gently until a little thick, and serve at once.

Water Gingerbread With Whole Wheat.—One-half cupful molasses, one-half tablespoonful ginger, one-fourth teaspoonful salt, one-fourth cupful warm water, two tablespoonfuls shortening, one cupful whole-ground wheat flour, one teaspoonful soda. Sift ginger, salt and soda into the molasses, add the shortening melted, beat well, and add warm water and flour unsifted. Beat thoroughly and bake in a well-greased shallow pan in a moderate oven about twenty-five minutes.

Green Corn Pancakes With Whole Wheat.—Two cupfuls whole-ground wheat flour, one cupful cooked corn cut from the cob, one and three-fourths cupfuls water, three teaspoonfuls baking powder, one teaspoonful salt, one tablespoonful shortening. Mix the unsifted flour, baking powder and salt thoroughly together, all the corn and the cold water gradually until it forms a batter that will pour. Stir in the shortening melted. Beat well. Bake on a hot griddle.

We Guarantee 35% Fuel Saving

over the expense of heating your home by any other method when you use a Caloric Pipeless Furnace. Many of our customers say that they save half. This guarantee applies to coal, coke or wood.

It's a clean saving of over a third of your fuel bill. Not only that, but you will not know real heating comfort until your home enjoys the balmy circulation of healthful warmth distributed by the Caloric.

With complete satisfaction at a third less cost, your own best interest urges you to install a *Caloric*. We've ample proof for all we claim.

OVER A THOUSAND LETTERS PROVE IT

We've put them in a book. Ten thousand more might be added. Every one of these is the actual experience of a pleased owner.

No heat in the cellar—ideal for storage of fruits and vegetables. No coal to carry to three or four stoves. No dirt or dust in living rooms. No long pipes to waste heat. No holes to cut in walls. No risk of fire. Only one register. Can be put in any house, old or new. Costs little to install. Price is low. Satisfaction guaranteed.

I consented to the installation of a Caloric and the results were wonderful. I own and occupy an eight-room residence. During previous years I consumed, in a base-burner, between nine and ten tons of coal and used only three rooms on entire first floor. With a Caloric I consumed seven tons and found that the second floor of my residence was just as comfortable as anyone could desire. At a temperature of five degrees below zero, I found the fourth or front room on first floor of my residence to be 72 degrees. Demand a Caloric and your heating problem is solved.

HERMAN STRODEL,
1320 Wells St., Ft. Wayne, Ind.

PIPELESS CALORIC FURNACE
TRADE MARK TRADE MARK

Let the Caloric dealer in your town show you this wonderful furnace. Write us for our free booklet describing it.

Mansfield, Ohio

THE YOUNG FOLKS

Loves Her Lark.

Dear Young Folks:—I am a girl thirteen years old and I will be in the fifth grade this year. I guess if you had not been to school for four years you would be in the fifth grade too. But I am going this year, because we have a housekeeper now and I do not have to stay at home. I have four little brothers and one sister. My sister is four years old. Her birthday is on the twenty-second of February. Two of my brothers are twins. They are five years old. I do our sewing, washing, ironing and baking. I have no mother to take care of me or of the others. I am nearly like Vesta, am I not?

I am going to tell you Young Folks about my pet lark. One day when I was sick I had my window wide open. I was eating breakfast when in came a lark. It flew around the room and then came down and perched on my shoulder. I gave it some bread crumbs and it ate them. Then I gave it some cool water. It had a nest on top of our clock and it flew to the nest with some crumbs. There were some little larks in the nest. I love my lark dearly and I love to see it feed the little ones.

I like to guess the riddles. Can you guess this one? How can you get the water out of a bottle without breaking the bottle or pulling the cork out?

Erma.

The Humming Birds Like Her Garden.

Dear Young Folks:—I am a little girl eleven years old. I will be in the eighth grade this term. I like to go to school and I have not missed a day for four years. We live two miles and a half from town and a quarter of a mile from the schoolhouse.

We have two pets, a dog and a cat. The dog's name is Trixy and the cat's name is Mew Mew. They are great chums and play together a great deal. They eat together out of one dish and sleep in the same box.

I have one sister and one brother. My sister is five years old and my brother is nine.

I have a garden of my own. There are a great many flowers in my garden—balsam, candytuft, nasturtiums, phlox, marigolds and Japanese morning-glories. Many humming birds visit my flowers and I think it is fun to watch them flit from flower to flower.

I like to read your letters and guess the riddles. I think the answer to Dorothy's riddle—what table has no legs—is the multiplication table.

Hazel.

A Music Course For Advanced Students

Finishing courses in vocal, piano and all string or wind instruments will make you a confident, experienced concert artist or parlor performer, as you choose. Finest teachers, most efficient methods.

Dramatic Course develops for amateur or professional work on stage or for films.

Normal Course, guaranteed, in any line, will make you a successful teacher.

All based on the advanced Centralizing Method. Write today for booklet of courses and terms.

CENTRALIZING SCHOOL OF MUSIC
18 E. Jackson Blvd., CHICAGO

LE PAGE'S CHINA CEMENT
STANDS HOT AND COLD WATER TO

Member of Boys' and Girls' Club.

Dear Young Folks.—I would like to join your circle, as I enjoy reading your letters very much. I wrote to you once before, but did not see my letter in print so will try again.

I live on a 160-acre farm a mile and a half from town. I am twelve years old and in the seventh grade. This year our school organized a boys' and girls' club. I am in the poultry project and like it fine. I have twenty-six Plymouth Rock chickens.

I have a piano, but have not taken lessons yet, although I can play. I like to live on a farm because it is fun to ride horseback. I have a pony named Buck.

I like to guess riddles, so I will send one for you to guess. Four and twenty white sheep standing on a hill; now they go, now they go, now they stand still.

Frances.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Enclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date fall and winter 1917-1918 catalog, containing 550 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating thirty of the various simple stitches), all valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

2021—Ladies' sport blouse, with sleeve in either of two lengths. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3½ yards of 36-inch material for a 36-inch size.

2200—A good dress for school or general wear. Pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 3⅝ yards of 36-inch material for an 8-year size.

2032—A popular boys' blouse. Pattern is cut in 5 sizes: 8, 10, 12, 14 and 16 years. It requires 2⅜ yards of 36-inch material for a 10-year size.

2199—A charming negligee. Pattern is cut in 4 sizes: Small, 32 and 34 inches bust measure; medium, 36 and 38 inches; large, 40 and 42 inches, and extra large, 44 and 46 inches. Size medium will require 7½ yards of 36-inch material.

2216—A simple, popular model. Pattern is cut in 4 sizes: 14, 16, 18 and 20 years. Size 16 requires 6⅜ yards of 44-inch material. The dress measures about 3 yards at the lower edge. The sleeve may be finished in wrist length with a deep cuff, or in short length, with a shaped cuff.

2226—Girls' dress. Cut in 4 sizes: 8, 10, 12 and 14 years. It requires 4½ yards of 44-inch material for a 10-year size.

2208-2211—Ladies' costume. Waist 2208 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 2211 cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It will require 6 yards of 36-inch material for a 36-inch size, for the dress as illustrated. The skirt measures 2⅜ yards at the foot. Two separate patterns, 10 cents for each pattern.

2013—A practical ladies' apron dress. Pattern is cut in 4 sizes: 34, 38, 42 and 46 inches bust measure. It requires 5 yards of 36-inch material for a 34-inch size.

2006—Ladies house dress, with reversible closing, with or without chemisette, and with sleeve in wrist or elbow length. Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 7⅛ yards of 36-inch material for a 36-inch size.

1978—Children's dress with sleeve in either of two lengths. Pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2½ yards of 36-inch material for a 4-year size.

2223—A practical, comfortable garment. Pattern is cut in 6 sizes: 1, 2, 4, 6, 8 and 10 years. Size 6 requires 1⅝ yards of 36-inch material.

1971—Ladies' dress. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6 yards of 44-inch material for a 36-inch size.

International Sunday School Lesson

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for September 16, 1917.

The Fiery Furnace.

LESSON TEXT—Daniel 3.

GOLDEN TEXT—When thou walkest through the fire, thou shalt not be burned; neither shalt the flame kindle upon thee.—Isaiah 43:2.

I. The Occasion (vv. 1-7). The fact that God said to Nebuchadnezzar, "Thou art this head of gold" (2:38) was too much for him. Though he appeared to have been deeply impressed with Daniel's God, his pride got the better of him. As he grew great and became conscious of it, he grew proud. This moved him to set up a colossal idol of gold in the Plain or Dura to be worshipped by all the people of his realm. It was an attempt at self-deification. It combined with it a political move, the object of which was to weld together the various kingdoms and peoples into one homogeneous body. He inaugurated a religious festival, and called upon all the people to worship the image which he set up. He backed this demand by civil authority. The penalty for refusal to bow down and worship the image was to be cast into the burning fiery furnace. Imposing images are set up in many places, and men and women are being called upon to bow down and worship them. Some of these images are money, fashion, scholarship, worldly ambition, pleasures, etc., and woe be to those who will not worship before them.

II. The Behavior of the Hebrews (vv. 8-18). (1) The accusation by the envious spies (vv. 8-12).

Daniel's three friends had been promoted to positions of honor and responsibility. Certain Chaldeans whose envy had been excited by the promotion of these Hebrews, sought occasion against them. This they found when the Hebrews would not bow down to and worship the image. Envious eyes are always watching God's faithful ones. Had these Chaldeans been faithfully worshipping, they would not have seen the Hebrews.

(2) The King's rage (vv. 13-15).

He calls the Hebrews before him, questions them and gives them another chance. The offense was not serious—they were defying the authority of the one who had honored them in their promotion; it savored of ingratitude. After closely questioning them he gave them another opportunity to consider their position before consigning them to the fire. His supreme mistake was in the challenge he made to the God of the Hebrews. He seems to have forgotten entirely the confession he had made with reference to God (2:47).

(3) The courageous reply of the faithful Hebrews (vv. 16-18).

They replied without passion or fear. The peace of God filled their hearts. Their behavior is an expression of triumphant faith. "We are not careful to answer thee in this matter. If it be so, our God whom we serve is able to deliver us from the burning fiery furnace, and he will deliver us out of thine hand, O king. But if not, be it known unto thee, O king, that we will not serve thy gods, nor worship the golden image which thou hast set up." They courageously showed their contempt for death. They were not afraid to die, but were afraid to sin against God. They knew that to bow down before this image was to disobey and dishonor God. While they did not know what God would do, in the premises, they knew that he would do the right thing. These Hebrews were far away from home, exposed to the most severe temptation, but they saw their duty clearly set before them. God's law plainly settled it for them. They did not try to find an excuse to evade their duty, and seeing the way clearly they acted accordingly.

III. The Glorious Issue (vv. 19-30). (1) The harmless furnace (vv. 19-25).

The infuriated king ordered the heat of the furnace to be intensified, his most mighty men to bind the Hebrews and fling them into the fire. Though the heat was so intense that the soldiers who cast them into the furnace were slain, the Hebrews were seen walking loose in the fire without any hurt. Equally astounding was the fact that a fourth one was seen with them.

(2) The convinced king (vv. 26-28).

The spectacle was so wonderful that the king called the Hebrews together out of the fire. They came forth unharmed, for the fire had no power over their bodies; not even a hair of their heads was singed, their coats changed, nor the smell of fire upon them (v. 27).

(3) The king's decree (v. 29).

This was most foolish and wicked. Even a king has no right to kill people for not worshiping God.

(4) Promotion of the Hebrews (v. 30).

Their fidelity in this trying ordeal resulted in their promotion instead of downfall. May we learn from this that:

(a) God alone is Lord of the conscience. One's faith and worship should be determined by the individual before his God. No church, king or ruler has a right to interfere.

(b) We should meet religious intolerance by being obedient to God rather than man.

(c) God will support those who are faithful.

(d) We should prepare for fiery trials, and through them all be true to our conscience.

SUGAR 5c A LB.

Only one of the many wonderful bargains offered in our new Price-Wrecking Grocery Catalog, sent free to you today with your first order of the sample outfit quoted below. This catalog is not sent out indiscriminately. Its hundreds of bargains in highest class, staple food products are intended only for those who buy in quantities sufficient to make such remarkable prices possible. Only those who are interested in saving 30 to 50 per cent on all their fine groceries will receive this big list of bargains free with the trial order quoted below.

FLOUR $9.60 Per Barrel

In order that we may know you will appreciate and make prompt, earnest use of the hundreds of big bargains contained in our catalog, we have chosen from it this sample order amounting to $1.87:

TRIAL ORDER A. 42

$ .50	5 lbs. our Best Granulated Sugar	.25
.16	2 Bars American Family Soap	.09
.08	1 Pkg. Gold Dust Washing Powder	.03
.12	1 Large Package Quaker Oats	.06
.50	1 lb. Special Baking Powder	.40
1.00	2 lbs. Our Special Blend Coffee	.64
.40	½ lb. Black Pepper	.20
.40	½ lb. Cinnamon	.20
$3.16 Approximate Retail Price		$1.87 Our Price

You Save $1.29

Send for this trial order **today.** With it we will include our Price-Wrecking Grocery Catalog, showing how you may buy sugar at 5c, flour at $9.60 per barrel, with orders. **You choose your own items** on all future orders. We do not ask you to buy complete outfits except this **trial, get-acquainted order.** Don't pay exorbitant grocery prices another day—when you can secure the best at a saving of from one-third to one-half.

RYE.

CHOICE high-yielding plump pedigree rye; recleaned and graded; reasonable price. Arthur Popp, Jefferson, Wis.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Poultry Need Dust Baths.

Dust baths are essential to the health of poultry. Fowls enjoy wallowing in them and sifting the fine dust through their feathers, which serves the purpose of killing lice and removing scales and scurf from the skin. Some provision for the dust bath should be made in every poultry flock. The easiest way is to secure a large, shallow box, open at the top and having close-fitting sides and bottom. It should hold six or eight inches of dust and have sides high enough to prevent the chickens from throwing the dust out. Some poultrymen favor a closed box, arguing that there is less scattering of the dust when the box has a top and small hole in the side for the fowls to enter. But a dust box should be exposed to sunlight, which disinfects and cleanses, and, furthermore, chickens are inclined to shake off the dust after they have come out of the box, thereby scattering it just as much as if the box were open. In order to get the direct rays of the sun, the dust box should be either on the south exposure of the poultry house or inside the house near a window where the sun can shine on it. Unless it is raised above the surrounding floor or ground, litter and other foreign matter will get mixed with the dust. For this reason an elevation of three or four inches is desirable. Short scantlings, nailed to the sides of the box near each corner and projecting downward the desired distance, may serve as supports to give the proper elevation.

Perhaps road dust has attained the widest popularity of any material for the dust bath. It may easily be obtained and proves effective, but can be improved on as a lice killer with the addition of fine sifted coal ashes. Dust kills lice by stopping up their breathing pores and the finer the dust the greater its effectiveness. When road dust is not at hand, sandy loam soil mixed with coal ashes serves the purpose admirably. Many poultrymen add to such a mixture a small quantity of insect powder, lime or tobacco dust, all of which aid in getting rid of lice. The essential thing is to make the dust mixture light, fine and dry as possible.

Destroying Poultry Lice.

Because the lice live, eat and breed upon the body of the fowls, means of eradication must be such as to reach them beneath the feathers. This is accomplished in two ways, by the application of powers which suffocate the lice, and by liquid preparations which stifle the lice with their fumes or kill by coming in direct contact with the parasites.

If fowls have easy access to a dusty earth wallow, they will keep themselves fairly free from lice, but eradication will not be entirely complete in the majority of cases. A good dust wallow may be made of equal parts sifted dry loam and coal ashes. Wood ashes should not be used, as they may bleach or burn the shanks and feathers.

For the eradication of lice quickly and complete, as upon show birds and sitting hens, it is usually necessary to work a fine, dusty powder into the feathers. The method of application is to hold the fowl with one hand by the legs, head downward, and work the powder into the fluffy feathers around the vent, on the body, under the wings and on the neck, with the free hand.

An excellent powder at low cost may be made as follows: To a mixture of three parts gasoline and one part of crude carbolic acid, stir in all of the plaster of Paris it will moisten. When enough plaster has been added, the powder will be dry, brownish pink in color, and have a pronounced odor of carbolic acid and gasoline.

A second application of the powder should be made at the end of one week to catch any lice that escaped the first dusting or had hatched from eggs in the meantime.

Sitting hens should be thoroughly dusted when eggs are placed under them and again at the end of the first and second weeks. This insures them being free from lice when the chicks are hatched.

To kill the lice upon chicks, dust the mother hen or paint the walls of the coop with some liquid lice killer or disinfectant as given.

Especial care should be taken to dust the male of the flock thoroughly, as the quickest way to spread lice through a flock is by means of a lousy male bird.

Leg Weakness in Growing Chicks.

We ran into a flock of chickens a short time ago that were big, overgrown fellows, large for their age, perfectly healthy, but the abnormally large bones were so soft that the flock was developing what is termed "leg weakness."

Inquiring into the matter, it was brought out that those chickens had been hatched in an incubator, kept in limited quarters where they were wholly dependent on their keeper for their feed, which consisted almost wholly of cornmeal, that was lacking in ash to give rightly proportioned bones, and the result was that they were soft and spongy, with the flock beginning to go to pieces.

This same principle applies not only to growing chickens but to the production of eggs. Mineral is necessary to produce an egg. In a measure, grain furnishes the mineral, but not in large enough quantities. An egg contains eight times as much ash as its equivalent in grain, and it is very evident that grain alone cannot furnish the right balance, as it would require eight times the amount of grain necessary for the needed ash that would otherwise be utilized, and the effect would soon show up in the egg production.

Some ash is furnished through the use of fresh vegetables, though not in large enough quantities. Beef scrap and cut bone are the most dependable sources of ash, with an abundance of milk as a good substitute. In the former, care should be taken to not feed too much, and green cut bone is easily tainted. It is preferable to buy from the grocer the granulated bone, which is always sweet. For laying hens in winter and chickens raised in limited quarters the ash must be supplied in some form.

Crushed oyster shells and limestone grit furnish this necessary element to a great extent and should be within reach of flocks, whether yarded or on range, at all times. Locality plays an all-important part in this. Some places afford all the lime and grit which the chickens need for the picking.

Few are the times we find chicks suffering from leg weakness when they range with the hen. Chickens brooded by artificial methods are troubled most, and unthinking people get the idea that it is caused from being hatched in an incubator, when really it has its foundation from wrong feeding; the things that the range chick hustles around and finds when at liberty with the hen is lacking and they, in one sense of the word, are starving.

The growing chick on the range has access to everything that forms bone and flesh, and it is a star at balancing the ration to be had for the gathering, coming up at night to get the grain ration for best results.

Feed the Fighters! Win the War!

Harvest the Crops! Save the Yields!

On the battlefields of France and Flanders the United States boys and the Canadian boys are fighting side by side to win for the World the freedom that Prussianism would destroy. While doing this they must be fed and every ounce of muscle that can be requisitioned must go into use to save this year's crop. A short harvest period requires the combined forces of the two countries in team work, such as the soldier boys in France and Flanders are demonstrating.

THE COMBINED FIGHTERS IN FRANCE AND FLANDERS
AND THE COMBINED HARVESTERS IN AMERICA
WILL BRING THE ALLIED VICTORY NEARER

A reciprocal arrangement for the use of farm workers has been perfected between the Department of the Interior of Canada and the Departments of Labor and Agriculture of the United States, under which it is proposed to permit the harvesters that are now engaged in the wheat fields of Oklahoma, Kansas, Iowa, North Dakota, South Dakota, Nebraska, Minnesota and Wisconsin to move over into Canada, with the privilege of later returning to the United States, when the crops in the United States have been conserved, and help to save the enormous crops in Canada which by that time will be ready for harvesting.

Help Your Canadian Neighbors When Your Own Crop Is Harvested

Canada wants 40,000 Harvest Hands to take care of its

13 MILLION ACRE WHEAT FIELD

One cent a mile railway fare from the International Boundary line to destination and the same rate returning to the International Boundary. High wages, good board, comfortable lodgings.

An Identification Card issued at the boundary by a Canadian Immigration Officer will guarantee no trouble in returning to the United States.

AS SOON AS YOUR OWN HARVEST IS SAVED, move northward and assist your Canadian neighbor in harvesting his; in this way do your bit in helping "Win the War."

For particulars as to routes, identification cards and place where employment may be had, apply to Superintendent of Immigration, Ottawa, Canada, or to

GEORGE A. HALL 123 Second St., Milwaukee, Wis.
Canadian Government Agent

AUCTION SALE—Having land in the West which I must give attention to, have decided to sell farm and personal property, at my farm, in town of Herman, 2½ m. so. of Lyndhurst, 4 mi. east of Tilleda, on Monday, Sept. 17. Good work team, weight 3,000; 12 head reg. cows and heifers; 4 bulls; all of the cattle are pure-bred, reg. Holsteins, all tubercular tested and vaccinated. Will also sell the farm of 160 acres; first-class buildings; good frame house; basement, barn, cemented, water works in barn for all stock, stanchions, concrete silo; all of late improvements; machine shed, chicken house, granary, wood shed, well and windmill. And all machinery. Lays on main road close to school, church and cheese factory. Telephone. Wm. Hoferman, R. 1, Box 18, Lyndhurst, Wis.

A SMALL FARM in California will make you more money with less work. You will live longer and better. Delightful climate. Rich soil. Low prices. Easy terms. Sure profits. Hospitable neighbors. Good roads, schools, churches. Write for our San Joaquin Valley illus. folders, free. C. L. Seagraves, Ind. Com'r, A.T.&S.F.Ry., 1959 Ry. Ex., Chicago.

DRAINED CORN-WHEAT LAND

NO ROCKS, hills or swamps. Improved. $50 per acre up. Terms, one-fourth cash, balance 10 years, 5% interest. This year's crops will pay price asked for some of these farms. Write Box 216, Farley, Iowa.

HAVE SOME of the best farming lands, also diversified farms in the Northwest. Prices, $20 to $35 per acre, five to ten years, terms. One crop of wheat or flax under present government price pays for land. Write for information. Ryan Land Co., Leith, N. D.

POULTRY AND PET STOCK.

HOUNDS

COON, FOX, WOLF, RABBIT HOUNDS—PEDIGREED AND ELIGIBLE TO REGISTRY. Broke dogs sent on ten days' trial. Money back guarantee. Nice lot of puppies 6 to 9 weeks, ready for shipment now.
OTIS SLATER & SONS Oconee, Ill.

FOR SALE---S. C. RHODE ISLAND REDS

FOR SALE—Reg. and ped. Rufus Red Belgian hares from prizewinning stock. Satis. guar. or money ref. Hy. C. Hess, Box 39, Homestead, Ia.

APRIL hatched Single Comb Buff Leghorn cockerels and pullets, from choice laying strain. Chas. Schmit, Hortonville, Wis.

HELP WANTED.

WANTED—Experienced farm hand. State wages. John J. Mueller, Montfort, Wis.

FARM MECHANICS

Questions and Answers.

Muffler Cut-Out.

Will a muffler cut-out give a car more power? Will it let the carbon out, or will it keep it in the cylinder?

Answer.—A muffler cut-out gives the car some additional power when running with the cut-out open. It is against the law in nearly all cities to run with the cut-out open, on account of the noise of the exhaust. With the cut-out open, some of the carbon will blow out of the cylinder that would otherwise remain in it. The difference is not very noticeable, however.

Making a Bean Thresher.

Will you please tell me how to make a bean-threshing machine that will run by a one and one-half horse-power engine? I want to fix the engine so that it will pull itself and the thresher. If the engine is not large enough, please tell me what size I need.

Answer.—We would be pleased to hear from any of our readers who have made a successful outfit of this kind. We woul dadvise the use of an engine having at least three horse power. The size of the engine would depend upon the capacity of the thresher.

Electric Tail Light.

Please publish a diagram showing the way to put an electric tail light on a Ford car.

Answer.—This is very easily done. Run a wire from the magneto terminal on the back of the coil box, or from your storage battery if you have one, to the tail-light lighting switch, which you may install on the dash. This may be an ordinary snap switch or a wall switch. From the other switch terminal run a wire to the tail light; and from the other tail light terminal run a wire to the frame and fasten it, making sure that it makes good metallic contact. Use rubber insulated lighting cable.

Magneto Out of Order.

I have a Bosch high-tension magneto, type ZEV. It produces a much hotter spark at one plug than it does at the other. When turning the magneto over by hand I can notice that it has a much stronger pull for one plug than it has for the other. I have been careful to adjust the platinum points, and they separate the same distance. What can I do to remove rust in the bottom of my gasoline tank?

Answer.—One of the ends of the cam operating the contact points of your magneto is worn. Unless you are expert on magneto repairing you had better send the magneto to the nearest service station for repairs. If you do not know where the nearest station is located write to the Bosch Company. We do not know of any method for removing the rust in your tank without injury to the tank, but you can slow down the rusting process by placing a strip of zinc in the bottom of the tank.

Kerosene Carburetors.

Please give me the addresses of all the manufacturers making kerosene burning devices for Ford cars. Are they successful? Will a gallon of kerosene give more mileage than a gallon of gasoline?

Answer.—There are at least three successful kerosene-burning carburetors for Ford cars. As to the merits of these, you better consult your local Ford garage man, who will be able to supply you with an outfit. You will probably obtain slightly less miles per gallon from the kerosene, though the difference will not be very noticeable. Theoretically, you should obtain more mileage from the kerosene, but the kerosene is harder to burn completely.

Three-Horse Evener for Wagon.

I am getting a great deal of useful information from the Farm Mechanics Department, but when it comes to three-horse eveners for a wagon, I think I have the best one. I enclose a sketch. Figure 1 is an iron bar, one-eighth inch thick, five inches wide, and twenty inches long. Figure 2 shows an iron bar one-eighth inch thick, one and one-half inches wide, and sixteen

FIGURE 1.

inches long; the holes being one inch from each end. These parts and a chain are used in connection with an ordinary tripletree. The manner in which they are used is shown in Figure 3. In Figure 3, A is the tripletree, B the part shown in Figure 2, C the part shown in Figure 1, and D an ordinary clevis. The parts shown in Figure 1

FIGURE 2.

and Figure 2 are bolted together by two plow bolts, the part shown in Figure 1 being countersunk so that the heads of the bolts are level with the surface. The part shown in Figure 1 goes above the pole, and the part shown in Figure 2 goes below the pole, as shown in the end view, Figure 3. A clevis, D, connects the tripletree with the part shown in Figure 1. A chain attached to the clevis is passed between the upper and lower parts of

FIGURE 3.

the front axle and fastened to the rear axle, just enough slack being allowed so that the tripletree will not drag on the wheels. I have used this outfit for fifteen years and I know that it works well.

Answer.—We are pleased to publish the above letter, as we are sure it will be of interest to many of our readers. The fact that it has been used successfully for many years adds value to it. The writer of the above letter is giving others the benefit of his experience, and we would be pleased to hear from any of our readers who have good ideas which they have tried out successfully. The Farm Mechanics department is not only to help you out of trouble; it is a department for the exchange of ideas.

The description of the outfit is so complete that no further explanation is necessary, the principal dimensions being given. Any style of tripletree may be used.

Prest-o-Lite Candle Power.

What is the candle power of the one-half foot size of Prest-o-lite burner. Also what candle power is the three-fourths foot burner? Does the law require dimmers for Pret-o-lite lamps?

Answer.—The half-foot size will give thirty candle power; the three-fourths-foot size, forty-five candle power. Dimmers are required on Prest-o-Lite lamps the same as on electric lights.

Spark Plugs.

I would like to know if there is any difference between the spark plugs used on automobiles and motorcycles. What company makes the smallest spark plug? How many batteries does it require to work them?

Answer.—There is no difference between the plugs used on automobiles and motorcycles. There are three common sizes of spark plug in common use, the size referring to the thread rather than to the size of the body of the plug. These are known as one-half pipe, Metric and A. L. A. M. It is necessary to purchase a plug having the proper thread for the engine in which the plug is to be used. At least three dry cells are required to operate plug successfully unless the spark coil is exceptionally good. Five cells are commonly used for automobile work. A less number is used for motorcycles, as it is necessary to reduce weight. Special combination batteries are often used on motorcycles.

Belt Power From Ford Car.

I enclose cut of a belt attachment for a Ford car. This attachment operates a pulley in front of the car, driving the pulley by the starting clutch. How can the speed of the motor be governed while sawing wood or filling a silo? This attachment will develop eight horse power, while I only need five. Do you think that this outfit will hurt the engine or the front wheels of the car?

Answer.—The outfit should operate successfully without undue strain on the engine or car if the outfit is properly installed. Care should be taken to see that the pulley shaft of the attachment lines up properly with the crank shaft of the engine. There will be some wear on your engine, but not more than for a similar time spent on the road.

We know of no governor on the market for regulating the speed of the engine. A boy in the machine could work the throttle lever to regulate the engine speed to suit the load; or the throttle rod could be disconnected from the carburetor and a wire attached so that the operator could open or close the throttle from any desired point.

North America's 1917 wheat crop won't come within 400 million bushels of supplying the shortage of our European allies and neutrals, Herbert Hoover announced. As a partial remedy he suggested that every person in the United States use one pound less wheat flour per week—a reduction of 20 per cent from the present consumption. Substitute other cereals, of which there are plenty, he urges. If these cereals—corn, oats, barley and rye—are substituted in the American home, it will mean that "war bread" will become part of the American diet. Hoover suggested that this conservation "will be no privation to us and will reduce the privation of our allies." His estimate is based on normal consumption in a three-year period.

The Washington County Fair will be held this year at West Bend, October 1st-2d-3d. The West Bend News calls attention to the announcement of the twentieth annual fair held in West Bend in 1878. At that time there were twenty-six classes in the premium book, and now there are 107, not including the many prizes and cash premiums offered to school children. In 1878 the total racing purses amounted to $500 and in addition to trotting races there were foot races, sack races and a mule race as the "grand finale." Things have changed a great deal in Washington county since the twentieth and fifty-ninth county fairs, and the fair has kept pace with the general advancement in the county.

Exchange Places with

Your Wife—

IF YOU are not jolted around on the front seat as much as she is on the rear seat, it is because you can brace yourself with the steering wheel. You take the rear seat, she the front. Then you'll *know* that you ought to equip your Ford with a set of the

HASSLER **Shock Absorber** For Ford Cars

The Hassler makes both seats as comfortable as any $2,000 car. You'll feel the difference in the front seat as well as in the rear. Easier to hold the steering wheel. Easier to guide the car where you want it to go. No sudden jolts. No sharp rebound. No side sway. Cushions the car as well as the passengers. Lets tires last a much longer time; the extra mileage pays for it several times over. Over two hundred thousand sets in use.

Free Trial Offer See for yourself how much the Hassler would mean to your wife, your family, and yourself by letting us have a set put on your Ford for ten days trial. No money in advance. No obligation. No risk. Write today for Free Trial Blank and illustrated folder with letters from users. Address

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Actinomycosis.

I have a steer with a swelling between the two jawbones. This troubles him in swallowing and I would like to know what to do for it.

This is in all probability, if of some standing, lumpy jaw, or actinomycosis. It has probably taken on the form of an abscess and, if so, should be opened by someone familiar with such troubles. If a pus cavity is present and the pus is allowed to escape there will follow relief.

Scirrhus Cord in Pigs Following Castration.

After castrating my pigs bunches form after they are apparently healed. They are hard like a tumor and contain a little dried-up matter. Others here complain of the same trouble. These bunches grow until they are larger than one's fists. We want to know how to remedy this difficulty.

This condition is known as scirrhus cord and is one that is often seen. It is many times a botryomycotic infection and often comes about from faulty castration, causing poor drainage. The only remedy that gets immediate results is the complete removal of the growth. They can, however, if small, be split open freely and a caustic substance inserted into the mass. When the lump is removed surgically it should be done by someone experienced in the work.

May be Necrobacillosis.

I have several pigs which have swellings on their legs. They are not very large and are just below the middle joint of the leg, both front and back in some. One or two have swellings on the foot joint. They appear to be painful and cause the pigs to limp. The pigs are in good health otherwise, and eat well. These pigs are three months old, on grass pasture with some grain. I would appreciate any advice you can give me.

The trouble may come from injury from pigs piling up or it may be some form of necrobacillosis. It is hard to say positively without an examination. In any event, we doubt if much can be done to relieve the condition.

Contagious Abortion.

I have a Holstein heifer, three years old, that has had one calf. I cannot get her with calf. She has come in heat regularly since she dropped her calf in January. My bull is a sure breeder. Other cows are losing their calves when they are six or seven months along. Can you tell me what the trouble is?

Since you speak of your cows losing their calves we are led to believe the trouble is of an infectious nature and, if so, this may account for your heifer not breeding. You should have the cooperation of some good veterinarian in ridding your place of abortion. This is quite a task, but much may be accomplished by persistency.

BARN AND SILO ON AUG. PABST FARM, WAUKESHA COUNTY, WIS.

Quality of Sugar Beets.

To the Editor:—Few sugar beet growers realize, particularly, that the quality of the crop depends very much upon the health of the sugar beet plant. A healthy plant has a bright green color. The presence of the green color of the leaf to a certain degree is due to the substance known as the chlorophyll. These greenlike bodies in the leaf play a very important part in the formation of sugar. The work of these bodies is to make plant food out of the raw materials.

One of the chief plant foods is carbonic acid gas. This gas comes from the lungs of animals. We can readily see the source of this plant food when it is known that all animals continually breathe out carbonic acid from their lungs. What is poisonous to man is an important food to plants. In fact, plants could not store up sugar nor could they even live without this food.

On very careful examination of some plants it will be observed that carbonic acid gas of the air passes through small openings found on the under side of the leaves. One will readily understand the necessity for growing a large, healthy leaf so as to furnish a large breathing area. However, large quantities of the gas are taken in by the leaves of the beet plant. Under the influence of the green chlorophyll bodies, the gas unites with water and forms a compound from which sugar is ultimately made. When the sugar has been formed in the leaves, it is then carried to the roots of the sugar beets by the downward flow of the sap. Later in the season the sugar in the beet root is deposited in cells all along the root which very closely resembles a honey comb in structure.

The sugar beet plant has gone to all this trouble of storing a considerable amount of sugar in its root. Did it do it for our benefit? Not entirely so. The sugar beet plant is a biennial, that is, it produces seed every second year of its growth. Should we harvest it the first year and store the sugar beet root in the cellar and then plant it the following spring, we would observe that it will again begin to grow. From the crown of the beet root (mother beet) a strong leafy stem is sent up. This stem bears the flowers which later will bear the fruit. Flowers will form at short intervals along the stem and its branches and are usually in clusters of four or five and below each cluster one notices a small bract. Quite frequently the seed does not ripen uniformly. If allowed to become too ripe considerable portions of it will shell and will be lost on the ground. J. F. Wojta.

Wisconsin Experiment Station.

It's Natural for a Hog to Wallow

Here's a good thing to do: Provide a wallow close to the feeding grounds to which add Dr. Hess Dip and Disinfectant. As the hogs pass back and forth from the wallow to the feed trough, the DIP will kill the lice and cleanse the skin, while the DRIP will destroy the disease germs and the worms that pollute the ground. That will mean a clean, healthy skin, freedom from lice, a safeguard against disease and larger, better porkers.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

M. V. Miller's Poland China Sale.

AN important sale of big-type Poland China swine will be held on September 26th by M. V. Miller, Lawler, Iowa. This is Mr. Miller's first annual sale and he has a good, useful offering. Mr. Miller has always bought the best seed stock obtainable and it is this class of Polands he offers. His present herd boar is Timm's Wonder, a splendid yearling with lots of bone and size and very smooth, but best of all he is proving a great sire. About half the offering is by him and includes the best pig on the farm. This boar pig is out of Lady Nelson, by Long Nelson 2d and is a great prospect for a herd boar. There is a good pig by Timm's Wonder and out of Big Wonder by Lingford's Choice. There is a good litter of 10 by the same boar and out of Wonder Lady by Miller's A Wonder. Timm's Wonder is a good enough boar that such enterprising breeders as Drewelow Bros., New Hampton, Iowa, paid Mr. Miller a long price for half interest in him. A good boar pig by Big Bob and out of a dam by Big Master is listed. There are also good pigs by Mouw's Smooth Jumbo and out of dams by Mouw's Big Bone 2d and Great Jumbo. A good litter is by Big Fashion and out of a dam by the Iowa grand champion, Grand Master. Forty head will be sold, 10 of which are fall boars by Long Jumbo by Black Jumbo and out of a dam by Reubel's A Wonder. There are 20 spring boars and 10 spring gilts, the tops of this year's crop. The pigs are not as fat as some, but they are in a good, thrifty condition and will do well for their buyers. No better bred offering will be sold and Mr. Miller is a straightforward, honest gentleman with whom to do business. You will get a square deal. We neglected to state that Timm's Wonder is by Fessy's Timm (by Big Timm) and out of a dam by A Wonder, second dam by Long King, making his pedigree as good as the best. Arrange to attend the sale. Write for catalog, mentioning The Wisconsin Farmer. See page 26. Send bids to T. P. Shreve, of The Wisconsin Farmer, in care of Mr. Miller.—Adv.

Did You Notice the Atwater Advertisement?

NOTICE the breeding of the Duroc herd boars that appears in the L. F. Atwater advertisement on page 25 of this issue. It's absolutely impossible to get breeding that is more popular at the present day. Take Proud Chief Jr., a champion himself and sired by the greatest of recent day sires—Cherry Chief, and out of a Proud Col. dam, the cross that has produced some of the great boars. P. S. Wonder is dead, but he lived long enough to produce the best pigs on the Atwater farm this year. It was expected that he would reproduce something great, for he was by Crimson Wonder Again, out of H. A.'s Queen. Model King is no "handsome being," but "handsome is as handsome does," and he does produce the good ones. Sired by High Model out of a King the Col. dam—enough said. Illustrator King was by the illustrious Illustrator, and had for a dam a daughter of Proud Col. When L. F. calls his sale on October 17th he will offer you breeding and individuality that will be hard to duplicate. It's a sale you can't overlook if you want herd-boar material. He has absolutely retained the best ones for this sale, so that everyone has an equal chance and will not have to take any culls. They are sure good, and The Wisconsin Farmer gladly recommends them to the critical buyer. Watch for our October 4th issue, which will contain the details.—Adv.

King Orion Grand Champion at Minnesota State Fair.

FOR some time past we have been talking about King Orion, for he is the best Duroc boar we have seen in the Northwest, and our judgment was substantiated at the Minnesota State Fair, where he was first in class and senior and grand champion Duroc Jersey boar. This is the good senior yearling boar owned by E. H. Parker & Son, Janesville, Wis. He will be shown at Milwaukee, where many of our readers will see him. He is a truly wonderful boar in every respect. Weighed 900 pounds, 75 inches long, 75 inches heart girth and 74 inches loin and has nine and three-fourths-inch bone, and no boar ever stood on better feet. In passing, we might add that he is a son of Orion Cherry King Jr., the grand champion boar at Omaha last fall that recently sold for $3,500. Keep your eye on King Orion, the grand champion.—Adv.

Waukesha County Guernseys.

WE were surprised while visiting the show herd of J. H. Williams, Waukesha, Wis., that Mr. Williams was offering for sale several of his choicest young cows. Two of them are daughters of Rhea's King of the May and one a daughter of Nancy Rose, containing a double May Rose cross. The daughter of Nancy Rose is a senior yearling and a strictly high-class show animal. It is doubtful if there will be any animals of her age at the state fair this fall that could beat her, while the two daughter's of Rhea's King of the May are out of a 568-pound cow of good conformation. These two daughters are nicely marked, possessing good lines, and are the kind that are good enough for the most discriminating buyers.—Adv.

Big Doings at Lancaster, October 2d.

TUESDAY, October 2d, is to be Poland China day in Grant county, Wis., for on that day the popular Poland breeders of that county will have for sale at Lancaster, top boars from their respective herds. A representative of this paper recently visited the various herds and saw the boars that have been picked for this sale. The tops of some 12 herds have been selected for this sale and we believe this to be as uniform a lot of good, big, growthy boars as we have ever seen listed for a sale. Even though feed has been high, the boys in Grant county have not neglected their Polands, and the boars and sows that have been cataloged for this sale will be a credit to them as breeders. If you will get a catalog of this sale and notice the blood lines contained therein you will see that there is a great variety of breeding. In this manner boars can be purchased that will not conflict with boars used in the past. We are not saying much about the gilts, for this is properly a boar sale, but if you want to see ten gilts "in a class by themselves" you can buy them in this sale. We won't mention the breeding of this sale offering at this time, but bear in mind that this offering is worthy of your patronage. There is no association in the state that is doing more for their chosen breed than the Poland breeders of Grant county. They are boosting the breed and producing boars that will improve the breed in this state. If you want a boar and cannot attend this sale in person send your buying instruction to T. P. Shreve, who will represent The Wisconsin Farmer at the sale. Send mail in care of Burlie Dobson, Lancaster, Wis. Write him at once for a catalog and mention this publication. See advertisement on page 26.—Adv.

The Cole Poland Chinas.

A. W. COLE, Lodi, Wis., has been breeding Poland Chinas for about 20 years, and for the past 15 years his ideal hog has been one that had plenty of length, strong bone to carry weight and conformation that denoted easy-feeding qualities. Mr. Cole has used good boars in his herd. King Victor 2d was by Fair Boy, a grandson of old Longfellow. King Victor was used before the above and some of the best sows in the Cole herd are by this last mentioned boar. He goes back to Best of All. Other good sows are of Major Hadley and Monarch breeding, as well as Big Bone. Mr. Cole had very good success with his spring pigs and he has a nice lot of boars and gilts to offer the public. His prices are certainly in keeping with the individuality. At this writing—September 2d—his spring pigs weight 160 or more, and they are in growing condition. The frame is there to carry over 200 pounds. Only a few of the breeders are offering bred sows for sale, and Mr. Cole is one of them. He has a few good sows bred to farrow in September that he is offering for sale. Write this breeder at once. See page 26.—Adv.

Old People's Home, Stoughton, Wis.

MR. O. C. Lee has decided to sell Briar Pietje Korndyke (140506) a three-year-old 26.57-pound son of Briar Butter Boy, that has 15 A. R. O. daughters. Mr. Lee states that the bull he is offering is a good individual, well marked and weighs about a ton. His ancestry unites the blood of some of the most noted animals of the breed. On his sire's side he traces to Pontiac Korndyke and De Kol 2d's Butter Boy 3d, in the third generation and on his dam's side he traces to Pietje 22d, a 31.62-pound cow that is generally recognized as one of the great cows of the breed. Every dam in this bull's pedigree is an A. R. O. cow with the exception of one, for three generations and she is the dam of two A. R. O. daughters. Write to Mr. Lee for further particulars. The bull is priced to sell quickly. See the advertisement on page 27.—Adv.

Will Howie's Jersey Herd.

WILL HOWIE, who is a son of Adelaide Howie, the well-known lecturer, and who is the possessor of one of the best Jersey herds in the state of Wisconsin, has been in business for himself since the dispersion of his mother's herd. The individuality of the cows in Mr. Howie's herd is much above the average, and he now has a number of heifer calves mostly sired by a son of Noble of Oaklands that are particularly fine and will be priced right. Anyone on the market for animals of this description will do well to write Mr. Howie for further particulars.—Adv.

September 24th at Hazel Green.

ON the above date E. W. Hendricks holds his annual Poland China boar sale at his farm near Hazel Green, Wis. Ed has the goods for this sale. His boars are not fat, but they have that extreme length and frame that is so desirable. First, there are 18 spring boars by that good sire, Black Jumbo, without a doubt one of the best sires ever used in Wisconsin. There are four dandies out of a sow by Long Bob. Four 1,000-pound prospects are out of Lady High Wnder, a granddaughter of the $600 Long Wonder 2d. One of the best pigs in the sale is out of an A Wonder bred sow. Four good ones out of Smooth Daisy by Smooth Wonder. One out of a daughter of Big Bug. One can't go wrong on these boars. Then comes 14 boars by Model Major 2d, the boar that will be talked about after the Wisconsin State Fair. Three of them are out of Gold Blossom by Spring Valley Gold. One real good boar out of a Black Jumbo sow. Two boars and three gilts out of Lady Jumbo 2d by Wonderful by A Wonder. Three boars and one gilt out of Long Giantess. One boar by Blue Valley Jr. by Blue Valley, one of the best and sure well bred. Two boars by Big Joe 2d by Big Joe. This will give you an idea of the blood lines—they couldn't be improved on. Ed is selling 30 boars and 10 gilts that will please you—the kind that make good. If you can't attend and want a boar or a gilt, send your instructions to T. P. Shreve representing the Wisconsin Farmer at this sale. Write at once for the catalog and mention this publication. See the advertisement on page 25.—Adv.

Higgins Ready for You.

ISAAC HIGGINS, Gotham, Wis., is now ready to fill your order. Mr. Higgins is the man that bought those good, well-bred sows last winter. They raised him good litters, but at his request we have not made much noise about them, for he wanted to wait until they had some size before he shipped them out. He wants them to go to head pure-bred herds, and he has carried them along with that view in mind. He now advises us that he has selected a number of boars that are suitable to head the best herds. He has some out of a Royal King dam. Others out of a Big Climax dam, others out of a Defender bred dam, etc. They are sired by Gano Model's Educator, a boar that carries the blood of Col. Gano, Golden Model 2d and old Educator. King Orion is the sire of one litter. Pal's Chief Col., a Pal's Chief-bred boar, is also the sire of some of the pigs. Mr. Higgins will also sell a few of his good gilts, and someone wanting some well-bred gilts to "sweeten up" their herd should investigate this herd of Durocs. Gotham is near Richland Center, on the Milwaukee railroad. If interested, get busy at once. Please mention The Wisconsin Farmer. Note the advertisement on page 25.—Adv.

Fewacres Farm, Wauwatosa, Wis.

WE were very much impressed with the prospects of the show herd which the Fewacres Farm is turning out this fall. While they have not as yet decided to show at the big shows following the Wisconsin State Fair there seems to be some likelihood of their doing so. We offer our prophecy at any rate that they will give a good account of themselves at the Wisconsin State Fair. Mr. Alfred Sersted, who has had charge of the herd on the farm ever since it was founded, has done splendid work in bringing it to its present state of perfection, and Mr. Underwood, the owner, has been fortunate in retaining the services of one who has had the ability and interest to build up a herd possessing both creditable register of merit work and show ring performance.—Adv.

O'Keefe Duroc Brings $221.

DON'T say that M. H. O'Keefe & Sons, Waunakee, Wis., haven't the goods in Durocs when one of their boar pigs sells for $221. "Red Messenger" was a Red Cross pig donated by the above firm to the Waunakee Red Cross Society. He was on exhibition at the Dane County Fair, held at Madison last week and was the center of attraction. The Red Cross Society sold tickets at 25 cents each, and almost everyone that passed the pen bought a ticket for the "good of the cause." Number 517, held by Elmer Levenhage, 212 E. Main St., Madison, held the lucky number. See page 25.—Adv.

Big Joe's Equal Sale.

IF you want long, stretchy, well-bred Poland China boars, get a son of Big Joe's Equal at Bert Irwin's, Mt. Carroll, Ill., on Saturday, September 22d. If you want some good fall gilts or tried sows bred to Big Joe's Equal you can get them at Bert Irwin's. Regarding Big Joe's Equal. He is one of the real good big-type boars in service today. A boar with a wonderful back, great depth, the best of bone and feet and the most important is that he is a good sire. We believe you will like this boar, as everyone else does. He is without a doubt one of the best sons of Big Joe. Several of the boars in the sale weigh 300 pounds, and are good herd-boar prospects. Irwin has a good sow herd, there being daughters of Big Joe, A Wonder, Big Bone, Big Defender, A King, Columbus, etc. This big-type breeding can't be improved on. Don't forget that this was the home of the $1,000 Oakland's Equal. There are a few boars in the sale by Bill's Chief and Cream City Jumbo. There will be 30 boars and six good fall gilts and four tried sows that are being offered as attractions. Every boar guaranteed a breeder and every sow guaranteed to farrow a litter or money refunded. Wisconsin breeders can well afford to attend this sale, for Bert has the goods. The good farmers can find boars to their liking in this sale. The catalog gives you the information you desire and is interesting reading—get one now. T. P. Shreve will represent The Wisconsin Farmer and mail bids should be sent to him if you can't attend in person. See the advertisement on page 24.—Adv.

Waukesha County's Forty-Pound Bull.

NATURALLY, as we called upon S. A. Baird & Son, Waukesha, Wis., the other day, we inquired for Woodcroft Perfection, the $5,200 bull calf that was purchased last spring at the Detroit sale by the following breeders: S. A. Baird & Son, Baird Brothers, Muckleston Brothers, Aitken Bros. and D. J. Howell, all of Waukesha. This calf has been kept in S. A. Baird & Son's herd ever since he came to Waukesha, and has been making a splendid growth. He has the appearance of making a large, rugged individual, possessing plenty of refinement and quality. His dam, it will be remembered, made 40.25 pounds of butter in seven days with 726.70 pounds of milk; 161.01 pounds of butter in 30 days and 3,013.40 pounds milk. This record was made at six years and at five years she made 37.41 pounds butter in seven days with 704.10 pounds milk. His dam also made 1,046.12 pounds butter in a year with 27,008.40 pounds milk. These records show that the dam of this calf is not only a phenomenal producer, but a consistent one as well, and that she has the constitution to stand up under such strenuous work for a long period of time. Breeders over the state having exceptional cows that are worthy of being bred to a 40-pound bull will do well to get in touch with the owners of Woodcroft Ptrfection, as he will soon be ready for light service.—Adv.

H. J. Fisk.

MR. FISK, who has been manager of the Fred Pabst Stock Farm, Oconomowoc, Wis., has recently decided to go into the government service and has, therefore, taken up the management of the Fort Leavenworth tract, Leavenworth, Kan. This tract consists of about 20,000 aces of land, which the government has decided to stock with dairy cattle. In fact a number of large buildings are already under construction and Mr. Fisk is now in the market for 100 high-class, pure-bred cows, as well as two exceptionally well-bred herd sires. We feel that Mr. Fisk is doing his country a great service taking the active management of so great an undertaking, and, while Wisconsin breeders regret seeing him leave the state, their best wishes follow him to his new work.—Adv.

Sorenson Has Choice Boars.

SOME time ago we called attention to the fact that John Sorenson, Willmar, Minn., had the best Duroc Jersey pigs we saw in Minnesota. The boars are now for sale. They are immune. The breeding is the very best, the pigs being sired by E. J.'s Crimson Wonder, the grand champion of Minnesota, 1916, and Big Wonder, the grand champion of Iowa, 1913. Mr. Sorenson sure has the goods for his customers this year. Not only has he champion boars, but no breeder in the state has better sows than Mr. Sorenson. As mentioned above, the boars are choice and the breeding the best, so get in touch with John Sorenson, Willmar, Minn. Please mention The Wisconsin Farmer.—Adv.

Rock County Short-horns.

REMEMBER Rock county, Wis., when in need of Short-horn cattle. More cattle of this breed can be seen in the above county than in any other county in the state. If you want cattle of the very best Scotch breeding, Rock county has them. If you want cattle that have milk records back of them, the many herds of milking Short-horns in Rock county will appeal to you. If you want

Scotch-topped cattle, Rock county is the place for you to visit. For information write the secretary, J. E. Kennedy, Janesville, Wis. See page 27.—Adv.

Burt Farms' Duroc Jerseys.

FOR over 20 years F. H. Burt, Brodhead, Wis., has been breeding Duroc Jerseys, and during this time has held to the large-bodied, heavy-boned, prolific type, without sacrificing breeding. Such breeding as Col. S. Jr., Pal's Col., Cherry King, Indiana King, and The Professor is prominent in this herd. While Mr. Burt seldom shows any stock himself, his ability to breed show stuff is proven by the success his customers have had when showing stock of his breeding. At present he is offering 50 March and April boars that will weigh from 180 to 220 pounds. These pigs are sired by Model Wonder 182445, he by Indiana King, Professor B. 148913, a grandson of The Professor, and Wonder Col 216085, a grandson of Cherry King, out of a Col. S. Jr. dam. Nine of these boars are out of a Pal's Col. dam, a boar recognized by the Duroc world as one of the greatest boars of his day. At his death, the Ohio College of Agriculture secured and mounted the body as a model of Durocs. Eighteen are out of Lee's Defender dams. As is well known this boar was several times grand champion at the Wisconsin and Minnesota State Fairs and stamped his progeny with size, bone and quality. Eighteen are out of Defiance dams, a half-ton boar of his own breeding. All the boars have been selected for breeding, merit and usefulness. These hogs are sold under a liberal guarantee, which it will pay the prospective purchaser to investigate. Write Mr. Burt at once, and please mention The Wisconsin Farmer. See page 25.—Adv.

Don't Say Wisconsin Hasn't Good Durocs.

READ the report of the Duroc show at the Minnesota State Fair last week and notice the "killing" made by Wisconsin breeders. Minnesota breeders won the futurity, for outside breeders were not eligible. Reeves Bros. & Mallory, of Iowa, had the champion sow and the first-prize sow pig was owned by a Minnesota breeder. Every other first and championship was won by Wisconsin breeders, either Atwater, Jenkins or Parker. McDonald and Martiny upheld the reputation of Wisconsin in the Poland China division. Keep it up, boys, and Wisconsin will soon gain the place she rightfullly deserves as a hog state.—Adv.

Harvey Little and Milking Short-horns.

HARVEY H. LITTLE, Evansville, Wis., always has a few young bulls on hand, for he has a large herd. If you want bulls out of dams that have records worthy of consideration, you should let Harvey send you a description. It is a treat to see the Little cattle. They are big and smooth and not like so many of the so-called, milking Short-horns. If you want information relative to one of the best herds in the state, write the above breeder. See page 27.—Adv.

Baby Beef.

HAVE you written Walter J. Steinhoff, the secretary of the Grant County Aberdeen Angus Breeders' Association, relative to the Angus bulls and females that are for sale? We have recently seen some very fine young bulls and heifers in Grant county that are owned by members of this association, and Mr. Steinhoff has this information ready for you when you write him. His address is Platteville, Wis., and he will be glad to tell you about the Grant county Angus that are for sale.—Adv.

Herefords.

DID you see the Hereford exhibit at the fairs this fall and did you see the cattle owned and exhibited by Walter Brothers, Chippewa Falls, Wis.? If you did you no doubt will appreciate the many good things we have said about this herd the past few months. For those that did not get to see this exhibit, we will say that they "have the goods," and if you want a bull that is right, get in touch with these breeders. See page 25.—Adv.

Village Mystic by Villager.

THOSE that are partial to the Villagers should be reminded of Village Mystic, the good roan Short-horn bull at the head of the C. J. Schoenfeld & Son herd at Fox Lake, Wis. He is a son of the noted Villager and is a worthy son of a great sire. The calves by this bull are good and this firm solicit your inspection. See page 27.—Adv.

Bulls, Cows and Heifers.

H. B. DRAKE & SON, Beaver Dam, Wis., have a large herd of Short-horns and are in a position to supply your needs in whatever you want. They have for sale cows, heifers and bulls at prices that will prove attractive to you. Write them if interested. See page 27.—Adv.

W. J. Bernd Short-horns.

DON'T forget W. J. Bernd, New Richmond, Wis., when you think of Short-horns. He has a good herd, headed by outstanding herd bulls, and we feel confident that if he has what you want to buy, it will be right in every way. Get in touch with him.—Adv.

Holstein Cattle.

Oct. 23-24. Lake Mills Holstein Sale, Lake Mills, Wisconsin.

That the unprecedentedly high price of corn is not due to abnormal holding of supplies by farmers is the belief of the department of agriculture, based on reports just received from crop correspondents in Illinois, Ohio, Kentucky, Iowa and Missouri. These states are typical of the great surplus white corn-producing region, the department declares, and their conditions indicate conditions throughout the corn-producing area. The investigations disclosed that farmers are holding only corn enough to insure their seed supply for next spring and to protect their live stock feeding interests until the production of a sufficient supply from the present crop is assured, and the stocks in their hands are much lower than normally. Among the conditions making for high corn prices, according to the department, are shortage of the 1916 crop and the "carry over" from 1915, increased exports, increase in the general level of prices and the increased numbers of live stock on farms.

M. V. MILLER'S FIRST ANNUAL SALE
BIG-TYPE POLAND CHINAS
LAWLER, IOWA, SEPTEMBER 26

Timm's Wonder, one of the largest, smoothest, heaviest-boned yearling boars of the breed. Some great pigs by him in the sale.

40 HEAD, 10 fall boars, 20 spring boars, 10 spring gilts. The fall boars are a good useful lot with plenty of size and are sired by Long Jumbo by Black Jumbo. The spring boars are the tops of this year's crop of spring pigs and include 20 great herd boar prospects. A wonderful prospect is by Timm's Wonder and out of Lady Nelson by Long Nelson 2d. There is a good big boar by Big Bob, dam by Big Master. Other litters are by Mouw's Smooth Jumbo, Big Fashion, Miller's Baron, Miller's Chief and about half of them by Timm's Wonder. These pigs have not been crowded, but are in fine growing condition, are bred in the purple and are the right type. If you are interested in good Polands attend this sale and get some bargains. It is our first sale and we do not expect any high prices. **The entire offering is immune.** Write for catalog mentioning The Wisconsin Farmer. Auctioneers, H. S. Duncan, S. E. Johnson, R. Francis. T. P. Shreve will represent The Wisconsin Farmer. Address

BURLIE DOBSON, Sec'y Grant County Poland China Breeders' Association, Lancaster, Wis.

POLAND CHINA SWINE.

50 BIG-TYPE POLAND CHINA SPRING BOARS AT $40.00 EACH

Double treated, and we record them. They will be worth $40.00 on the market by the time you are ready for their service. Farrowed in last of February, March and April, the greatest lot of high-class pigs we have ever raised, long and deep bodied, heavy boned, nicely marked and good backs. They are from the most noted families of the great breed, sired by Giant Jumbo 2d, the 700-lb. year-old son of Giant Jumbo, whose sire was the 1,055-lb. Maid's Halvor 1st; his dam sired by the 1,000-lb. and over Big Bone 2d, his grandam by Mouw's noted Big Jumbo. There is no bigger breeding. Others by Long Expansion, a 900-lb. two year old, and Pawnee Wonder, a 1,000-lb. son of A Wonder.

The dams are sows weighing from 600 to 800 lbs. and over, of the most intense big-type blood lines. Buy your boar now and save from $20 to $50. Boars will be high and scarce this fall.

Send your check right with the order, tell us the kind of a boar you want and we will send him or return your money. Come and see our herd, one of the greatest in America, as well as one of the most up-to-date, pure-bred stock breeding establishments.

Home Plan No. 1410
A comfortable and commodious Bungalow on the popular craftsmen lines. Has every built-in convenience. Factory-to-user price for material complete . . **$1515**

This Is but One of 200 Gordon-Van Tine Homes

All at "Mill-to-Owner" Prices—All Costs Guaranteed

When you buy a Gordon-Van Tine Home, **there are no extras.** You pay the **"mill-direct-to-owner" price** that includes **everything**—lumber, millwork shingles, paints, nails, glass, builders' hardware, etc. And it makes no difference **where you live—the cost is guaranteed!** That prices for building may be high in **your locality, does not affect you.** For you buy **direct at as little as from $300 up.**

Women! Let Me Help You With Your Plans

Let me save you the mistakes that are often made in building a first house. I can help you provide just what meets your particular housekeeping requirements. The hundreds of letters I get weekly from women prove this. So, if you will write me about your likes and dislikes in a home, I can make my knowledge of Gordon-Van Tine Home Plans helpful to you.

Let me help you choose your home—a woman's home—the kind you can live in and like twenty-four hours each day. I write this, not as an architect, but just as one woman to another and only because through long study I know every Gordon-Van Tine Home, from cellar to garret. And what I want to do is to make that knowledge useful to you so you will get the very biggest value in EVERY way that Gordon-Van Tine or anyone else can give you. Tell me approximately what you want to spend and let me help you.

(Mrs.) Lian Belle Parker

Home Building Adviser to Women,
Care Gordon-Van Tine Co., Davenport, Iowa.

P. S. You don't have to be buying a Gordon-Van Tine Home to write me. My work is to make the American home more livable. I will be glad to answer letters from anyone who is building.

Materials Ready-Cut or Not Ready-Cut—as You Prefer!

From Gordon-Van Tine you can buy your house on **either** method. We price houses **both ways.** But whether you buy Ready-Cut to **reduce building costs** and **lessen labor problems**—or buy not Ready-Cut but **in usual lengths**—you always get **highest standard grades.** You get **newest architectural styles**—many of them modifications and adaptions from **the work of America's best architects** simplified into **inexpensive** construction. And your **savings** will probably **pay for your lot!** Every plan tested and **proven; all built hundreds of times in every State.** Some near you; **local references given.**

Send Today for FREE Book of Home Plans!

New book just out; shows **Bungalows, 3 to 6 rooms;** charming **Colonial residences,** selected from the best types of New England; **one story cottages,** 3 to 6 rooms; **story and a half cottages,** 4 to 7 rooms; **two story homes,** 6 to 9 rooms; **model farm homes,** 5 to 10 rooms; **roomy kitchens, entry washrooms,** and every practical convenience. **Many ideas** appealing to women—**built-in pantry cases, linen closets, 2-panel Fir doors, bungalow trim** for mahogany or other stain. Many pages in color show **stain and painting ideas.** Remember, this big book is FREE to home-builders. Send for it **today.** Use the coupon.

THE WISCONSIN FARMER

VOL. XLVI. NO. 38. THURSDAY, SEPTEMBER 20, 1917. WHOLE NO. 1860

Wisconsin Fair Is Improved.

THE state of Wisconsin furnished a good live-stock and agricultural exposition at Milwaukee last week and the attendance was good considering the weather. When we say that the state furnished this exposition we make the remark advisedly, because the state of Wisconsin is now back of the fair, in a financial way, and Wisconsin farmers, breeders, horticulturists and poultry raisers, in combination with the dairy products interests of the state, furnish most of the show. It was a Wisconsin fair, with few exhibitors from the outside. Illinois elected to hold its fair at Springfield the same week as the Wisconsin fair this year and the result of this change was that both Wisconsin and Illinois stockmen exhibited in their home state. Wisconsin has previously demonstrated that she can put up a good show without the aid of the outside world. As this is written the exact financial statement for the 1917 fair is not available, but it seems probable that Wisconsin will again be obliged to charge off a few thousand dollars to "expense for educational work." That is probably not the way the bill will read when it is finally audited at Madison, but that's what the deficiency on the state fair each year really amounts to.

There was marked improvement in almost every department of the fair. The live-stock show was not so large as usual, but it was a good show, and demonstrated Wisconsin's leadership in dairy cattle, both as to numbers and quality. The beef show, hog show, horse show and sheep are handled separately in this issue of The Wisconsin Farmer so it is unnecessary to go into detail here concerning them. Suffice it to say that better arrangements were made than usual for taking care of the stock show, especially in the hog and sheep divisions. Gradually the Wisconsin State Fair grounds is becoming a real exposition grounds even though for financial reasons it is necessary to make progress slowly. This year a $35,000 poultry building was added and it housed a $40,000 show. The grounds were well drained for the first time. Quite a little work was done toward decorating the grounds. When the rain came on Thursday it was apparent that soon it will be necessary to put in wider walks and more of them. The streets on the grounds should be wider and protected against the weather, either with gravel or some other pavement which will make it possible to keep out of the mud. But the good drainage system in use this year was a great help and these other things will undoubtedly be looked after later. The state has made $50,000 available next year for increasing the size of the grand stand. This grand stand is not for the racing crowds only, but is so constructed as to accommodate scores of exhibits. When completed the grand stand will easily care for several of the main departments of the fair, and this is the plan which the Board of Agriculture has in mind. Outside of the live-stock show the fair was more than usually complete in all departments. The automobile show was one of the biggest features this year. This show has been staged for three years in the old machinery hall. This year the hall was not large enough to accommodate the exhibit. An annex was put into use and fair visitors had an opportunity to see a high-class automobile show for a dime. In many respects this automobile show was the best that has been held in the country, outside the New York and Chicago winter shows. The decorations were artistic and the electrical effects at night added to the brilliancy of the scene. There were a larger number of closed cars shown than at any previous Wisconsin auto show. Interest was also shown in the automobile truck display, and right here it may be mentioned that farmers are casting their eyes very seriously toward the automobile truck. It is apparent that the time is not far distant when the truck and the tractor will gain great prominence as equipment for a Wisconsin dairy farm. Creameries and cheese factories in the state are looking into the merits of the truck as a vehicle for collection of cream and milk. The gardener appropriated the truck some time ago, but the average grain and live-stock farm is just beginning to realize its value. The success of the automobile show was due largely to the work of the Milwaukee Automobile Dealers' Association. These dealers conducted their annual booster tour this year as usual, previous mention of this tour having been made in The Wisconsin Farmer. They did some splendid advertising for the fair and incidentally, thousands of the state fair visitors this year came determined to spend a good part of their time in the automobile show.

GOV. EMANUEL L. PHILIPP, IN PATRIOTIC ADDRESS BEFORE GRAND STAND CROWD AT WISCONSIN STATE FAIR.

Milwaukee has done a good deal to make the Wisconsin State Fair a success. Every year when the fair management faces a deficit, Milwaukee turns out en masse and helps to keep the deficit down as low as possible. The city has never been able to get satisfactory transportation service to and from the grounds. It is a long, slow ride, from Third and Grand, to West Allis, and by the National Avenue line the trip back to town seems interminable. The most vexatious thing, however, though in each individual case it may seem a small matter, is the extra two cents charged for the trip. The fare to the grounds from town is seven cents. There is probably no city in America where one may not ride farther for a nickel than the distance from Milwaukee, down town, to West Allis. But the Milwaukee street car management has never found it agreeable to knock off these two extra pennies. After the state fair visitor has ridden something over a half hour in a crowded car the conductor comes along with a tin box with slot-in-the-top arrangement. It reminds one of taking up mite-box collections for the missionaries, but we would not go so far as to suggest that the street car company has any heathen connected with its management. We will say, however, that the company should make the fare to the state exposition grounds a nickel, and also the company should adopt some modern system of collection of fares so as to avoid delays when the cars are crowded. If the state fair at Milwaukee ever gets a large crowd such as it really deserves, the out-of-date system of holding people back at the gates while the conductor makes change in pennies, will have to be done away with or the dissatisfaction on the part of visitors will be very great.

"No sane man likes war," said Governor Emanuel L. Philipp, in his patriotic address, delivered before a crowd of 12,000 people on State Day, at the Wisconsin fair. The governor then proceeded to say that the time has arrived when American interests demand the sacrifice of human life. The fact that we are at war, in the governor's opinion, should end discussion as to the causes of the war. There is now only one position for the American citizen to take and that is on the side of the country and our army. "The man who is not on our side is on the other side," said Governor Philipp. The governor showed that the agricultural interests of Wisconsin have risen to the emergency caused by the great war. Wisconsin has come to the front this year of food shortage, with the greatest crop in her history and Governor Philipp, himself a farmer and dairyman, with his own farm and his own cows, says that our Badger state will make an even greater showing in the year 1918.

A state fair is a sort of clearing house for all the various organized and individual agricultural and live-stock enterprises of the state. To the extent that Commissioner C. P. Norgord and his associates are able to make this clearing house representative of the state's productivity and progress along these lines, the fair will always be a success. The Wisconsin Farmer is especially pleased with the showing made this year in the county exhibits building, where the competition was keenest in the history of this show. Mr. E. L. Luther and his associates have done fine work. The poultry exhibit was more than state wide in importance. No state fair in the western circuit this year has been able to

(Continued on page 9.)

CURRENT EVENTS

ALTHOUGH not actually at war with Germany, Argentina is very near to that condition. Last week Secretary of State Lansing, made public a number of messages showing that the German minister to Argentina had taken advantage of the Swedish government (whether knowingly or unwittingly has not yet been disclosed) and had sent official messages, in cipher, to Berlin through Sweden and over Swedish official wires. These messages told of the sailing dates of Argentine merchant ships and suggested that they be torpedoed so effectively by the German submarines that no trace whatever be left of them. One of the German messages thus sent referred to the minister of foreign affairs in Argentina as an "ass." Sweden is supposed to be neutral, although its rulers are known to be friendly to Germany, the Swedish queen being a cousin to the kaiser. At the same time it is an unneutral and decidedly unfriendly act to allow its wires and privileges to be used by one of the combatants for any purpose, particularly so when it is against the welfare of the country where the ministry is located. It has been pretty well proved already that Germany kept in touch with affairs in both North America and South America by means of messages sent by the German minister through the Swedish ministry in Argentina, the German minister being unable to reach his government direct. To what extent Sweden has been guilty of collusion with Germany remains to be shown by subsequent developments, but the situation is critical, as it may result in Sweden joining openly with Germany and Argentina declaring war against Germany. At the close of the week, Argentina had contented itself with handing the German minister his passports and Sweden announced that it would not recall its minister to Argentina, who had been guilty of helping Germany out, as it was a personal affair of his, of which the government took no cognizance. Sweden's excuse was a lame one, at best, and developments of even greater importance are momentarily expected.

IF Argentina declares war against Germany she will be the second South American country thus to take action, Brazil having declared war some weeks ago. The chief advantage to the allies in the situation lies in the fact that the countries which thus declare war immediately seize the German merchant ships which have been interned in their harbors while friendly relations existed. By this means the fleet which carries ammunition and foodstuffs to the allies over in Europe is enlarged, for the German ships are immediately repaired and put into commission. Argentina, Brazil and Chile are the leading nations of South America and two of them have already taken a very definite stand against Germany's high-handed ways of running things, not only on the seas, but all over the world.

A VERY serious and threatening situation has existed in Russia for the past week, due to a counter revolution against the provisional government headed by General Korniloff, former commander-in-chief of the Russian armies. Premier Kerensky discovered that Korniloff, who is exceedingly popular, was proposing to set himself up as dictator. He lost no time in declaring Korniloff a traitor, but the latter likewise lost no time in marching his army toward Petrograd, the Russian capital. When within a few miles of the capital, however, he was defeated, so that at last reports the revolution seemed to be tottering. Torn and distracted by internal revolutions the Russian army is in no position or condition to make any showing against Germany, so the armies of the latter continue their victorious march through Russian territory, seriously menacing Petrograd itself. It is quite likely that the Russian capital will have to be removed soon, to prevent its falling into the hands of the Germans, who already have Riga. Russia is a great disappointment to the other allies and at this writing seems almost out of the war, so far as being of any actual help to the nations which are fighting Germany, Austria and Turkey.

HOPES that the German submarine menace may shortly be checked were revived by the issuance of the British official report early in the week. A marked decrease in the destruction of British merchant vessels is shown by the report. Twelve vessels of more than 1,600 tons and six of less than 1,600 tons were sent to the bottom, as compared with twenty in the large and three in the small category sunk the previous week. The statement shows that four fishing vessels also were lost. The above admiralty statement shows the smallest number of large British vessels sunk by mines or submarines since Germany last February began her intensified submarine campaign. Dispatches were received during the week showing that a flotilla of American vessels, convoyed by destroyers, was attacked, two American vessels being lost, and one of the German submarines being sent to the bottom by American gunners on the destroyers.

DRAFTING of all aliens in the United States except Germans, others exempt by treaty, and those countries allied with Germany, who have resided in this country one year, is proposed in a joint resolution passed by the senate and sent to the house. It is estimated that more than 1,000,000 aliens would be affected. Under the resolution by Senator Chamberlain, of Oregon, chairman of the senate military affairs committee, subjects of the allies or neutrals claiming treaty exemption, would be allowed to leave the country within ninety days. Inequalities of the operation of the draft law because of exemption of large proportions of aliens in many districts, were cited by Senator Chamberlain to show the need for his resolution. Amendments adopted would permit the use of aliens of Germany in this country for other than military purposes; would provide that in future drafts credit shall be given for the excessive proportion of aliens and provide against expatriation of Americans who have joined the allies.

THE war revenue bill—proposing the greatest single levy of taxes in the history of the world—was passed by the senate last week. The measure provides revenue totaling $2,411,670,000, an increase of $542,750,000 over the amount proposed in the bill as it was passed by the house. The difference between the house and senate provisions will be compromised by the conference committee of the two houses, but in any event the total revenue eventually provided will be more than $500,000,000 short of the $3,000,000,000 levy urged upon congress by Secretary of the Treasury McAdoo as the financial spokesman of President Wilson. After knocking out the consumption taxes on tea, coffee, sugar, and molasses, proposed in the house bill, the senate passed the measure by a vote of sixty-nine to four. The senators voting against it were Borah, of Idaho; LaFollette, of Wisconsin; Gronna, of North Dakota, and Norris, of Nebraska, all republicans. LaFollette and Gronna have led the little band of anti-war senators in opposing all war legislation, but Borah and Norris agreed with them that the bill does not impose sufficiently heavy taxation of wealth. LaFollette offered a substitute for the entire bill, proposing a $2,000,000,000 tax on war profits, higher income taxes, and a bonus to soldiers sent to France, which was defeated by a vote of sixty-five to fourteen. Stupendous as is the tax levy proposed by the senate measure, the prospect is that the administration will ask congress at the next session, which convenes in December, to increase still further the amount derived from direct and indirect taxation. The cost of the war is increasing by leaps and bounds and the administration and the democratic leaders in congress have agreed to levy $3 in taxes for every $7 raised by issues of bonds.

GERMAN barbarity reached a new height when Teuton aviators dropped bombs on an American hospital camp, killing one officer, three privates, and a patient and wounding ten others. The raids upon the hospitals were deliberate, says a newspaper correspondent over there. That the Americans might not forget, the Germans dropped German coins over the camp, as souvenirs. These souvenirs were pfennig pieces. The officer in command of the hospital unit, which suffered most in the raid, showed the coins. The survivors of the raid, indignant and bitter, all declared they believed the German pilot deliberately dropped the coins as "souvenirs" of his visit. The officers, men and nurses displayed real American spirit and heroism under the enemy bombardment. With bombs bursting about them, and men already wounded being torn by pieces of the exploding missiles, nurses hastened to their aid. Officers stood at their posts, men responded to every call upon them, and the first American units to be under enemy fire carried out the work they had to do with the utmost bravery.

Warm Homes At Low Cost

A CONTINUAL circulation of moist, warm air through the entire house, keeping all the rooms at a comfortable temperature and providing perfect ventilation—and all from one register—that's what you get with the

Mueller Pipeless Furnace

It's much better than stoves—cleaner, more healthful, more economical, less trouble. It is easy and inexpensive to install—no tearing up the walls for pipes or flues. It will go in small or partial cellars—even where there is no cellar at all it is an easy matter to dig a pit large enough for the Mueller Pipeless. Does not heat the cellar, preventing storage of fruits and vegetables. The Mueller Pipeless is a *real* furnace of exactly the same construction as the old reliable Mueller line, only without pipes or flues. Backed by the Mueller name and reputation of 60 years as makers of heating systems of all kinds. Saves 35 per cent in fuel. Burns hard or soft coal, coke or wood.

Thousands of Homes Are Now Heated by Mueller Pipeless Furnaces

You should learn all about this new and modern way. Just tear out this advertisement, write your name and address on the margin and mail to us for interesting booklet telling all about pipeless heating, with name of nearest dealer who can tell you all about the Mueller Pipeless.

L. J. Mueller Furnace Co., 204 Reed Street, Milwaukee, Wis.
Makers of Heating Systems of All Kinds Since 1857

MUELLER PIPELESS FURNACE

Stump Pulling in Barron County.

For the past thirty-five years pine stumps ranging in size from twelve to sixty inches in diameter have been blocking the progress of the agricultural development of Upper Wisconsin counties. On the farm of Mr. Bedner, of Haugen, Barron county, the land-clearing demonstration conducted by the college of agriculture demonstrated practical and efficient means of removing stumps. Many farmers of that section visited the demonstration and frequently remarked how easily and quickly stumps can be removed by modern methods.

Very little land has been cleared in this community during the past few years. There has been no organized effort to get rid of the stumps. As a result of this demonstration this community undoubtedly will take hold of the stump problem, which should result in far more land being cleared this fall and next spring than has been the case during the last few years.

The work of the land-clearing special is to develop the best methods to use in the various localities in which they are operating. Four different types of stump pullers are on the ground. Dynamite is being used separately and in connection with the stump pullers. Just which one of the various methods in practice here is the cheapest has not yet been determined. The information gathered, however, will be available for the residents of this section so that they may have the value of the information gathered at this point.

One of the big problems which confronts the man who starts in to clear a tract of land is to get rid of the stumps after they are out of the ground. The homemade Conrath Piler, designed by Frank Conrath, of Conrath, Wisconsin, is solving the problem. In building this simple homemade device Mr. Conrath kept in mind the man with limited means and at the same time tried to design a piler which would pile the stumps in such shape that they would burn readily. Many farmers have suggested other uses than stump piling for this machine. It could be conveniently used at butchering time; or for stacking or elevating grain. On account of the present high price of iron and steel the parts necessary to make a complete piler will be between $40 and $50. This represents, however, the largest portion of the investment. If two or three farmers would go together and build a machine the amount of time saved in piling the stumps would soon cover its cost. Blue prints showing the construction of every detail necessary for the making of such a machine can be obtained by sending a request to the college of agriculture at Madison for blue prints showing the construction of the Conrath Piler.

The electric method of blasting stumps received a good deal of attention. The idea was new to many old hands who knew how to handle dynamite. The old method of putting all the charge in one spot, which results many times in leaving a considerable portion of the stump in the ground, is rapidly being supplanted by the newer method of electric blasting. By this method several shots placed around at various points underneath the roots of the stumps can be fired at one time. The lower grade of dynamite was used to demonstrate the feasibility of using a low-grade dynamite instead of the higher and more expensive grade.

The various stump pullers, together with their various attachments, came in for their share of interest. The tap-rooted stumps, which were very few on Mr. Bedner's place, are pulled by means of a root hook. This consists of a heavy hook which is fastened against the stump after the top has pulled off. The stump is then pulled in the usual manner by the tightening of the cable.

MAN—To wear fine suit, act as agent; big pay, easy. Banner Tailoring Co., Dept. 738, Chicago.

Conservation Bulletins.

The extension division of the Minnesota College of Agriculture is sending out three food conservation bulletins prepared for the state committee of food production and conservation.

One of these on farm dairy cheese by R. M. Washburn deals with the making of cheese on the farm as a means of saving great stores of skim milk which now go to waste.

Another on the storage of root crops on the farm by W. W. Cumberland, gives directions for proper storing of farm products for the winter.

A third, also by Mr. Cumberland, gives directions for the preparation of perishable farm products for market.

Copies of these bulletins may be had by addressing Office of Publications, University Farm, St. Paul, Minn.

The Wisconsin Farmer

THURSDAY, SEPTEMBER 20, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

AS THE SOLDIERS MARCH AWAY.

THIS week and in the weeks to come thousands of men—the flower of the grain belt's young manhood—will be leaving their farm homes at their country's call, to begin training for America's fifth liberty army. As their forefathers in 1776 turned from the plow and became the embattled farmers at Lexington, who fired the shot heard round the world for the cause of liberty; as their great-grandfathers in 1812 struggled for the freedom of the seas; as their fathers rushed forward in 1861 to preserve the Union and emancipate the slaves, and as their elder brothers in 1898 made their sacrifices on the altar of Cuban independence, so the young men of today turn from peaceful pursuits to suffer whatever sacrifices are needed to make this a better and safer world in which to live.

I see our farm boys, all over the grain belt, as they assemble to march away to do their bit for flag and country. I see their neighbors as they bid them God-speed, with ringing words of encouragement, with prayer and song. I see their hands waving from car windows at hundreds of stations, in response to the waving handkerchiefs and flags and the kisses thrown after them as their train pulls out. And then I see the hushed crowds which they leave behind on station platforms, the cheers checked by sobs, the handkerchiefs no longer waving, but pressed to eyes from which the tears that have long struggled with brave smiles for mastery, cannot longer be held back. I see the empty homes in the weeks to come, in which a son or a brother and in many instances a husband, is missing; where the prayers rise like a fountain night and day for the absent ones, and the vacant chairs at meal-time and family worship are symbols of the heart loneliness of the household. And I see the men taking up their duties of camp routine, doing whatever is set them uncomplainingly, courageously, cheerfully, because it is a duty which must be done.

And as I see these things I think to myself: "God help the enemies of a country that goes to war, not gaily, not boastfully, not vaingloriously, but seriously, tearfully, prayerfully!" The pomp and circumstance of other wars has gone, but in its place has come a spirit of grim determination, both in the hearts of those who go and those equally patriotic ones who stay at home, to help them by the work of their hands in the fields and the prayers of their hearts to accomplish the great task that is set before them.

As I think of these things a similar scene rises before my mind's eye. The hands of time's clock are turned back nearly sixty years for me, and I see my boyhood home in Ohio, the day my father left with his regiment, never to return. As though it were yesterday, I recall the mile and a half walk with my mother to the camp, for the last regimental prayer meeting on northern soil, the night before they went away, and my mother's bravery as the train pulled out next day, her outward appearance, like that of the Spartan mother, giving no signs of the bursting heart within. Nor can I ever forget the dark days that followed—the days of toil and the nights of worry, when our little home was sold by the sheriff after my father had fallen and was buried somewhere not far from Vicksburg; the weekly trips of a younger sister, with her little hand-cart, to the near-by tannery for our week's fuel supply of tan-bark; the little basement quarters where we lived for a time and from which I tramped long distances to work, to help support the family; and then the sudden attack of Morgan's Kentucky raiders, which all of us who were left—young and old—enlisted to repel. Most vividly stands out in bold relief, the day that the first soldier's body returned, with the flag draped round it, when the whole countryside gathered to do reverence to the fallen hero. Then came the days when the sight became a common one; when people ceased to gather from far and near to view the pine boxes piled, one above the other, at the railroad stations, and only the near and dear ones followed, to their last silent camping grounds, those who had laid down their lives that the nation might live.

I cannot bring myself to believe that such scenes and times as those of Civil War days will be repeated. It is a far different thing to face an alien enemy, removed by three thousand miles of water, than when brother meets brother, almost across their own door-yard. Nor am I yet convinced that all of the thousands of our farm boys, who will be called from the grain belt during the months to come, will be sent to Europe, or that it will be necessary for any large number of them to give the last full measure of devotion to the cause of liberty and peace. I cannot help but believe that when our nation's foes understand the spirit of America, when they see the vast preparations we are making, to throw all our weight into the balance, they will yield to the world-wide demand for an early dawn of that millennium of peace for which we fight; for that glorious day

When the war drum throbs no longer, and the battle flags are furled,
In the parliament of man, the federation of the world.

God grant that that time may come swiftly! But in the meantime I offer to our farm boys who are going forth to make their sacrifices for a realization of this hope, my hand, my heart and my prayers in gratitude for what they are doing. I know that, wherever duty may call these boys, they will respond in a manner to make us all proud, that they will uphold the best traditions of America, and that they will be an honor to themselves, to the nation and to the cause for which they fight.

To those they leave behind I extend my heartfelt sympathy, and also my congratulations, that their sons, husbands and brothers are made of the same stern, heroic stuff that has answered the call of duty in all ages and in all climes. My heart throbs with theirs, both in the anguish of the moment and in the pride with which they send their loved ones forth to battle for the right. I realize that this country will never again be the same for their going. Fourth of July will have a new meaning for us all in the future, and the stars in Old Glory will shine with an added luster for their going. And when peace with justice comes, we will receive them back to our farm homes and to the places which they left in the fields with all the honors, all the pride, all the thankfulness to which they are so richly entitled.

SAVING IN THE FARM KITCHEN.

I AM impressed more and more each day by the fact that the men and women of America—farmers and townsfolk alike—have resolved to conserve the food supply so that no one may know want. If there ever was a time when the good farm wife might be excused for thinking that she need not make use of every scrap and leftover it is now, for never were our fields yielding so abundantly. Gardens bloomed like the proverbial rose this year. Hardly a town family that was without its backyard garden, so that much of the usual demand on the farmer and truck gardener for fresh vegetables was lacking this year. But even this condition has not caused the thrifty, far-seeing farm wife to indulge in a particle of extravagance. She knows that a day of reckoning is coming, a day when a hungry world will cry piteously for food, unless all of us do our bit now, clean the plate and platter down to the last drop and crumb, and save for the future.

I wandered aimlessly, for an hour or so, through the buildings of the Minnesota State Fair week before last and what impressed me more than anything else were the number and the forcefulness of the signs urging people to conserve food and to use substitutes for meat and wheat. In the room devoted to cooking demonstrations—where bright-eyed girls were at work canning fruits and vegetables and baking bread—there were hourly lessons on household economies which cannot fail to have good effect. Why use wheat altogether for our daily bread, it was argued, when potato bread is equally nourishing and when liberty bread can be made of three-fourths wheat flour and one-fourth other cereal? "Help win the war by conserving wheat," "The kitchen is one key to victory"—so ran the signs, and there were few who passed through the room without looking at them intently, letting their truth soak in. "Several apples a day will save meat and wheat," read a sign elsewhere. And who has to be urged to eat a good, luscious red apple (someway, I always preferred the rosy-red apples to the yellow ones, not even excepting the Bellflower or the Grimes Golden)? "An apple a day keeps the doctor away," we used to be told, and now they say another apple or two a day will save the wheat for the soldiers fighting our battles over in France. With a good apple crop in prospect, in most of our grain-belt states this year, I fail to see why we should not have an old-fashioned winter of apple-eating such as we used to enjoy when I was a lad. Our apple crop bids fair to be good this year, save in northern sections of the grain belt, particularly in the lake regions. Why not a revival of apple-eating in the home, of the old-time festivals which had the apple and various apple games as the pivotal points? We will travel many and many a day before we find anything more pleasing to the taste or beneficial to the body than a good, rosy-red apple. Oranges, grapefruit, and so on, are not to be considered in the same class, in my opinion.

The truth is, the people are awake to the necessity of saving, both food supplies and money, this year, as never before. Business is good. Our farm products are bringing fine prices, in the main. Merchants tell me there is no let-up in retail business. At the same time, never were our individual bank deposits so heavy, on the whole. We are putting money away for the inevitable rainy day, perhaps even the day when the rain shall be one of shells from the enemy. We have produced bumper crops this year, but we are not stopping with this. We are making those crops go farther than they ever went before. A few weeks ago I printed a plea for a revival of corn bread in all its delectable forms: johnnycake, corn pones, and so on. This plea has been taken up by the daily papers. I find one urging it in this fashion:

> The government has asked us to eat corn bread one day each week and help save the wheat for the soldiers who are going to fight for us. It's a good suggestion.
>
> This whole country was pioneered on corn bread. The Pilgrim Fathers almost lived on it. Corn was the first crop planted in all the virgin soil as it was settled from the Atlantic out across the Alleghenies upon the broad prairies to the Rockies and beyond. Corn was a crop that would grow even in the uncleared forest of the Middle West. The pioneers used to deaden the trees by girdling and drop corn in hills in the unplowed soil and get a first crop that way.
>
> Sturdy men were reared on corn bread and venison. But in these days corn bread has fallen into disuse in the cities partly because wheat has been so cheap, and partly because women have forgotten how to make palatable corn bread.
>
> Let the cooking experts get busy now and tell us again how to make corn bread "like grandma used to make."

Liberty bread made of three-fourths wheat, corn bread, mush and milk, several apples a day—the prospect is not so discouraging; in fact, to me, it is even alluring. We are returning to some of the best articles of diet that the tables of us older men and of our fathers ever knew. We are getting away from some of the highly seasoned foods which have become fashionable because they were high priced rather than because we really liked them. Let us have simplicity at our dining table; plenty of good, wholesome food and every platter scraped and cleaned before we push our chairs back. By this means we shall learn a good lesson, which we have needed to learn lately, and we shall see to it that none of the world's people shall cry aloud for food and find their cries unanswered.

WHERE COURTESY SPRINGS FROM THE HEART.

WE ALL know that courtesy pays. It pays for itself in dollars and cents in the business world, and it pays for itself many times over in the feelings of good will and brotherhood it engenders. Like the quality of mercy, it is twice blessed, for it blesses him who gives and him who takes. It adds to the sum of human happiness and good cheer, things of which this topsy-turvy old world stands in sore need these days.

Last week I had this all impressed on my mind anew and realized that nowhere does whole-souled kindness and unfailing courtesy spring more from the heart than among the farmers. I was taking a long automobile trip in one of our grain-belt states and had occasion many times to stop at some farm house to ask a favor, and in every single instance the service proffered was greater than the one asked. No matter how busy the farmer or his wife, there was time to give the stranger what he wanted, seasoned with a cheery welcome and a God-speed that sent me on my way with more of the joy of living in my heart. No matter what the request, it was granted as if I were extending a favor in asking it, instead of receiving one. If it was an inquiry as to the right road to take, the route was carefully explained, with information as to the condition of the roads and the offer to go a short distance with me, if the directions were difficult to follow. If it was a drink of water that I requested, as likely as not buttermilk was offered also, or a bite to eat.

As I think back, I believe that this fine spirit of

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES.

BY JAMES M. PIERCE

JAMES ATKINSON, EDITOR-IN-CHIEF

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter.

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address THE WISCONSIN FARMER, Madison, Wisconsin

Wisconsin State Fair Finances.

Sec. O. E. Remey, of the Wisconsin State Fair, advises us that the deficit this year will be small, if any. It would be making a new record if the Wisconsin State Fair paid expenses. Last year the attendance was a little over 165,000 for the week. Thursday was the big day in 1916 with 63,705 paid admissions. Thursday would undoubtedly have made a new record this year but for the fact that rain fell steadily all Wednesday night and intermittently on Thursday. Notwithstanding this fact Milwaukee people turned out well and 46,465 admissions were recorded. The fair got a good start this year with an attendance of 46,334 on Monday, as against 43,848 on Monday a year ago. In 1916 the Tuesday attendance was 11,003 and this year it reached 18,738. Wednesday is State Day at the fair and the state program brought out 27,671 people in 1916 and 38,407 this year. With this steady gain the fair officials were quite hopeful of a financial success, but the rain Wednesday night cut down the attendance on Thursday to 17,000 less than it was in 1916. It is the usual story of bad weather. There is every reason to believe that the Wisconsin State Fair of 1917 would have netted a nice little surplus but for the middle-of-the-week rain. The official figures on the 1917 attendance are 189,184, or a gain in excess of 14,000 over 1916.

It is probable that the matter of a longer fair may be given serious consideration, and this may be practical for the reason that Wisconsin farmers and breeders are the chief exhibitors at Milwaukee, and the Badger fair does not have to wait until some other fair is over to start its own. With two additional days, or even with a Sunday fair (which, of course, would have the amusement features eliminated and be confined to concerts and inspection of exhibits) it might be possible to bridge over the small space between a loss and breaking even or a surplus. There are enough farmers within 100 miles of Milwaukee to make the Wisconsin State Fair a financial success and with the added attendance from the city, which gives loyal support, our state department ought to be able to put this fair over without a loss.

Price of Wisconsin Potatoes.

At this writing the exact damage done to the potato crop in Wisconsin by the recent frosts is not known, but estimates indicate that the crop may be cut down 8,000,000 to 10,000,000 bushels. It is not expected that the freeze of state fair week will cause any more damage than that. Whether the freeze will cause an actual loss to growers, to any appreciable extent, remains to be seen. Undoubtedly the shrinkage in total crop will cause a rise in prices, but just how much we cannot tell as yet. There is a splendid opportunity to use the smaller potatoes caught by the frost for seed. We refer to the tubers which would have been good sized and good stock if the frost had held back a couple of weeks, and not to the naturally small tubers on vines not caught by the frost. Frost-stunted tubers, though small in size, may make good seed if planted whole, and thus the loss caused by the cold snap may be minimized. The frost was not particularly early in the potato-growing sections but it caused damage because the season was late. The stock of tubers caught by the cold were in most cases disease free, and had they all matured Wisconsin would have had its biggest "spud" crop in history this year.

Pres. J. W. Hicks, of Prentice, was a visitor at the Wisconsin State Fair. He is head of the Wisconsin Potato Growers Association, and one of the best-known growers in the country. Recently he attended conferences held in Washington with Food Administrator Herbert C. Hoover. President Hicks says it is a mistaken idea that the government desires that the price of potatoes shall be run down to the extent that there will not be good profits on the 1917 crop. In common with many growers he has figured the cost of producing a bushel of potatoes in Wisconsin under present conditions and he believes this cost to be from 40 to 60 cents a bushel, depending upon labor conditions, cost of seed, condition of soil, treatment of soil needed and other items. A rumor that buyers were endeavoring to gather in a portion of this year's crop on contract at 30 to 50 cents was denied by Mr. Hicks. No buyers have been making any such foolish offers and they would not be taken seriously if they did. In the opinion of Mr. Hicks and other men of equal prominence in the potato world, the crop this year will sell at 75 cents to 95 cents a bushel or more. This estimate, based on a cost of 40 to 60 cents a bushel to produce, is the price which most potato men believe will be paid to the farmers. However, this estimate was made before the frost, which, as we have said, may change the situation to some extent by reducing the visible supply. It was The Wisconsin Farmer's guess, before we realized what a large crop Wisconsin might raise this year, that potatoes would sell at or around $1 a bushel. The farmer should get $1 a bushel or near that for this crop this year. If there should be a deviation from this price it should be upwards—not downwards.

The government apparently realizes fully that the farmer must have a fair profit on what he raises. Our state and federal departments of agriculture urged "more potatoes" and Wisconsin has delivered "more potatoes." For his big crop the Wisconsin farmer is entitled to good pay for his work just as all other lines of business are reaping good profits in these times. It is safe to say that the potato grower will not be any more grasping than some other people not engaged in farming, whom we might mention, would be.

Wisconsin Farmers Doing Their Part.

"Wisconsin has done her duty in every way in the present world crisis." This is the statement made by Governor Emanuel L. Philipp, in his State Day address to farmers at the 1917 fair. In referring to slanderous statements which have been published abroad relative to Wisconsin's position in the war the governor said:

I hope it is a matter of interest to you to know that in all the tasks placed on the states by the government Wisconsin has been among the first, if not the first, to respond. We were the first state to complete our registration and we registered 100 per cent of our estimated quota. In all the stages of the conscription process we have been among the first to do our work.

We have completed our National Guard. We enlisted 16,000 men—all we were allowed to enlist—and these men are all volunteers. Every demand made upon us has been promptly and patriotically met.

I ask these slanderous writers, in all candor, what has Wisconsin done, or failed to do, that she should be called traitorous? When the history of this war is written you need not fear that the historian will say that Wisconsin failed in any particular to fulfill every duty of a patriotic commonwealth. Wisconsin can be depended on to be with the national government in every effort made in the war, as she ought to be.

We have a hard task before us. We have raised 28,000 men. I can hear the rumble of another call. Within two or three months we may be forced to go to the people again and ask them for their sons. I do not know, and no one can tell, how often the call may come, but I am confident that if it be one call, or three, or ten, so long as there are young men in Wisconsin capable of military service the call will be answered if we have to take the last man.

I wish especially to remind the farmers of their duty in this crisis. It is one thing to raise an army and another thing to feed it. No great battle was ever won with an empty commissary. It is the duty of the country to feed and clothe and care for the men who are in the field. It is equally a duty to feed those who stay at home. And it is also a duty to help to feed our allies, for unless we do so we make our own path so much the harder. It is important that every acre of land in the state that is fit for agricultural purposes be cultivated next year. We must not neglect a single acre.

I would admonish the householders to do their part in stopping waste. Every pound of bread or pound of meat that is wasted is taken from someone who needs it. I urge the farmer to make good use of the soil; to attend with the greatest care to his animal husbandry and to assemble his food products to the greatest advantage, and again I urge the householder to avoid waste in every way. I am afraid the time is not far away when we shall not always have all the things we should like to eat. But these conditions, if they come, must be met cheerfully, and if they are so met they will not be hardships. We can do much for the love of our country if we have that love, and I am sure that you have.

I hope that when we meet again next year it will not be necessary to discuss the war. I hope that the war will be over and the questions that have disrupted Europe will have been settled in the American way and that the people of Europe will see the birth of a new liberty, a new freedom, under which such conflicts will be forever impossible.

When the records of food production by states are figured up for 1917 Wisconsin will be able to prove conclusively that her farmers and dairymen have indeed done their part well. And Wisconsin farmers are determined to raise even greater crops and produce even more butter and meats, in 1918. We all hope with the governor that we may be able to meet under peaceful skies at the 1918 Wisconsin State Fair. In the meantime Wisconsin may be depended upon to help fill the pantries and commissaries of our country and our allies.

NO WONDER HE SMILES.

Phosphatic Fertilizer on Winter Wheat.

Experiments conducted at the Ohio station have resulted in the accumulation of data that indicate that it is a paying proposition to apply acid phosphate to land seeded to winter wheat. In Wayne county, Ohio, an application of 160 pounds of acid phosphate increased the yield eight bushels per acre, while in three other counties the increase ran from five to six and one-half bushels per acre. The result of twenty years of experimenting at the Ohio station indicates that an application of 160 pounds of acid phosphate may be expected to increase the yield of wheat anywhere from five to eight bushels. Even the application of 100 pounds of acid phosphate to wheat shows an average increase of four and one-half bushels per acre, and this would mean an increased income of $180 with wheat at $2 a bushel as the result of applying one ton of acid phosphate on twenty acres.

There has been a heavy demand for fertilizers during the present growing season and at times the supply was not equal to the demand. Acid phosphate costs at the present time approximately $1 per hundred pounds laid down at the farms of the corn belt. It may run as high as $1.25 per hundred, and in that case 200 pounds per acre would mean an expenditure of $2.50. An increase of one and a quarter bushels of wheat would pay the fertilizer bill and there is every possible reason to believe that if 200 pounds per acre are added there will be a margin ranging anywhere from four to seven bushels per acre of wheat over and above the amount required to pay for the fertilizer.

Of course, judgment is called for when it comes to the matter of applying commercial fertilizers. Soils that have been well rotated and manured will not be as much benefited as those that have been heavily farmed. There are thousands of cases in the corn belt where rotations have been interfered with on account of the clover killing out two or three years in succession, with the result that grain crops of one kind or another have been grown continuously. Under those conditions we have no hesitation in saying that an application of acid phosphate will prove to be a highly paying proposition. In some instances where land has not been clovered for many years a mixture of phosphate and ammonia might be still better. Of course, it will be higher in price, but in matters of this kind it is not so much what a fertilizer costs as what it will do when applied to the land.

There will be instances where men will be deterred from applying fertilizer to the wheat for fear the wheat might be winterkilled in the case of a bad winter or a hard spring. However, the fertilizer will not be wasted and it will be in the soil to produce just as good results if the land is put in corn or oats next year, as would have been the case with wheat.

FAMILY CIRCLE TALKS—By The Publisher.

(Continued from page 3.)

hearty hospitality and accommodation to others has grown among farmers, since I was a young man on the farm. I am sure that our intentions were of the best, but, as I now recall it, I suspect that our manner towards the stranger at our gates was at times a little bit abrupt and perhaps tinged with a feeling of suspicion. We had not traveled much, and what few strangers called, from time to time, were not, as a rule, the kind that inspired a feeling of confidence and hospitality. Our world was a little one and our lives necessarily narrowed by our limited horizon. Farmhouses were widely scattered and means of communication were slow. The stranger, who called at our door, was more than likely to prove a fake lightning rod agent, whose order blanks were apt to turn up at a bank later, in the form of ninety-day notes, or else he was a seed swindler, going through the country and duping the farmers with his wild promises of big profits from Bohemian oats. Coolness towards such travelers became a matter of self-protection with the farmer, who learned by bitter experience to restrain any natural inclinations which he might have had towards hospitality.

Today all that is changed. The automobile, the rural telephone and the free mail delivery have brought the world to the farmer's door. He travels widely and is accustomed to meeting men and mingling with them. The limits of his state are smaller to him than the boundary lines of my home school district were to me, in my earlier days. The average farmer today appreciates the dependence which every man has to place on his fellow men; he knows that the needs and troubles of others may, at any time, be his own, and that we are all our brothers' keepers. So he is willing and glad at every opportunity to pass along the courtesies which he has received from others and to keep good will and mutual helpfulness in circulation, knowing that these things even themselves up in the long run and that the greatest joy he keeps is the joy he gives away to others.

I noticed the other day that General Pershing has made a special request that the American soldiers abroad treat the people of our allies with the utmost politeness, consideration and respect. The American has had a reputation—that was not entirely undeserved—of brusqueness, amounting almost to incivility to strangers, and General Pershing is anxious that our men in Europe show the kindly people of foreign countries that we, too, have come to understand the ordinary decencies of life, which may be small in themselves, but which always make for good will and mutual understanding.

If my experiences with grain-belt farmers have been typical, and I believe they have, I am not afraid that America will have any occasion for shame over the conduct of her farmer-boy soldiers toward our allies, for they cannot help but have learned the value of kindness and courtesy that spring from the heart, by the examples which their parents have set them on the farm.

A MATTER OF BREEDING.

I DO NOT want my readers, especially my younger ones, to get the idea that I am preaching at them. Rather, I would have them think that we are a large and pleasant family circle counseling together, each having the right to a free expression of his or her opinions, I having the floor a little the oftener because of my age and gray hairs.

This being the situation—as I should like to have it, at least—perhaps it may not be amiss for me to reproduce a portion of a letter which I received from a woman subscriber who is an active worker in one of the splendid neighborhood clubs springing up throughout the grain belt in such large numbers. This correspondent of mine brings up a matter which we might well consider together for a few minutes. Let Mary Birr, supervising teacher of Oconto county, Wisconsin, speak first:

Oconto Falls, Wis., R. R. 2, September 12, 1917.
Dear Mr. Pierce:—In our neighborhood farm club is one of the finest groups of young people I have ever met anywhere, and I have been around quite a bit. They come from splendid homes, have high ideals, are willing workers and enjoy living.

Your paper is found in every home represented in the club. I read it with the greatest interest, as do also the club members. I have sometimes wished that in it you would publish short, readable articles on morals and manners. Not necessarily those possessed by the society man, but the plain, ordinary courtesies that every boy and girl wants to show, but does not, because he is not conscious of the fact that he doesn't. Country boys and girls, now grown, because of a dearth of reading matter in homes and poor teaching in home and school in regard to these little niceties, "queer" themselves when they go to cities or are in company outside of their circle.

The following are some of the failings:

Extremely loud talking on streets and in public places.

Not removing hats when entering homes or public places, such as a restaurant, hotel, etc.

Lack of the common courtesies toward members in the home, thoughtless of others.

Unduly cruel to animals under the least provocation.

There are many more. In spite of the many sterling qualities these boys and girls possess, being guilty of one or more of these mentioned is a handicap to their becoming the best possible or receiving the attention from the opposite sex which they otherwise would and are deserving of.

I know that "preachments" are not the best method of teaching these, but somehow they don't get it through stories, for they do not read many, nor have they them to read. Very truly, MARY BIRR.

I believe this is a matter of forgetfulness rather than of any inherent lack of breeding or individual discourtesy. So many of us are apt, at times, to forget or to overlook the little niceties of custom, both of speech and of action. It is so easy to say "thank you" and "please" and apparently quite as easy to forget to say them. Yet these little words mark the difference between a cultured, refined person and a boorish one. A lifted hat when a lady speaks or passes is only a little thing in itself, yet it reveals the character of the man as much as any one thing. A quiet, well-modulated voice, especially in public places, is a mark of refinement and good breeding; a loud, impatient tone is the opposite.

Some of my readers may think this is an unimportant thing. Far from it. We are judged by our appearances and our actions far more than we think. There is no reason under the sun why the farm boy should be a bit behind the town or city boy in this matter of little courtesies, but he often is. He is no less a hard worker, a faithful son or brother or a loyal citizen, and would be no less a brave soldier, because of this, but if we can impress people with our worth and increase our self-respect by a little action, which costs us nothing but a moment's thought, shall we not do it?

Observation will teach any of us what is proper and expected of us. We do not need books of decorum nor preachments from anyone. Let us see what other people (whom we instinctively know to be cultured and refined) are in the habit of doing, and model our own actions so that we may compare favorably with them and be known, throughout all our circle and wherever we may go, as a person of good breeding and refinement, capable of entering the best society any place and respected as one who is courteous to all people, even in the most minor and matter-of-fact relations

James M. Pierce

St. Croix Has Best County Exhibit.

TWENTY-TWO counties sent delegations in charge of a booth to represent them at this year's state fair. The number is somewhat smaller than last year, but there was closer competition among the counties for first honors than ever before. The exhibits showed a greater completeness, especially among the first eight, every phase of agriculture being represented. Prizes were announced on Friday, September 14th.

St. Croix county was awarded first prize on its exhibit and received the cup annually presented by the Milwaukee Journal for the best county exhibit. The St. Croix booth was in charge of T. M. Olson, county agent; A. H. Aune, county superintendent of schools, and George Rummle. To A. H. Aune probably belongs greatest credit for the showing made by St. Croix county. For many years Mr. Aune has had charge of the booth representing his county and, though the county has never ranked lower than sixth in the final placing, this is the first year that it has been awarded premier honors. In presenting the cup to Mr. Aune, E. L. Luther, of Madison, superintendent of county exhibits, made a short address mentioning the loyalty of Wisconsin farmers in the present crisis. Few sections of the United States have been as eager and as successful in complying with the government's request for greater food production. There is no need, according to Mr. Luther, for radical changes in our agriculture at the present time. If we intensify upon our present system of farming all the necessary foodstuffs for a hungry world can be produced without hardships for anyone. H. C. Campbell, assistant editor of the Milwaukee Journal, made a short address, calling attention to the idea which the Journal wishes to convey to the counties of Wisconsin through the medium of the cup. Stimulating friendly rivalry between counties for agricultural supremacy will tend toward greater production, which is the object.

The surprise of the morning, however, was the presentation of a full set of table silver to Mr. Luther by the twenty-two counties entered in this year's contest. The untiring efforts of Professor Luther have not escaped unnoticed by the agricultural people of the state and it took him so greatly by surprise he had very little to say with the exception of a few earnest words expressing his gratitude.

The best eight exhibits as placed by the judges are as follows: (1) St. Croix, (2) Woods, (3) Sauk, (4) Waupaca, (5) Ozaukee, (6) Langlade, (7) La Crosse, (8) Marathon.

The St. Croix booth was very tastefully arranged, each product being displayed to its best advantage. On a framework resembling the letter "M" six shelves had been filled with the best of St. Croix county products. On the bottom shelf garden vegetables of every kind were displayed, while the shelf above was given over to some splendid specimens of the different varieties of potatoes. On the tier above that the grains and farm seeds were neatly arranged in sacks, each properly labeled. Corn, samples of this year's crop, occupied a shelf of their own, as did also the apples. And finally there was the row given to grapes and strawberries of different varieties. On the walls around the booth the sheaf samples of grasses and grains occupied every available inch of space. An especially strong exhibit of grasses testified to the county's inclination toward dairying. St. Croix county boasts of the second largest creamery in Wisconsin, located at Baldwin. Cabbage and trucking in general is the most profitable in the southern part. Farther north dairying is uppermost. One hundred and forty silos were put up in the county in the two months just past, which added to the 1,068 already in the county, are a good indication that the farmers of St. Croix not only know but practice the principles of feed conservation. Special efforts are to be put forward to make the dairy interests larger with each succeeding year.

Wood County.

The Wood county booth was in charge of O. J. Leu, of Grand Rapids; Christ Witt, of Marshfield, and W. W. Clark, of Grand Rapids. The county exhibit was particularly strong in its clover and grass specimens and had a very complete assortment of grains, fruits and vegetables. Wood county people are proud of their dairy cows, claiming for the county all honors for the successful growing of cows, corn and clover. The experiment station at Marshfield has the support of nearly every farmer in the county, who use the results of the station to correct such mistakes of field management as the experiment station discovers and points out. Wood county potatoes are of good quality this year and out of danger as far as frost is concerned.

Sauk County.

Sauk county has been a regular exhibitor at the state fair and in 1914 won first honors and the cup. The exhibit this year was, as usual, high class, and, in the opinion of the judges, a close contender for first honors. Albert Wichern, of Baraboo, was the chairman of the committee. He was assisted by Henry Eschenbach, of North Freedom, and G. W. Davies, county superintendent of schools. Sauk county is especially strong in fruits, but also showed excellent specimens of grasses, grains, potatoes and vegetables. Sauk county is also beginning to raise prize corn. Beef and dairying are fairly well divided, with dairying gaining perhaps somewhat more rapidly than beef.

Ozaukee County.

The Ozaukee exhibit, adjudged the fifth best, was in charge of William Nero & Son, of Cedarburg. A particularly good exhibit of vegetables and grasses, including all varieties of clover, was a feature of this booth. Nearly every agricultural product of the county was displayed with the exception of the different grape varieties. The grain samples were very good. Ozaukee county is also going into dairying more with each year, better dairy stock replacing the scrub cattle as fast as this can be done without excessive strain upon the finances of the county's husbandmen.

Langlade County.

L. Freiburger, Max Swoboda, county agent; Will Wagner and George Marshall, all of Antigo, comprised the committee to represent Langlade county. They took good care of the county's interests, arranging a very creditable exhibit of the agricultural products. Langlade county people insist that they can raise nearly all crops on their soil with as much success as any other section. Though there is only a small per cent of the county under cultivation as yet, settlers are coming in steadily. Numerous creameries and cheese factories located in various parts of the county are an indication that dairying is on the increase. Clovers and grasses grow naturally well on the soil and the county exhibit proved this. Especially large samples of all varieties of the clovers attracted the attention of the passers by. Potatoes, vegetables and small grain were also of good quality.

Chippewa County.

Chippewa county had an exhibit under the care of W. E. Christiansen, of Chippewa Falls, and George Hipke, of Stanley. It was a good exhibit especially strong in potatoes and the grains. Oats were heavy this year and the samples in the Chippewa booth were evidence that the heads had

(Continued on page 24.)

Miss the Big Red Apples This Year.

Horticultural Department.—N. A. Rasmussen, Oshkosh, superintendent. Judges, J. G. Moore and L. G. Kellogg.

THE big red apple was missing at the 1917 Wisconsin State Fair. When Mr. Frederic Cranefield, secretary of the state horticultural society, discussed the subject of decoration of Horticultural Hall several weeks ago, he remarked that his exhibit would show a great deal of red. When the fruit was unpacked and set up for show it was discovered that the apples were not brilliantly colored as in former years. Apparently the slow season and the lack of sunshine at certain periods resulted in failure to color the fruit and give the exhibit the showy appearance that it has had in former years. But this was no fault of those in charge of the show. There was a splendid collection of fruits, flowers and garden stuff. Wisconsin has had a good year for small fruits and cherries and only the late apple crop has been a disappointment in quality. Following out its splendid campaign of conservation of the fruits of the state, the Wisconsin State Horticultural Society has urged careful selection of the apples raised, and, while a great many Wisconsin apples will not look as beautiful as the normal crop, they will serve well for food and fill their place in the food supply Wisconsin is furnishing to the nation this year. The year 1917 has been one of the greatest garden years in the history of the state—probably the greatest. Never before has so much good food from orchard and garden been canned, dried or otherwise preserved for the winter's use. Garden products have not run so much to the fancy stuff which would be suitable for exhibition at a state fair, as the good average run suitable for family table use. The orchards and gardens of the state will help supply the food shortage, and farmers as well as people in the towns and villages, have had a lesson in the value of small fruits and gardens which will stay with them for years to come. Wisconsin should have more fruit. No state in an average year can raise finer apples. While dairying with one cow to the acre, as pointed out by Secretary Cranefield, may net $100 an acre, and wheat may be depended upon to net $50 an acre a year, apples with 75 trees to the acre, assuming the trees are properly selected and properly cared for, may easily net $500 an acre. Cherries can be depended upon to produce $300 to $600 an acre each year. Small fruit will pay well and there should be more of it in Wisconsin. Wisconsin is third in the Union in the production of cranberries, and a display of berries was shown at the fair as usual.

A few of the horticultural department awards follow:

Best display of apples not to exceed twenty varieties—1st A. K. Bassett, Baraboo; 2d Amo Meyer, Cascade; 3d J. H. Cooper, West Allis; 4th William Toole & Son, Baraboo; 5th Great Northern Nursery Co., Baraboo; 6th D. E. Bingham, Sturgeon Bay.

On best display confined to ten and five varieties, Bassett, of Baraboo, also won first. S. M. Roney, of Baraboo, won third on best display of ten varieties, and G. H. Townsend, of Madison, sixth. Townsend won third on best display of five varieties and William Toole & Son, of Baraboo, won fourth on this same classification.

The best plate of Ben Davis apples was shown by William Toole & Son, of Baraboo. Other firsts on plate displays were as follows, the list not including all, but those which had been judged when this was written:

Best plate of Alexander, A. K. Bassett, Baraboo.

Best plate Beautiful Arcade, D. E. Bingham, Sturgeon Bay.

Best plate Delicious, Balgheim Bros., Twin Bluffs.

Best plate Dudleys, J. E. Hauser, La Crosse.

Best plate Fameuse, T. T. Haack, Brookfield.

Best plate Gano, A. N. Kelley, Mineral Point.

Best plate Grimes Golden, Virgil J. Dawson, Franksville.

Best plate Golden Russet, A. K. Bassett, Baraboo.

Best plate Jonathan, A. K. Bassett, Baraboo.

Best plate Maiden's Blush, R. G. Dawson, Franksville.

Best plate McIntosh, A. K. Bassett, Baraboo.

Best peck Northewestern Greenings, A. K. Bassett, Baraboo.

Best peck Plum Cider, A. K. Bassett, Baraboo.

Best peck Wealthy, Great Northern Nursery Co., Baraboo.

Best barrel Duchess, A. K. Bassett, Baraboo.

The display of other fruits was up to the average and in some departments better than usual. In competition for the best collection of pears, W. J. Moyle, of Union Grove, won first; R. G. Dawson, of Franksville, second, and John H. Cooper, of West Allis, third. William Toole & Son, Baraboo, had the best collection of plums. In competition for the best collection of grapes, not to exceed fifteen varieties, John Reis, of Twin Bluffs, won first; A. K. Bassett, of Baraboo, second, and Balgheim Bros., of Twin Bluffs, third.

The following is the list of Wisconsin exhibitors in the fruit section of the horticultural exhibit:

Arpin Cranberry Co., Grand Rapids; Balgheim Bros., Twin Bluffs; D. E. Bingham, Sturgeon Bay; Belle Lake Cranberry Co., Mather; Bennett Bros., Waterford; Bonnie View Cranberry Co., Tomah; A. K. Bassett, Baraboo; John H. Cooper, West Allis; R. G. Dawson, Franksville; Virgil J. Dawson, Franksville; Mrs. E. M. Goelzer, Oakwood; Great Northern Nursery Co., Baraboo; John F. Hauser, Bayfield; T. T. Haack, Brookfield; J. H. Hearding, Delafield; L. B. Irish, Baraboo; J. J. Ihrig, Oshkosh; A. N. Kelley, Mineral Point; J. F. Lyon, Elkhorn; Amo Meyer, Cascade; W. J. Moyle, Union Grove; O. O. Potter, Warren; Palmeter & Turtle, Valley Junction; Melvin O. Potter, Grand Rapids; John Reis, Twin Bluffs; S. M. Rooney, Baraboo; Mrs. C. E. Strong, West Allis; William Toole & Son, Baraboo; G. H. Townsend, Madison; Chelcie Treet, Valley Junction; A. F. White, Brookfield; S. N. Whittlesley, Cranmoor; H. J. Zilmer, Pewaukee.

N. A. Rasmussen, of Oshkosh, was superintendent of the horticultural exhibit and his work in this particular was very satisfactory. Mr. Rasmussen is an experienced fruit grower, whose articles in The Wisconsin Farmer have made him well known to the readers of this paper.

The Grain Show at Wisconsin Fair.

THERE were "new faces," figuratively speaking, among the premium winners on agricultural products, including grains and potatoes, at the Wisconsin State Fair. A few of the old winners were represented, but they did not succeed in "cleaning the platter," as they have so frequently done in former years. The new situation augurs well for the success of the fair—not but what the men who took so large a per cent of the premiums in former days deserved all they got, but a wider distribution of blue and red ribbons indicates that the state is adding to its honor roll of good corn, wheat, rye, oats and potato growers.

The oats crop, winter and spring wheat, and rye and barley, were all good this year, with abundant yields in practically every corner of the state and excellent quality of grain. Samples of wheat, especially the prize-winning sample of white winter wheat, shown by A. Selle, of Thiensville, Wisconsin, we believe as good a peck of wheat as was ever exhibited at the state fair. Other small grain samples were also excellent. There was practically no showing of 1917 corn, owing to the late season, though St. Croix county, well up toward the northern part of the state, showed some this year's corn. St. Croix county, and Dane county, the crop experts and weather men tell us, have about the same length of growing season, and St. Croix county is as well adapted to corn as many of the counties farther south. The prizes offered on corn, except for corn on the stalk as noted, cover selections from the 1916 crop, and the awards were as follows:

Best 50 ears Wisconsin No. 7, Silver King—1st Otto Wolf, La Crosse; 2d Robert Ward, Fort Atkinson; 3d H. J. Block, Burlington; 4th A. N. Kelly, Mineral Point.

Best 50 ears Golden Glow, Wisconsin No. 12—1st R. H. Lang, Jefferson; 2d J. Weilinga, La Crosse; 3d E. J. Leibenthal, West Allis; 4th J. Van Loon, La Crosse.

Best 50 ears No. 8, early yellow dent—1st H. J. Block, Burlington; 2d Robert Ward, Fort Atkinson; 3d J. A. Haas, Ellison Bay; 4th F. J. Lindley, Fox Lake.

Best 10 ears Golden Glow, W. Weilinga, Galesville.

Best 10 ears No. 8, Noyes Raessler, Beloit.

Best 10 ears Silver King, H. Brewer, Hudson.

Best 10 ears Murdock's Dent, J. Weilinga, Midway.

Best Corn on Stalk (1916)—No. 8, F. J. Lindley, Fox Lake; No. 12, J. Weilinga, Midway; No. 7, F. J. Lindley, Fox Lake.

Best peck white winter wheat, A. Selle, Thiensville.

Best peck red winter wheat, A. O. Popp, Jefferson.

Best peck spring wheat, Bennett Bros., Waterford.

Best peck pedigree rye, A. O. Popp, Jefferson.

Best peck pedigree No. 1 oats, H. E. Krueger, Beaver Dam.

Best peck oats, any other variety, H. E. Krueger, Beaver Dam.

Best peck oats, No. 5 pedigreed, H. N. Whitehead, Rockland.

Best peck Kherson, J. L. Krause, Beaver Dam.

Best peck barley, Anton Bohl, Beaver Dam.

In the potato division new names and new prize winners were the general rule and not the exception. Upper Wisconsin for the first time took practically all the prizes and the showing of potatoes was the best, though small, that has ever been seen at the state fair. The best peck exhibits of potatoes of the several standard varieties were as follows:

Rural New Yorker, J. A. Haas, Ellison Bay.

Green Mountain, J. H. Hauser, Bayfield.

Triumph, Herman Schoenick, Enterprise.

Burbank, Mrs. Charles Parsons, Antigo.

Early Ohio, L. S. Jacobson, Mole Lake, Forest county.

Early Rose, Herman Schoenick, Enterprise.

Irish Cobbler, Fred S. Campbell, Three Lakes.

The Machinery and Tractor Show.

MACHINERY HALL" was back in form again this year at the Wisconsin State Fair and this very important feature of any agricultural exposition bids fair to again have its just share of attention. The list of exhibitors was larger than usual this year, considerably larger than last year, and the demonstrations of power machinery added a great deal to the interest of the show. The tractor show put on in connection with the machinery department of the fair was a success, though Thursday, the day when a special program was arranged for, was wet and rainy and the crowd of farmers was disappointing. Only the smaller tractors pulling two bottoms were demonstrated at Milwaukee. The tracts plowed were small and did not permit of as good work as the tractor really can do. That there is a great deal of interest among farmers in power farming was shown by the fact that several thousand on Wednesday followed the tractors some distance from the ground, and remained until the plowing exhibition had been completed. Twenty-eight companies had tractors entered in the demonstration. This demonstration, however, was not under the auspices of the National Implement and Vehicle Dealers' Association, as was the demonstration held at Fremont this year and at Madison last year. For that reason a large number of the leading makes of tractors were not included in the demonstrations at Milwaukee. Mr. C. I. Griffith, of Madison, assistant to Frank White, of the engineering division, Wisconsin College of Agriculture, was superintendent of the demonstrations. Many gardeners and truck farmers living within twenty or twenty-five miles of Milwaukee, were interested in the demonstration of garden tractors.

It is important today to make a careful study of farm machinery and to enlist the help of such tools and implements as will mean a saving of labor.

Placards posted about the grounds read as in the accompanying panel.

The placard expresses the sentiment of Wisconsin farmers who are more than ever at this time anxious to make every possible use of machinery and equipment to help them in their farm work. No one advises a wholesale buying of machinery for every farm, but it is highly advisable that each farmer consult his individual needs and equip his farm or dairy with such machinery and tools as will add to his production and profits. The following is the list of machinery and tractor exhibitors at the 1917 Wisconsin State Fair:

Asmuth & Davis, Evansville, Wis.; E. E. Heath, Madison, Wis.; Louis Kirsch, Antigo, Wis.; Sieverkropp Engine Co., Racine, Wis.; G. M. Watters Mfg. Works, Minneapolis, Minn.; Keystone Lubricating Co., Chicago, Ill.; Oliver Chilled Plow Works, Milwaukee, Wis.; Badger Light Machine, Platteville, Wis.; D. J. Carpenter, Milwaukee, Wis.; Safety Spark Set Co., Elkhorn, Wis.; Highway Trailer Co., Edgerton, Wis.; A. F. Klingman Mfg. Co., New Holstein, Wis.; P. J. Downes Co., Minneapolis; Beeman Tractor Co., Minneapolis, Minn.; Milwaukee Trailer Co., Milwaukee Wis.; Whitesel Automatic Wire Stretcher Co., Omaha, Neb.; John Gallagher Co., Madison, Wis.; Salisbury Mfg. Co., Milwaukee, Wis.; Hirsch Bros. & S. L. Allen Co., Madison, Wis.; Madison Tent & Awning Co., Madison, Wis.; Schmidt & Stork Wagon Co., West Bend, Wis.; Dane Manufacturing Co., Dane, Wis.; A. C. Wolf, care New Idea, Waukesha, Wis.; Farmers Barn Equipment Co., Two Rivers, Wis.; Rassmann Mfg. Co., Beaver Dam, Wis.; Atlas Engineering Co., Milwaukee, Wis.; Milan Northrop, Beloit, Wis.; Anderson Vehicle Co., Fond du Lac, Wis.; Western Steel & Iron Works, De Pere, Wis.; Bergland Concrete Mixer Co., Deerfield, Wis.; Eagle Manufacturing Co., Appleton, Wis.; Wisconsin Tractor Co., Stevens Point, Wis.; P. P. Brueckbauer, Bloomington, Ill.; The Auto Utilizer Co., Burlington, Wis.; John G. Kelley, Waukesha, Wis.; Regal Oil-Gas Burner Co., Milwaukee, Wis.; Louden Machinery Co., Fairfield, Ia.; Whirlwind Concrete Mixer Co., La Crosse, Wis.; Smith Form-A-Tractor Co., Chicago, Ill.; The Avery Co., Madison, Wis.; Cyclone Fence Co., Waukegan, Ill.; Trenam

Tractor Co., Milwaukee, Wis.; The John Lauson Mfg. Co., New Holstein, Wis.; Bean Spray Pump Co., Lansing, Mich.; Lawrence Auto Power Co., St. Paul, Minn.; Monarch Tractor Co., Watertown, Wis.; Moline Plow Co., Moline, Ill.; Rock Island Plow Co., Rock Island, Ill.; McFarland & Westmont Tractor Co., Sauk City, Wis.; Fairbanks Morse Co., Milwaukee, Wis.; G. H. Poor, Milwaukee, Wis.; Swartz Electric Co., Indianapolis, Ind.; Western Electric Co., Chicago, Ill.; Reineman Hardware Co., Burlington, Wis.; J. I. Case Threshing Machine Co., Madison, Wis.; Wood Tire Silo Co., Sheboygan Falls, Wis.; The Tures Mfg. Co., Milwaukee, Wis.; Official Mfg. Co., La Crosse, Wis.; J. P. Stanton, Waukesha, Wis.; Lindsay Bros., Milwaukee, Wis.; International Harvester Co., Milwaukee, Wis.; Wills Mfg. Co., Mendota, Ill.; James Mfg. Co., Fort Atkinson, Wis.; E. F. Elmberg Co., Parkersburg, Ia.; Mullins Mfg. Co., Brillion, Wis.; Wisconsin Stable Equipment Co., Oconomowoc, Wis.; H. M. Hardgrave, Madison, Wis.; Hercules Gas Engine Co., Evansville, Ind.; J. G. Steward, Milwaukee, Wis.; J. Dorsch & Sons, Milwaukee, Wis.; Humane Stanchion Works, Baraboo, Wis.; King Ventilating Co., Owatonna, Minn.; The I. B. Rowell Co., Waukesha, Wis.; Walsh Harness Co., Milwaukee, Wis.; Western Silo Co., Des Moines, Ia.; Evinrude Motor Co., Milwaukee, Wis.; Lauson-Lawton Co., De Pere, Wis.; S. Freeman & Sons Mfg. Co., Racine, Wis.; Mitchell Mfg. Co., Milwaukee, Wis.; Milwaukee, Reliance Boiler Works, Milwaukee, Wis.; Milwaukee Air Power Pump Co., Milwaukee, Wis.; Clemens & Gingrich Co., Grand Rapids, Mich.; Dallman & Cooper Supply Co., Fond du Lac, Wis.; Buckeye Traction Ditcher Co., Milwaukee, Wis.; Drew Carrier Co., Waterloo, Wis.; Western Utilities Co., Milwaukee, Wis.; Johnson & Field Mfg. Co., Racine, Wis.; Sheldon Mfg. Co., Nehawka, Neb.; Gehl Bros. Mfg. Co., West Bend, Wis.; Turner Mfg. Co., Port Washington, Wis.; Sandwich Mfg. Co., Sandwich, Ill.; Appleton Mfg. Co., Batavia, Ill.; Walter Cool, Distributor, Chicago, Ill.; Rosenthal Corn Husker Co., Milwaukee, Wis.; National Fire Proofing Co., Chicago, Ill.; Whitewater Brick & Tile Co., Whitewater, Wis.

Wasted Effort in Dairying.

In this time of stress and hurry it might pay well if darymen could stop and take a good, square look at themselves. In so doing each might for the time being consider himself to be a temporary receiver or efficiency expert for his own particular farm and business and for the dairy business in general. This latter is suggested because it is through united effort that greatest progress must come.

The circumstances that prompts this suggestion was the observation that four milk delivery wagons passed the writer's home in ten minutes one morning and doubtless do so every morning. It is also probable that other dairymen make daily deliveries, because not half the homes within the block were supplied by the four wagons mentioned above. On those four wagons were four men and a boy. Big, strong men were doing the work of driving the delivery horse or were carrying the pint milk bottles to the kitchen door and returning with light milk bottles.

Surely if dairymen could observe that condition as did the writer they would set about for a remedy. One thing observed which might lead to a possible remedy was that every customer gave tickets in return for milk or cream. Since that was the case and since every ticket has been purchased and paid for in advance it is obvious that some centralized delivery system could be devised. Certainly there is no competition gained in each dairyman having his own wagon. It is the satisfaction given by the milk in the home that constitutes the real competition. A central depot at which each retailer may deliver his milk each morning to be taken out by the one cooperatively hired delivery man would doubtless cheapen the product to the consumer and increase the profit to the retailer.

Circumstances of prices for milk and wages paid to labor are going to force many changes. It is highly probable that in case united delivery systems cannot be arranged that cheaper help can be used on the wagon. Young boys are being constantly given greater responsibilities than are required to deliver milk and to collect tickets. Girls have proven efficient and take delight in doing this work. Milk delivery methods constitutes one of the big leaks in the business through which money is wasted for the producer and for the retailer. Dairymen who will make effort to stop this waste will doubtless increase their profits. In this they deserve the best coöperation the public can give.

PAIGE

The Most Beautiful Car in America

The Final Test of Quality

IT IS a matter of record in fifteen of the principal cities that Paige used cars bring a higher price—proportionate to first cost—than any other American automobiles.

And here, after all is said and done, is the final test of quality.

A used car has been "through the mill." Its motor and all of its working parts have been subjected to constant strain.

Its "finish" has been knocked off—*if it will come off at all.*

Its gears, its rear axle and its transmission have endured the punishment of day-in and day-out pounding. All of its weakness is plainly evident—and likewise its *strength.*

The used car either stands before you a broken down, dispirited "has been"—or a strong, robust champion of many battles—ready and eager for all the service that man can give it.

That, we repeat, is the final test of quality.

And in this test the Paige stands supreme. *After fifteen, twenty-five, thirty-five thousand miles of service, there is still enough GOODNESS left in a Paige to command the record price in used car markets.*

Frankly, now, is there anything that we could tell you about our product that would be more convincing? Could you have any better guarantee that a Paige is all that we claim it to be—all that you could possibly expect it to be?

As to the selection of a model, this is simply a matter of your own personal requirements.

In our line you will find a seven-passenger car, a five-passenger car and two roadsters. You, alone, can make a choice, but please remember that you can't make a *mistake.* For all of these models are Paiges—blood brothers of the same strain. That is the really important thing.

But don't lose any time. See your Paige Dealer today. Let him give you the kind of demonstration that will definitely settle your automobile problem, and place your order while we can still promise early deliveries.

Paige prices range from $1330 to $3230. There are sixteen distinct body styles including Limousines, Town Cars, Sedans and Coupes. No handsomer line of enclosed vehicles can be found on the market.

PAIGE-DETROIT MOTOR CAR COMPANY
207 McKinstry Avenue, Detroit, Michigan

Winners at Wisconsin Fair.

1—Anoka Farms' grand champion Short-horn bull, Anoka Champion. 2—Hurdcroft's first-prize futurity winner, Sara Belle. 3—Martiny's senior champion Guernsey cow, Wahtawaso of Chippewa. 4—Lamb's champion Percheron stallion, Keota Idea. 5—Van Etta's grand champion Ayrshire bull, Bargenock Rising Star. 6—Harvest Farms' first-prize two-year-old Percheron mare, Jennette 1st. 7—Underwood's grand champion Jersey bull, Pennithorp's Raleigh. 8—Culver's grand champion Holstein cow, Springbrook Darkness. 9—Rust Bros.' first prize senior yearling Holstein bull, Sir Ida Lotta Hengerveld. 10—Inman's grand champion Brown Swiss cow, Sara May. 11—Robinson's grand champion Hereford bull, Maple's Lad 61st. 12—Goodhand Kingston's grand champion Guernsey cow, Raider's Butterwick of Muskego.

Wisconsin Fair Is Improved.

(Continued from page 1.)

make such a showing of poultry, and this show alone in another year should attract thousaids of people annually to Milwaukee. Mr. C. W. Hackett is to be congratulated on the success of this show. The junior fair, comprising the work of boys and girls in the state, was well managed and the number and quality of exhibits showed wonderful progress. The work undertaken by Prof. T. L. Bewick has developed into a big thing for the state and for the boys and girls who are enlisted as competitors. A new meaning was placed on cow-testing work by the exhibit shown under the direction of Messrs. Searles and Negley, of the dairy and food department. The government and state are now both lending financial assistance to this work. The automobile show was an eye-opener. B. J. Ruddle, of Milwaukee, was superintendent. The educational exhibits under direction of Prof. G. W. Davies, of Sauk county, are worthy of more than passing mention. Mr. N. E. France, of Platteville, was present with his exhibits of bees and fine Badger honey, and it is difficult for us to estimate the good which Mr. France has been able to accomplish along this line through the annual exhibit at the state fair. N. A. Rasmussen, of Oshkosh, is a thorough and painstaking fruit grower and he makes a good superintendent of that department. J. A. Chinnook, of Hudson, was superintendent of machinery on the grounds, but Mr. A. W. Kalbus, connected with the Wisconsin Department of Agriculture, was largely responsible for the increased number of exhibits and the excellent management of the show. Amusements, as usual, were in charge of Mr. Thomas Saxe, of Milwaukee, one of the best-posted amusement men of the country and a superintendent who takes special interest in the Milwaukee fair because he lives in Milwaukee and wants to see the fair a success. The superintendents of live stock divisions, all of whom did excellent work, were as follows: Horses, W. K. Caldwell, of Morrisonville; sheep, Ira M. J. Chryst, of Hudson; cattle, H. W. Claflin, of Muskego; swine, James Dillon, Mondovi. Our old and trusted friend, Fred Marty, of Monroe, was in charge of the dairy products show and this is about "nuff said." Mr. O. E. Remey has made a good secretary, working tirelessly for the success of Wisconsin's fair.

SENIOR CHAMPION AYRSHIRE COW, OWNED BY FERNDELL FARMS, LADYSMITH, WIS.

DAIRY CATTLE.

Owing to the scarcity of competent labor, the high prices of food, and the general unrest manifest throughout the country, it is not surprising that the various dairy breeds were not as strongly represented as they are some years. It was rather more of a surprise to see so many breeders have nerve enough to come out under the existing circumstances. Enthusiasts of the various breeds should feel indebted to these men for the effort they have made to make the dairy show at the Wisconsin State Fair as creditable as it was. The Jersey men put up the best show, as there were four good herds represented. Most of the honors were keenly contested, which made the judging work of special interest to the spectators. To our way of thinking, a breed can get no better or more efficient advertising than to stage a top-notch, hotly contested show at the state fair where people from all over the state have an opportunity to meet and make breed comparisons. The Holstein exhibitors likewise put up a good show, as there were seven herds represented. A number of the classes brought forth some very high-class animals. Two full herds of Ayrshires represented the breed to good advantage and in some instances, the decisions were very close. The disappointment of the dairy show was the poor showing made by the Guernsey people. One could hardly realize why this should be ,when there are so many splendid Guernsey herds within a few miles of the fair grounds. Brown Swiss interests were represented by one herd, though not the well-known Ayers herd that has been at the Wisconsin State Fair for so many years.

SECOND-PRIZE HOLSTEIN BULL, SENATOR JOHANNA, OWNED BY KIRKPATRICK BROS., REEDSBURG, WIS.

Holstein-Friesians.—One of the foremost classes in the Holstein-Friesian show was the aged bulls. Sir Pietertje Ormsby Mercedes 14th, sired by E. C. Schroeder's famous herd bull, Sir Pietertje Ormsby Mercedes, and shown by Marlow & McCargar, was senior and grand champion bull. This animal was easily the outstanding animal of the show. Kirkpatrick's bull, Senator Johanna, that stood second was also a fine individual and bred by one of Wisconsin's leading breeders, P. H. Schafer. The dam of this bull has a seven-day record of 31.07 pounds butter and a semiofficial yearly record of 1,146.78 pounds butter. Rueben Klofonda had three prize aged bulls and first-prize bull two years and under three. Mr. Klofonda's two-year-old bull is an exceptionally handsome individual, the kind that would look good in any company. John G. Fisher took junior championship on Sir Fau de Hol, a beautiful senior calf. Mr. Fisher also took first prize in the three-year-old cow class and produce of one cow. Rust Bros. took second prize again with their splendid cow, Ida Lotta 5th. Unfortunately this animal has never been shown at the Wisconsin State Fair in her best condition. Last year she was milked down and this year she was dry. Nevertheless, she is a great cow and worthy of much more recognition than she has received. Rust Bros. took first in junior bull calf class, four cows in milk, and second in aged herd. Van der Schaaff took second in class four cows in milk, third in young herd and second in three-year-old cow class. V. S. Culver took more first prizes than any of the exhibitors and also had the grand championship cow, Springbrook Darkness. Culver took first prize in most of the group classes, as well as the female classes. His herd, indeed, made a very creditable showing.

Exhibitors—Rust Bros., West Allis, Wis.; Rueben Klofonda, Racine, Wis.; R. F. Weymouth & Son, Plainfield, Wis.; Chas. Van der Schaaf, Sparta, Wis.; V. S. Culver, Stillwater, Minn.; Kirkpatrick Bros., Reedsburg, Wis.; Marlow & McCargar, Mankato, Wis.; T. E. Anderson, Tunnell City, Wis.; John L. Fisher, Janesville, Wis.

Bull 3 years or over, 1st Marlow & McCargar on Sir Pietertje Ormsby Mercedes 14th, 2d Kirkpatrick Bros. on Senator Johanna White, 3d Klofanda on North Star Parthenea Sir Beets, 4th Van der Schaaf on North Star Cornucopia Sir Beets, 5th Weymouth & Son on Sir Korndyke Piebe Jewell, 6th

Tractor Tests

Conducted at Fremont, Neb.

July 26 to August 2, 1917, by the Agricultural Engineering Department of the University of Nebraska

Prof. L. W. Chase in Charge

A series of interesting tractor tests have just been made. Every farmer may now know facts.

The object of the experiments was to determine under actual farm conditions the amount of fuel required and the rate of doing various field operations, and to study the quality of the work done. Also the effect of different depths of plowing in the same field.

The tests were not of a competitive nature, but were made with the object in view of observing tractors in actual farm work so that all farmers might have actual figures.

The tests were made with Case tractors operating standard farm equipment, under the auspices of the Department of Agricultural Engineering of the University of Nebraska, directed by Prof. L. W. Chase, assisted by Prof. O. W. Sjogren, Mr. Louis Runnels and Mr. Ray W. Carpenter.

For Free Distribution

A bulletin has just been published covering twelve tests. This is the first authoritative statement of its kind.

It shows the equipment used, the kind of fields, the different operations. Of chief interest to all farmers is the fuel consumption and cost per acre. Much of this information has hitherto been speculative. Now it is down in black and white. It shows the advantages of Case tractors.

Some of the Data

Each test is complete. Different size tractors are used. Some tests are for plowing at different depths. Some are for spike-tooth harrowing and disking, drilling, etc.

Kerosene was used, and based on a cost of 8½ cents per gallon, the cost per acre for plowing under different conditions and depths is shown. These are exact figures—not estimates. The temperature was 100 degrees in the shade—but the heat, however, had no effect on the operation of the tractors in any way.

Send for Your Copy

This bulletin created a sensation at the Fremont Tractor Demonstration. All farmers have been waiting for conclusive figures. Case, the leader for 76 years in power farming, now sets a new pace. No farmer should fail to get this bulletin.

Copies are free. Merely send us your name and address, asking for "The Tractor Tests Bulletin," and a copy will be forwarded at once—without charge. The first edition is just off the press. So don't delay—write today.

Rust Bros. on Portage Pauline King, 7th Culver on Peibe Laura Ollie Homestead King, 8th Rust Bros. on Johanna Pontiac De Kol; 2 years and under 3, 1st Klofanda, 2d Far Oaks Sir Ormsby Johanna; senior yearling, 1st Rust Bros. on Sir Ida Lotta Hengerveld, 2d Anderson on North Star Lady Vera Beets; junior yearling, 1st Fisher on King Segis Pontiac Isaac; senior calf, 1st Fisher on Sir Fan De Kol, 2d Anderson, 3d Van der Schaaf, 4th Rust Bros. on Sir Aaltje Salo Mechthilde Johanna, 5th Rust Bros. on Sir Inka De Kol Liemokge, 6th Culver on Far Oaks Sir Star Ormsby, 7th Kirkpatrick Bros. on King 8 Pontiac Ormsby; junior calf, 1st Rust Bros. on Sir Aaltje De Kol Pontiac, 2d Klofanda on Racine Piebe, 3d and 4th Culver on Far Oaks Sir Ormsby Champion and Far Oaks Sir Violet Ormsby, 5th Kirkpatrick Bros. on Sir Aaggie Pontiac Korndyke, 6th Fisher on Sir Korndyke Segis,

Cow 4 years or over, 1st Culver on Springbrook Darkness, 2d Rust Bros. on Ida Lotta 5th, 3d Klofanda on Colantha Piebe of Elm Court, 4th Dr. Loyal Klofanda on Yeslet De Kol of Riverside, 5th Kirkpatrick Bros. on Helena of Wayside, 6th Rust Bros. on Ida Lotta Hengerveld, 7th Van der Schaaf on Korn Canary Kishie De Kol; 3 years and under 4, 1st Fisher on Tyranea American Ivy, 2d and 3d Van der Schaaf on Dido Enterprise Segis and Queen of Enterprise Stock Farm; 2 years and under 3, 1st and 2d Culver on Far Oaks Ideal Ormsby and Southside Inka De Kol 2d, 3d Rust Bros on Altje Salo Netherland Hengerveld, 4th Van der Schaaf on Queen Segis Canary, 5th and 6th Kirkpatrick Bros. on Korndyke Pontiac Nell and De Kol Pontiac Grace Fayme, 7th Fisher on Pledge De Kol Fisher; senior yearling, 1st Culver on Far Oaks Skylark Ormsby, 2d Fisher on Bessie Pietertje Fisher, 3d and 4th Van der Schaaf on Enterprise Segis Dido and Queen Segis Enterprise, 5th Kirkpatrick Bros. on Clover Pontiac Ormsby, 6th Rust Bros. on Altje Salo Rosella May 2d; junior yearling, 1st Culver on Far Oaks Lily Ormsby, 2d Fisher on Pansy Fan Careme, 3d Culver on Far Oaks Harriet Ormsby, 4th Kirkpatrick Bros. on Dairy Dats Ormsby, 5th Rust Bros. on Altje Salo Netherland Pontiac 3d; senior calf, 1st Culver on Far Oaks Miss Ormsby Rue, 2d Fisher on Johanna Fan Fisher, 3d Culver on Far Oaks Parthenea Ormsby, 4th Fisher on Valdiva Fan Ormsby, 5th Kirkpatrick Bros. on Jewel Maid Johanna, 6th Van der Schaaf; junior calf, 1st and 2d Culver on Pelagie Wayne Rag Apple King and Far Oaks Pauline Ormsby, 3d and 4th Fisher on Juliana Pietertje Fisher and Juliana Pietje Fisher, 5th Culver on Far Oaks Mandlene Ormsby, 6th Rust Bros. on Altje Salo Mechthilde Johanna.

Senior and grand champion bull, Marlow & McCargar on Sir Pietertje Ormsby Mercedes 14th; junior champion bull, Fisher on Sir Fan De Kol; senior and grand champion cow, Culver on Springbrook Darkness; junior champion cow, Culver on Far Oaks Skylark Ormsby; get of sire, 1st Culver, 2d Fisher, 3d Rust Bros., 4th Van der Schaaf; produce of cow, 1st Fisher, 2d Klofanda, 3d Culver, 4th Rust Bros., 5th Van der Schaaf, 6th Kirkpatrick Bros.; aged herd, 1st Culver, 2d Rust Bros., 3d Kirkpatrick Bros., 4th Van der Schaaf; young herd, 1st Culver, 2d Fisher, 3d Van der Schaaf, 4th Rust Bros., 5th Kirkpatrick Bros.; 4 cows in milk, all owned by exhibitor, 1st Rust Bros., 2d Van der Schaaf, 3d Fisher.

Jerseys.—The senior and grand champion bull was Pennithorp's Raleigh, shown by F. B. Underwood. This bull is a well-known animal in the Jersey world and has stood at the head of H. W. Claflin's herd, Muskego, Wis., for several years. He is a bull possessing remarkable capacity and general dairy temperament and has to his credit many outstanding sons throughout the state. W. H. Dixon & Sons took junior and grand championship female honors on Oxford May Maid, a junior yearling of exceptional style and finish. Chas. A. Peterson took first on heifer two years and under three with Glory's Pearline. She was unquestionably one of the nicest females of the show. The aged cow honors went to W. M. Knight, a young breeder, who has been developing a splendid herd. His first-prize aged cow was Combination Golden Lady, a cow of good size, one that bears the external indications of a producer. First honors in the aged herd and four cows in milk classes went to F. B. Underwood. The Jersey breeders were the only ones to award premiums for cows possessing official records. This shows they are anxious to encourage breeding of animals possessing both type and production.

Exhibitors.—W. H. Dixon & Sons, Brandon, Wis.; F. B. Underwood, Wauwatosa, Wis.; W. M. Knight, Eagle, Wis.; Chas. A. Peterson, Rosendale, Wis.

Bull 3 years or over, 1st Underwood on Pennithorp's Raleigh, 2d Knight on Noble's Fenwick, 3d Dixon & Sons on Sultana's Oxford Rosette; 2 years and under 3, 1st Peterson on Ibsen's Chief, 2d Knight on Treal's Noble of Oakland; senior yearling, 1st Dixon & Sons on King's Oxford Maid, 2d Peterson on Marguerite's Jolly King; junior yearling, 1st Underwood on Frederic's Lord of Fewacres, 2d Knight; senior calf, 1st Dixon & Son on Gaumlet's Oxford Togo, 2d and 3d Peterson on Sultan's Noble Oxford and Chief Beauvoir, 4th Underwood on Fewacres Alonzo, 5th Underwood, 6th Underwood on Few Acres Bill Bradley; junior calf, 1st Knight, 2d Peterson on Western King's Glory Lad, 3d Dixon & Son on Oxford Una's Togo.

Cow 4 years or over, 1st Knight on Combination Golden Lady, 2d and 3d Underwood on Distinction Oxford Bell and Financial Leah, 4th Dixon & Son on Oxford Una's Lass; 3 years and under 4, 1st Underwood on Financial Quadale, 2d Underwood on Noble's Financial Meg, 3d Peterson on Ibsen's Pearl, 4th Knight on The King's Son's Girlie; 2 years and under 3, 1st Peterson on Glory's Pearline, 2d Underwood on Noble's Hephyibah, 3d Dixon & Son on Cowslip's Brightness, 4th Underwood on Lynnewood Marjorie, 5th Knight on Oxford's Queenie Princess; senior yearling, 1st Knight on Eminents Gafly Belle 2d, 2d Dixon & Son on Oxford Togo Beauty, 3d Peterson on Oxford's Glory Laverne; junior yearling, 1st Dixon & Son on Oxford May Maid, 2d Peterson on Glory's Oxford Belle, 3d Underwood on Frederic's Lady Marjorie, 4th Dixon & Son on Oxford May Maid, 5th Knight on Volunteer's Lotty 2d; senior calf, 1st Dixon & Son on Conliss May Oxford, 2d Underwood on Fewacres Lady Maude, 3d and 4th Peterson on Chief's Glory Laverne and Trimy's Oxford Togo, 5th Dixon & Son on Oxford Togo Jolly, 6th Underwood on Fewacres Lady Lucretian; junior calf, 1st Knight on May of Oak Grove 2d, 2d Peterson on Harbinger Belle, 3d Dixon & Son on May Oxford Majesty, 4th Knight on Trial's Massey's Princess.

Senior and grand champion bull, Underwood on Pennithorp's Raleigh; junior champion bull, Dixon & Son on Gaumlet's Oxford Togo; senior champion cow, Peterson on Glory's Pearline; junior and grand champion cow, Dixon & Son on Oxford May Maid; get of sire, 1st Dixon & Son, 2d Knight, 3d Peterson; produce of dam, 1st Dixon & Son, 2d Peterson; aged herd, 1st Underwood, 2d Peterson, 3d Knight, 4th Dixon & Son; young herd, 1st Dixon & Son; four cows in milk, all owned by exhibitor, 1st Underwood.

Jersey Specials, Cows having register of merit record for one year, under 4 years, 1st Knight on The King's Son's Girlie; 4 years or over, Dixon & Son on Distinction's Oxford Belle; get of sire, 1st Dixon & Son, 2d Knight; breeder's young herd, 1st Dixon & Son; exhibitor's herd, 1st Underwood, 2d Peterson, 3d Knight, 4th Dixon & Son; produce of cow, 1st Dixon & Son, 2d Peterson; grand champion female, exhibited by her owner, who must have been her owner for 1 year or over, Dixon & Son.

Guernseys.—Exhibitors: Goodhand Kingston, Muskego, Wis.; L. P. Martiny, Chippewa Falls, Wis.; Hill, Welles & Lawson, Rosendale, Wis. The Guernsey show was a disappointment, as none of the old show herds of the state were represented. The burden of representing the breed fell upon a couple of comparatively recent beginners. May King Vrangue of Ingleside was senior and grand champion bull, now owned by Hill, Welles & Lawson. Martiny exhibited the junior championship bull, senior champion cow and most of the first-prize animals in the female classes. Kingston, however, took the grand championship female honors with Raider's Butterwitch of Muskego. He also took first in young herd.

Bull 3 year or over, 1st Hill, Welles & Lawson on May King Vrangue of Ingleside, 2d Martiny on Captain Cedric, 3d Kingston on Moss Raider of Muskego; 2 years and under 3, 1st Martiny on Dairydette; senior calf, 1st Martiny on Begonia's Masher of Chippewa, 2d Kingston on Moss Raider Prince of Muskego, junior calf, 1st and 2d Martiny on Stranford Gold of Chippewa and Wahtawaso's Stranford, 3d Kingston on Moss Raider's Conqueror of Muskego, 4th Martiny on Verona's Dasher of Chippewa.

Cow 4 years or over, 1st Martiny on Wahtawso of Chippewa, 2d Kingston on Imp. Chywoone Erica; 3 years and under 4, 1st Martiny on Jeanie of Chippewa Falls; 2 years and under 3, 1st Martiny on Stranford's Verona of Chippewa; senior yearling, 1st Kingston on Raider's Butterwitch of Muskego, 2d Kingston on Raider's Irene of Muskego; junior yearling, 1st Martiny on Hiawatha of Chippewa; senior calf, 1st Martiny on Stranford's Buttermaid of Chippewa, 2d and 3d Kingston on Raider's Surprise of Muskego and Raider's Minnie of Muskego; junior calf, Delbert Fox, 2d Martiny on Stranford's Valley City of Chippewa.

Senior and grand champion bull, Hill, Welles & Lawson on May King Vrangue of Ingleside; junior champion bull, Martiny on Stranford's Gold of Chippewa; senior champion cow, Martiny on Wahtawso of Chippewa; junior and grand champion cow, Kingston on Raider's Butterwitch of Muskego; produce of cow, 1st Martiny, 2d Kingston; aged herd, 1st Martiny; young herd, 1st Kingston, 2d Martiny.

Ayrshires.—Exhibitors: James Van Etta, Lima Center, Wis., and Ferndell Farms, Ladysmith, Wis. These two herds made a good showing for the breed, with James Van Etta getting a little the better of the argument. The most striking animal of Van Etta herd were Bargenoch Rising Star, senior and grand champion bull, that was shown by Adam Seitz last year, Madison of Cloverdale, a particularly handsome calf and Cloverdale's Cavalier, junior and grand champion female. In the Ferndell herd the most attractive animals were May of Hillcoft, senior champion cow, Silver Pet of Ferndell, first-prize three-year-old cow, Ferndell's Felicity, second-prize two-year-old female, their first and second-prize junior yearling heifers and their first-prize junior bull calf. Judging from the representatives of the Ferndell herd shown this year the herd must be making rapid progress in its development.

Bull 3 years or over, 1st Van Etta on Bargenoch Rising Star, 2d Ferndell Farm on Ferndell Victor; 2 years and under 3, 1st Van Etta on David of Lessnessock; senior yearling, 1st and 2d Ferndell Farm on Ferndell's Trust and Ferndell's Credit; junior yearling, 1st and 2d Ferndell Farm on Ferndell's Arrogance and Ferndell's Loyalty; senior calf, 1st Van Etta on Madison of Cloverdale, 2d and 3d Ferndell Farm on Ferndell's Just Right and Ferndell's Sultan, junior calf, 1st and 4th Ferndell Farm on Ferndell's Scotchman and Ferndell's Three of a Kind, 2d and 3d Van Etta on Cloverdale's Liberty Bond and Cloverdale's Ringmaster.

Cow 4 years or over, 1st Ferndell Farm on May of Hillcroft, 2d, 3d and 4th Van Etta on Mayflower of Rock Ridge, Grace of Ritchfield and White Lily of Meadowbrook; 3 years and under 4 1st Ferndell Farm on Silver Pet of Ferndell, 2d and 3d Van Etta on Rose Winny and unnamed; 2 years and under 3, 1st and 3d Van Etta on Primrose of Alderveran and Alderveran Rosemary, 2d and 4th Ferndell Farm on Rerndell's Felicity and Ferndell's Hope; senior yearling, 1st Van Etta on Cloverdale's Cavalier Flecle, 2d Ferndell Farm on Ferndell's Promise; junior yearling, 1st and 2d Ferndell Farm on Ferndell's Fidelity and Ferndell's Mode, 3d and 4th Van Etta on Cloverdale Lady Bountiful and Seal of Cloverdale; senior calf, 1st and 3d Van Etta on Cloverdale's Pep and Cloverdale Joan, 2d and 4th Ferndell Farm on Ferndell's Good Enough and Ferndell's Wondering Girl; junior calf, 1st and 2d Van Etta on Rhyllis of Cloverdale and Beauty of Cloverdale, 3d and 4th Ferndell Farm on Ferndell's Regina and Ferndell's Lassie.

Senior and grand champion bull, Van Etta on Bargenoch Rising Star; junior champion bull, Van Etta on Madison of Cloverdale; senior champion cow, Ferndell Farm on May of Hillcroft; junior and grand champion cow, Van Etta on Cloverdale's Cavalier Flecle; get of sire, 1st Van Etta, 2d Ferndell Farm; produce of dam, 1st Van Etta, 2d Ferndell Farm; aged herd, 1st Van Etta, 2d Ferndell Farms; young herd, 1st Van Etta, 2d Ferndell Farm; 4 cows in milk, all owned by exhibitor, 1st Van Etta.

Brown Swiss.—Ira Inman, of the Brown Swiss Breeder's Association took up the banner this year, as our familiar Brown Swiss exhibitor, who has come regularly to Wisconsin for many years was conspicuous by his absence this year, though we noted him slip into the ring upon several occasions and jockey one of Mr Inman's animals into first position. Mr. Inman had, on the whole, quite a creditable herd.

Dairy Short-horns.—The Otis Herd, of Willoughby, Ohio, made the only exhibit of milking Short-horns, which were judged by Prof. Andrew Boss, of Minnesota. They were a very good lot and showed some good types of this class of cattle. The two-year-old bull, British Prince, was made senior

JUNIOR CHAMPION AYRSHIRE COW, CLOVERDALE CAVALIER—EXHIBITED BY JAMES VAN ETTA, LIMA CENTER, WIS.

and grand champion, and the junior yearling, Corporal Peach, was given the purple in the junior class. Christmas Rose, the aged cow, was given senior and grand champion females honors, the junior honors going to the junior yearling heifer, Loobagh Darling.

BREEDING CATTLE.

Short-horns.—A short time ago, Wisconsin grass fat steers, weighing better than 1,600 pounds, sold on the Chicago market for $16.50 per hundred. Many good sales of Wisconsin steers have been made in Chicago this summer. In addition to the good price paid for beef, men in Wisconsin are milking Short-horn cows that are producing better than 300 pounds of butterfat annually. The worth of Short-horn cattle on the open markets is the reason for the popularity of the old cosmopolitan breed in the Badger state. And their popularity was well testified to in the showing made at West Allis on Wednesday and Thursday. The Short-horn show was conceded by all unbiased people to be the banner exhibit made by any breed of cattle. Practically all of the animals shown were from Wisconsin herds, and they can put up as good a show of Short-horns as are to be found in any state. Two Iowa exhibitors came in for the competition and cut some of the melons with the home breeders. Taking the Short-horn show all in all, and it might be said to represent the energy of the Wisconsin breeders. Prof. E. A. Trowbridge, of Missouri, tied the ribbons and was kept working in all classes for almost two days. The aged bull class brought forward three good bulls, two of which had met before at Des Moines. Maxwalton Amateur had been slated to win, because he stood well above Lord Cullen in Des Moines. Lord Cullen is a massive bull, but carries his weight well. Maxwalton Amateur is smooth, and a bull of great quality, and it was a surprise to most of the onlookers when he was put into second place. Lord Cullen was made senior champion bull, but failed to annex the grand champion honors, which went to Anoka Champion, the senior calf, that has been winning the blue in his class at the fairs where shown this fall. In the female classes, Maxwalton Queen won easily in class and captured one more grand purple, defeating Fanny Anoka, the senior heifer calf, for final honors. Among the bull classes, the senior bull calf class made the best showing. In the female classes, there were quite a number of very attractive showings. The group classes attracted much attention.

Exhibitors—Gerald D. Arnold, Galesville, Wis.; Anoka Farms, Waukesha, Wis.; Carpenter & Carpenter, Baraboo, Wis.; Claverburn Farm, Colo, Ia.; Dexter Gray, Milton, Wis.; Herr Bros. & Reynolds, Lodi, Wis.; Eben E. Jones, Rockland, Wis.; J. E. Kennedy, Janesville, Wis.; C. A. Oldsen, Wall Lake, Ia. Judge, Prof. E. A. Trowbridge, Columbia, Mo.

Bull 3 years old or over (3 shown), 1st Carpenter & Carpenter on Imp. Lord Cullen, 2d Kennedy on Maxwalton Amateur, 3d Arnold on Richmond Villager; 2 years old and under 3 (2 shown), 1st Herr Bros. & Reynolds on Royal Choice 2d, 2d Arnold on Village Coronet; senior yearling bull (2 shown), 1st Herr Bros. & Reynolds on Ruby's Knight, 2d Carpenter & Carpenter on Collynie Cullen 2d; junior yearling (6 shown), 1st Oldsen on Inverness Hall Mark, 2d Jones on Collynie Cumberland, 3d Carpenter & Carpenter on Collynie Type, 4th and 5th Herr Bros. & Reynolds on Master Gwen and Master Seaman, 6th Gray on Greyhurst Stamp; senior calf (10 shown), 1st, 2d and 7th Anoka Farms on Anoka Champion, Merry Stamp and Royal Stamp, 3d Claverburn Farm on Royal Diamond, 4th Kennedy on Scottish Royal, 5th Gray on Whitehall Selection, 6th Arnold on Cumberland Barmpton; junior calf (7 shown), 1st and 4th Herr Bros. & Reynolds on Master Mariner and Brawith Master, 2d Anoka Farms on Rosebud Champion, 3d Claverburn Farm on Orange Stamp 2d, 5th and 7th Carpenter & Carpenter on Collynie Royal Knight and Collynie Cullen 10th, 6th Arnold on Choice Governor.

Cow 3 years old or over (6 shown), 1st and 5th Carpenter & Carpenter on Maxwalton Queen and Imp. Viola 7th, 2d Jones on Verbena of Oakdale, 3d Kennedy on Baroness Lady 7th, 4th Herr Bros. & Reynolds on Snowdrop 2d, 6th Arnold on Roan Lilly; two-year-old heifer (5 shown), 1st Carpenter & Carpenter on Collynie Mysie, 2d Kennedy on Windrow Belle 23d, 3d Gray on Village Belle 8th, 4th Herr Bros. & Reynolds on Woodburn Rosemary, 5th Arnold on White Beauty; senior yearling (8 shown), 1st Kennedy on Miss Lovely, 2d Carpenter & Carpenter on Anoka Clipper 3d, 3d and 4th Herr Bros. & Reynolds on Goldie's Ruby, and Rare Gift, 5th Arnold on Ann of Lancaster, 6th Jones on Victoria Cumberland, 7th Gray on Village Belle 11th; junior yearling (6 shown), 1st Claverburn Farm on Sunny Maid 10th, 2d Carpenter & Carpenter on Collynie Averne, 3d Gray on Village Belle 13th, 4th Herr Bros. & Reynolds on Village Belle 2d, 5th Jones on Collynie Belle, 6th Arnold on Meadowview Flower; senior calf (9 shown), 1st and 3d Anoka Farms on Fanny Anoka and Columbia Anoka, 2d Herr Bros. & Reynolds on Averne 15th, 4th Arnold on Meadowview Keepsake, 5th Jones on Hillshade Duchess, 6th Dexter Gray on Miss Lavender, 7th Carpenter & Carpenter on Collynie Gift 3d; junior calf (10 shown), 1st and 5th Anoka Farms on Augusta Anoka 5th and Clipper Anoka, 2d and 4th Jones on Hillshade Beauty and Hillshade Marvel, 3d and 6th Kennedy on Oaklawn Alice and Oaklawn Annie, 7th Claverburn Farm on Lovely Diamond.

Senior champion bull, Carpenter & Carpenter on Lord Cullen; junior and grand champion bull, Anoka Farms on Anoka Champion; senior and grand champion cow, Carpenter & Carpenter on Maxwalton Queen; junior champion heifer, Anoka Farms on Fanny Anoka.

Aged herd (4 shown), 1st Carpenter & Carpenter, 2d Kennedy, 3d Herr Bros. & Reynolds, 4th Arnold; young herds (5 shown), 1st Herr Bros. & Reynolds, 2d Jones, 3d Arnold, 4th Gray, 5th Carpenter & Carpenter; calf herds (5 shown), 1st Anoka Farms, 2d Herr Bros. & Reynolds, 3d Carpenter & Carpenter, 4th Claverburn Farm, 5th Jones; get of sire (7 shown), 1st Anoka Farms on get of Crystal Stamp, 2d Herr Bros. & Reynolds on get of Master Ruby, 3d Carpenter & Carpenter on get of Lord Cullen, 4th Jones on get of Collynie Sultan, 5th Gray on get of Archer Stamp; produce of cow (4 shown), 1st Carpenter & Carpenter on produce of Clipper 9th, 2d Jones on produce of Pearl Cumberland, 3d Arnold on produce of Sissy Ann, 4th Gray on produce of Village Belle 4th.

Herefords.—Herefords were few in numbers, but strong in quality at Wisconsin. J. C. Robinson & Son, of Evansville, made their usual classy showing, and competition was given to the show by the herd of Wencle Rott, of Wonewoc. The most of the controversy, though, lay between members of the Robinson herd which captured most of the blues and purples, losing only one of the blues where they competed, and the purple ribbon on junior champion bull, which went to Rott's senior yearling, Repeater 41st, that is the making of a good bull. Senior and grand champion honors went to Maple's Lad 61st, Robinson's three-year-old bull. In the female classes, senior and grand champion honors went to Maple's Lass 68th, the junior honors falling to the junior yearling heifer, Maple's Lass 82d, both from the Robinson herd. Professor Trowbridge judged the cattle and expressed himself as well pleased with the show.

Exhibitors—J. C. Robinson & Son, Evansville, Wis.; Wencle Rott, Wonewoc, Wis. Judge, Prof. E. A. Trowbridge, Columbia, Mo.

Bull 3 year or over (2 shown), 1st Robinson & Son on Maple's Lad 61st, 2d Rott on Lady's Real; senior yearling (2 shown), 1st Rott on Repeater 41st, 2d Robinson & Son on Maple's Lad 82d; junior yearling (3 shown), 1st and 2d Robinson & Son on Maple's Lad 93d and Beau Welcome, 3d Rott on Young Harris; senior calf (3 shown), 1st and 2d Robinson & Son on Maple's Lad 97th and Maple's Lad 102d, 3d Rott on Rex 3d; junior calf (3 shown), 1st and 2d Robinson & Son on Maple's Lad 107th and Maple's Lad 108th, 3d Rott on Rex Perfection.

Cow 3 years or over (3 shown), 1st Robinson & Son on Bonnie Dee, 2d and 3d Rott on Sly Lass and Miss Repeater 40th; 2 years old (3 shown), 1st and 2d Robinson & Son on Maple's Lass 68th and Maple's Lass 57th, 3d Rott on Lady Fairfax 3d; senior yearling (3 shown), 1st and 2d Robinson & Son on Maple's Lass 73d and Maple's Lass 69th, 3d Rott on Lady Real 4th; junior yearling (2 shown), 1st Robinson & Son on Maple's Lass 82d, 2d Rott on Bonnie Lass; senior calf (3 shown), 1st and 2d Robinson & Son on Maple's Lass 85th and Maple's Lass 87th, 3d Rott on Gay Lass; junior calf (1 shown), 1st Rott on Miss Elmyra.

Senior and grand champion bull, Robinson & Son on Maple's Lad 61st; junior champion bull, Rott on Repeater 41st; senior and grand champion cow, Robinson & Son on Maple's Lass 68th; junior champion cow, Robinson & Son on Maple's Lass 82d; aged herd (2 shown), 1st Robinson & Son, 2d Rott; young herd (1 shown), Robinson & Son; calf herd (2 shown), 1st Robinson & Son, 2d Rott; get of sire (2 shown), 1st Robinson & Son on get of Bonnie Brae 8th, 2d Rott on get of Rex; produce of dam (2 shown), 1st Robinson & Son on produce of Gosimer 11th, 2d Rott on produce of Harris Princess 59th.

Aberdeen Angus.—Congdon & Battles, of North Yakima, Wash., had the only show of Doddies at the Wisconsin show. This herd is too well known to need any comment, and it is to be regretted that the Angus interests of the state of Wisconsin were not better represented at the show. The Congdon & Battles herd has been making the Wisconsin show for many years and deserves compliments on furnishing a representation of the breed to Wisconsin state fair visitors. They, of course, won all the ribbons and took all the championships.

Polled Durhams.—Boynton Bros., of Janesville, Wis., furnished the entire show of Polled Durhams. This herd has made good strides and wonderful improvement in the past few years, and were brought out in good enough shape to have welcomed competition. Prof. Andrew Boss judged the classes and awarded senior and grand champion bull honors to the two-year-old bull, Silver Mist. The senior calf, Lead On, was made junior champion. In the female classes the aged cow, Blue Bell was made senior and grand champion—the junior honors going to the junior yearling heifer, Valley View Queen.

Red Polls.—One herd of Red Polled cattle, shown by John Curran, Sechlerville, Wis., made up the entire show of this breed. He filled all the classes, and was awarded all the champion ribbons. This herd stood well in some of the classes at Hamline last week and would have stood competition at Wisconsin. Prof. Andrew Boss placed the awards.

Baby Beef Contest.—Nine calves were shown in the baby beef contest. The calves were all brought out in good shape, the top calves being in especially good order. The awards were placed by Mr. J. N. Chamberlain, Beloit, Wis., as follows:

1st, C. Elwyn Thompson, Lake Geneva, Wis., Hereford calf; 2d Lee Jewell, Mineral Point, Wis., Hereford calf; 3d Harold Hall, Edgerton, Wis., Angus calf; 4th Harry McCann, Janesville, Wis., Short-horn calf; 5th John McCann, Janesville, Wis., Short-horn calf; 6th Geo. Schofield, Edgerton, Wis., Short-horn calf; 7th Kitchell Sayre, Edgerton, Wis., Short-horn calf; 8th and 9th Richard Roberts, Sun Prairie, Wis., Short-horn calves.

Get Rid of Worms

Figure how much it's worth to you in dollars and cents to keep your hogs free from worms. Worms prevent thrift—retard growth—rob you of good, high-priced pork.

Dr. Hess Stock Tonic

Drives Out the Worms

and at the same time tones and conditions the system. It enables your hogs to be at their best—to do their best. You take no chances. My Stock Tonic is guaranteed. You buy it at an honest price, from my dealer in your town who will return your money if it does not do as claimed.

Why Pay the Peddler Twice My Price?

FAT CLASSES.

Grade or Cross Breds.—Steer 2 years and under 3 (4 shown), 1st and 3d Claverburn Farm, 2d E. W. Graber; steer 1 year and under 2 (5 shown), 1st Claverburn Farm, 2d E. W. Graber, 3d Herr Bros. & Reynolds; steer under 1 year, 1st Herr Bros. & Reynolds, 2d Claverburn Farm, 3d Condon & Battles; steer herd, 1st Claverburn Farm, 2d Herr Bros. & Reynolds, 3d E. W. Graber; champion steer, Claverburn Farm on the two year old.

HORSES.

Percherons.—Percherons were not numerous, but were of good quality at the Milwaukee show. Wisconsin exhibitors furnished most of the show, which was strengthened by a strong showing made by Hurdcroft Farm, of Minnesota, and Shekleton & Sons, of Iowa. In the aged stallion class Honorable Baccarat was defeated by the toppy and drafty Keota Idea, that was considered good enough to carry off the champion stallion honors. Sara Belle was again good enough to capture futurity honors, and to be champion mare bred by exhibitor, but was defeated for champion honors by her stable mate, Pearl, the first-prize three-year-old mare. This decision was hardly in keeping with what was expected after the good showing made by the young mare at Des Moines and Hamline. Wisconsin exhibitors made a good showing, Harvest Farms Co. making an especially good show in the group classes. The showing of most of the classes dragged and it would add much to the character of the horse show if a little better understanding of the rules could be obtained, and if a little more snap in getting animals into the ring would prevail.

Exhibitors.—W. J. Bernd, New Richmond, Wis.; B. F. Babcock, Eleva, Wis.; H. Harrison, Spring Green, Wis.; Harvest Farms Co., Bayville, Wis.; Hurdcroft Farm, Monticello, Minn.; H. L. Houser, Mondovi, Wis.; Wm. Hurtley, Mondovi, Wis.; Francis Lamb, South Byron, Wis.; Frank P Shekelton & Sons, Lawler, Iowa; Whelandale Farms, Mondovi, Wis. Judge, S. F. Guttenstein, Milwaukee, Wis.

Stallion 4 years or over (4 shown), 1st Lamb on Keota Idea, 2d Hurtley on Honorable Baccarat, 3d and 4th Shekleton & Sons on Dudie and Illet; 3 years and under 4 (4 shown), 1st Hurdcroft Farm on Herbert, 2d, 3d and 4th Harrison on Theodore, Peerless and Grant; 2 years and under 3 (4 shown), 1st Hurdcroft Farm on Promoter, 2d and 4th Harvest Farms on D'Artignan and Captaine, 3d Bernd on Canton; 1 year and under 2 (5 shown), 1st Lamb on Gildroy, 2d Babcock on Iritus, 3d and 5th Harvest Farms on Vidette and Chevalier, 4th Whelandale Farms on Honorable Rex.

Cow Points Shown By Contrast.

Cow-Testing Exhibit at the Wisconsin State Fair Was Educational and of Great Interest to Visiting Dairymen.

THE cow-testing association exhibit at the fair grounds this year was one of the most important features of the live stock show. Living demonstrators of the soundness of the testing association plan were on hand, in the form of the best five cows that have completed their year's work in the eighty-three cow-testing associations in Wisconsin. An exhibit of two dairy sires, a good one and a poor one, and several ordinary looking cows with out of the ordinary production records made it plain to the visitors what cow-testing associations will do for the dairyman.

"Ima Failure," a pure-bred Holstein cow standing by the side of Lucy, a grade Holstein, each with their yearly work tabulated on a card above their stalls, formed the strongest argument in favor of testing. "Ima Failure" made during her year's work only 2,466 pounds of milk and 83.3 pounds of fat. Her work brought no profit, but resulted in a loss of $14.80 for her owner. For every 72 cents' worth of product her owner had to feed her $1 worth of grain and grasses. She was a pure-bred, but in this case her ancestry seemed not good enough to overcome her poor individuality as a producer of milk and butter fat. On the other hand, Lucy, of only grade origin, made for her owner, Herman Vetter, of Calvary, a profit of $198.12. Looking at the two cows without any knowledge of their actual performance, one would give the pure-bred animals an even chance of producing fully as much as the grade animal. In this case "Ima Failure," on top of her pure-bred ancestry, had most of the points which we look for in an animal of the dairy type. It is possible that she cannot be made to yield largely and profitably as a dairy cow should, but it is more likely that her feed and care had much to do with her low record. But the point is that no one can tell without the scales and the Babcock tester whether the feed put into a cow is bringing the results in dollars and cents which the owner has a right to expect. As this is the foundation of cow-testing work, the point is well illustrated in the case of these two cows.

The wonderful growth of the association work in the state, notably so during the last four years, is well worth mentioning. From ten associations in 1909 the membership has increased to eighty-three in 1917. The first ten associations included 3,840 cows. Today 40,700 cows are being regularly tested each month and checked up on their production. Noel Negley and H. C. Searles, the field men for the Wisconsin Dairymen's Association, are not satisfied, however, and never will be satisfied until they have located a cow-testing association in every dairying community in Wisconsin. The exhibit they show each year at the fair will undoubtedly do more towards converting the skeptical than any other thing yet attempted.

The five best cows among the 40,700 for the year were on exhibition in the barn. There were a few animals that ranked higher in actual fat production for the year, but since their owners did not care to exhibit, the prizes and the honors went to the next in line. First prize went to Lucy, already mentioned in these paragraphs. Second to her was Helena of Wayside, a pure-bred Holstein owned by Kirkpatrick Bros., of Reedsburg. Helena gave 13,940 pounds of milk yielding 605 pounds of fat and resulting in a profit of $203.84 over feed cost. She returned $3.46 for every dollar spent on her for feed. Third honors went to Fritz, a grade Guernsey owned by H. J. Duecker, of Kiel. Fritz gave a profit of $299.58 over the price of the feed, yielding 11,194 pounds of milk and 583.6 pounds of fat. She returned for every dollar spent on her $4.03 profit. Next in line was Canary Jewel Gem, a pure-bred Holstein owned by D. Cornue, of Zenda. Her output of 17,583 pounds of milk and 548.2 pounds of fat brought a profit of $203.75. Fifth was Fall Breeze Beauty Second. She is owned by A. G. Palmer & Son, of Lake Geneva. Her 15,449 pounds of milk and 544 pounds of fat paid for her feed and yielded a profit of $117.43 besides.

Lucy, feature of cow-testing exhibit. Owned by Herman Vetter, Calvary, Wis. Record 16,355 pounds of milk, 691.7 pounds of butter. A grade cow bought for $40 three years ago, and made valuable by cow-testing records.

The profits are not necessarily an indication of what the cow is able to do, as there is a wide variation in the cost of feeding and the method used by various owners in arriving at the final figures. With some associations coöperative buying has cut down the expense for all concentrated feeds to a minimum, while with others buying by the single ton has run the cost up to a considerable figure. The basis on which the prizes were given to the above-named owners was on the fat production of the cows. That is the reason some of the profits of the cows in second and third place appear larger than the first prize animal can show.

Numerous signs and posters about the barn called attention to the vital facts of successful dairying. Questions on these posters directed to the cow owner were intended to set the visitor to thinking. "Cows are mostly better or worse. Which are yours?" "What is the use of having good cows when the ration is wrong?" "Pure breds, but how good? Registration papers are not enough." These and many others around the building served to indicate what the testing association can do towards making dairying profitable.

Over one stall was this poster, "$1.25 made $150. My owner, C. E. Binning, of Fond du Lac, offered me for sale a year ago for $50. He could not sell me, so he put me in the cow-testing association and this is what I did for him during the past year: Milk, 7,737 pounds; fat, 487.9, valued at $229.31; cost of feed, $79.06; profit over feed, $150.25. It cost $1.25 to discover me. Is it not a good investment? Signed, Mary Grade Jersey, age five."

Another sign read, "'I'll sell you. You are no good.' That is what my owner, Otto Ziehlke, of Rosendale, said. But a cow-testing association was organized and this is what I did for him last year as shown by the records: Milk, 7,570 pounds; fat, 363 pounds; value of fat, $150.78; cost of feed, $56.58; profit over feed, $94.20. Signed, Grade Holstein." Below each

The large pile of boxes represents cheese produced by Lucy, champion at cow-testing exhibit. Small pile shows cheese produced by a cow that looked good, but was short on delivery of milk.

How Will You Fill Your Silo?

You can fill it the right way, cutting as the corn is ready, filling a few feet, letting that settle and then filling some more much or little at a time, till the job is done. That is the right way, and if you have a filler and an

AUTO UTILIZER

you'll be independent of filling crews, neighborhood helping round-ups and all the usual grief connected with silo filling. With it you can meet every power requirement on your farm.

Just Back Car Onto Runway
No Jacking Up-Nothing to Attach

Car stands level and runs exactly as it does on the road. Positively no strain on its construction or working parts. Because the Auto Utilizer is so simple and everlastingly strong, it's the only practical means of using a car for farm power. Unit construction makes it easy to move about. All steel and iron. Only two simple revolving parts—running in long Hyatt Roller Bearings. Find out all about it and you won't do without it. Ask your dealer if he has seen it—if he is going to demonstrate it. Send today for complete descriptive literature.

sign stood the cow referred to, contentedly chewing her cud.

Further along in the barn two dairy bulls, both pure bred, stood side by side. Over the stall of the one was a sign, "This bull increased herd production." Over the stall of the other, "This bull decreased herd production." The one had poor ancestry and consequently could not sire dairy cows that would yield profitable amounts of milk and butter fat. The other bull was a splendid individual of the dairy type, with good length of body, exceptional depth and a high quality throughout. His pedigree showed him to be the offspring of high-producing dams on both sides. Several blue ribbons testified to the fact that the dairy judges had found him an individual of the type worthy of heading a herd. Another placard showed that his offspring were capable of producing high amounts of butter fat. A list of seven or eight cows which had successfully entered the National Guernsey Association because of their records were sired by him. The other bull, the unprofitable one, not only lacked the ancestry but also showed none of the points which the dairyman requires his herd sire to have. He was small in size for his age and lacked dairy quality. None of his offspring showed ability to produce milk in large amounts.

In looking over the various cows on exhibition in the barn and especially the pure bred, "Ima Failure," visitors were inclined to pronounce offhand judgment and seeing points in favor or against the cows which, in reality, did not exist. Several recognized dairymen, in looking over the cows, were certain that even such an animal as the Holstein heifer, Ima, could be made to yield milk in large enough amounts and at low enough cost to produce a profit. A great deal depends upon the feed and care of a cow, and, while one man may be able to feed a cow profitably when another is unable to do so, it stands to reason that one bad year will in most cases convince the owner that it is no longer worth while bothering with those animals that did not show a profit. That is the purpose of the cow-testing association.

Extra Poultry Space All Taken.

New $35,000 Poultry Building at Wisconsin Fair Fails to Provide Room For Great Collection of Badger Birds.

WITH more than 4,000 birds entered at the state fair poultry show this year, the new $35,000 building just completed has already proved too small to take care of the needs. Many of the bird fanciers were forced to "double up" on coops, as there otherwise would have been no room to take care of them all.

The show was not only the largest but also the best ever held on the fair grounds. New exhibitors were undoubtedly attracted because of the advertised increase of space for showing and also because of a complete revision which had been made in the premium list. There were only a few outside exhibitors from Iowa, Illinois and Minnesota, the rest all hailing from various sections of this state.

One of the heaviest classes was that of Barred Rocks. The White Rocks also formed an outstanding exhibit, H. W. Halbach, of Waterford showing the best stock. Several of the birds entered by Mr. Halbach have been winners at Madison Square Garden, New York City, and were not for sale there, even at the offered price of $250 a bird. Wm. Bell, of Arlington, showed some splendid Single Comb Leghorns of the white, black and brown varieties and won most of the moneys in these divisions. Chanticleer Farm, of Oconomowoc, gave Mr. Bell a close race, however, in the Single Comb White Leghorn, and won especially heavily on their Single Comb Rhode Island Reds. Winnebago Poultry Yard, of Omro, also were heavy winners in the Rhode Island Red division. The stock from the Winnebago Yard is uniformly good from year to year. Exhibits by members of the Milwaukee Poultry Breeders' Association were also in on the prize money. John F. Marvin, who is secretary of this association, came out well with his White Orpingtons and J. E. Schaefer, who is president, was a steady winner in the Single Comb White Leghorns. Polish birds were shown by W. A. Hoyt, of Whitewater, and E. J. Roberts, of Fort Atkinson. In the Silver Wyandotte classes R. J. Porter, of Muckwanago, was a heavy winner, while Charles Prei, of Waukesha, came out well in the White Wyandottes. An especially strong contender in various classes was W. E. Hathaway, of Jefferson.

A feature of the poultry building was the water fowl exhibit located in the center of the building. Excellent specimens of Egyptian geese, wild ducks, pin tail ducks, green-winged teal and mandarin ducks had been secured to make the exhibit as complete as possible. E. E. Lawrence, of Token Creek, near Sun Prairie, furnished several swans.

The show was highly satisfactory in the opinion of both officials and the poultrymen, but it is evident that more space will be needed next year to accommodate this rapidly growing department of the state fair. As the building is now arranged there is no room to spare. A small office located at each end is the only space which is not occupied by pens and coops. There is no place at all for demonstrating useful apparatus for the poultryman, no room for concessions of any kind. There is also a great need for a catalog to help the stranger as well as the exhibitors in securing information on entries and addresses of those showing. However, these are only small points compared to the essential feature, viz., the success of the show. No one attending a show of the size and quality of the state fair poultry show would complain in any way of its success. The exhibitors of pigeons and poultry were:

F. J. Alricht, Waterford, Wis.; E. L. Barnes & Sons, Milton, Wis.; Wm. Bell, Arlington, Wis.; E. A. Berg, Chesterton, Ind.; Oscar Bohling, Lake Beulah, Wis.; A. W. Wagner, Milwaukee, Wis.; Winnebago Poultry Yards, Omro, Wis.; Winnebago Bantam Yards, Oshkosh, Wis.; A. L. Wussom, Milwaukee, Wis.; A. Wold, West Allis, Wis.; J. E. Zeigler, Milwaukee, Wis.

The pigeon exhibit was also especially heavy, more fanciers than usual entering the various classes.

Simplicity Blower-Cutter noted for its great capacity and economy of operation. Many exclusive features which insure efficiency and durability.

New Simplicity kerosene engine. Throttling governor insures smooth running. Special carburetor provides perfect mixture. Burns kerosene without smoke or carbon.

The Tractor You Buy

IT must be a tried-and-proved tractor—one that will do things not only when on exhibition, but day in, day out, right through the year.

Dependability is the main thing—a balky tractor is worse than a balky horse. The Turner Simplicity tractor is thoroughly dependable. It's built on approved principles, consequently you need not expect defects to appear in construction or design. You can use the

TURNER Simplicity

for plowing, discing, harvesting, hauling, and belt work. It's an all-around tractor for the average size farm. Works in any kind of soil—not afraid of wet fields or heavy clay. It's called "the light tractor with the heavy pull" because it does the work of heavier tractors, yet doesn't have the excess weight. For that reason you can use it on small jobs economically.

Has Waukesha tractor motor, Hyatt Roller Bearings—standard design throughout. Three-point suspension gives it flexibility. Turns short, has simple gear-shift control. Burns kerosene or gasoline. All working parts are enclosed in dust-proof cases and run in a bath of oil. A quality tractor built by the makers of the well-known Simplicity farm engine.

Tear out this ad, write your name and address on the margin and mail for descriptive literature. Mark a cross under other products, if interested.

Holstein Breeders in County Tour

Walworth County Breeders Spend Enjoyable Days on the Holstein Farms of Waukesha County.

THIRTY-EIGHT automobiles carrying 171 passengers and representing the Walworth County Holstein Breeders' Association, journeyed to Oconomowoc and vicinity in Waukesha county Thursday, August 30th. In addition to the Holstein breeders there were included in the party Mr. and Mrs. Malcolm G. Gardner, of the Advanced Registry Offices at Delavan; Superintendent Buell, of the State School; Sales Manager Merrick and several other Delavan citizens, County Agricultural Agent L. L. Oldham, Ben Bachhuber and L. W. Swan, of Elkhorn.

The day was ideal for such a trip and barring the dust, not an unpleasant incident occurred. Very few cases of trouble developed with the cars en route and these few were immediately cared for by the trouble men who accompanied the party from Troy Center. The soil in the region of Dousman and Oconomowoc seemed very dry. The pastures appeared dried up; corn and potatoes apparently were suffering and land seemed too dry for plowing, thus delaying the seeding of winter crops. Someone said that this vicinity had not received rain since the first week in July.

Leaving East Troy about 9:45, the party went direct to George A. Schuster's, at Mukwonago. Mr. Schuster was on hand and took personal charge of the crowd. He was proud of the fact that the farm had eight thirty-pound cows—the state record for any one farm. He pointed out for our attention the $2,100 cow purchased last spring and her stablemates—most of them daughters of King of the Pontiacs and purchased at the famous Stevens Bros. sale held in New York some months ago. What is more enjoyable than the sight of a body of breeders critically looking over the living models of a successful fellow breeder, feeder and owner? Mr. Schuster is all of these and his performances prove it.

A group of Waukesha breeders headed by "Bill" Beard were on hand at Schuster's ready to escort them on to Dousman. A write-up of the trip would not be realistic without mention of the Alps-like hills and the Glacier National Park-like scenery traversed in the vicinity of Eagle.

At 12:20 the first car pulled up at the Wisconsin Masonic Home at Dousman. Here Superintendent and Mrs. Walker, formerly of Delavan, had made preparations for the serving of the picnic lunches, cream and coffee. Too much cannot be said in appreciation of the hospitality of these good people who did all in their power to make everyone comfortable. Both Mr. and Mrs. Walker met many of their old Delavan acquaintances and exchanged greetings with them.

With all feeling much refreshed, the autos rambled on to the Pabst Farms Nos. 1, 3 and 5. Mr. Pabst, the owner, met the party and personally conducted the pilgrimage through his domain. The Pabst Farms are always an interesting stopping place. They were of particular interest to this party because of the fact that they are the home of so many of the black and white breed and this party was a Holstein affair. The $12,000 calf purchased from the E. H. Dollar sale held in New York and being groomed for herd sire, was the chief attraction. This calf is a half brother to Rag Apple Korndyke 8th, sire of the famous $53,000 calf sold to Mr. Field at the recent Stevens Bros. sale. He is certainly bred in the purple and is bound to make Holstein history in Wisconsin.

Talking about history, the test barn on Farm No. 3 is an archive of more than passing note. Here are found the animals that will herald the future successors of Mr. Pabst as a breeder and feeder. With so many splendid daughters of King Pontiac Champion coming into milk in the near future, it would seem that Mr. Pabst's successors are assured.

Our party viewed most of the 400 head, the matchless buildings with their clean, sanitary, well-lighted accommodations, the sixty-foot silos with the seventeen-foot water tanks on top, the whole standing like two silent sentinels of prosperity, ever guarding the paunches of these soldiers of the dairy, the marl-covered floors and the bins of phosphate, both materials being daily incorporated in the farm manure to keep up the fertility of the land—these and other features were observed and carried back home in the minds of the interested to be used later when opportunity afforded.

Leaving the Pabst Farm, the tourists headed for Carnation Farms. Ten miles on a good highway leading directly through the quiet, clean, pretty little city of Oconomowoc, and passing along one of the numerous beautiful bodies of water which contribute so much in Nature's way to this famed region of Wisconsin passed all too quickly.

"The Home of Contented Cows" is the way the advertisement reads. This phrase precisely describes the first glimpses the party had of the seventy head of black and whites housed in the big, spacious, old-fashioned round barn. Space does not permit a detailed account of this farm. Suffice it to say that we all marveled at the fine individual, well-marked, productive looking progeny of Johanna McKinley Segis, the splendid condition of the cows and herd sires, the clean, sanitary surroundings of the calves, and the general neatness on all sides. The animals, young and old alike, radiated the hygiene of their environment. A battery of silos—five in number—was one of the noteworthy sights. These structures emphasized the wisdom and good judgment of the owners and once again appeared as the silent guards of the dumb, who are at all times ready to back up the men who are back of the men in the trenches.

The party disbanded here, some going straight to town, others winding their way through the pretty lakes. As night drew near all of them wound their way homeward. The trip was talked over and its attractive features visualized in the minds of all. It will never be forgotten—rather will it be stored in that most wonderful of storehouses—the human mind's memory.

WALWORTH COUNTY BREEDERS AT PABST SOCK FARM, WAUKESHA COUNTY.

See page 26. Read The Farmers' Market advertisements. There may be a bargain there for you.

Hauling Road Gravel By Teams and Tractors.

Records were recently kept very carefully of the cost of hauling gravel for some main roads in Minnesota, which show the value of horse and mechanical traction under similar conditions. About twenty-two miles of road had the gravel distributed over them by teams and about 3.6 miles were covered with gravel hauled by a caterpillar traction outfit. Itemized cost records were kept so carefully that the results of these two methods of hauling can be compared.

Using teams it was found that the cost of loading and hauling a cubic yard up to one-half a mile ranged 57 to 94 cents per mile. Where the hauling was one-half to one mile the cost per mile ranged from 30 to 48 cents. Where it was from one to one and one-half miles, the cost was 23 to 35 cents, and where it was between one and one-half and two miles the cost per mile was 22 to 28 cents. The detailed figures show that the cost depended largely upon the efficiency of the men engaged in loading the wagons. These loading costs varied from 7 to 25 cents per yard. The least figure was obtained by making the teamsters help in the shoveling and the highest figure was due to an excessive amount of frost and firewater.

The tractor outfit consisted of a gasoline-driven caterpillar tractor, the type of machine upon which the design of the British army tanks is based, seven three and one-half-yard spreading wagons, a fifty-yard storage bin and a loading machine. The work was complicated by a very heavy grade at one place. The best that could be done here was to haul four cars across private land and then go back and haul the remaining three cars across this rough ground. A full train was then made up and hauled the remaining two and one-half miles. The total average haul was about three miles. As the work progressed another gravel pit was opened where these grades did not exist and the hauling was done more easily. On the first part of the work the average cost was 15.4 cents per yard per mile and on the latter part it was 15.41 cents.

The engineer who reported these figures, Orrin J. Kitt, has stated that with a more powerful tractor and a loading outfit of greater capacity, a much lower operating cost could have been obtained with the tractor outfit. It is his opinion that with proper equipment, mechanical traction of this type is much cheaper than hauling by team. There are also other advantages which he has summed up as follows: By applying the gravel in two courses with a tractor the gravel is rolled without additional cost and the road is ready for travel as soon as the tractor leaves it. Furthermore, by loading the gravel into a bin, thence into wagons and finally dumping it on the road, the material is better mixed than when it is shoveled directly from the bank into the wagons which dump it on the roads.

The Checking of Corn.

To the Editor:—I believe there is no piece of farm machinery that is so little understood by the average farmer as our common check-row corn planter. I am operating one that was highly recommended, but I simply cannot make it check correctly; neither can the agent of whom I purchased it. All over the country where a good check is found there will be many poor ones. If you can give us farmers some definite and understandable information along this line the same will be highly appreciated by the big majority of corn-belt farmers who take your practical journal. By way of uncovering the cloudy points, won't you please discuss the following questions?

Should you run a tight wire, a medium wire or a loose wire. All methods are recommended by different dealers and agents. Should you throw your wire over before stretching or just carry it over? What do you mean by the "drag" of the wire? How much is it and in what direction?

What is meant by "behind the button" and how do you determine it? Do you simply lay your wire on the ground behind your planter and dig up your corn? If you are planting two inches behind button with a tight wire won't your corn be about four inches out of check?

If you check with a loose wire won't the drag of your wire be much more than with a tight or medium wire?

Please explain why raising or lowering the tongue in its slot adjustment will throw the corn ahead or behind the botton.

Should not the distance behind the button be determined by the tension of your wire, that is, if I am planting one inch behind with a tight wire should I not plant two or three inches behind if I am running a loose wire?

L. E. Pennewell.

Fine Cheese and Butter Exhibits.

Drum Swiss Classes Largest Ever Exhibited at Any Dairy Products Show in Wisconsin—Quality of Dairy Products Excellent.

Dairy Department—Fred Marty, Monroe, superintendent. Judges of butter, Prof. C. E. Lee, Madison; N. W. Hepburn, Urbana, Ill.; G. H. Benkendorf, Madison. Judges of foreign cheese, G. Marty, Madison; J. Lehnherr, Monroe. Judge of milk and cream, Donald R. Mattson, Madison. Judges of American cheese, E. L. Alderhold, Neenah, Wis.; A. T. Bruhm, Madison; J. D. Cannon, New London, Wis.

WISCONSIN is keeping up the quality of her dairy products as evidenced by the good showing at the state fair at Milwaukee last week. There were 225 entries in the cheese exhibit and over 100 tubs of butter, and there were few which failed to receive favorable mention because of the fact that they scored too low. Superintendent Fred Marty and his assistants arranged the dairy products exhibit in attractive style. The showing of drum Swiss cheese was the feature of the show, there being thirty-six drums as compared with twenty-five, the record number exhibited at any previous Wisconsin State Fair. In total quantity the cheese exhibits exceeded that of last year, but there were a few less entries than last year. There are now almost 2,200 cheese factories in Wisconsin and the number is increasing each year. It is noticeable that the number of creameries is not increasing, but on the contrary has fallen off to some extent. This is due to the fact that cheese will bring, in most cases, a larger immediate cash return on milk than can be realized from the sale of cream. Farmers of the state have not all come to the point as yet where they will take into serious consideration the feeding value of skim milk. The butter exhibit this year was about the same size as last year. Below are given the high scores on butter and the several classes of cheese:

Creamery Butter—M. Mickelson, Westby, score 96; Tony Kroyer, Basco, score 96.

Cheddar, Flat or Daisy Cheese—Emil Boeing, Woodstock, 97.16; Carl H. Schneider, Heller, 97.16; Math Meyers, Stanley, 97.16.

Young America, Longhorn or Print Cheese—A. C. Worth, Appleton, 96.33.

Brick Cheese—George Schram, Beaver Dam, 96.75.

Drum Swiss Cheese—Fred Glauser, South Wayne, 98.25.

Block Swiss Cheese—Otto Urban, Riley, 98.25.

Limburger Cheese—John Weiss, Bellville, 98.

Other scores in butter and the several cheese classes are as follows:

Creamery Butter.—Robt. S. Anderson, Northland, 94.83; Chester Bishop, Whitewater, 95:50; L. L. Bolstead, Basco, 95.50; John H. Bogert, Stoddard, 92.66; J. A. Betthauser, Oakdale, 92; Ed T. Bolstead, Stoughton, 93.50; Chris Back, Luck, 95.83; R. W. Butler, Amery, 95; R. J. Brigham, Whitewater, 95.66; Walter Christensen, Klevensville, 93.16; Chas H. Cartweight, New Richmond, 93; W. L. Campbell, Steuben, 92.66; R. C. Cleves, Pola, 95.50; C. J. Chapin, Sheridan, 95.16; Odin Christenson, Nelsonville, 92; G. A. Doldenhauer, Montello, 92.33; H. M. De Golier, Louden, 92.83; Val Droessler, Louisburg, 91.50; W. J. Dehn, Fennimore, 92.83; E. A. Danielson, Grantsburg, 92.66; Rudolph J. Else, Johnson Creek, 92.50; S. E. Enockson, Falun, 93; Albert Erickson, Amery, 95.33; C. G. Fostveldt, Wild Rose, 91.33; Joel Gilbertson, Medford, 92.50; Otto Hankom, Cutler, 93; W. L. Hanson, Brooks, 91.66; T. J. Hanlon, Prescott, 92; Hoie D. Harrison, Clear Lake, 95.50; F. H. Harnes, Waverly, Iowa, 95.83; Frank O. Hearn, Melrose, 90.66; August M. Hein, Hull, Iowa, 95.33; Lewis M. Hansen, Waupaca, 91.83; Maurice Hansen, Iron River, 95.83; John Hinkamp, Waupun, 92; Emil Holverson, Nye, 92.50; L. H. Hoppe, Rio Creek, 94.16; H. E. Jahnke, Florence, 92.50; M. Johnson Co., Kilbourn, 91.66; W. H. Kubat, Marshall, 94.66; W. L. Karker, Brill, 91.16; E. O. Klemm, Manitowoc, 90.50; Fred Kutz, Johnson Creek, 92.50; Tony Kroyer, Basco, 96; Henry Kipp, Cambridge, 91.33; Julius Kretzschmar, New Lisbon 92.33; H. C. Koenig, Plain, 93.33; Pedar Kristensen, Cushing, 94.66; Sylvester M. Koller, Soldier's Grove, 92.50; A. P. Lund, Nashotah, 94.50; A. H. Lindow, Medford, 92.33; B. J. Lindvig, Milltown, 95.33; G. N. Marvin, Black River Falls, 92.16; Fred Maso, Jr., Fennimore, 92.66; M. Mickelson, Westby, 96; Wm. Michaelson, Arkansaw, 93; John Mogensen, Wyocena, 94.16; John E. Mattson, St. Croix Falls, 95; Harry D. Nichols, West DePere, 92.83; George B. Nelson, Luck, 95.33; Lewis Olson, Galesville, 92.66; Arthur A. Olson, Oshkosh, 94.66; Louis Peterson, Bonduel, 91.66; E. J. Peschke, Fair Water, 94.66; Herman R. Ponto, Montello, 92.50; John H. Quale, Planteville, 91.83; John Rassmussen, Mantoma, 93.50; Racine Pure Milk Co., Racine, 94.66; Jos. Rupiper, Waterford, 93; F. S. Root, Rudolph, 94.33; H. F. Rucknagel, Seymour, 93.50; Robt. Ruhland, Lomira, 95.50; A. J. Rivard, Emerald, 95; G. W. Schroeder, White Creek, 92.33; John Schuller, Fond du Lac, 95.16; John Sundin, Lime Ridge, 90.50; Walter Schmidt, Manitowoc, 90.50; Wm. Sieger, Chaseburg, 93.16; C. G. Sipert, Franksville, 95.50; G. M. Stewart, Mazomanie, 91.66; G. P. Sauer, Cedarburg, 95; And. J. Swanberg, Trade Lake, 93.16; Lorenz Tarnutzer, Mazomanie, 91.16; Homer Townsend, Chetek, 93; Homer E. Tait, Turtle Lake, 95.50; Alfred B. Thareson, Grantsburg, 92.33; Wm. F. Thyn, Bloomer, 93.25; John Vigen, Frederic, 92.16; Wm. Warnke, Kingston, 92.16; F. J. Warner, Rosholt, 92.83; J. A. Warnke, Princeton, 94.16; Henry Wolfram, Ft. Atkinson, 94.16; J. C. Ward, Ft. Atkinson, 93.50; Albert E. Will, Ft. Atkinson, 95.66; F. C. Yates, Gleason, 91.33.

Dairy Butter.—Camilla Anderson, Weyauwega, 92.66; Mrs. D. Danielson, Black River Falls, 92.33; Nathan Dickinson & Son, Lake Geneva; Mrs. J. H. Pilgrin, North Milwaukee, 92; Mrs. Chas. Parsons, Antigo, 91; C. C. Thompson, Black River Falls, 91.16; C. J. Ward & Sons, Ft. Atkinson, 90.83.

Cheddar, Flat or Daisy Cheese.—H. W. Austin, Richland Center, 92.33; Emil Boeing, Woodstock, 97.16; Harry Benecke, Denmark, 91.50; P. C. Battes, Bear Creek, 92.66; Ernest Boll, Sheboygan, 90.33; Louis J. Blahnik, Kewaunee, 93.83; Louis Conklin, Seymour, 93.83; Frank D. Donn, Wooco, 92.66; Robert Engel, Fremont, 95.50; C. M. Engelbretson, South Wayne, 91; Emil W. Ehlert, Thorp, 92.66; Wm. J. Frank, Manitowoc, 92.33; Henry J. Gerondale, Merrill, 91.16; Geo. L. Coss, Stitzer, 91.33; Louis Grimm, Manawa, 92.66; Arnold Grimm, Manawa, 92.83; J. C. Gibbs, Muscoda, 96.16; C. E. & F. A. Goodrich, Lone Rock, 92.50; Lee Groom, Muscoda, 90; C. R. Guth, Forestville, 93; Clarence Haigh, Greenwood, 92; Otto Hrabik, Luxemburgh, 93.33; Andy Huggler, Fennimore, 92.50; E. F. Hrudka, Peshtigo, 91.50; Jos. Hensler, Marshfield, 96.33; J. A. Hernke, Hilbert, 92.50; Fred J. Harder, Hillbert, 93.50; Aug. Ipren, Cobb, 91.83; Aug. Janssen, Mineral Point, 92; A. W. Johnson, Stanley, 90.33; H. A. Kuschel, Merrill, 93.50; E. O. Klemm, Manitowoc, 9166; Reuben W. Kalk, Sheboygan Falls, 92.66; H. A. Kalk, Sheboygan Falls, 94; Kielsmeier Co., Manitowoc, 91.16; Ervin Keesow, Appleton, 93.83; Albert Koopman, Jr., Grafton, 92; Fred Kalkofen, Greenwood, 92.33; Herman Kalkofen, Greenwood, 92.83; George W. LaRa, Gratiot, 97; Ralph W. Leeseberg, Suring, 93; Arthur A. Miller, Antigo, 92.83; Fred Moser, DeForest, 90; Math Meyers, Stanley, 97.16; J. C. Martinson, Cadott, 90.83; Ed Maedke, Stanley, 93.66; Wm. F. Naulin, Loual, 92.66; Fred N. Nussbaumer, Waldo, 92.66; D. E. Norleen, Abbotsford, 91.50; Abe Nelson, Mineral Point, 95.66; A. C. Nelson, Boardman, 96; Anton E. Nysse, Neenah, 92.83; H. J. Olin, South Kaukauna, 91.83; Arthur B. Perkins, Boyd, 92.66; E. W. Pingel, Wittenberg, 92.83; A. F. Peterson, Appleton, 93.16; Emil H. Peters, Boyd, 94.16; Wm. Right, Richland Center, 96.16; L. L. Rudersdorf, Plattsville, 90.83; N. L. Ropp, Stevens Point, 93.33; August Romang, Athens, 93.16; L. F. Roesler, Hortonville, 95.16; William Steiger, Withee, 92.83; G. H. Scannell, Eden, 92.50; Henry Schneider, Edgar, 93.16; Carl H. Schneider, Heller, 97.16; Wm. E. Schradter, Holcombe, 93; A. J. Schulte, Marshfield, 93.50; H. C. Schneider, Kewaunee, 94.16; O. R. Schwantes, Clintonville, 93.50; R. M. Schmitz, Unity, 96.66; Anton Schiller, New Holstein, 93.33; G. J. Steinhart, Algoma, 92.50; Norbert P. Strobel, Lomira, 93.66; Leonard A. Tracy, Viroqua, 93; Tom Troxel, Avoca, 93.83; C. A. Voigt, Chili, 93.33; W. S. Walsh, Fennimore, 93; Otto Weyer, Manitowoc, 94.16; A. C. Worth, Appleton, 96.83; Ed C. Williams, Hudson, 92.33; Arnold Zastrow, Stetsonville, 94.

Young America, Long Horn or Print Cheese.—A. J. Blabnik, Kewaunee, 94.16; Ernest Boll, Sheboygan, 92.33; Mrs. O. Dix, Auburndale, 93.66; F. A. Fenner, Rice Lake, 94.33; C. E. & F. A. Goodrich, Lone Rock, 92; J. A. Hernke, Hilbert, 92.50; Fred J. Harder, Hilbert, 93.50; Raymond Johannig, Plymouth, 93; H. A. Kalk, Sheboygan Falls, 94.50; David D. Kurth, Brandon, 92.16; Reuben Kalk, Sheboygan Falls, 94.50; Albert Koopman, Jr., Grafton, 92.16; Ervin Keesow, Appleton, 95; Ed Maedke, Stanley, 91.83; Math Meyer, Stanley, 95.50; Fred Nussbaumer, Waldo, 93.33; H. W. Quad, Kewauskum, 93.50; N. L. Ropp, Stevens Point, 94.66; Peter A. Schmitz, Lone Rock, 92; Rud Schoenrock, Marion, 92.50; A. J. Schulte, Marshfield, 94; Elmer H. Ter Maat, Plymouth, 92.33; Oscar A. Vorehting, Sheboygan, 94; Otto Weyer, Manitowoc, 94.83; A. C. Werth, Appleton, 96.33.

Brick Cheese.—Christ Abbuehl, Clear Lake, 92.50; Abraham Blatter, Hartford, 93; Henry Bolliger, Monroe, 92; Christ Bigler, Clayton, 91.75; Badger Cheese Co., Monroe, 94.75; E. W. Buntwick, Cambria, 94; Alfonso Carolfi, Monroe, 96.25; G. F. C. Dobbratz, Randolph, 93; Frank Ehinger, Ridgeway, 94.50; August Eppler, Burnett Junction, 92; Jacob Hiniger, Beloit, 92.25; Fred G. Kuenzi, Beaver Dam, 92.50; Robt. Kohli, Knowles, 92.25; Jack Leaberhair, Argyle, 92.50; Fred Nass, Ixonia, 94.50; Otto Ohrmudt, Randolph, 92; Aug. H. Raether, Watertown, 92.50; Otto Ray, Argyle, 93; Geo. Schram, Beaver Dam, 96.75; Anton Sutter, Cambria, 96.50; Carl Stocker, Juda, 91.75; Oswald Schneider, Appleton, 94.75; Fred Schuler, Morrisonville, 92.75; Ernest Wenger, Blanchardville, 93; Hans Widmer, Rosendale, 92.25; Harry Weaver, Beaver Dam, 94; John Zahler, Mt. Horeb, 93.50; Arnold Zumbach, Monroe, 94.25.

Drum Swiss Cheese.—Jacob Aeschliman, Woodford, 91.75; Ast Bros. Cheese Co., Dodgeville, 93; Hans Amport, Woodford, 92; Fred Baertchi, Albany, 91.75; Frank Brand, Monroe, 91.12; John Blickenstorfer, South Wayne, 90.25; Anton Banz, Winslow, Ill., 97.75; Emil Baumgartner, Monroe, 94.25; Badger Cheese Co., Monroe, 92.50; Robt. Emmenegger, Gratiot, 93.75; Emil Forster, Barneveld, 93.25; Ernest Fenz, Woodford, 92.25; Joe Guegler, Ridgeway, 94.50; Fred Glauser, South Wayne, 98.25; Alex Hoerburger, Gratiot, 96; E. E. Hasley, South Wayne, 95; Martin Koller, Ramona, 94.25; Charles Krucker, Darlington, 94; Gottfred Loosli, Browntown, 91; Arnold Lauber, Woodford, 91.25; Joseph Lauber, Woodford, 92; John Muggler, Browntown, 91.75; Joseph Meyer, Brodhead, 93.50; Alois Niederberger, Argyle, 91.50; Albert Oertig, Argyle, 92.75; Aug. Ruesch, Gratiot, 97.37; Rudolph Schaller, Barneveld, 91; Alex Schaller, Barneveld, 91.75; Herman Schoepfer, Hollandale, 90.25; John Schmitz, Monroe, 95.50; Jacob Tuescher, Darlington, 95.50; Christ Ubert, Monroe, 92; Gottfred Vogel, Monroe, 94; Otto Wirz, Ramona, 95.50; Jacob Walser, Woodford, 92.12; Ed Wittmer, Monticello, 94.

Block Swiss Cheese.—Carl Amport, Blue Mounds, 92.25; John Amport, Mt. Horeb, 94; Adolf Boyser, Barneveld, 94; Badger Cheese Co., Monroe, 94.25; Nick Engelbert, Spring Creek, 92; Nic Freitag, Monticello, 92; Joe Gugler, Ridgeway, 95.37; Jacob Heiniger, Newark, Beloit, 91.37; Adam Hefty, Darlington, 92.50; August Miller, Monroe, 92.62; Math Marty, Darlington, 91.50; Werner Ryser, Barneveld, 93; Fred Rufenacht, Monroe, 93.50; John Stricker, Monticello, 90.25; John Schaefer, Darlington, 93.25; Otto Urban, Riley, 98.25; Frank Waltie, Barneveld, 94.25; Rudolph Waltie, Barneveld, 92.50; Adolf Wysscrod, Verona, 94.75.

Limburger Cheese.—Badger Cheese Co. No. 6, Monroe, 97.25; Badger Cheese Co. No. 127, Monroe, 95.75; Badger Cheese Co. No. 58, 94.50; John Diem, Monroe, 92; Fred Gilgen, New Glarus, 96.25; Ernest Haessig, Monticello, 94.75; Otto Haefli, Monticello, 92; Friedrich Kehrli, Beloit, 91; Johannes Rechsteiner, South Wayne, 91.25; Ernest Regez & Son, Blanchardville, 92; Ernest Regez & Son, Blanchardville, 94; Carl Schiess, Clarno, 91.75; John Weiss, Belleville, 98; Matt Weidmann, Woodford, 90.50.

Miscellaneous Cheese.—Jacob Bierstecker, Little Chute, first; French Cheese Co., Browntown, first; A. H. Kempen, Oconto, second; Ed J. Scray, DePere, third.

Your Most Valuable By-Product

This year of all years you can't afford to waste manure—your crop needs it. Save every bit. By spreading it evenly in a wide sheet and making one ton produce better results than two tons spread by hand; doing the work in one-fourth the time and without back straining labor—you can soon pay for

The Flying Dutchman Wide-Spread Spreader

Striking advantages are built into this spreader which commend it to farmers above all other spreaders.

Double Beater pulverizes manure thoroughly. Second beater running at high speed makes a wide, even spread—covers the field in less time—makes the load go farther and produces better crop results.

Separate Direct Axle Drive for beater and apron eliminates overstrain on beater mechanism—prevents breakage.

Low down—only 42 inches from ground to top of box at rear—makes it easy to load.

Wide range of adjustment permits spreading thin coat or heavy layer. Reserve speed moves apron at rate of 40 loads to the acre, for clearing out the bed. One lever controls operation.

Exceptionally light draft under heavy load—easily carries 4500 pounds.

Built almost entirely of steel—nothing to warp, sag or rot.

The Flying Dutchman pays for itself in one season's work. Ask your Moline Dealer about it, or write us for Illustrated Literature.

For Over 50 Years The Mark of Good Implements

High Quality Butter at Wisconsin Fair.

To the Editor:—The quality of the butter entered at the Wisconsin State Fair was of unusual high quality. It was open for inspection in the large refrigerator in the Dairy Building. It is doubtful if an exhibit of Wisconsin butter of such uniform high quality and workmanship was ever entered at a contest at this season of the year.

The average score placed upon the butter from ninety-nine factories was 93.12, with twelve tubs that received a score of 95 to 96. Another lot of twenty-six tubs received 93 to 94.88, with only five entries scoring below 90. When butter of this high quality is entered from various sections of the state it reflects credit upon an industry which holds a prominent place among all of our agricultural activities. It represents coöperation of the producers, factory operators and the makers.

Good butter is the result of handling at the various creameries nothing but milk and cream produced under sanitary conditions and manufactured in well-equipped creameries and in charge of trained men. The making of butter, the kind that always satisfies the consumer, is not an accident, but the result of care and skill from the cow to the consumer. Wisconsin factory men are beginning to realize that these long prices must be backed by quality and that the tainted article has no place on the table under the name of Wisconsin creamery butter.

A few tubs were of rather poor quality and lowered the average score. These lots of butter were made in factories receiving cream that was slightly tainted. One tub was made from fairly good quality of raw material, but the quality of butter was injured by the maker adding lime to the cream before it was churned. While the cream was being pasteurized it was treated with the so-called purification method. All of this had a detrimental effect on the flavor and aroma of the butter.

The time will come when a law will be enacted prohibiting the renovating of cream unless the product is so labeled. This must be done to protect the manufacturers of butter who use the untainted product.

The judges of butter were C. E. Lee, assistant commissioner; Professor Benkendorf, University of Wisconsin Dairy School, and N. W. Hepburn, University of Illinois. G. L. Weigle.

Wisconsin Dairy and Food Com.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word per insertion. See page 26.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Motorcycle Facing.

I have a four-horse-power belt-driven motorcycle. The leather facing on the engine pulley burns off. Please tell me of some facing that will not burn off.

Answer.—Try a raybestos facing. Any garage should be able to supply you with it. Raybestos is made of asbestos, containing a small amount of rubber and interwoven with small copper wires. It resembles heavy canvas. It is much used for brake and clutch linings.

A Spark Knock.

I have a Model T Ford car that has run about 5,000 miles. When I advance the spark to the fifth notch, the engine runs all right; but when I advance the spark more than this, it makes a clicking noise. This is noticed most when running from fifteen to twenty miles per hour. When running from twenty to twenty-five miles per hour, I do not notice the clicking so much; and sometimes it disappears entirely. This clicking noise is somewhat annoying, and any information you can give me as to how to stop it will be appreciated.

Answer.—The clicking noise is probably a spark knock. It can be avoided by not advancing the spark too far. Using a heavy lubricating oil should lessen the trouble. Your pistons probably fit the cylinders too loosely; slightly larger pistons should eliminate the trouble.

Starter Trouble.

I have a Briscoe car and the lighting system is not working. It will start the motor. It will light the car O. K. when the car is idle, but the automatic indicating switch fails to release when the battery is not charging. This is what caused the trouble. The battery ran down, and upon the advice of the garage man, I ran the car with the switch giving a clicking sound. Soon I found that the switch was burnt out. I had the battery recharged and a new switch put on, but still it will not work. When the switch burnt out, did the wiring on the motor burn out too?

Answer.—Your motor is probably all right. Examine the wires and see that they are in good condition. Possibly you have a ground or short circuit somewhere. If you are not absolutely sure of the wiring connections, write to the manufacturers for a wiring diagram. If possible, have a competent electrician to examine the starting system. It is difficult to say where the trouble is without actually testing the various parts of the system.

Oiling Motorcycle.

I have a single-cylinder Merkle motorcycle, four and one-half horse power. It will run on the stand and answer the throttle instantly; but when running on the ground, does not pick up well. It seems to want to stop; works hard, and finally stops. Let it rest again for a short time, and it will run again for a while. What is the matter? I have read that the best way to give oil to an old engine cylinder is to mix the oil with the gasoline. If so, in what proportion should they be mixed?

Answer.—A carburetor adjusted to run well idle does not always run well under load. Your carburetor adjustment is probably the cause of at least a part of your trouble.

We would not recommend feeding the oil with the gasoline except in two-cycle motors. For old engines use an oil with a very heavy body. Too light an oil will work up past the rings of an old motor and cause ignition trouble. Some of your trouble is on this account. When you while the oil drains off the gs; then the motor will run

Building a Cave.

I am to build a cave for some friends; and, not having much experience on such work, I am going to ask a few questions. Would tile be better than solid concrete? Which would be the more frost proof? Which would be the least expensive? Which the more durable? How are the roofs built on either; and are they safe from collapse?

Answer.—The hollow tile walls would be more frost proof than the concrete. The concrete is probably the more durable, but either should last a lifetime. Which would be the ensive would depend upon local conditions and could only be told by figuring the cost of materials, forms and labor. Either construction if properly done should be entirely safe from collapse.

No forms are needed for building the walls with hollow tile. A top view of the forms for concrete walls is shown in Figure 2. All the small shaded sections like E are the ends of 2x4's set vertical, the lower end being sharpened and driven into the

FIGUURE 1.

ground. The 2x4's are stayed at the top by the crosspieces, F G, which may be made of almost any size lumber. Boards one inch thick placed inside the 2x4's hold the cement. Each pair of outside and inside 2x4's are wired together about every two feet so as to keep the concrete from bulging them out.

For putting on the roof either of concrete or tile, a wooden form shown in

FIGURE 2.

Figure 1 must be used. C and D are usually made of 2x6's and A and B of 4x4's. These forms are placed about two feet apart and boards placed over them to support the cement or tile. A special shaped tile may be obtained for forming the arch. For concrete, the rise of the arch should be at least one-eighth of the width. The forms should not be removed for four days after the cement is poured. A good mixture for the concrete is one part cement, four parts fine, sharp sand and four parts coarse gravel or broken rock not over two inches square. The roof should be six inches thick and the walls not less than eight inches.

Setting Slide Valve.

Would you pleace advise me how to set the steam valve gear and slide of an "Advance" steam engine?

Answer.—The following instructions are taken from the "Advance" instruction book:

Proceed in the following manner to locate the two dead center positions of the crank pin. Make a small mark with a sharp prick punch on the front of the engine frame between the crank disk and engine crosshead, and about six inches from the disk. With one point of a pair of compasses in this mark, and the crank pin about three inches above the center line, make a mark on the edge of the disk with the free end of the compasses. Also scratch a line on the guides at the end of the crosshead. Now turn the crank pin below the center line until the crosshead returns to the line on the guides and make a mark on the disk with the compasses as before. The engine must be turned in the direction it is to run, so as to take up any lost motion. Make a point on the disk half way between the two compass marks. With one point of the compass in the mark on the frame, turn the crank pin toward the center line until the free end of the compass will just enter the half-way mark on the disk. The crank pin will then be on dead center. For locating the opposite center, repeat the operation.

Having centered the engine, it is customary to place the crank pin on the center nearest the cylinder, place the reverse lever in the center notch, and turn the reverse gear on the crankshaft until the crank pin of the reverse gear shaft is on its center nearest the crankshaft or away from the cylinder. Estimate this position by the eye. Tighten the screws on the reverse gear on the crankshaft slightly and temporary. Then as a preliminary in the operation, set the screws that are in the top and bottom of the stop plate so that they will project inward about half an inch from the lugs on the stop plate. Then move the reverse lever down until the reverse box strikes the screw in the bottom of the stop plate, and fasten the reverse lever in that position. Now, with the engine still on the position nearest the cylinder, set the valve stem with the edge of the valve even with the edge of the port in the valve seat, or so that the valve just covers the port; then tighten the screws slightly that hold the valve to the valve stem. Then, with the engine still on the same center, move the reverse lever in the opposite direction until the reverse box strikes the screws in the top of the stop plate, and fasten the lever in that position. If the edge of the valve does not return to the edge of the port, or if it laps by the edge of the port, make a mark on the valve seat even with the edge of the valve. Make another mark half way between the edge of the port and the first mark; loosen the screws in the reverse gear on the crank shaft, and turn the gear until the edge of the valve stops at the mark just made. Then tighten securely the screws in the reverse gear on the crank shaft. The gear is now supposed to be properly located.

Loosen the valve on the stem and set it so that there will be about one-thirty-second of an inch opening between the edge of the valve and the port, this opening being called "lead." Fasten the value securely on the stem, the engine still being on the center nearest the cylinder. Then place the crank pin on the opposite dead center. The reverse lever being in the top notch, the engine should be turned "over" when centering it. If the lead is now found to be more than one-thirty-second of an inch, turn the set screw into the lug at the top of the stop plate until the proper lead is secured. If the lead is less than one-thirty-second of an inch, turn this set screw out. Then tighten the jamb nut on the set screw.

Now, put the reverse lever in the bottom notch, and turn the crank pin a few inches below the center and return it to the center. This is done in order to remove the slack in the reverse gear. If the lead is found to be more or less than one-thirty-second of an inch, move the set screw in the bottom of the stop plate in or out as described above. The valve being now properly set, all set screws should be securely tightened. When the steam pressure is one hundred pounds or more, the dogs or catches on the quadrant should be located. Under no circumstances should the set screws in the top or bottom of the stop plate be disturbed for the purpose of taking up lost motion; take up any lost motion by adjusting the dogs.

GOOD MEN WANTED TO LEARN THE AUTO BUSINESS

Any ambitious, capable young man can make a success for himself, and if you will only prepare yourself, you will get work, because positions are open, waiting for competent men to do Auto and Electrical work.

The American Auto College develops your talent for a splendid, big paying trade. Our course has been enlarged with lots of new work—principles of Knight Motors, 8 and 12-cylinder Engines of new models, Tractors, new Starting Systems, Magnetos, Wiring, Coils, Welding, Brazing, Lathe work, Milling and Drill work, Tool making, Overhauling and Repairing, and all the newest, up-to-date Auto equipment.

AUTO College

$900 TO $3,000 SALARY OR BUSINESS PROFITS PER YEAR

Positions Are Open Tinker repair men are let out as fast as good men are found to take their places. Garage men, letters and telegrams come to us asking for good men. Just prepare yourself and your future and success will be started. Think of the good time, and the money you can make.

LIFETIME OPPORTUNITY—It's up to you to be either a common, hard-working laborer or else learn a good business. Thousands of men will go into the Auto business within the next year. Be one of them. We want you to. Get started right away. Learn here where the opportunities are greatest and best, by our system of actual work in our large shops. No books used; we furnish tools. You do the work yourself. Our men learn easily and quickly because practical work is the best.

Big Electric Starter and Tractor course FREE with the regular Auto course. Write for our big FREE Catalog now.

AMERICAN AUTO COLLEGE, 406 Auto Bldg., OMAHA, NEBRASKA

Earn $90 to $300 a Month

THE demand for trained men in the automobile and tractor business far exceeds the supply. Let me train you to earn higher pay as an expert, by real practical machine shop experience. You learn by doing the work yourself under the guidance of master mechanics. Four big buildings, fully equipped with practice motors, complete oxy-acetylene and oxy-hydrogen outfits—all types of starting and lighting equipment, engine mounted, forges, lathes, drill presses.

Rahe Method Insures Success

In a few weeks you are ready to take a steady position paying big money right from the start. Don't work for small wages. Get this training now and your future is assured. Thousands of successful graduates.

$50 Tractor Course FREE. Enroll for my regular automobile course now and get this valuable Tractor instruction without added cost. Trained tractor operators in demand at big wages. The course is worth $50.00. Limited number of scholarships free.

Big Free Book! Write at once for my big 80-page catalog. Full of pictures showing my 4 big buildings and tractor farm equipment.

Junior Show at the State Fair.

Young People's Fair Was a Great Feature of the Wisconsin Exposition at Milwaukee Last Week.

A FEATURE of the Wisconsin State Fair this year was the boys' and girls' individual and club contest work, directed by Thos. L. Bewick. This department was new at the 1916 state fair. Considerable interest was manifested, however, in it last year and it was determined to more completely organize the department for the 1917 fair.

There were thirty-one boys' and girls' clubs represented on the fair grounds, with a total of about 300 club members actually enrolled. Superintendent Bewick is also in charge of boys' and girls' club work throughout the state as special representative of the college of agriculture. He now has enrolled about 9,000 boys and girls in organized clubs. There are about 25,000 doing some sort of agricultural project work under his direction.

The boys' and girls' department of the Wisconsin State Fair might properly be called the Junior Fair. There are entries of all sorts of agricultural products and special contests, both for individuals and clubs, under the following classifications: Corn, potatoes, calves, pigs, poultry, garden, canning, sewing, baking and fruit growing. The club winners in these contests this year are as follows:

Corn—Linn Junior Farmers' Club.
Potatoes—Bayfield Club.
Calf—Portage County Juniors.
Pig Club—La Crosse County Agricultural School, Onalaska.
Poultry—Sun Prairie High School Club.
Garden—Linn Junior Farmers' Club.
Canning—Linn Junior Farmers' Club.
Sewing—Sun Prairie High School Club.
Baking—Sun Prairie High School Club.
Fruit—Sun Prairie High School Club.

The boys and girls had regular agricultural and garden exhibits, arranged somewhat after the order of the booths in the county exhibit building. The prizes were awarded for these booths in the following order:

First—Linn Junior Farmers' Club.
Second—Green Bay West High.
Third—Worth While Club.
Fourth—Bayfield Club.
Fifth—Sun Prairie High School Club.
Sixth—Edgerton High School Club.
Seventh—Pewaukee Club.
Eighth—Milwaukee Club.

One angle of the boys' and girls' work has to do with judging of live stock. On State Day at the fair sixty boys were engaged in the live stock judging contest. It was a spirited contest, and demonstrated the fact that these boys have had good training. The markings awarded to the boys under the several classifications are as follows:

Horses—Robert Gray, Milton, 98; Harold See, Onalaska, 96; Foster Claflin, Mondovi, 94; Carl Praeger, Pewaukee, 94; Harvey Woodward, Wausaw, 94; George Massey, Walworth, 92.

Beef—Robert Morton, Darien, 94; Earl Massey, Walworth, 92; Lovell Blocke, Janesville, 79; Russell Turton, Sun Prairie, 79; Charles Rodle, Onalaska, 77; Robert Gray, Milton, 63.

Sheep—Earl Massey, Walworth, 98; Francis Cunningham, Janesville, 96; Russell Turton, Sun Prairie, 94; Emil Virchow, Sun Prairie, 88; Walter Renk, Sun Prairie, 86; Kitchell Sayre, Edgerton, 86.

Dairy Cattle—George D. Searset, Onalaski, 99.6; N. K. Paul, Janesville, 98; Walter Renk, Sun Prairie, 98; Harvey McCann, Janesville, 96; Lovell Blocke, Janesville, 96; Ed. J. Overton, Beloit, 96; Elmer Dutton, Janesville, 96; F. H. Roepke, Seymour, 96.

Hogs—George S. Searset, Onalaska, 96.8; Ed. J. Overton, Beloit, 96; M. K. Paul, Janesville, 95.2; K. Sayre, Edgerton, 95.2; Francis Cunningham, Janesville, 92; Harvey McCann, Janesville, 91.

As will be noted by the markings, the judging contests were very close. Five were tied for third place in judging dairy cattle and three of these are students of Prof. Allen B. West, of Rock county, who has been doing some excellent agricultural work.

The junior live stock exhibit was exceptionally good, especially in the calf and pig classes. There were forty-nine calves shown. The La Crosse County Agricultural School exhibited fifteen, the Sun Prairie high school eight, Portage County Junior Calf Club six, and the Edgerton high school six; the balance were chiefly individual entries. The Guernsey and Holstein calf classes compared favorably with such classes in the open ring. A Guernsey calf, shown by Delbert Fox, of Waukesha county, was awarded the championship for dairy heifer of any breed. The champion pure-bred bull calf was an Ayreshire exhibited by Emmett Howe, of Sun Prairie.

There were about seventy pigs shown by the junior. The La Crosse County Agricultural School exhibited twenty-seven, Sun Prairie high school fourteen, Lancaster Club six, the Edgerton high school six and the Pewaukee Club five. A Poland China, exhibited by Ralph Dobson, of Lancaster, was grand champion sow of any breed, and a Duroc exhibited by Harold Henke, of Janesville, was grand champion boar, any breed.

A total of 300 birds were exhibited in the junior poultry show, including 150 shown by Sun Prairie high school, seventy by the Oconomowoc Junior Poultry Club, ten by the Pewaukee high school, ten by the West High School of Green Bay, ten by the La Crosse Agricultural School and fifty miscellaneous.

There is considerable talk of petitioning the department of agriculture for a special building to house the junior exhibits.

SUN PRAIRIE HIGH SCHOOL AGRICULTURAL EXHIBIT.

PRIZE-WINNING BOOTH OF LINN JUNIOR FARMERS' CLUB, WALWORTH COUNTY FAIR.

Keeping the Stallion Vigorous.

Plenty of exercise, good ventilation, light, and proper care throughout the whole year are necessary for the vigor and health of a stallion. Exercise tones the muscles, stimulates the circulation and digestion, gives strength and vitality to every tissue and every organ of the body. Good, honest work is the best kind of exercise for stallions. Some owners find it practical to work them in pairs while others find it more satisfactory when a stallion is worked with a gelding or pregnant mare.

Utmost care is necessary in working stallions. They are big, strong and willing, but are usually soft and fat from lack of exercise. Consequently they must not be given hard work at first. One should begin with light work—only a few hours each day—gradually increasing the work until the stallion is able to do daily a full day's work. A half day's work during the breeding season is beneficial. Aside from the economy resulting through such work the stallion will become stronger, more vigorous, more tractable, easier to control, and more agreeable to handle, as well as a better breeder. Of course, the owner must use his judgment about special cases.

The proper amount of exercise given will make the question of feeding the stallion less troublesome. How to feed is more important than what to feed. The stallion should be fed three times a day regularly and at the same time each day. Plenty of pure, clean, fresh water should be provided. The problem of proper ration will depend largely on the feeds available, upon those that are home grown, as well as upon the consideration of the amount invested in the stallion. A good, wholesome ration should be selected and enough should be fed to keep the stallion in fairly good flesh, but not too fat. During the breeding season one should aim to keep him gaining a little each day.

The place where the stallion is kept should be flooded with sunlight, and properly ventilated. Sunlight and fresh air are the best and cheapest disinfectants we have, but avoid drafts. Dr. W. C. McCampbell.

Progress of Wisconsin Schools.

Educational Exhibit at State Fair Reflects Good Work Done in the Rural Schools Throughout the State.

THOUGH there were fewer schools entered in the educational exhibit this year, each booth showed more quality and all-around completeness than has ever before been the case. Excellent specimens of penmanship, designing, map making, sewing, cooking, rope splicing and knot tying, and a hundred odd things children are learning in our schools today were on exhibition.

Rural, grade and high school exhibits and two exhibits from county training schools for teachers more than filled the space allotted to the educational showing. Everything from the kindergarten, with color work and paper mounting, to the county training schools, featuring manual training, sewing and construction work, was of the highest class. G. W. Davis, superintendent of the exhibit, pronounced every one superior to previous entries.

There were five entries in the rural school, Miss Dora Thomas, of Dodgeville, carrying away the prize because of the better workmanship and a more attractively displayed exhibit. Two city high schools exhibited, Manitowoc and West Allis, and both showed some

MISS ELEANORE KESSLER, BARABOO, WIS.
Had highest average in spelling, arithmetic and penmanship contest.

excellent work in every department, West Allis especially so in the manual training work. The two cities did not compete against each other, as they were entered in different classes. Two county training schools were entered for honors in the training school class, Columbia county taking first prize over Sauk county by a narrow margin.

The city school exhibit of cooking, baking and dried and preserved fruits showed up especially well. Basket work and construction work in general was excellent.

An exhibit which attracted much attention was entered in a special class for the best original work by young Inar Ebbe, of Marshfield. This consisted of a miniature reproduction in wood of a large type locomotive and also an excellent reproduction in wood of a seven-passenger touring car. The drawings for the locomotive were made by this thirteen-year-old boy last January when an engine happened to become stalled in front of his father's farm. Young Ebbe reproduced the engine on paper and immediately set to work to build a likeness in wood. The details were carried out so perfectly that passers-by gave it fully as much attention as any of the exhibits in the building. Being the work of a boy it is all the more remarkable and the prize awarded for the exhibit was fully earned by Inar.

The annual contest in spelling, arithmetic and writing conducted in connection with the educational work was won by Eleanore Kessler, of Baraboo, against a field of thirty-four county champions. For this contest only grade children from one-department rural schools and two-department graded schools in the state are eligible.

Preparations are made by the teachers of these schools during the school year and eliminations are made either in the school contest or in the contest conducted at the county fairs. One pupil from each county is in this way chosen to represent his or her section at the annual state contest. Though forty qualified, only thirty-four counties sent representatives to uphold the county's honor this year. The work is divided into three sections, spelling, arithmetic and writing. The pupil receiving the highest percentage in each of the three is awarded the gold medal. In the spelling contest Florence Ketchum, of Grand Marsh, was first with a grade of ninety-six; Luella Walter, of Oshkosh, second, with a grade of ninety-four, and Eleanore Kessler, of Baraboo, third, with a grade of ninety. In the writing contest Luella Walter was first with a grade of ninety-two, Eleanor Kessler, second, with a grade of ninety, and Irene Schoenborn, of Milwaukee, third with a grade of eighty-five. In arithmetic Eleanore Kessler won first, Luella Walter second and Florence Ketchum third. The averages showed thirteen-year-old Eleanore the best and she was declared the winner of the medal.

The pupils entering the final contest at the state fair are the guests of the fair board during their stay and they receive transportation to Milwaukee and back to their home town in addition. In ages the contestants ranged from ten to sixteen years. The general average for all the pupils was very satisfactory.

The secretary of agriculture has announced the apportionment of $14,500,000 of federal funds to be used in the fiscal year ending June 30, 1919 by the several states for the construction and maintenance of rural post roads. Wisconsin is allotted $382,707.20. This is the third apportionment under the act, $4,850,000 having been appropriated for the fiscal year ending June 30, 1917, and $9,700,000 for the fiscal year ending June 30, 1918.

Wisconsin Harvest Well Along.

Hay and Grain Crops Made Abundant Yields in Most Sections—Oats Did Especially Well—Live Stock Show Thrifty Condition.

WISCONSIN.

Crawford County.—Weather has been cool for the last week with a frost on the 10th, but did very little damage. Early planting of corn is about out of danger of frost, but late planting needs good weather until October 1st. Threshing is nearly all finished. Oats yield from 50 to 70 bushels per acre. Winter wheat about 25 bushels per acre. Spring wheat from 18 to 20 bushels. Barley 40 to 50 bushels. Rye, 15 to 20 bushels. Hay on old meadow averages about a ton and a half per acre. New seeding, two to two and a half tons. Fruit is not as good as expected and the season for garden truck is about over in this locality. Cattle feeding is decreasing. Dairymen are prospering. The pasture has been good.—George Ashbacher.

Grant County.—Hay was fine this year. It yielded better than last year. Small grains were exceptionally good. Oats was a big turnout. Wheat and barley also were good, considerably better than we have had for several years. Corn is looking good, only it is away late and would need an awfully good fall ot make anything. Gardens have been good and most fruits plentiful. There is no disease among live stock in this vicinity so far.—Al Vesperman.

Green Lake County.—Oats, rye and wheat are yielding from 10 to 40 per cent more than last year and are of a superior quality. Barley is averaging not as well as last year. The hay crop has averaged about 1½ tons per acre and has mostly been put up in good condition. The acreage is about normal with last year. Corn, late potatoes and some garden truck have been badly damaged by frost. Feeding operations are about normal, but somewhat later than usual on account of the scarcity of feed. There has been very little mill feed fed to dairy cattle.—G. B. W.

Kewaunee County.—A small percentage of the grain is still in the shock and threshing has begun. Barley is running below the average. Wheat, oats and rye are turning out fine. Corn is late, but is developing nicely and if frost holds off, will be a good crop. Recent rains have freshened pastures, gardens, potatoes and the root crops. Dairy cows are looking well, in fact all stock looks healthy. The plowing and working of ground for fall grains has begun. Soil is in excellent condition.—Fred Lutz.

La Crosse County.—The yield of wild and tame hay has been much larger than usual. Small grain crops are slightly less per acre than usual while the acreage was greater than last year. Much of the corn crop is unmatured and frost on the night of the 9th inst. did considerable damage to corn and late garden crops. Much damage has been done by blackbirds to fields of corn near rivers and marshes.—S. J. Dawson.

Marinette County.—Another year's good crops are again nearly harvested. The hay crop will average up well with former years both as to quality and quantity, the season being all of two weeks later than usual, which did not permit an early enough cutting of the first crop to insure a good start for the second and the weather also not being very favorable the second cutting will not come up to an average crop. All small grain is good. Oats are lightly colored on account of rain in the shock. Threshing has begun. Potatoes look good, still nice and green, no blight appearing. Considering the cold weather, corn has made a fair growth, but is very green and most of it will not mature. Pastures are still good and live stock is doing nicely. Very little feed at the present prices is being bought by dairymen just now. The second crop of clover is being pastured to a considerable extent instead.—H. B. Pederson.

St. Croix County.—The hay crop was fairly good, but not equal to the 1916 crop. The yield will probably average one and one-half tons per acre. The oat crop was the best in many years, possibly 45 bushels per acre, and the quality is exceptionally good. The corn crop does not promise well. The weather has been chilly and the corn is two or more weeks late. The stand is good, but the stalks somewhat shorter than usual. However, two or three weeks of fine weather without frost will insure an average crop. Gardens have never been better, but the fruit crop is not large. Feeding operations will not amount to much owing to the high price of feed. People do not think it will pay to fatten cattle and hogs on $1.50 corn. There are fewer hogs than last season and shoats are much lighter than usual at this time of the year.—Stephen Everson.

Sauk County.—The hay crop in this vicinity was by far the largest ever harvested in recent years, insuring plenty of cheap roughage for next winter's use. Heavy frost the night of September 9th killed corn, potatoes and all vegetables. Practically all corn was still in the milk stage and silo filling will now have to begin. Potatoes showed every promise of the heaviest yield in years, the frost damaging crop prospects at least one-third. More farmers than usual stacked their grain this year and little threshing so far around here on which to base estimates of small grain yields.—Richard F. Klemm.

MINNESOTA.

Goodhue County.—The hay crop has been harvested and is of fair quality and about the usual quantity. There is a little second hay crop left to be put up. The wheat crop is good, both quantity and quality, but fewer acres than in normal years, owing to the failure of last year. Early potatoes are good but few. Late potatoes suffered from dry spell and are small, will yield from 50 to 125 bushels per acre. Garden truck is good, but far behind time owing to cool weather. The yield will depend on frost. Oats are good, 20 per cent better than last year. Barley about ten per cent better. Stock and hogs are few and thin owing to lack of pasture and corn. There is a good stand of corn and if the frost does not touch it, the yield should be large. It will take four to five weeks more to mature it, as it is just in the milk or roasting ear stage. The dairymen are facing a bad proposition. Feed is too high to buy and sell the product at a proper price. Several milk dealers are planning to sell their cows and quit before winter.—Otto W. Kobshorn.

Wisconsin Fair Is Improved

(Continued from page 11.)

years or over (2 shown), 1st Lamb on Keota Idea, 2d Hurtley on Honorable Baccarat; 2 years and under 3 (3 shown), 1st and 3d Harvest Farms on D'Artignan and Captain, 2d Bernd on Canton; 1 year and under 2 (3 shown), 1st Lamb on Gildroy, 2d Babcock on Iritus, 3d Harvest Farms on Vidette.

Mare 3 years and under 4 (2 shown), 1st and 2d Harvest Farms on Grace and Winifred; 2 years and under 3 (4 shown), 1st and 3d Harvest Farms on Jeanette and Petite, 2d Houser on Peerless; 1 year and under 2 (4 shown), 1st, 3d and 4th Harvest Farms on Nanette, Eleanor and Eunice, 2d Lamb on Leverette 2d.

Percheron Special.—Stallion under 3 years, bred and owned by exhibitor (2 shown), 1st Harvest Farms on D'Artignan, 2d Lamb on Gildroy; champion stallion, bred and owned by exhibitor, Harvest Farms n D'Artignan; mare 3 year or over, bred by exhibitor (2 shown), 1st and 2d Havest Farms on Grace and Winifred; mare under 3 years, bred and owned by exhibitor (4 shown), 1st Hurdcroft Farm on Sara Belle, 2d Harvest Farms on Jeanette, 3d Houser on Peerless; champion mare, bred and owned by exhibitor, Hurdcroft on Sara Belle; best five stallions, Harvest Farms; best three mares (2 shown), 1st Hurdcroft Farm, 2d Harvest Farms.

Clydesdales.—Speaking of Clydesdales, one always strikes a good show at Wisconsin, and this year was no exception. Three of the state's best breeders brought representative samples of their studs, and made the show at West Allis, one of the best exhibitions of the breed seen on the circuit this fall. George Hutton, of Madison, passed upon the classes in his usual able manner to the satisfaction of all, and expressed himself as well pleased with the show, and stated that it was better than last year's show which is saying a good deal. The show was really high class, and was marked by the absence of poorly fitted animals and poor quality was not present. The champion stallion was found in the three-year-old class, when Badger King, shown by W. L. Houser was led out. Badger King is certainly a promising stallion. He has lots of substance, is a good mover, and is built right near to the ground. Sired by King Norman and out of Lady de Bathe, he possesses the right blood lines to make him good. The champion mare came from the McLay stables, Bucklyvie Lady, the aged mare, defeating the rest for this honor. Sweet Marie, shown by Jones, made a good showing, and won her class, but had hardly the substance of the senior mare. The three Wisconsin exhibitors have made wonderful advancement in bringing out a real good bunch of Clydesdales.

Exhibitors—W. L. Houser, Mondovi, Wis.; E. A. Jones, Bangor, Wis.; McLay Bros., Janesville, Wis. Judge, George Hutton, Madison, Wis.

Stallion 4 years or over (2 shown), 1st McLay Bros. on King's Buckler, 2d Jones on W. J. Bryan; 3 years and under 4 (2 shown), 1st Houser on Badger King, 2d McLay Bros. on King's Baron; 2 years and under 3 (3 shown), 1st Jones on Baron's Trooper, 2d and 3d McLay Bros. on El Ray and King's Signet; yearling (4 shown), 1st and 2d McLay Bros. on King's Joy and King's Messenger, 3d Jones on Lloyd George, 4th Houser on Parallel; foal (3 shown), 1st and 3d Houser on Peerless Fortune and Perfect Fortune, 2d McLay Bros.

Brood mare and foal (8 shown), 1st and 5th McLay Bros. on Lady Edgar and Melba, 2d Jones on Lady May, 3d and 4th Houser on Laura and Fannie; mare 4 year or over (5 shown), 1st and 5th McLay Bros. on Bucklyvie Lady and Florentia, 2d Jones on Lady May, 3d and 4th Houser on Laura and Fannie; 3 year and under 4 (4 shown), 1st Jones on Sweet Marie, 2d and 3d McLay Bros. on King's Baroness and Viola, 4th Houser on Black Flossie; 2 years old (3 shown), 1st and 2d McLay Bros. on Jessamine and Sweet Briar, 3d Jones on Silver Bell; yearling (2 shown), 1st Houser on Molly Darling, 2d McLay Bros. on King's Delight; foal, (5 shown), 1st and 3d Houser on Parewinkle and Poinsetta, 2d McLay Bros., 4th Jones on Diamond Lassie.

Get of sire (3 shown), 1st Jones, on get of Young Criterion, 2d McLay Bros. on get of King Norman, 3d Houser on get of Prince Fortune; produce of dam (3 shown), 1st Jones on produce of Maud Trooper, 2d McLay Bros. on produce of Mabel Marshal, 3d Houser on produce of Perfection; champion stallion, Houser on Badger King; champion mare, McLay Bros. on Bucklyvie Lady.

Futurity.—Colt foaled in 1916 (4 shown), 1st and 2d McLay Bros. on King's Joy and King's Messenger, 3d Jones on Lloyd George, 4th Houser on Parallel; filly foaled in 1916 (2 shown), 1st Houser on Molly Darling, 2d McLay Bros. on King's Delight.

Clydesdale Specials.—Stallion 3 years or over (2 shown), 1st Houser on Badger King; stallion under 3 years (1 shown), McLay Bros. on King's Joy; mare 3 years or over (3 shown), 1st McLay Bros. on Bucklyvie Lady; mare under 3 years (3 shown), 1st McLay Bros. on Jessamine.

Shires.—Two stallions owned by Robert Hardy, Waukesha, Wis., constituted the entire showing of English cart horses at West Allis. West Mill Conquering Duke won the blue against Scipio, and was given the purple for champion stallion.

Belgians.—Frank P. Shekleton & Sons, Lawler, Iowa, showed the three-year-old stallion, Reavedore, which was the only Belgian horse shown at Wisconsin.

THE SWINE SHOW.

Poland Chinas.—The Poland China show this year was hardly as good, either in quality or numbers, as heretofore, though in nearly every class were individuals of special merit. The show was the largest of the swine department and a good-sized crowd watched the placings. Both of the champion prizes were taken by J. D. McDonald on his aged entries. L. P. Martiny and Thos. Holmes captured the junior championships on sow and boar respectively, the Martiny entry being the senior pig winner, while the favored Holmes boar was the junior pig entry. Henry Dorr, of Remsen, Iowa, tied the ribbons and gave very general satisfaction, though the ringside differed sharply with him in the placing of the first prize in the junior yearling boar class, the Dobson & Eastman entry being a favorite. The E. W. Hendricks entry in the aged boar class was also very popular with the onlookers. However, the placing, as a whole, was very satisfactory and there were no sore spots at all. The show of the big blacks demonstrated that they have won a permanent place in the hearts of the Badger state farmers.

Exhibitors.—Ed Hendricks, Hazel Green, Wis.; J. F. Diley, Rush Lake, Wis.; Dobson & Eastman, Lancaster, Wis.; Thos. Holmes, Lancaster, Wis.; W. H. Esterly, Whitewater, Wis.; J. D. McDonald, North Bend, Wis.; L. P. Martiny, Chippewa Falls, Wis.; L. E. Pease, Wales, Wis.; N. Kintz & Son, Berlin, Wis.; W. G. Barthold, Burlington, Wis. Judge, Henry Dorr, Remsen, Iowa.

Aged boar (3 shown), 1st McDonald, 2d Hendricks, 3d Martiny; senior yearling (2 shown), 1st McDonald, 2d Pease; junior yearling (4 shown), 1st McDonald, 2d Dobson & Eastman, 3d Kintz, 4th Martiny; senior pig (8 shown), 1st and 2d McDonald, 3d Pease, 4th Dobson & Eastman, 5th Martiny; senior futurity pig, 1st and 2d McDonald, 3d Pease, 4th Dobson & Eastman, 5th Martiny, 6th McDonald; junior pig (23 shown), 1st Holmes, 2d McDonald, 3d Martiny, 4th Diley, 5th Dobson & Eastman, 6th Martiny; junior futurity pig (23 shown), 1st Holmes, 2d McDonald, 3d and 6th Martiny, 4th and 7th Diley, 5th Dobson & Eastman, 8th Holmes.

Aged sow (5 shown), 1st McDonald, 2d and 3d Martiny, 4th McDonald, 5th Kintz; senior yearling (3 shown), 1st McDonald, 2d Martiny, 3d Kintz; junior yearling (5 shown), 1st and 2d McDonald, 3d Martiny, 4th and 5th Kintz; senior pig (11 shown), 1st Martiny, 2d McDonald, 3d Dobson & Eastman, 4th Martiny, 5th McDonald, 6th Kintz; senior futurity pig, 1st and 4th Martiny, 2d and 5th McDonald, 3d Dobson & Eastman, 6th Kintz; junior pig (21 shown), 1st, 4th and 6th McDonald, 2d and 3d Martiny, 5th Diley; junior futurity pig, 1st, 4th and 5th McDonald, 2d, 3d, 6th and 7th Martiny, 8th Dobson & Eastman.

Aged herd, 1st McDonald, 2d Martiny, 3d Kintz; young herd, 1st McDonald, 2d Martiny, 3d Diley, 4th Dobson & Eastman, 5th Kintz; get of sire, 1st McDonald, 2d Martiny, 3d Dobson & Eastman, 4th Holmes, 5th Diley; produce of dam, 1st Martiny, 2d McDonald, 3d Holmes, 4th Kintz, 5th Dobson & Eastman; futurity litter, 1st Martiny, 2d Holmes, 3d McDonald, 4th Diley, 5th Dobson & Eastman, 7th Esterly.

Senior champion boar, McDonald on McChief; junior champion boar, Holmes on M.'s Big Ben; grand champion boar, McDonald on McChief; senior champion sow, McDonald on Miss Price 4th; junior champion sow, Martiny on Golden gate Mable; grand champion sow, McDonald on Miss Price 4th.

Durocs.—The Duroc show at Milwaukee this year was not as large as last year, but the quality was outstanding in most every class. Many of the smaller breeders did not show this year, no doubt, due to the fact that feed was so high. The aged classes were strong and competition was keen throughout. Fisher was winner again this year in the aged class on King Defender, the grand champion of 1916. Parker showed the outstanding boar of the show in King Orion, the recent champion at the Minnesota State Fair and he was also made grand champion of Wisconsin. He is, without a doubt, one of the greatest champions ever seen at the Wisconsin State Fair. Atwater showed a wonderful "under year" boar in Jack Orion. Atwater made the killing in the sow classes, winning all championships. Martiny was the heaviest winner in the pig classes, winning in the open classes and the futurity. The silver trophy given by The Wisconsin Farmer to the breeder winning the most points in the futurity was won by Martiny, having 47 points, Atwater came second with 35 points. In all the show was very successful in every respect and many sales were made at "long" prices.

Exhibitors.—L. F. Atwater, Bangor, Wis.; Riley Martiny & Son, Baraboo, Wis.; John L. Fisher, Janesville, Wis.; E. H. Parker & Son, Janesville, Wis.; W. G. Bartholf & Son, Burlington, Wis.; W. C. Jenkins, Bangor, Wis.

Aged boar (4 shown), 1st Fisher, 2d Bartholf & Son, 3d Martiny & Son, 4th Jenkins; senior yearling (2 shown), 1st Parker, 2d Atwater; junior yearling (3 shown), 1st Parker, 2d Fisher, 3d Jenkins; senior pig (6 shown), 1st Atwater, 2d Fisher, 3d Jenkins, 4th and 5th Bartholf; junior pig (21 shown), 1st, 4th and 5th Martiny, 2d and 3d Parker, 6th Atwater; futurity class, 1st, 4th and 5th Martiny, 2d and 3d Parker, 6th, 7th and 8th Atwater.

Aged sow (6 shown), 1st and 2d Atwater, 3d Jenkins, 4th Martiny, 5th Bartholf; senior yearling (3 shown), 1st Atwater, 2d Jenkins, 3d Bartholf; junior yearling (7 shown), 1st, 4th and 5th Atwater, 2d and 3d Jenkins; junior pig, open class (18 shown), 1st and 4th Martiny, 2d, 3d and 5th Atwater; futurity (18 shown), 1st, 4th and 6th Martiny, 2d, 3d, 5th and 7th Atwater, 8th Bartholf; futurity litter, 1st and 3d Martiny, 2d and 5th Atwater, 4th Parker, 6th and 7th Bartholf, 8th Fisher.

Aged herd, 1st Atwater, 2d Jenkins, 3d Martiny, 4th Bartholf; young herd, 1st Atwater, 2d Martiny, 3d Jenkins, 4th Fisher, 5th Bartholf; young herd bred by exhibitor, 1st Atwater, 2d Martiny, 3d Jenkins, 4th Fisher, 5th Bartholf; get of sire, 1st Atwater, 2d Martiny, 3d Jenkins, 4th Fisher, 5th Parker; produce of sow, 1st Atwater, 2d Martiny, 3d Jenkins, 4th Fisher, 5th Parker.

Senior and grand champion boar, Parker on King Orion; junior champion boar, Atwater on Jack Orion; senior and grand champion sow, Atwater on Proud Helen 2d; junior champion sow, Atwater on Model May 2d.

Chester Whites.—There was a fine showing of Chester Whites and, with the exception of one herd, they were blooming. The competition was keen throughout and most of the classes were well filled. The Chester men had the best aged sow class of any breed on the grounds and are to be congratulated. Butts showed Pay Streak again this year and succeeded in winning grand championship on him. Derenthal showed a very typey gilt with size and quality that was made junior champion. We believe we are safe in saying that the showing of Chesters was the best ever seen at the Wisconsin State Fair and it goes to show that this popular breed continues to gain on the other breeds. No breed has made the advance that the Chester White breed has, in the last few years. Most breeders need a little more size in their herds, for as in all breeds, the cry is for the big ones that have the quality. The Chesters have the quality and when they get a little more size they will certainly have the ideal type.

Exhibitors.—W. C. Schiebe, Burlington, Wis.; Wm. F. Butts, Evansville, Wis.; B. H. Babcock, Evansville, Wis.; A. J. Adams, Litchfield, Mich.; W. H. Barr, Ames, Iowa; H. A. Derenthal, Wykoff, Minn. Judge, W. F. Harris, Morganfield, Ky.

Aged boar (3 shown), 1st Butts, 2d Schiebe, 3d Adams; senior yearling (3 shown), 1st Barr, 2d Derenthal, 3d Adams; junior yearling (4 shown), 1st Derenthal, 2d Barr, 3d Schiebe, 4th Adams; senior pig (6 shown), 1st Barr, 2d Butts, 3d Schiebe, 4th Derenthal, 5th Adams; junior pig (10 shown), 1st Derenthal, 2d and 5th Butts, 3d Barr, 4th and 6th Schiebe.

Aged sow (7 shown), 1st and 2d Barr, 3d and 4th Derenthal, 5th Adams; senior yearling (4 shown), 1st Barr, 2d Derenthal, 3d Adams, 4th Schiebe; junior yearling (6 shown), 1st and 2d Barr, 3d Derenthal, 4th Schiebe, 5th Adams; senior pig (10 shown), 1st and 2d Barr, 3d and 4th Derenthal, 5th Schiebe; junior pig (10 shown), 1st Derenthal, 2d and 3d Schiebe, 4th and 5th Butts, 6th Barr.

Aged herd, 1st Barr, 2d Derenthal, 3d Schiebe, 4th Adams; young herd, 1st Barr, 2d Derenthal, 3d Butts, 4th Schiebe, 5th Adams; get of sire, 1st Barr, 2d Derenthal, 3d Butts, 4th Schiebe, 5th Babcock; produce of sow,

GRAND CHAMPION CHESTER WHITE BOAR, PAY STREAK, OWNED BY WILLIAM F. BUTTS, EVANSVILLE, WIS.

No. 8 Spiral Wide Spreader

Latest in International Harvester Spreaders!

WE have added the New No. 8 Spreader—Spiral Wide Spread, Light Draft—to the **Low Corn King** and **Low Cloverleaf** lines. We are in a position to suit exactly any regular farmer, whatever his previous spreader experience may have been.

Grasp an opportunity to study the features of the No. 8, the spreader for every average farm, the lightest draft spreader made. No. 8 has the famous International spiral wide spread that has thoroughly demonstrated its success as a wide-spreader for all-around use. In addition, the **Low Corn King** and **Low Cloverleaf** lines provide you with your choice of larger capacity spreaders, with the regular disk-wide-spread (well-known wherever spreaders are sold) or with the spiral spread on special order.

The **New No. 8** Spiral Wide Spreader and other **Low Corn King** and **Low Cloverleaf** Spreaders will go onto thousands of farms before the close of the year. They are all light-draft, low-loading, easy-handling, built of steel—and satisfactory. We have an idea one of them would stand a good chance of going onto your farm if you were fully posted. At any rate it will pay you to write us for catalogues. Write the address below.

International Harvester Company of America

CHICAGO U S A

Champion Deering McCormick Milwaukee Osborne

1st Derenthal, 2d Barr, 3d Schiebe, 4th Babcock, 5th Adams.

Senior champion boar, Butts on Pay Streak; junior champion boar, Barr on Longfellow; grand champion boar, Butts on Pay Streak; senior champion sow, Barr on Lenora's Gem; junior champion sow, Derenthal on Callaway Lady 1st; grand champion sow, Barr on Lenora's Gem.

Berkshires.—The Berkshire showing this year was not large, there being three herds competing, but the individual excellence was far in advance of anything seen at Milwaukee in recent years. Whitmore Bros. had an excellent showing of big useful "Berks." They do not raise the "show yard" kind, but are breeding for production rather than the fine points that formerly won in the show ring. Brae Burn Farms and Geo. E. Kelley had excellent herds well fitted and came in for their share of the prizes. Whitmore Bros. showed a wonderful boar for the championship, one of the oustanding boars of the swine show. Brae Burn Farms had a fine showing of sows and won all championships.

Exhibitors—Brae Burn Farm, Lake Forest, Ill.; Whitmore Bro., Lyons, Wis.; Geo. E. Kelley, Mineral Point, Wis.; La Crosse County School, Onalaska, Wis. Judge, Henry Dorr, Remsen, Ia.

Aged boar (2 shown), 1st Whitmore, 2d Kelley; senior yearling (2 shown), 1st Brae Burn Farm, 2d Whitmore; junior yearling (6 shown), 1st and 2d Whitmore, 3d and 5th Kelley, 4th Brae Burn Farm; senior pig (3 shown), 1st Whitmore, 2d and 3d Brae Burn Farms; junior pig (7 shown), 1st, 2d and 5th Whitmore Bros., 3d and 6th Brae Burn Farm, 4th La Crosse County.

Aged sows (5 shown), 1st and 2d Brae Burn Farm, 3d Kelley, 4th and 5th Whitmore Bros.; senior yearling (3 shown), 1st and 2d Brae Burn Farm, 3d Whitmore Bros.; junior yearling (7 shown), 1st and 2d Brae Burn Farm, 3d and 4th Whitmore Bros., 5th Kelley; senior pig (4 shown), 1st and 2d Brae Burn Farm, 3d Whitmore Bros., 4th Kelley; junior pig (9 shown), 1st, 4th and 5th Whitmore Bros., 2d and 3d Brae Burn Farm, 6th Kelley.

Aged herd, 1st Brae Burn Farm, 2d Whitmore Bros., 3d Kelley; young herd, 1st Brae Burn Farm, 2d Whitmore Bros., 3d Kelley; get of sire, 1st Brae Burn Farm, 2d Whitmore Bros., 3d Kelley; produce of sow, 1st Brae Burn Farm, 2d Whitmore Bros., 3d Kelley.

Senior and grand champion boar, Whitmore Bros. on Aldoro Climax; junior champion boar, Whitmore Bros.; senior champion sow, Brae Burn Farm on Brae Burn School Mistress; junior champion sow, Brae Burn Farm on Brae Burn Rival Lass; grand champion sow, Brae Burn Farm on Brae Burn Farm Mistress.

Hampshires.—Exhibitors: A. L. Damon, Richland Center, Wis.; W. W. Vaughn & Son, Burlington, Wis.; La Crosse County School, Onalaska, Wis.

Aged boar (2 shown), 1st Damon, 2d Vaughn; senior yearling (1 shown), Vaughn; junior yearling (1 shown), Damon; senior pig (3 shown), 1st Damon, 2d Vaughn, 3d Kelley; junior pig (3 shown), 1st and 2d Damon, 3d La Crosse Co.

Aged sow, 1st Damon, 2d Vaughn, 3d Damon; senior yearling, 1st Vaughn, 2d and 3d Damon; senior pig, 1st Vaughn, 2d Damon, 3d Kelley; junior pig, 1st, 2d and 3d Damon.

Aged herd, 1st Damon, 2d Vaughn; young herd, 1st Damon, 2d Vaughn, 3d Kelley; produce of sow, 1st Damon, 2d Vaughn, 3d Kelley.

Grand champion boar, Damon on Dellbrook Maloy; grand champion sow, Vaughn on Pearl.

Spotted Polands.—Mr. A. S. Booco, Jeffersonville, Ohio, showed the only herd of Spotted Polands and had entries in every class and incidentally won all prizes.

THE SHEEP SHOW.

The sheep show at the fair this year was pronounced by judges and flockmasters alike, as the strongest show thus far seen at any fair. Both the mutton and the fine wool breeds were represented by higher quality animals and a greater number of entries than usual. J. C. Duncan, of Lewiston, N. Y., judged the mutton breeds and John E. Webb, of South Fort, Ind., the fine wools. The fine wool breeds put up an especially strong show with plenty of quality to make the prizes worth while to the winners.

R. D. Williams, of Xenia, Ohio, was the heavy winner in the American Merinos, while Watson Lovett, of Zanesfield, Ohio, won most of the firsts in the Delaines Merinos. Orth & Mathews, of McGuffy, Ohio, won heavily in the Rambouillet classes with F. S. King Bros., of Laramie, Wyo., competing strongly and successfully for every place in the class. Sheep men from outside of Wisconsin had the best of the argument in the fine wools, but in the mutton classes the Wisconsin breeders were the big winners. Smith Bros., of Union Center, made a strong fight for Wisconsin for the fine wool breeds.

Like the fine wool show the mutton show was also of superior quality with well-filled classes in every division. Judge Duncan stated without any reservations that the Wisconsin show has brought together more quality sheep and a greater number than any show so far held. The Wisconsin classes make it possible for the new sheep men of the state to come in on the prize money and there is no doubt that this is the reason why the entries were heavier than usual. Also, professional show men are in this way prevented from taking all the moneys hung out in the competition. But even in the open classes the Wisconsin men were the heaviest winners.

The Shropshire class was the big show, as usual. Honors went to Arthur Broughton & Son, of Albany, who won every first with the exception of first place on ewe lamb, which went to Clarence Wilson, of Minneapolis. William Renk, of Sun Prairie, was a consistent contender, as was also W. G. Miles, of Evansville, but they could not claim better than third and fourth places.

In the Oxfords, Richards & Richards, of Lodi, won first place on their yearling ram and ram lamb, but were beaten for championship by the aged ram owned by A. J. Mohr, of Bloomer. Championship ewe was owned by Smith Bros., of Union Center.

In the horned Dorsets, C. G. Cherry, of Xenia, Ohio, won grand championship on his yearling ram, but E. Crall & Son, of Evansville, took the honors in the ewe championship, as well as most of the other firsts in this class. Mohr was a runner-up for honors all the way through.

In the Cheviots A. W. Arnold, of Galesville, won championship for ram and ewe and had things his own way pretty much in all classes. Smith Bros. and Crall made active competition for every first, but Arnold's entries were uniformly superior.

In the Southdowns Arnold was again a winner, but V. G. Miles was first in all but the yearling ewe and champion ewe classes. Smith Bros. had to be content with third honors all the way through.

Hampshire honors went to Walnut Hall Farms in the open classes with Renk running a close second all the way through. In the Wisconsin classes Renk won heavily and he was also awarded the special prize offered by the American Hampshire Association for best flock, consisting of one ram, two yearling ewes and two ewe lambs. Miles was a close second to Renk, while Arnold did not do as well here as with the other breeds.

In the Cotswold class Arnold was the strongest winner, with Richards & Richards putting up a good fight for honors. The Cotswold show was a strong one.

The Lincoln prizes were pretty well split up between Wilson, Crall and Arnold.

The sheep exhibitors were: Orth & Mathews, McGuffy, Ohio; A. W. Arnold, Galesville; H. H. Cheney, Xenia, Ohio; A. Broughton & Son, Albany; C. G. Cherry, Xenia, Ohio; E. Crall & Son, Evansville; Dobson & Eastman, Lancaster; J. C. Ellis & Son, Evansville; M. F. Hogan, Waunakee; H. Jewell & Son, Mineral Point; F. S. King & Sons, Laramie; Watson Lovett, Mansfield; V. G. Miles, Evansville; A. J. Mohr, Bloomer; Wm. Renk & Sons, Sun Prairie; L. M. Rooney, Baraboo; S. R. Smith & Sons, Union Center; M. Trener, West Allis; Walnut Hall Farm, Donerail, Ky.; R. D. William, Xenia, Ohio; Clarence Wilson, Minneapolis; Richards & Richards, Lodi.

GRAND CHAMPION POLAND CHINA SOW, MISS PRICE 4TH, OWNED BY J. D. McDONALD, NORTH BEND, WIS.

GRAND CHAMPION DUROC SOW, PROUD HELEN SECOND, OWNED BY L. F. ATWATER, BANGOR, WIS.

CHAMPION RAM AND EWE, WISCONSIN FAIR—OWNED AND EXHIBITED BY ARTHUR BROUGHTON, ALBANY, WISCONSIN.

THE Call to the Colors calls for thrift and common sense by everybody. A 10c. pouch of W-B Cut Chewing goes twice as far as 10c.'s worth of ordinary tobacco. That's the big point: W-B Cut isn't ordinary tobacco, it's *rich* tobacco and a lasting chew.

Made by WEYMAN-BRUTON COMPANY, 1107 Broadway, New York City

FREE FEED

For 100,000 Cattle 200,000 Sheep!

THERE is 9 months' grazing every year on the luxuriant and nutritious native grasses of the Free Open Range surrounding the farm lands in the

Highlands of Louisiana

This pasturage is **Free** to the Northern farmers who have bought and are buying at our low prices on easy terms. On these lands two or three cultivated crops are grown in the same fields each year. We believe this to be the greatest opportunity in America for the stock raiser and general farmer. Mild winters, ample rainfall, productive soil, healthful climate.

Learn about it. Send for the big, **Free** book, **"Where Soil and Climate Are Never Idle,"** full of facts and photographic illustrations. Write for it **Now.**

Homeseeker's excursion first and third Tuesdays of each month.

Hominy Grits.

"You don't eat grits or rice?"

The Vermont woman shook her head.

"Well, what do you put your gravy on?" was the puzzled question of the southern woman.

Food economists must answer this if meats stay at present prices. For average Americans will have to learn to use meats as the Italians do, largely for the flavor. Then the something cheap to put your gravy on is necessary. Grits makes an ideal "something," and, moreover, is a corn product and so a patriotic food.

In the far South hominy grits is a breakfast dish, a dinner dish or a supper dish. It goes well and quickly with bacon or hash for breakfast. Sometimes a southern child will stir into his grits a soft-boiled egg, making a complete meal. Usually it is eaten with gravy or butter.

To cook hominy grits, wash thoroughly, allowing three cups of water to one cup of hominy. Salt water to taste. Cook in single boiler until hominy begins to thicken. Then set on back of stove or on asbestos mat and cook slowly until done. Hominy needs about an hour's cooking. It burns very easily. It is much improved by beating in half a cup of milk just before dishing up. The pan in which hominy has been cooked should be put to soak in cold water at once. If hot hominy is poured into a deep dish it can be turned out when cold, cut in slices and browned or fried like mush. Fried hominy is usually served with duck. It is also an appreciated addition for breakfast.

Baked hominy grits may be used as a dinner dish like a vegetable. Cook one cup of hominy as directed above. While hot stir in one well-beaten egg and enough milk to make a very thick batter, and a little bacon fat. Bake in deep dish until firmly set. Time depends on depth of dish. Serve with spoon from dish. Baked hominy, toast and bacon is a most satisfactory breakfast.

Those who wish to try out hominy are advised not to serve it as a breakfast food with milk and sugar. It is too starchy to be satisfactory; it needs the flavor of the meat or egg. Serving it as a breakfast food will only prejudice the family against a really valuable food product.

Dry Roasting Ears for Winter.

By drying the corn on the cob instead of cutting it off you can have roasting ears for midwinter menus. And it isn't the least bit of trouble, either.

Select the corn in the proper roasting-ear stage, remove the husks, blanch the ears in boiling water from eight to ten minutes, then plunge in cold water and dry. The blanching tends to set the milk in the corn and gives it a better color when dry.

Dry the ears the same as you do the corn when it is cut from the cob, by placing on trays in the sun or in an artificially heated atmosphere. Be careful that the corn does not sour in drying. When thoroughly dry, place in sacks or open containers until conditioned. Then tight containers may be used. For protection against worms, heat the corn in the oven at 14 degrees Fahrenheit for five minutes as soon as taken out of the drying trays.

When the corn is wanted for use it is soaked and then cooked the same as fresh roasting ears.

Dressing Up Old Furniture.

Most varnished furniture in the course of time needs serious attention and most furniture is varnished. Sometimes the varnish can be rubbed down with boiled linseed oil and pumice stone, giving a duller polish, but more often the varnish should be removed. To do this, get a prepared varnish remover. Apply to surface with a brush, let stand about thirty minutes. Apply the second time, let stand fifteen minutes, scrape off with putty or case knife or steel scraper. Another application of remover which can be wiped off with a cloth may be necessary. Then sandpaper surface, using medium to fine paper. Then rub down with oil and pumice stone, wiping off all oil and polish, using a woolen cloth. The piece can then be waxed, using a mixture of turpentine and beeswax or floor wax. It is better to rub down with oil several times before applying wax.

This gives a beautiful finish to old mahogany or walnut and brings out the beauty of the wood. Many an old piece could be made a thing of beauty by this treatment.

So much furniture is finished in golden oak and is unpleasantly shiny. Try refinishing a piece and see how it improves the looks. It may need a coating of stain to even up the color where it has been scraped.

Any furniture finished in a wax or fumed surface should be rubbed down with oil a few times a year to preserve the finish. Be sure and wipe off all superfluous oil. Some of the most beautiful old English furniture never had any other finish but frequent treatments of linseed oil.—[Nellie M. Kilgore.

For Mrs. H. L.

To the Editor:—A lady who signed her letter Mrs. H. L. asked for different ways of cooking cabbage. Sometimes I put it through the food grinder, using the coarse knife, and then fry the same as potatoes. Another way is to grind as for frying, then boil until tender and dress with sweet cream, salt and pepper. Our folks think it is fine prepared in this way.

Mrs. H. L. also wanted to know how to roast an old hen so that the meat will not be dry. She should first boil it until she can pierce the meat with a fork. Then proceed the same as wtih a young fowl. The broth that the chicken was cooked in is fine for dampening the dry bread used to stuff it. When I cook an old rooster I let it boil for half an hour, then pour off the water and replace it with fresh. The meat is as sweet as that of a hen when cooked in this way. Mrs. C. G.

The Pride of Our Hearts.

The little twins at the left are Josephine and Catherine Rybolt, daughters of Mr. and Mrs. Willis Rybolt. They are caught with the evidence that they are "bottle babies" and their plump little bodies and happy faces are proof that it agrees with them. Next comes Cecile Vivian Brady. You can see she is a dear little lady, and her mother, Mrs. Harlan Brady, says she is as healthy and as sweet as a baby can be. The Buster in the center is William Georgie Bernaw, and he confides to us in a letter that his aunts and uncles think he is "some kid." We would just like to tell those same adoring aunts and uncles, though, that William Georgie had to have grandmother help him write his letter. Clifford Carl Hansen comes next. The weather was warm when Clifford had his picture taken—and we are glad of it, for we can tell from the looks of him that there are kiss-inviting dimples in each of his elbows. And to balance things up we have another pair of twins at the right—boys this time. They are Ralph and Raymond Hylik. They believe in having a good time and they couldn't get the mischief out of their eyes long enough to have their pictures taken.

Western Electric
Labor Saving
Farm Light and Power Plant

Electricity on the farm brings more than safe, bright lights; it brings a farm hand that never sulks or grumbles, one that will work 24 hours a day, every day in the year—a hired man that will never quit.

You talk about the scarcity of good farm labor. Consider this: electricity will turn the grindstone, the cream separator and the churn, without a pause for dinner or a stop for sleep. It will clean the house, wash and iron the clothes, wash the dishes, cool the home, and do a score of other irksome household tasks. *It's better than the best hired help you ever had!*

And you can get electricity easily. You can buy a Western Electric plant and use your own gas engine to run it. It's as easy to take care of as the Western Electric farm telephone in your home. Back of it is 40 years of electrical experience, a national distributing organization with stocks in 35 cities, and an agent in your territory.

When you buy a Western Electric Plant you can get Western Electric lamps, motors, pump, cream separator, iron, washing machine, vacuum cleaner—in fact, almost every kind of electrical appliance built especially for this service. Have your whole electrical outfit a Western Electric.

Just mail the coupon for a copy of "Brightening Up the Farm"

Running water upstairs and downstairs with an electrically driven pump.

The constant speed of the electric motor means better separation of the cream.

Canning Cabbage.

I wonder if you can tell me how to can cabbage? My early cabbage is going to rot and, as we like fresh cabbage would like to save it. One can buy canned cabbage at the stores and I don't see why we cannot can it at home.—Mrs. T. E. M.

Cabbage may be canned by exactly the same method as that described on this page for pimento peppers. Doubtless you have canned other kinds of vegetables and should have no trouble at all with your cabbage.

Pimento Peppers.

Will you please give me a recipe for canning pimento peppers?—Mrs. S. G. W.

Pimento peppers are as easily canned as any other vegetable. After the

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word per insertion. See page 26.

peppers are cleaned you proceed in the same way as in canning wax beans or okra. Blanch in live steam for five to ten minutes, then dip quickly in cold water. Pack in hot, sterilized jars or tin cans and add boiling water until the jars are full. Add one level teaspoonful of salt to each quart. Put rubbers and caps of jars in position, but do not seal tight. Seal tin cans completely. Sterilize in water bath for 120 minutes, counting from the time the water begins to boil.

To Take Print Out of Flour Sacks.

Will you please tell me how to take the print out of flour sacks? I have about thirty that I would like to use if I could get them clear and white.—Mrs. M. W. P.

The print may be taken out of flour sacks by boiling them in lye water. Shake the sacks thoroughly to rid them of as much of the flour as still adheres to them, then wash clean in clear, cold water. When all the flour is washed out, put in the boiler in which the lye water is already prepared. Use lye in the proportion of about a teaspoonful to a gallon of water. If the print does not all disappear with the first boiling, repeat the operation.

Helpful Hints.

Putty will mend pails and tubs made of paper pulp. Fill the hole or crack full of putty, cover with a piece of cloth and paint over it.—[Mrs. M. W. P.

Clean the smoked mica in the stove with vinegar.

Two tablespoonfuls of white cracker crumbs will take the place of an egg in pumpkin or squash pie.—[Mrs. M.

Plant some parsley in a flower pot and set it in a sunny window. It will grow nicely and you will have parsley throughout the entire winter.

Discoloration on enamelware will disappear if scoured with vinegar.

To bake potatoes in record time, pour boiling water over them before placing in the oven. This not only saves time in cooking but improves the flavor of the potato.

Recipes.

Baked Omelet.—Three eggs, three tablespoonfuls bacon fat, one-half cupful crumbled stale bread, three tablespoonfuls hot water, one teaspoonful salt, one-eighth teaspoonful pepper. Brown the bread in the bacon fat, separate the eggs, beat the whites stiff and the yolks until creamy. Add the hot water to the yolks, stir in the seasonings and the fried bread, and fold in the egg whites. Pour the remaining fat into a heated baking dish, transfer the mixture into it and bake for twenty minutes in a quick oven.

Fried Carrots.—Scrape the carrots, boil in salted water. When done cut in two lengthwise, roll in flour and fry a light brown.—R. S.

Ham Bone With Vegetables.—For two people use a half head of cabbage, cut in two, two small turnips, two carrots, four potatoes and one beet. Put in a kettle in which a ham bone or some bacon has been boiling for a quarter of an hour. When done place the cabbage in the center of a platter, slice the meat and arrange with the other vegetables around the cabbage.—Mrs. S.

Brown Rice and Codfish Cakes.—One-half cupful shredded codfish, one tablespoonful minced green pepper, one tablespoonful minced onion, one and one-half cupfuls cooked brown rice, salt and pepper to taste. Freshen the codfish for ten minutes; drain, and add to the rice. Stir in the onion and the green pepper, which should be cooked until soft in some savory drippings, season and form into flat cakes. Roll the cakes in flour and fry on a griddle. Serve with white sauce.

Fried Mush With Hashed Meat.—Mold, slice and fry corn meal mush and lay the slices closely side by side on a hot platter. Chop the remnants of a roast with one green pepper from which the seeds and membranes have been removed, season to taste, heat very hot in enough of the gravy to moisten thoroughly, and arrange in a thick layer on the fried mush.

Potato Soup.—Take six medium-sized potatoes, one onion and four slices of bacon cut into small pieces. Season with salt and pepper and cook until the potatoes are soft enough to mash with a spoon. Then add a pint of milk. Just before serving add the well-beaten yolks of two eggs and a tablespoonful of chopped parsley.

THE YOUNG FOLKS

A Nice Trip.

Dear Young Folks:—I am a little girl nine years old and I am in the fifth grade at school. I take music lessons and like it very much. I am in the second grade in music.

Shall I tell you about a trip I took last fall? My father, mother, sister and I went, and the rest stayed at home. We went to Milwaukee, Wis., first. My brother lives there and he was at the depot. He is married and has two little boys. We had lots of fun. We went to Washington Park and we went riding with some friends in a big seven-passenger car. We stayed there about a week and then went to Chicago, where my sister lives. She also has two little boys and we had great fun riding in my brother-in-law's Ford truck. While we were in Chicago we went to Lincoln Park. I wish all the Young Folks could see the animals and birds there. We stayed in Chicago about two weeks and then went to Sterling, Ill., for two days and then came home.

I'M WASHING MY CAR JUST LIKE DADDY DOES HIS.

I have another brother who lives two miles from our home and he has two little boys. You see I have a lot of nephews. Irene.

A Party.

Dear Young Folks—Hello, boys and girls! I am a farmer's girl, twelve years old. I live on a farm of eighty acres.

I will tell you about my party that I had a few evenings ago. There were eleven of us. We played blackman, hide-and-seek, needle's-eye, and several other games. When we were through with the games I served ice cream and cake. We had several contests that were very interesting.

I read your letters every week and am much interested in them. Here is a riddle for you. What is a hot time? Elsie.

Bovee's Pipeless Furnaces

Sold at Manufacturer's Prices

The most practical heating plant used. Twenty years on the market. Saves 40 per cent on cost and 40 per cent on fuel. We manufacture five sizes suitable to heat from a small cottage to a large church, including our old reliable No. 40 Pipeless with 28-inch combustion chamber and all fittings, for

$86.00

Easy to install in an old or a new house. No cutting of walls. Cool basement. We also furnish regular piped furnaces and fittings when required. Save big money by getting our free catalog.

Bovee Furnace Works 204 W. 8th St. Waterloo, Iowa

Wants to Be a Dressmaker.

Dear Young Folks:—I am writing to you for the third time and this time I hope to see my letter in the paper.

I am in the seventh grade at school and hope to enter the high school later on. I have one sister and three brothers. My sister goes to school with me.

I can crochet a little and I like to sew. When I am older I wish to become a dressmaker. What do you want to be when you are grown up, Young Folks?

I think Lela is a good little girl who helps her mother with the work. I do all I can to help mother.

Guess my riddle, Young Folks. Which is the oldest tree in England? Mabel.

Will Live With Grandma This Winter

Dear Young Folks:—Mama said I could write you a little letter because I am so interested in the Young Folks. I am a little girl eight years old. This winter I am going to stay with grandma and go to school. We live on a farm seven and one-half miles from town and two miles from school and mama thought that too far for me to walk.

I have two little brothers, Joe and Keith. Joe is six years old and Keith is ten months old. Joie helps papa harness the horses and I help mama wash dishes and keep the house nice and clean. I helped mama dress chickens for the harvesters, too. Letha.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Enclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date fall and winter 1917-1918 catalog, containing 550 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating thirty of the various simple stitches), all valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

2192—A jaunty coat for girls. This model has inserted pockets in pouch effect. Pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires, for a 14-year size, 4½ yards of 54-inch material.

2217-2218—Ladies' costume. Waist 2217 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 2218 cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 8 yards of 27-inch material, for a medium size, for the entire dress. The skirt measures 2⅛ yards at the foot. Two separate patterns, 10 cents for each pattern.

1934—A natty suit for mothers' boy. Pattern is cut in 4 sizes: 3, 4, 5 and 6 years. It requires 3⅛ yards of 36-inch material for a 5-year size.

1973—Dress for misses and small women. This style may be made with the sleeve in wrist or elbow length. Pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 5⅝ yards of 44-inch material for an 18-year size.

2204—A dainty dress for mother's girl. The sleeve may be short with a cuff, or in wrist length, finished with a heading. Pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. Size 8 will require 3½ yards of 44-inch material.

1948—Girls' overblouse dress, with guimpe, having sleeve in either of two styles. Pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 1¾ yards of 27-inch material for the guimpe, and 3⅜ yards for the dress, for an 8-year size.

1954—A popular style. Ladies' one-piece dress. The belt is finished with a smart pocket, which may be omitted. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7½ yards of 36-inch material for a 36-inch size.

2041—Girl's underwaist and drawers. Pattern is cut in 6 sizes: 2, 4, 6, 8, 10 and 12 years. It requires 1 yard of 36-inch material for the waist, and 1¼ yards of 36-inch material for the drawers, for an 8-year size. Ruffles on drawers will require 2½ yards of edging, 3½ inches wide.

2213—A popular style. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 3 yards of 36-inch material.

2205—A practical work garment. Pattern is cut in 4 sizes: Small, 32 and 34 inches bust measure; medium, 36 and 38; large, 40 and 42, and extra large, 44 and 46. Size medium requires 6⅛ yards of 36-inch material.

2042—A new "cover all" apron. Pattern is cut in 4 sizes: Small for 32 and 34 inches bust measure, medium for 36 and 38 inches bust measure, large for 40 and 42 inches bust measure and extra large for 44 and 46 inches bust measure. It requires 5½ yards of 36-inch material for a medium size.

2215—A new riding skirt. Pattern is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 5 yards of 44-inch material for a 24-inch size.

If You Have Running Water in Your Home, You Are Ready For

"Standard" Plumbing Fixtures

THE next step, after installing a water system, is the addition of a labor-saving Kitchen Sink, a Bath Tub, Laundry Trays—real plumbing *comforts* that belong in every home whether it be new or made over.

"Standard" fixtures for Bath, Kitchen, Laundry, represent long experience in manufacture, great variety of styles to select from, and assurance of *service* as rendered by our branches in all principal cities and by leading plumbers everywhere. Demand "Standard" fixtures.

Look for the "Standard" Green and Gold label. Talk to your plumber in any nearby town about the line that is "Standard" in name and fact. Write today for a copy of "Standard" Plumbing Fixtures for the Home."

International Sunday School Lesson

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for September 23, 1917.

Daniel in the Den of Lions.

LESSON TEXT—Daniel 6.

GOLDEN TEXT—The angel of the Lord encampeth round about them that fear him, and delivereth them.—Psalms 34:7.

I. Daniel the Prime Minister of the Hedro-Persian Empire (vv. 1-3).

Daniel's sterling worth brought him to the front and kept him there. The new king was quick to discern his merits and to give them recognition by placing him at the head of affairs in his kingdom.

II. An Occasion Sought Against Daniel (vv. 4-9).

(1) The Reason of—Envy. To have this foreigner placed over them aroused the jealousy of the presidents and princes of the empire, so they set about to have him removed. The presence of envy shows inferiority. One never envies those below him. It is hard to forgive those who have outstripped us and left us behind in the race of life.

(2) The Failure (v. 4). Daniel's official record was blameless. Not even an error could be found of which they could accuse him. Though he was without fault he had to suffer. Those who excel in any line are sure to suffer in some way. It is true in business, the home, the school, politics and religion.

(3) The Wicked Plot (vv. 5-9). Not being able to find any fault, they trumped up a charge against him on the ground of his foreign religion. They were not careful about the method employed, just so their end was attained.

III. Daniel's Noble Confession (vv. 10-13). Though Daniel knew that the wicked decree was signed, he knelt before God three times a day as usual. He went quietly about his affairs, attended to his regular devotions, because he trusted God. There is always a marked silence about heroism. Weak men bluster, but strong men have little to say. Daniel continued his usual habit of prayer, even though it was a violation of the civil law, because he knew that God's law was first. When the laws of earth conflict with the laws of heaven there is but one thing to do; that is, to obey God rather than man.

IV. The Foolish Decree Executed. (vv. 14-17). The king was greatly displeased with himself (v. 14) and diligently sought to deliver Daniel, but he was helpless (v. 15). The proud ruler was a slave. Laws which change not are self-condemnatory, foolish, positively wicked. The king was weak for fear of others, which is utter wickedness. Daniel was cast into the den of lions (v. 16) and a double seal placed upon the den. (V. 17). They were not content with the king's seal alone, which shows that one rascal will not trust another. The king's words, "Thy God, whom thou servest continually, he will deliver thee," to Daniel were a poor excuse, but they were the best that he could offer to his conscience.

V. Daniel Delivered (vv. 18-23).

(1) The King's Sleepless Night (v. 18). Doubtless Daniel was more comfortable in the den of lions than the king in his palace. His quietude is a picture of the safety and peace which are the portion of those who trust God and do his will. This is a sample of what faith can do. "Thou wilt keep him in perfect peace whose mind is stayed on thee, because he trusteth thee."

(2) The King's Question (v. 20). In the morning the king called to Daniel in the den of lions saying, "Is thy God able?" This is always the question of the unbelieving heart. The believing heart says, "Our God is able."

(3) Daniel's Answer (v. 22). "My God has sent his angel." Angels are God's ministering spirits. "The angel of the Lord encampeth round about them that fear him, and delivereth them," (Psalm 34:7.) Many times no doubt our lives are preserved because we are guarded by God's angels. Not even a sparrow falls to the ground without the Father, and the very hairs of our heads are numbered, so we ought to expect the mouths of the lions to be shut against us.

(4) Daniel Removed From the Den (v. 23). There was no manner of hurt upon him. The reason was that "he believed in his God." The same reason is why the garments and hair of his companions were not even signed.

VI. Doom of Daniel's Accusers (v. 24). They were cast into the den of lions "and the lions had the mastery of them, and brake all their bones in pieces or ever they came at the bottom of the den."

VII. Darius' Decree (vv. 25-27). He decrees that in all arts of his kingdom men of all peoples and tongues should tremble and fear before the God of Daniel.

VIII. Daniel's Prosperity (v. 28). Though Daniel's enemies perish, he goes higher and higher in the kingdom, even continuing into the reign of Cyrus. In all our trials and testings we should not be moved, for there is a righteous and just God in heaven, and nothing can occur without him.

North America's 1917 wheat crop won't come within 400 million bushels of supplying the shortage of our European allies and neutrals, Herbert Hoover announced. As a partial remedy he suggested that every person in the United States use one pound less wheat flour per week—a reduction of 20 per cent from the present consumption. Substitute other cereals, of which there are plenty, he urges. If these cereals—corn, oats, barley and rye—are substituted in the American home, it will mean that "war bread" will become part of the American diet. His estimate is based on normal consumption in a three-year period.

St. Croix Has Best County Exhibit.

(Continued from page 5.)

filled well and the crop weighed out heavier than usual. Chippewa has not been showing for several years. The exhibit was distinguished from others by mounted deer heads above the booth and tastefully arranged culinary specimens. Fruits of twenty odd varieties helped to make this county's booth one of the attractive booths in the show. Chippewa county people intend to put forth an extra effort to increase the yield and quality of the potato crop during the coming year, and for this reason they have engaged J. W. Hicks, president of the Wisconsin Potato Growers' Association, to lend counsel and advice to growers.

Waupaca County.

Ed Blocke, together with his brother, H. W. Blocke, and Mr. Fred Schoenick, took proper care of Waupaca county, putting up a very creditable booth to represent the county's agricultural interests. Potatoes are naturally the biggest product and an especially strong show was only to be expected. In every variety shown Waupaca ranked among the best entered in the contest. Certified seed was long ago adopted by many Waupaca potato growers and this fact is responsible to a large extent for the excellence and uniformity of the crop. Next to potatoes Waupaca county farmers are paying much attention to dairymen. Clovers and grasses essential to the successful feeding of sows and the production of milk, play a vital role with the farmers. The committee carried no advertising matter, insisting that land in Waupaca county sells without much effort.

Clark County.

Ten million pounds of dairy products out of Clark county during the last year is ample evidence that Clark county farmers are aware of the profits which may be made in dairying. M. E. Wilding, of Neillsville, John Ver-Keilen, of Thorpe, and William Creed, of Unity represented the county. Their presence in the booth did much to make Clark county known all the more to the hundreds of visitors who stopped to ask questions about the various products displayed. There is only 20 per cent of Clark county under cultivation, yet the showing made with the products from the tilled acres compares well with anything seen at the fair this year. The exhibits lacked completeness for successfully competing for first honors.

Lincoln County.

A. H. Cole, county agent of Lincoln county, Hall S. Brooks, A. T. Curtis and Robert Kelinschmidt, the committee representing Lincoln county at the state fair, displayed the county's products to good advantage. Potatoes, clover, alfalfa and garden products were well selected and fully representative of Lincoln county's productiveness in crops of all kinds. No gold dollars grow on bushes in Lincoln county more than anywhere else, but the man willing to work and seeking a favorable community in which to settle, is advised by the Lincoln county men to investigate the opportunities awaiting him. Beans and peas are also grown with profit by farmers of this section, with dairying, of course, receiving the attention due it from every county in our great dairy state.

La Crosse County.

As usual, La Crosse county came to the front in all departments of the state fair with interesting exhibits. The county booth was in charge of T. H. Campion, superintendent of the La Crosse County Agricultural School; B. F. Oltman, county superintendent of schools, and W. E. Spreiter, connected with the county agricultural school. La Crosse is one of the best corn counties in the United States, from the standpoint of quality. Here are located breeders of corn and small grains who take infinite pains with their work and who are able to make a good showing in the keenest contests on grains held in the country. Early potatoes and peas form another profitable enterprise of La Crosse county farmers and three canning factories have all they can do to take care of the county's output of peas. The men in charge of the booth are satisfied that their county's record in agricultural work coupled with unexcelled shipping facilities will make the county one of the most profitable in the state for general purpose farming.

Ashland County.

Especially blessed with a soil rich in the elements necessary for luxuriant growth of the useful grasses, Ashland county naturally tends towards dairying. Holstein cattle are becoming more numerous each year and the usual step from grade to purebred cattle is taking place at the present time on a large scale. Alex Gingles, of Ashland, C. E. Post, county agricultural agent, H. B. Minton, of Mellen, and O. G. Anderson, of La Point, displayed the products of Ashland farms to the best advantage. A full grain exhibit showing some excellent samples of wheat, rye and oats proved that all the feed necessary for the dairyman, even to growing corn for silage and graining purposes, is available to the settler, if he will raise it.

Sawyer County.

Specialists in potato raising and proud of it, Sawyer county through its representatives, C. P. West, county agent, and George Christiansen, of Exeland, brought to the Wisconsin state fair one of the best "spud" exhibits of the show. Accompanying the potato display there was a good exhibit of grasses grown in Sawyer county, proving that the farmers of this live upper Wisconsin county can change from potato growing to any type of farming they may be inclined to follow, when potatoes for any reason prove no longer profitable. At present, however, they lay claim to being one of the state's biggest potato counties and able to take care of a big crop each year through proper storing. Corn and grain samples shown in the booth compared favorably with any samples brought from the same sections of the state as did also the vegetables and fruits.

PRIZE-WINNING COUNTY EXHIBIT BOOTH.
Group of exhibitors surrounding: E. L. Luther, superintendent, who was presented a silver set, and H. C. Campbell, of the Milwaukee Journal, presenting Journal Cup to the winner.

Bayfield County.

F. Dunnebecke and D. H. Parkinson, both of Mason, represented Bayfield county, with the first exhibit which has been brought from this county, which borders on Lake Superior. Only 15 per cent of Bayfield county has to date been put under the plow, though every acre of the stump land will produce large and profitable yields of clover, grains, corn for silage and fruits. This exhibit was not long on ornamentation, but the quality of stuff was good, and anyone could see that Bayfield county fields will deliver the goods. The gentlemen who represented the county this year said that they learned a lot about making up an exhibit and they expect to come to Milwaukee next year "loaded for bear," as the old saying is. Several fine samples of grain were borrowed from the experiment station, but the grain was raised in Bayfield county.

Marathon County.

In the heart of the clover belt Marathon county is especially favored by nature with luxuriantly growing grasses which make the county the logical spot for dairying. George S. Cook, of Unity; Fred Bandy, of Wausau; J. D. Christy, of Schofield; L. H. Cook, of Wausau, and A. Paronto, of Mosinee, formed the committee in charge of the Marathon county booth. They displayed the agricultural products of Marathon county to good advantage. A good exhibit of the grains, vegetables and grasses was made, but the strong competition this year made it impossible for Marathon to repeat her record of 1915 and 1916, when the county was awarded first place over all others. This section is fast becoming the leader among the dairy counties of the state.

Oneida County.

Though Oneida county did not place in the money, F. T. Coon, Arthur Taylor, W. D. Juda, Wm. Gilligan and E. S. Shepherd, all of Rhinelander, put up a very creditable exhibit to display Oneida county products. Good specimens of grasses, including the many varieties of clovers, samples of potatoes, grains and vegetables were well selected and exhibited. With plenty of streams in the county and a soil rich in the elements necessary for growing the clovers and grasses, Oneida county has every opportunity of becoming a leader in dairying. Prizes for potatoes have been coming regularly to Oneida county farmers at the various shows and this year also splendid samples of the various varieties were on hand to add strength to the exhibit. Oneida county is coming back next year determined to win a place well up in the line.

Help! Help! Help!

Everywhere they are crying for help, not inefficient or untrained, but real help, **help** that **knows.** Every business needs experts. Auto and tractor owners want the kind of help that will save the life of their machines.

ARE YOU READY TO FILL AN AUTOMOBILE EXPERT'S JOB?

My school is equipped from top to bottom with every device and gas engine part necessary to teach you the gas engine business. We have equipment—lots of it—for you to work on, from vulcanizing and welding machines, to twin-six and twelve-cylinder motors. Each student gets personal instruction from men who have been in the business for years. Every part of my course is practical and teaches what you need to know to be an auto or tractor success. Best of all, my charge for this complete instruction is within reach of every man who wants to learn, and my course arranged so you can take it all in seven weeks.

IOWA STATE AUTOMOBILE & TRACTOR SCHOOL

F. D. HENNESSY, President and General Manager
876 PEARL STREET SIOUX CITY, IOWA

Taylor County.

Taylor county's committee consisted of Max Back, Julius Roloff and L. Ramm, all of Medford. The booth under their care was well arranged, showing especially good samples of grasses and vegetables. Potatoes were of excellent quality throughout. Only 25 per cent of Taylor county is under cultivation and there is room enough for all who wish to make Taylor county their home. Taylor county is going into dairying more and more, as the soil yields bountiful harvests of grass and clover and grains. Fruit samples showed that Taylor county can raise small fruits successfully as well as all other crops necessary in profitable farming. Especially cheap gains are made from pasturing beef steers on the rich acres of Taylor county. Good samples of cabbage and corn were on display in the booth.

Kenosha County.

Kenosha county was taken care of by Wm. Luke and Griffith Richards, county agent, both of Kenosha. Kenosha county is especially strong on truck farming, and had an excellent display of garden vegetables, corn and potatoes. Though not as fortunate as the northern counties in having naturally rich soil for clover and grass production, a splendid exhibit was nevertheless shown of the different clovers that grow in the county. Potatoes and fruits were also represented by well-selected specimens. Some especially good cabbage was also shown here.

Milwaukee County.

The Milwaukee county exhibit was under the supervision of the Milwaukee County Agricultural School. The exhibit, directly in charge of C. D. Adams, E. Little and P. J. Kelly, showed a very complete line of vegetables and field crops, though it is certain that with greater care perhaps a good many specimens shown could have been improved upon. The Milwaukee county farmers are for the greater part, at least, interested in trucking. However, there is some big-type farming practiced in the county and some excellent field crops are produced. The samples of grain showed up fairly well.

Forest County.

Forest county, strong on potatoes, roots and clover, had a very complete exhibit in these divisions. The samples of clover were particularly good, though many of the other divisions, such as fruits and vegetables, were not complete. Whatever products were shown, however, were of high quality. John Swenehart, county agent; Grant Faulkner, of Crandon; Henry Mundt, of Crandon; L. S. Jacobson, of Mole Lake, and A. A. Trojahn, of Laona, were the committee repre-

senting Forest county. Less than 1 per cent of Forest county is under the plow and the showing made must be considered good. There are only 400 farms in this county. Dairying is destined to be one of the chief industries when the county can be considered a fairly well-settled community.

Racine County.

Racine county, represented by Almos Piper, of Racine; Martin Herzog, of Corliss, and E. A. Palley, of Rochester, had a well-put-up exhibit, especially good in the truck or vegetable end. The central and western portions of the county are given over to dairying and general farming, while the eastern portion is strictly devoted to trucking. Corn and small grain, however, are of good quality, as are also the potatoes. The exhibit was not as complete, however, and not of the quality, especially in the grasses, to compete successfully against the winning counties.

Outagamie County.

Outagamie county was represented by P. W. Silberwood, of Oneida; Mike Mack, of Shiocton, and W. F. Wolf, of Appleton. The garden and fruit exhibit was especially good, as the Shiocton cabbage country is especially fertile and well given to trucking in general. During the marketing season and lasting for approximately five weeks, the Shiocton district markets a train load of cabbage a day. The southwestern portion of the county is given over to potato raising, while in the northern section, with Appleton as headquarters, dairying is the main industry. The Fox River Valley has made quite a reputation for itself in this respect during the last few years. Grasses do well in the county.

Iowa County.

Iowa county had a very neatly arranged exhibit under the care of Jesse Van Etta, county superintendent, Dodgeville; Otto Oimoen, Barneveld, and J. A. Brunker, of Ridgeway. Iowa county is famous as a beef-raising section, but grain crops are grown successfully, as has been proved time and again at the grain shows. The exhibit had good samples of grain and corn in it, as also of potatoes and vegetables. However, the fruits and vegetable classes were not complete, which is always a point against the exhibit. Iowa county became famous two years ago at the Panama-Pacific Exposition, when the championship for the best ten-ear sample of corn went to J. A. Brunker, of Ridgeway.

ATLAS EXPLOSIVES

Get Stumps Out With Less Work

Pulling stumps is slow and costly. "An explosive reduces the labor of clearing land to the minimum. It may be used by any intelligent man," says Minnesota Farmers' Bulletin 134. Get any stump out quickly, and at the same time split it into pieces easily handled, by using

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

Atlas Farm Powder is made especially for farm use. It is easy to use—no experience needed. Just bore a hole, load, fire, and work that otherwise would take hours or days is done instantly! Ask your dealer about Atlas Powder today.

You can save money and make money by using Atlas Farm Powder to blast out stumps and shatter boulders, break up hard-pan, do ditching and make beds for trees. It is the cheapest farm hand you can possibly find.

Send for "Better Farming" Book—FREE
Our illustrated book, "Better Farming," tells how to improve the fertility of the soil, how to grow bigger crops, redeem waste land, improve orchards, etc., with Atlas Farm Powder. Valuable to every land owner. Mail the coupon.

Guernsey Breeders Are Active.

Association in Waukesha County Has Become Interested in Cow-Testing Work—Heifer Donated to Red Cross Work.

WAUKESHA county is steadily forging to the front in dairying, and, as usual, the Guernsey breeders are working harmoniously together to advance the interests of the popular breed which they represent. Guernsey breeders are realizing more and more the importance of keeping animals which are paying propositions and animals which are "star boarders" are being replaced with "profit producers."

At the last annual winter meeting of the Waukesha County Guernsey Breeders' Association, the members present were much inspired by a talk given by Prof. H. C. Searles, Fond du Lac, Wisconsin, on cow-testing associations. Much enthusiasm was shown by members present over the new proposition and many promises were received from breeders that they were desirous of taking up the new work. In a few weeks the first cow-testing association was organized, and the first tests were taken in March. This organization consisted of men who owned only Guernseys and who were members of the county Guernsey association. Other farmers soon realized that the cow-testing association was a means of increasing the production of the animals, for it secured better care for the animals on test and better feed was fed. In order to accommodate the men who wished to enlist in this important work of eliminating the unprofitable cows, a second association was organized, and, like the first one, consisted of only Guernsey cows, and the work was started on July 1st.

The county was then divided into two sections, the northern and southern sections. There are twenty-eight members in the northern section, which is in charge of Mr. Frederick Thomson, of Virginia, and twenty-five members in the southern section, which is in charge of Harold E. Snyder, Chicago, Illinois. Both testers are giving the best of satisfaction and the members visited are well pleased with the work done by them. Of no less importance is the satisfaction the breeders are receiving by knowing what their Guernseys are able to do. The milk is weighed after each milking, thus giving an accurate report for each month.

During the month of June there were forty-nine cows that produced forty pounds or more of butter fat for the month. The highest cow for the month was a grade Guernsey owned by Wm. Steele, Jr., Pewaukee, having a record of 1,237.1 pounds of milk and 68.04 pounds of butter fat. The next highest was also a grade Guernsey owned by Goodhand Kingston, Waukesha, with a record of 1,548.7 pounds of milk and 66.59 pounds of butter fat. The herd having the highest average of butter fat for the month was that owned by C. F. Spaulding, Oconomowoc, eight cows averaging 646.9 pounds of milk and 35.49 pounds of fat. The herd of Wm. Steele, Jr., Pewaukee, ranked second, with an average of 33.28 pounds of butter fat for nineteen cows.

After a cow has finished her year's work, her owner will be presented with a certificate showing the record made by her during the year. This certificate will be signed by the president and secretary and the tester.

At their sale next month, announcement of which will be made in the columns of The Wisconsin Farmer, a special feature will be the sale of a beautiful Governor of the Chene heifer, donated by George W. Browne, of Waukesha, and shown in the accompanying illustration. The proceeds from the sale of this desirable heifer will go to the Red Cross. The heifer is known as Red Cross Lady No. 74661. The sire of Red Cross Lady is Imp. Governor's Whimsome No. 26189, who was first prize and senior champion male at the Wisconsin State Fair in 1916, also sired first prize heifer calf, junior and grand champion female at the Wisconsin State Fair in 1916. He is a son of Governor of the Chene. His dam has a record of 775 pounds butter fat on the Island of Guernsey. The dam of Red Cross Lady is Imp. Bonita 3d of Les Bordages, 46428, who is a daughter of Governor of the Chene and of Bonita of Les Bordages. This makes Red Cross Lady a double granddaughter of Governor of the Chene. She is a heifer that would add dignity and grace to any herd and was born January 5, 1917. A goodly sum is looked forward to from the sale of this heifer, as the Governor of the Chene breeding is one of the best of the Guernsey breed, Governor of the Chene having more daughters in the Advanced Registry than any other sire of the Guernsey breed. The heifer is a splendid individual and should appeal to the most critical buyer.

The Waukesha County Guernsey Breeders' Association is one of the strongest organization of its kind in the United States and is steadily increasing in number, now having a membership of 168 at the present time, all of which are in good standing. Any member not paying his dues for one year is removed from the list and is not reinstated until all dues in arrears are paid.

The demand for Guernseys during the past few months has been exceedingly good, several carloads of cattle having been sent to Kansas, Iowa, etc. Buyers have been here making purchases of both pure breds and grades from Washington, Tennessee and other states, and all are looking forward for a still better market this coming fall.

RED CROSS LADY 74661, DONATED BY GEO. W. BROWNE. OF WAUKESHA COUNTY, TO THE RED CROSS.

Walworth County Patriotic Picnic.

To the Editor:—To Walworth county, Wisconsin, goes the honor of holding the largest community gathering in Wisconsin and perhaps in the Middle West this year. Actual count showed a total of 1,175 automobiles, averaging five to the car, parked on the grounds. Most of those present came by this modern mode of travel. However, those from close at hand walked, while those from a distance came by train.

The eighty-acre grove on the Tilden farm, near Delavan, was certainly a wise choice, for notwithstanding the heat of the day and the absence of a breeze, the crowd moved back and forth within the limits of abundant shade. Platform events, such as pie-eating contests, pillow fights, toe wrestling, nail-driving contests, clothes pinning contests, etc., attracted the older folks, while the pony races, running races, tugs of war, free-for-all matches and general sports caught the attention of those interested in the more exciting.

Band concerts by the Elkhorn and Sharon concert bands furnished the instrumental amusements, and Prof. E. B. Gordon, of the department of music of the state university, led the crowd in singing patriotic songs.

Mr. A. J. Glover, editor of Hoard's Dairyman, gave the only talk of the day. He chose for a subject, "Patriotism on the Farm." The enthusiastic audience interrupted him on many occasions with handclapping and cheers, so interested were they in his utterances. Mr. Glover has become a national figure and those fortunate enough to hear him carried home some lasting thoughts of our position in the present crisis.

This community and patriotic gathering of 7,000 was held under the auspices of the Walworth County Federation of Clubs, an organization perfected last winter by the county agricultural agent and the county superintendent of schools. Twenty clubs are enrolled as members—fifteen of them farmers' clubs, neighborly clubs and community clubs; the remainder are civic and commercial associations in the five towns of the county. The club spirit, as manifested by the attendance at this picnic is an indication of the feeling of patriotism and good will that exists between the town and country in Walworth county. Few, indeed, are the citizens who do not belong to some club and membership is freely interchanged.

L. L. Oldham.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Poultry Not Always Profitable.

Conditions alter circumstances, and, although poultry can be kept at a profit even at the abnormally high prices of grain, it requires close figuring and business management. Poultry products are high, but the last few weeks have witnessed the price of corn jump from $1.50 to $2.23 per bushel, and that extra 75 cents just about sounds the death knell for many small flocks where practically all of the feed must be purchased.

One woman has a flock of two dozen hens on a couple of back lots, which gives a very nice range for them. At certain intervals of the day they are turned out on the street, where they get all the grass, as well as seeds, etc., that they wish. This flock has been laying very well through the summer, but are nearing the molt, and if the feed which is purchased from a farmer who brings it into the yard, happens to be slow in arriving at a busy time, the hens take revenge by quitting off short and taking their own time in starting up again.

It is a pure-bred flock, and the owner naturally is reluctant to dispose of it. She asked us in all candor what she should do, and to the best of our knowledge, she was advised to sell all of the two-year-old hens and keep only the best of the yearlings for a start another season. Something like a half dozen. If she had been successful in raising some early pullets this season, disposing of all the heavy hens, there might have been a fighting chance to come out even; as it is, the manner in which she feeds, having little or no knowledge in the selection, it would cost her very nearly $2 each to keep those hens until they lay again, which would be next spring.

Even though the hens in question have passed their best laying age, she was earnestly urged to sell to someone who could winter them at not too great a loss, coming out even next summer when the hens could be turned on the range of some farm. We should heed the crying need of foodstuff and not sacrifice a single producer that can be made to do its part in this worldwide calamity. Before we should sell a hen to the butcher that we cannot make pay out, better far to give her to someone who can either keep her at a profit or else who can afford to keep her anyhow, until such time that she can do her part, so long as she evens up in the end.

This is diverging from the subject somewhat, but a cow at this place is so hard to milk that she is a nuisance as a dairy cow, though otherwise she is excellent. Fortunately, she has a goodly per cent of Short-horn blood and so when she comes in within a couple of months she will be given her own calf to raise, as well as the best calf we can buy—one that would go to the shambles, and that should be kept either as a future cow or that will be worth while for beef as a yearling. The purely dairy males, unless for breeding purposes, are not worth the feed it requires to raise them.

Another woman bought 100 baby chicks and raised the greater part of them. That was last season. About forty-five hens are being kept in a small pen without shade, adequate feed, enough water, nothing of sanitation or comfortable sleeping quarters. It is about the dirtiest, most distressed-looking bunch of fowls we have ever seen. They laid a limited number of eggs through the natural laying season, quit the job, and are running up and down that miserable pen like caged animals. The humane society should take those poor chickens over and place them in good homes where they could do their mite in producing eggs.

It may be said that these are exceptional cases and do not apply to the farm flock. It is the exception and not the rule. At the same time, in a way, it has a bearing on the farm flock. One enterprising farmer, whose chickens are much more than just a sideline on his farm—rather one of the main crops—is planning more closely than ever to make his hens pay out. "They must do better yet for the feed consumed," he said, "or there will be a loss; no need to think that farmers can keep chickens for nothing, and instead of 250 layers this winter, there will be 150, and they have got to bring in an income as large as the other flock did last year or out they go!"

This from a loyal man, who would do much for the cause of his country, but who understands that unless a hen produces the equivalent for the feed consumed, she is a slacker and no good to him or to her country.

Hens Fail to Deposit Eggs.

Mrs. P. E., Wisconsin, is experiencing a rather rare trouble with her flock of hens, and the following is a brief summary of her letter:

I am hoping this letter will find the right stopping place, as I wish to ask through this paper the reason why my hens go on the nest day after day and do not lay any eggs. I killed one of them and found the small egg yolks turned to hard, dark lumps.

The immediate trouble is caused from diseased reproductive organs. The data on this subject is comparatively small, but it has been found that lowered vitality is the prime cause, which may be brought about in different ways, just as it may be brought about in a person.

Cold and roup are often responsible for this trouble. If it were a person we would say that the cold "settled" in those organs, when inflammation sets in, possibly resulting in gangrene of the ovary, when the small yolks are in a state of decomposition—rotted, in fact. The hen may not die from the trouble, but she is impaired for further usefulness; she will lay no more eggs, and besides, she will invariably become rundown and not get back to normal weight.

The disease does not necessarily take this form, varying with the condition of the organs. Sometimes we find an egg that is infertile; indeed, 20 per cent is about the average of infertile eggs tested from an incubator. Again an egg may be abnormal; ill-shaped, too large, too small, poor texture of the shell, and similar defects could be traced to abnormal reproductive organs. When tempted to use such an egg for incubation, just consider that the hen which laid that egg was not really healthy, and don't do it.

Selling off a flock of fowls is little short of a tragedy, but there is no cure, and the sooner the die is cast the better and the sooner you will begin all over again with, let us hope, better results.

Cleaning Up Waste Places in the Fall.

"I would not know how to do good farming without sheep," declared George McKerrow, of Wisconsin, one of the best and most widely known sheep breeders of America, upon a recent visit to the food administration in Washington. "Why?" he continued. "Because my sheep use up the wastes of the farm. They clean up the grass, weeds, brush and gleanings, and in so doing turn into cash what otherwise would be lost."

Mr. McKerrow knows sheep and his knowledge comes from a broad experience gained in fifty-one years of breeding them. His is a story filled with romance, faith and devotion to an ideal that covers a span of years from the time an eight-year-old farmer lad, who had saved his pennies and nickels and bought an aged ewe, which in turn produced two ewe lambs, down to the present when thousands of sheep "eliminate the waste" on his 2,300 acres.

"'Sheep," said Mr. McKerrow, "make the most economical gains of any kind of live stock because they clean up the odds and ends. They are particularly useful on the farm in the fall of the year, for they turn into mutton the things that otherwise would not be used. At the same time they save the feedstuffs that would be given them if they did not have access to these other things."

After harvest, Mr. McKerrow's sheep are turned into the oats fields for a few hours the first day, an hour or two longer the second day, and the time gradually increased until at the end of a week they have complete possession of the fields. The lambs are permitted to enter the corn before it is cut and they clean up on the weeds and lower corn plant leaves. The lambs do not pull down the lower ears of corn as do the sheep. Roots are grown for the cattle and sheep on Mr. McKerrow's place, and after the larger roots are hauled into storage for winter use, the sheep are turned into the field and eat the smaller ones that remain. Both the sheep and lambs are turned into the aftermath of the meadows and this brings them into winter quarters in good condition.

Another profitable practice on this farm is that of plowing up fields that become weedy afttr harvest. These fields are sown to rape and turnips, and later the sheep are turned in. They eat the rape and turnip tops with relish and will later hollow the meat from the turnip, leaving but a shell.

Mr. McKerrow has found that a frequent change of pasture is beneficial to the sheep. A 36-inch woven wire fence in 20-rod lengths is moved about, thus preventing the too short cropping of the grass, and furthermore reducing the internal parasite plague to a minimum. Water is also an important consideration, and ewes particularly should have water the same as dairy cows.

One of our subscribers, Mr. J. Houghland, calls attention to the fact that if you sow sunflower seeds along the fence rows you will get splendid returns and all the trouble it will be will be that of planting and gathering. Ordinarily this strip of land is wasted entirely, but in this way it can be made to produce heavily and every farm can use to advantage considerable sunflower seed.

POULTRY AND PET STOCK.

HOUNDS

COON, FOX, WOLF, RABBIT HOUNDS—PEDIGREED AND ELIGIBLE TO REGISTRY. Broke dogs sent on ten days' trial. Money back guarantee. Nice lot of puppies 6 to 9 weeks, ready for shipment now. OTIS SLATER & SONS Oconee, Ill.

FOR SALE—S. C. RHODE ISLAND REDS

GOOD BREEDERS from exhibition and trapnested laying stock. Write for prices. WINNEBAGO POULTRY YARDS, A. J. Schloerb, Mgr., R. 23, Omro, Wis.

BARRED PLYMOUTH ROCKS and Buff Orpington ducks; Chicago winners; great layers, established 1892; eggs for hatching: $1.50, 15; $4.50, 50; $8, 100; prompt delivery and good hatch guaranteed. G. Earl Hoover, R. 24, Matthews, Ind.

HATCHING EGGS; prize-winning S. C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W. F., Fond du Lac, Wis.

HATCHING EGGS—S. C. Reds, prize-winners all leading shows. Eggs, $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

RHODE ISLAND REDS—Setting of 15 eggs from pure-bred prize-winning Rhode Island Reds, $2 per setting; three settings for $5. Hildebrandt & Yon, Stoughton, Wis.

APRIL hatched Single Comb Buff Leghorn cockerels and pullets from choice laying strain. Geo. Schmitt, Hortonville, Wis.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. The rate is six cents per word, each insertion. Note the low cost to reach our 90,000 circulation.

THE WISCONSIN FARMER -:- MADISON, WIS.

RYE.

CHOICE high-yielding plump pedigree rye; recleaned and graded; reasonable price. Arthur Popp, Jefferson, Wis.

LEGHORN HENS.

FOR SALE—Will sell all or part of 200 White Leghorn hens; yearling stock; many of them fit for show room. Oak Dale Farms, Austin, Minn.

FARM LANDS.

A FEW MONEY MAKERS—80-acre farm with 25 acres under cultivation, and a guaranteed yearly rental income of $400; price $5,000. $1,500 cash. 80-acre farm with stock and crop; price, $3,700. 120-acre farm, good log buildings; price, $3,600. 40 or 80 acres cut-over land, with stream; price, $15 per acre. Write for details. The Ev. Luth. Colonization Co., No. D-M, Dept. 10, Merrill, Wis.

WISCONSIN FARMS—Any size you desire, from 160 acres and up, in any stage of cultivation. If you want a highly-improved farm with good buildings and in cultivation, we have it; or, if you want the raw land and do the improving yourself, we have that. Girton & Lyons, 705 Crocker Building, Des Moines, Iowa.

ALABAMA ALFALFA LAND, Demopolis Section—No part of America equal of this in the great combination of alfalfa, corn, velvet beans and grass. Rolling lime land, fertile, healthy country, artesian wells, tick free. Lands are cheap, quality considered. Full information and photographs. C. C. Clay Alfalfa Land Co., Demopolis, Ala.

HARDWOOD cut-over land, silt loam, clay subsoil. Not sandy or gravelly. Close to towns. Good roads. In the heart of the dairy country. You deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 9. North Western Lumber Company, Land Department, Stanley, Wis.

SPLENDID SHEEP PROPOSITIONS—1,180 acres rolling clover belt land, joining spring-fed lakes, 1 mile from railway station; price, $8 per acres. 626½ acres at $8.50 per acre. 440 acres at $9 per acre, half cash. The Ev. Luth. Colonization Co., C-M, Dept. 10, Merrill, Wis.

BUY A FARM and pay as you go. Write for our easy payment plan before you buy. Rich, chocolate loam soil. Close to railroad towns and all conveniences. We are owners. Booklet free. UPPER WISCONSIN LAND CO. (Land and Townsite Owners), Ladysmith, Wisconsin.

SPECIAL BARGAIN—160 acres, 3 miles from Warrens, Wis. 100 acres farmed, balance timber. Soil, sandy clay loam. Good buildings. 70 apples trees. $4,000. Have other lands. Want agents. J. H. Alexander, Warrens, Wis.

HAVE TWO GOOD FARMS for rent or will sell one to right party on easy terms. When you write, tell me if you have stock and if you like the stock business. M. A. Peoples, Ladysmith, Wis.

WOULD YOU SELL YOUR FARM if you got your price? Sell direct. No commissions. Particulars free. Charles Renich, G-2, Woodstock, Illinois.

118 ACRES, Green county, Wisconsin. Near town milk condensory. $60 per acre, $1,500 cash, long time balance. Box 534, Warren, Ill.

MARATHON COUNTY, WIS., improved and unimproved farms for sale. Free list and map. Wm. Albrecht, Jr., Wausau, Wis.

FLORIDA FARM lands, two to three crops; flowing wells. Write for particulars. T. B. Stinson, Palaltea, Fla.

BEST improved and unimproved Marathon county farms. J. G. Wolf, Wausau, Wis.

HOLSTEIN BULL FOR SALE.

REGISTERED Holstein bull, ready for service. Two of his dams averaged 108 lbs. milk in one day and 34.95 lbs. butter in seven days, officially. Price $125. Wisconsin Live Stock Association, Appleton, Wis.

REGISTERED Holstein bull, ready for service. Three of his dams average 100 lbs. milk in one day and 34.75 lbs. butter in seven days officially. Price $100. R. M. Harriman, Appleton, Wisconsin.

MONEY TO LOAN.

MONEY TO LOAN on Wisconsin farms in amounts of $5,000 to $25,000. Security must be twice the amount of the mortgage. 6% with privilege of paying $100 or more at any time. Address 206 Washington Bldg., Madison, Wisconsin.

SALESMEN WANTED.

SALESMEN WANTED—Owing to draft and enlistment we have a few well-worked territories open and will be pleased to hear from interested persons. Applicant must be exempt from draft. McConnon & Company, Dept. T, Winona, Minn.

LEARN TELEGRAPHY.

TELEGRAPH OPERATORS IN DEMAND—One superintendent writes: "Can use 25 operators tomorrow." Ladies or gentlemen. Wisconsin School of Telegraphy, Oshkosh, Wis.

LEARN TELEGRAPHY—Positions guaranteed; Young men and women. Write Northwestern Telegraph School, Eau Claire, Wisconsin.

LIGHTNING RODS.

LIGHTNING RODS that are guaranteed protection. $250.00 to find a building burned by lightning with our rods. L. F. Diddie Co., Marshfield, Wis.

TIMOTHY SEED.

TIMOTHY SEED—$4.00 per bu. High purity and germination, first class in every way. Timothy-alsike mixture, $4.50 per bu. Satisfaction or your money back. Henry Field, Shenandoah, Ia.

BLUE RIBBON HAMPSHIRES.

BLUE RIBBON HAMPSHIRES for sale. I have the bunch of young pigs, from six to ten weeks old, priced at $10 each while they last. Write G. Johnson, Oconto Falls, Wis.

GASOLINE TRACTOR.

GASOLINE TRACTOR—12-horse gasoline, portable engine and one two-roll husker. M. B. Murbridge, Waupun, Wis.

CARE OF AUTOMOBILE.

Look Over Car Frequently and Take Nothing For Granted—Avoid Using Too Much Lubricating Oil—By J. Peters.

TAKE care of your auto. It costs too much money to neglect it. Look over your car after every trip and keep the nuts tight. If anything rattles, fix it up. It is so nice riding in a car that does not make any noise. Watch your oil closely. Do not get too much oil in your crank case, as too much oil will cause your engine to carbon up quicker. Most cars have a gauge and the dealer will tell you to keep oil so high. But don't; use about a fourth less and you will find that your engine will work better and not carbon so easily.

Do not drive as though you were on the race track. Your car will last longer. Learn to run your car smoothly. Avoid jumps up and down wherever you can, or slow down. Be sure and grease where the hard oil cups are. Turn one-half once a month or every three weeks.

Watch your wheels. If they become a little loose, take off the cap and turn the nut up until it does not have any side play. Care must be taken not to make them too tight. If this is taken care of, you will not burn out your bearings. Grease front wheels about every 500 miles by simply filling cap with good hard oil and turning them back on next. Oil your springs and keep them oiled. You will find that it rides easier, also you will not be in so much danger of breaking your springs, as they must slide on each other at every little high spot in the road. If they are rusty, take the time to take them apart and rub the rust off with sandpaper. Grease them with a thin coat of hard oil and graphite and your time will be well spent.

Now a few don'ts: Don't race your engine. Don't open your carburetor all at once when starting out. It is hard on gears. Don't pull your car hard with the spark advanced. Don't change gears without taking out your clutch. Don't use your brakes on a slippery road. Use low gear and your car will hold the road better. Don't use too much oil. Don't monkey with your carburetor. Let it alone. If it needs to be looked after, see an expert. Don't run on a flat tire. Follow the maker's instruction and you will get best results. Don't run races and land in the ditch and get killed. Leave that part to the war. Don't use well water in your radiator; use soft water. Don't try to overhaul your motor yourself; let somebody do it that knows how to fit up bearings. It is no easy job. Have your valves looked after twice a year. It will pay you, as you will have more power and less gas. Put new rings on the pistons once a year, for they wear off and you lose compression, meaning loss of power.

Saving Potatoes in the Pit.

Tubers May Be Kept in Good Condition if Drainage Is Provided and Frost Excluded---Cost of Pitting Small.

POTATOES may be successfully stored in pits if provided with good drainage and given sufficient covering to insulate them against external heat and cold. The first consideration is a well-drained site or one which can easily be provided with good drainage.

The depth of the excavation may vary from practically nothing to two feet or more. It is usually not advisable to excavate more than six inches. The shape of the pit should be long and narrow rather than square.

The size is dependent to a certain extent on the quantity to be stored. It is not advisable to store too large a quantity in one pit, just as it is inadvisable to store too large a quantity in a bin or house.

In preparing the pit for the reception of the potatoes it is desirable to place a light layer of straw on the floor to protect the tubers from direct contact with the soil. The tubers should be piled in a ridge of inverted V shape. When piled in this way a greater area of the pile is exposed to the air, and at the same time when covered it sheds rain much better. Before covering the pile, or, in fact, before the potatoes are piled, it is desirable to make some provision for ventilation to take care of the moisture given off in respiration.

The potatoes are best insulated against cold and heat by covering with alternate layers of straw or hay and soil. The first layer should consist of straw, adding only sufficient soil to prevent injury to the tubers from exposure to light or frost. The object is to cool off the tubers and as soon as possible get rid of the moisture resulting from the sweating process. As the weather grows colder more straw should be added and then a layer of soil. With the approach of winter weather another heavy layer of straw should be put on and an additional layer of soil. The two layers of straw and the soil are usually a sufficient protection, but in sections where the winter temperatures drop to 20 degrees or more below zero an extra layer of each will be necessary. Each layer of straw when compacted should be approximately six inches thick. The final layer of soil may be six to eight inches deep, depending upon the amount of rain and snow likely to fall during the storage period.

CROSS SECTION OF POTATO PIT, SHOWS LAYERS OF STRAW AND EARTH.

Ventilation may be provided by means of a wooden flue, the lower end of which extends almost to the bottom of the pit, while the upper end projects well above the covering. The ventilating flue should be provided with a wooden cap to prevent the entrance of rain or snow, but at the same time it should be so constructed that it can be closed entirely during extremely cold weather. If the required attention be given to the preparation and protection of a pit of this sort, one can be reasonably certain that the tubers will keep in almost perfect condition until spring. The objection to the pit is that the potatoes stored therein are not always accessible during the winter.

Cow-Testing Reports.

Association Members Progressive

To the Editor:—Records somewhat lower than last month due to those troublesome pests, the flies. To Henry Harman goes the honor of having the best herd. His 13 cows average 975 pounds of milk and 40.1 pounds of fat. The members of our association are helping to conserve the nation's food supply, and withholding feed from cows which are unable to convert this feed into butterfiat profits. Since the association was first organized April 25th, twenty-four cows have been discovered which were not "doing their bit." Twenty-nine of the farmers in our association believe that it is worth while to weigh milk daily. Of the 34 members of our association all except two have silos, and six have two silos each. Four have milking machines, and several have tractors. Nearly all have automobiles. Most of the members have patent stanchions in their barns and water before their cows. The patriotic cows in our association enrolled in the Army of the Commissary and producing 45 pounds of butterfat or better as their "bit" towards the nation's food supply, covering the month ending August 25th, follow:

Owner, name and breed.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
Henry Harmann			
Pearl, G. G.	1323	3.9	51.9
Nina, G. H.	1386	3.7	51.2
Mary, G. H.	1238	4.1	50.7
Mabel, Native	1180	3.6	42.4
Trixie, G. G.	982	4.2	41.2

FRED PFUEHLER, Official Tester.

Butter Fat Lost in Skim Milk.

To the Editor:—The annual meeting of the Baraboo Cow Testing Association was held at the Y. M. C. A. building, August 2d. The meeting was called to order by W. H. Babcock, secretary of the Sauk County "Y," who helped to organize the association for the coming year. Ernest Kenzleman was elected president and Walter Rodeweld secretary and treasurer. Ernest Henrichs was chosen tester. At present the association has 480 cows under test, and for the coming year the association has been put on the $2 basis. Skim milk has been tested for all members of the association. It was discovered that one farmer was losing 510 pounds of butter a year and at 42 cents a pound this would run up to $214.20. The skim milk was testing .03 when it should test .09. The following is the 45-pound cow list for August:

Owner, name and breed.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
Ernest Hanger			
Grade Holstein	1299	4.2	54.6
Grade Holstein	1056	4.4	46.5
Registered Holstein	1188	3.8	45.1
F. R. Marquardt			
Native	1138	4.5	51.2
Ernest Kunzelman			
Grade Holstein	1255	4.0	50.2
L. L. Case			
Grade Jersey	837	6.0	50.2
W. H. Sherman			
Grade Holstein	1494	3.2	47.8
Ed McGilvra			
Registered Jersey	740	6.3	46.6
Walter Pierce			
Registered Short-horn	1085	4.2	45.6
Howard Briscoe			
Grade Jersey	918	5.0	45.9
F. W. Zantow			
Registered Short-horn	1128	4.0	45.1

ERNEST HENRICHS, Official Tester.

Reedsburg Association.

To the Editor: Three hundred and thirty-six cows were tested in the Reedsburg association, Sauk county, in August, 15 of which made better than 40 pounds of butterfat. Pia Young Susie De Kol again won the honors. A larger number of fall cows are now dry, which accounts for our short list. The condensary paid $2.30 per hundredweight for 4 per cent milk in August and has raised the price for September, which makes milking cows a little less tiresome. Our 45-pound list for August follows:

Owner, name and breed.	Lbs. milk.	P.C. fat.	Lbs. b'fat
E. H. Hoenecke			
Pia, R. H.	1541	4.0	61.6
H. W. Meyer			
Juty, G. H.	1389	3.6	50.0
Gerhart Schuette			
No. 4, G. G.	1119	4.2	47.0
Albert Gluth			
Hazle, G. H.	1063	4.3	45.7
W. J. Paff			
No. 4, G. G.	1032	4.4	45.4

WALLACE J. CUMMINS, Official Tester.

Scandinavia Association.

To the Editor:—The Scandinavian Cow Testing Association completed its four months' work August 31st. Out of 500 cows on test 461 are included in this month's records, with 21 qualifying for the 40-pound list, and seven reaching the 45-pound mark. A grade Guernsey captured the honors this month. The cow is owned by Emil Hotz. She won a race with the champion of the previous three months by producing 1,364 pounds of 4.5 per cent milk, or 61.4 pounds of butterfat. Two carloads have been purchased for our members through the local Farmers' Produce Company. The grade Guernsey herd of Johan Vig had the highest average butterfat production. Eleven cows in this herd averaged 32.4 pounds of butterfat. Four cows were sold as unprofitable and one registered bull replaced a former scrub sire. Pasture is fairly good, but quite a few members are feeding grain. The following is the list of cows which succeeded in reaching 45 pounds the past month:

Name, owner and breed	Age.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
T. J. Trinrud				
Beauty, G. H.	8	978	4.7	46.0
K. B. Knutson				
Queen, G. G.	2	880	5.4	47.5
Otto Gunderson				
Colantha, G. H.	8	1259	4.4	55.4
B. M. Ellingson				
Lynrose, G. H.	5	1302	4.0	52.1
S. D. Shambeau				
Champion, G. H.	4	1147	5.0	57.4
Johan Vig				
Leona, G. G.	6	1064	4.8	51.1
C. A. Hotz				
Daisy, G. G.	5	1364	4.5	61.4

H. R. BREWSTER, Official Tester.

Winnebago County Association.

To the Editor:—The following is the 45-pound cow list for the Winnebago Cow Testing Association for the month ending August 31st:

Owner, name and breed.	Age.	When fresh.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
N. A. Rasmussen					
May Bee, G. G.	5	6-3-17	1170	5.4	63.1

Bessie, G. G.	8	3-20-17	1175	4.3	50.3
Vinland Hope,					
P. B. G.	4	5-10-17	1010	4.7	47.4
Maid, P. B. G.	4	3-15-17	797	5.7	46.0
M. A. Rolph					
Jersey, G. J.	3	2-16-17	648	7.6	48.6

ARTHUR B. ARTHELS, Official Tester.
E. L. BUNSON, Secretary.

Crated Holsteins at Wilson's.

GEO. A. WILSON, a Holstein breeder of Niellsville, Wis., is a son of R. R. Wilson, and men posted on the history of this breed in America know of Mr. Wilson, Sr., as being one of the original breeders. He bought his first bull in 1876 whose number was 295. The first cow was Sylph 162. Geo. A. has 12 cows in milk at this time all good producers, with plenty of scale. The present herd bull is Plainview Sir Johanna Clothilde, a good son of Plainview Johanna Fayne, that has 20 A. R. O. daughters. The grandsire, Sir Johanna Aaggie Fayne, has 25 A. R. O. daughters. The dam has a four-year-old record of 23.19 and has three A. R. O. daughters. This bull is assisted by Duke Pietertje Korndyke Ormsby 8th. His sire's two nearest dams average 33.04 pounds butter in seven days. His dam has a 25.93-pound record and has four 30-pound sisters. He traces to Pietertje Maid Ormsby and Sir Johanna De Kol. Mr. Wilson has some young bulls for sale and they are priced worth the money. It will pay you to communicate with the owner at once.—Adv.

In skimming a hundred pounds of 35 per cent cream, fifteen more pounds of skim milk is kept on the farm than when the same amount of 20 per cent cream is taken. This saving can be accomplished by a turn of the cream screw, and at present feed prices is well worth the effort required. More skim milk on the farms also means more calves raised to furnish meat and milk for all. Milk producers are paid for the butter fat in cream, not for the water and other constituents. This makes it advisable to skim a rich cream, so that as much valuable skim milk as possible may be saved for feeding purposes.

KENDALL'S SPAVIN TREATMENT

The old, reliable remedy you can depend on for Spavin, Curb, Splint, Ringbone or lameness. Thousands have proved it invaluable. Get a bottle from your druggist. Price per bottle $1.6 for $5. "Treatise on the Horse" Free at druggist or from Dr. B. J. KENDALL CO., Enosburg Falls, Vt., U. S. A.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Don't Overlook Grant County, October 2d.

LEST you forget, we call your attention once more to the Poland China sale that will be held in Lancaster, Grant county, Wis., Tuesday, October 2d. This is an important sale, due to the fact that there are so many desirable animals to be sold. We gladly recommend the offering, for we feel confident that attending breeders will not be disappointed. The breeding is, in most part, of the best and most popular big-type breeding. Some of the best boars in the sale will be sired by Big Type Jim 2d, he by Jim Crow, the boar that sired the futurity winners at Milwaukee last fall. Big Ben H., the sire of some, is by the noted boar, Big Ben, the boar that sires the big ones. The good boars sired by Timm Wonder will be attractions. This boar is sired by Big Timm and out of an A Wonder dam. This popular breeding does not need comment. A.'s Big Orange is a Big Orange-bred boar and has sired some ripping good boars. You will be pleased with his get in this sale. Hauk's Orange is a son of A.'s Big Orange. Double Hadley is the good yearling that won first in his class at the Wisconsin State Fair this fall. Taking breeding and individuality into consideration, you cannot help but be impressed with this offering, could you but see it. The boars are big, and have the other good points so necessary in herd-boar material. It is only natural that one should find a good bunch when only the tops are picked from some 12 herds. If you don't want boars, remember they are selling some gilts that we venture to say are better than what you have at home. Try to be present, but, if you can't, send your instructions to T. P. Shreve, in care of Burlie Dobson. Write the latter at Lancaster, Wis., for one of the catalogs. See page 30.—Adv.

M. V. Miller's Poland China Sale.

M. V. MILLER, Lawler, Iowa, will hold his first annual sale of big-type Poland Chinas on September 26th. Forty head, consisting of ten fall boars, 20 spring boars and ten spring gilts make up the offering. A good share of the spring pigs are sired by the herd boar, Timm's Wonder, a splendid son of Fessy's Timm and he is one of the largest, smoothest, heaviest-boned yearling boars in the state and is proving a sire of outstanding merit. A few good herd-boar prospects sired by him are listed in the sale. Other litters are sired by Mouw's Smooth Jumbo, Big Fashion, Miller's Baron and Miller's Chief. Mr. Miller has always purchased the very best breeding stock obtainable and the blood lines of his offering will bear the closest inspection. His pigs are not as well grown as some, but they are in good, thrifty condition and every buyer will be well pleased with his purchase. There will be a great outcome in every pig sold in this sale. A few extra good high-class herd boar prospects are listed. Anyone looking for a good, useful, well-bred Poland China should arrange to attend this sale. If you cannot attend the sale, send a bid to T. P. Shreve, representing The Wisconsin Farmer. See page 30 and write for catalog, mentioning this paper.—Adv.

Waukesha County Guernsey Sale.

THE Waukesha County Guernsey Breeders' Association has announced October 31st and November 1st as the dates for their two-day consignment sale to be held this fall. October 31st will be devoted to the selling of pure-bred males and grade females—cows and heifers. This will be the second time in the history of the association that the public will be offered a chance to purchase some of the choice young pure-bred males of the country, and grade cows that are good producers. All animals will inspected by a committee of three previous to the sale, and only such animals as will be a credit to the sale, consignor and purchaser, will be accepted. It is the desire of the association to hold a sale that will eclipse all other sales held in he past. Animals of special merit and individuality, that have shown that they have good producing qualities, will be put up and sold to the highest bidder. The auctioneers will be R. B. Hellen, Jefferson; J. R. Love, Waukesha; R. L. Benjamin, Waukesha, and C. H. Beaumont, Honey Creek, Wis.—Adv.

J. Fisher & Son, Eastman, Wisconsin.

THE "Crated Hog," J. Fisher & Son's trade-mark, will appear in The Wisconsin Farmer regularly from now on It is hardly necessary for us to say anything about Mr. Fisher as a breeder of Chester Whites, for we doubt if there is any man in the Chester business in the state better known than Mr. Fisher and we are sure that no other breeder sells as many hogs as this pioneer Chester White breeder. The fact that Mr. Fisher has been breeding and selling hogs for over 30 years should be proof that he "gives value received." His spring pigs are all sold, but he has 75 September pigs that will be shipped when three months old. Orders for these pigs are being booked at this time, so if you will want something of this kind later, get your order in now. Write J. Fisher & Son, Box 13, Eastman, Wis., and please say you saw the advertisement in The Wisconsin Farmer. See page 31.—Adv.

Diley With the Big Types.

J. F. DILEY, Rush Lake, Wis., has been breeding Poland Chinas for about twenty years and his name is familiar to all Poland men in the state, for he has been a director of the Poland China Record Association for some time, as well as secretary of the state association until last winter. No breeder in the state, or for that matter the United States, is more honest in his dealings than Mr. Diley. He has sold many hogs in Wisconsin and the Northwest and we have yet to hear of a dissatisfied customer. Many are of the impression that this breeder raises the medium types and this has been true, but he is now in the big-type game with both feet and he sure got away right when he bought Smooth Big Bone A 2d, a son of the boar Sievers sold for $1,125, who in turn is a son of the 1914 Iowa champion, Smooth Big Bone. It would be hard to write a pedigree that contains breeding more in the limelight at the present time. Consistent with this breeding is the individuality—he is a worthy son of a worthy sire. Mr. Diley had some good pigs sired by him at the state fair and while they did not carry enough flesh to show to advantage they had the frame and points that go to make real boars at maturity. Goldengate Columbus is another boar being used. He is by the well-known Columbus Pan and out of a daughter of Goldengate King. Mr. Diley has three boars of this litter for sale. Mr. Peterson, of Kilbourn, is using a litter mate to these boars in his herd. From this mention you can realize that he has the big-type breeding. The sows are equally well bred and the boars being offered are good in every respect. We are glad to recommend this herd. Note the advertisement on this page, and write Mr. Diley for details.—Adv.

Holstein Calves—$25.

WAUKESHA COUNTY, WIS., needs no introduction as a dairy center and there are many high-grade Holstein cows in this county that furnish milk for the cities. The men that own these dairies are in it for the milk production and do not care to raise calves, as they wish to sell all the milk. In view of this fact J. A. Roberts, Oconomowoc, Wis., contracts for these calves and sells them to his customers at $25 each, and he pays the express to your station. These calves come from good, healthy herds, for this is imperative when the owners are selling milk for city consumption. Mr. Roberts has shipped many calves to bankers throughout the country, and they in turn give them to farm boys to promote the dairy industry in their respective districts. Mr. Roberts is an excellent judge of live stock and a pedigree student. He has a wide acquaintance throughout the state, for his services are in demand during the fair season as live stock judge. You cannot help but be interested in his proposition, so write Mr. Roberts immediately. See page 29.—Adv.

Constance of Waupaca.

WE recently spent the day at the Red Oak Farm, located near Waupaca, Wis., and owned by F. R. Constance. Mr. Constance has a good herd of Jersey cattle, and, by the way, they are on the accredited list, and Duroc Jersey hogs. Just at this time he has a good bunch of spring boars that he is offering for sale. They are sired by a good son of Lee's Defender, and he also has a good litter by the Minnesota champion, King Orion. There are some good boars in this litter and they are for sale. We are glad to recommend Mr. Constance, for we know that he will not send you a boar unless he feels that it will give satisfaction. His Durocs must please you or there is no sale made. If you are in need of a Jersey bull, he has them of the very best breeding. Don't forget Constance and write him for details relative to the stock he has for sale. See page 30.—Adv.

Pure-Bred Holstein Sale.

IN THIS issue on page 29 John G. Voss, of Elkhorn, Wis., announces a dispersion sale of pure-bred registered Holstein cattle, to take place at Burlington, Wis., September 25th. There are twenty-one head offered in this sale, including thirteen females, seven bull calves, and one herd bull coming two years old. The cattle are all young with the exception of one nine-year-old twenty-pound cow. This is a good bunch from which to make selections, and the herd is in good condition and the stock of good type. Write to John G. Voss, Elkhorn, Wis., at once and get sale lists and look up the pedigrees on these cattle. Please be sure to mention The Wisconsin Farmer in your letter.—Adv.

How Do You Like This?

HAVE you heard of the Tulloch Farms, Genoa, Wis.? If you have not it's time you get this name fixed in your mind, for there is a bull in this herd that is being mated to wonderful cows and the results should put his herd in the front ranks of the Holstein fraternity. The bull in question is Rag Apple Pontiac, without a doubt one of the best bred sires in the Middle West. He is sired by Rag Apple Korndyke, the $5,000 son of Pontiac Korndyke, and the sire of Rag Apple Korndyke 8th, the $25,000 bull that in turn sired the $53,200 bull calf. How can that be improved on from the sire's side? Now notice the dam's breeding: The dam, Dairy Maid Butter Girl 2d, a 30-pound daughter of King of the Pontiacs, from a 25-pound daughter of Butter Boy 3d, and a 28-pound cow, thus she is not only a 30-pound cow, but carries 62½ per cent the same blood as K. P. Pontiac Lass, the former world's record cow that made 44 pounds. Read the above carefully, for only a few bulls have an equal pedigree. How would you like to have a few cows safe in calf to this good bull? Several females are now being offered for sale bred to Rag Apple Pontiac. Each cow either has an A. R. O. record or is out of an A. R. O. dam. They are right and guaranteed in every way. Even though you get a great line of breeding backed up with the individuality, the prices asked for these females is very reasonable. Write Tulloch Farms, Genoa, Wis., for further information. See page 29.—Adv.

A Very Popular Cross.

IT would seem that the King Pontiac Champion and Korndyke Segis Johanna cross was very popular with the buyers of calves this season. Coming close on the heels of the announcement of the sale of Pabst King Champion, that is the son of Korndyke Segis Johanna to the Agricultural College, of North Dakota, comes the announcement of the sale of Pabst Korndyke Mechthilde Segis to Mr. Bert Millson, Taylor, Wis., who is going to use him for his own pure-bred herd of high-bred cows. He is out of Pabst Queen Mechthilde that has a record of over 25 pounds. She is by King Pontiac Champion that has 60 A. R. O. daughters. This Korndyke Segis Johanna and King Pontiac Champion cross is attracting wide attention from the producers and some record-breaking cows are expected from this line of breeding.—Adv.

JOHN VOGT, JR., breeder of Chester White swine, Glen Haven, Wis., writes: "I am all through threshing and am ready for the fall trade. I have had a good business for the summer. I have thirteen outstanding March boars left and some gilts that weigh 150 pounds and a fine lot of April boars. Now, if you want a good boar or a few gilts, send in your order before you are too late, for I treat a man white. That is my motto." See advertisement on page 31.—Adv.

NEXT WEEK'S SALE PROGRAM

Monday, September 24 — Poland Chinas, E. W. Hendricks, Hazel Green, Wis.

Tuesday, September 25 — Holstein-Friesians, John G. Voss, Elkhorn, Wis.

Wednesday, September 26 — Poland Chinas, M. V. Miller, Lawler, Iowa.

M. V. MILLER'S FIRST ANNUAL SALE
BIG-TYPE POLAND CHINAS
LAWLER, IOWA, SEPTEMBER 26

40 HEAD, 10 fall boars, 20 spring boars, 10 spring gilts. The fall boars are a good useful lot with plenty of size and are sired by Long Jumbo by Black Jumbo. The spring boars are the tops of this year's crop of spring pigs and include 20 great heard boar prospects. A wonderful prospect is by Timm's Wonder and out of Lady Nelson by Long Nelson 2d. There is a good big boar by Big Bob, dam by Big Master. Other litters are by Mouw's Smooth Jumbo, Big Fashion, Miller's Baron, Miller's Chief and about half of them by Timm's Wonder. These pigs have not been crowded, but are in fine growing condition, are bred in the purple and are the right type. If you are interested in good Polands attend this sale and get some bargains. It is our first sale and we do not expect any high prices. **The entire offering is immune.** Write for catalog, mentioning The Wisconsin Farmer. Auctioneers, H. S. Duncan, S. E. Johnson, R. Francis. T. P. Shreve will represent The Wisconsin Farmer. Address

50 BIG-TYPE POLAND CHINA SPRING BOARS AT $40.00 EACH

Double treated, and we record them. **They will be worth $40.00 on the market by the time you are ready for their service. Farrowed in last of February, March and April, the greatest lot of high-class pigs we have ever raised, long and deep bodied, heavy boned, nicely marked and good backs.** They are **from the most noted families of the great breed,** sired by **Giant Jumbo 2d, the 700-lb.** year-old son of **Giant Jumbo,** whose sire was the 1,055-lb. Maid's Halvor 1st; his dam sired by the 1,000-lb. and over Big Bone 2d, his grandam by Mouw's noted Big Jumbo. There is no bigger breeding. Others by **Long Expansion, a 900-lb. two year old,** and **Pawnee Wonder, a 1,000-lb. son of A Wonder.**

The dams are sows weighing from 600 to 800 lbs. and over, of the most intense big-type blood lines. **Buy your boar now and save from $20 to $50.** Boars will be high and scarce this fall.

Send your check right with the order, tell us the kind of a boar you want and we will send him or return your money. Come and see our herd, one of the **greatest in America,** as well as one of the most up-to-date, pure-bred stock breeding establishments.

Showing head-house type of modern Dairy Plant. Main building provides storage for hay and grain and offers a loafing place for cattle. The wings are a modern dairy annex and are furnished in several widths and any desired length. **Price of main barn, $490 to $2,629. Annex, $499 to $1,254.**

Buy the Type of Barn You Need—at WHOLESALE!

Number 227 36 x 60 x 16 $1,429

Number 228 36 x 60 x 18 $1,527

Costs Guaranteed—Less Than Material Bought in the Ordinary Way

A GORDON-VAN TINE BARN increases your land value far more than the barn costs. Practical barns for practical farmers—properly built and ventilated. They are the best designed, best value and sold by the best method. Shipped complete promptly. Safe arrival guaranteed no matter where you live. **Costs guaranteed**—the Gordon-Van Tine **wholesale, "mill-direct-to-farmer"** prices cover everything, and there are **no extras.** They are the kind of barns that help **make the farm pay!**

Barns That Are Bigger PROFIT PRODUCERS

Gordon-Van Tine Barns mean healthy live stock—greater milk production—chores done in less time—warmth, dryness, ventilation—full use of all storage space—stability, permanence, fine appearance. Highest standard grade materials; lowest prices. All material delivered at one time—**no delays.** No middlemen's profits to pay. Remember, our barn architects **specialize on barns all the time;** you get highest type of skilled advice.

You also get Gordon-Van Tine Barns "Ready-Framed," **all framework cut to fit.** Measurements adjusted **ready to nail.** Heights, roof-pitches, etc., all figured for you. Material marked to **correspond with numbered plans.** You can do the erecting work alone **without expert help**—another big saving! Remember, you run no risk dealing with us. Over 100,000 regular customers and 3 strong banks vouch for us.

Send for Book of Barn Plans FREE

This is the greatest and most intensely practical Barn Book ever printed. More than just a catalog. A valuable treatise on barn building. It pictures, describes and prices 654 kinds and sizes modern farm buildings, barns for dairying, mixed farming, cattle feeding, horse barns, bolted plank frame, barns with gable, gambrel, Gothic roofs, head house and dairy annex, lean-to's, round or barrel barns, modified timber frame barns, bank, basement and driveway barns, balloon, or self-supporting roofs, trussed roofs, colony and individual hog houses, granaries, corn cribs, poultry houses, implement sheds, dairy ho uses, outbuildings, steer stalls, litter carriers, cupolas, horse stalls, hay tools, door hangers, etc., etc. **Shows wholesale prices on all. As America's largest lumber dealers,** our volume gets you lowest prices. Selling through **catalog only,** costs are cut to the bone. **Minimum selling expense saves for you.** Every plan **tested and proven by actual building** hundreds of times in all climates.

THE WISCONSIN FARMER

VOL. XLVI. NO. 39. THURSDAY, SEPTEMBER 27, 1917. WHOLE NO. 1861

Beauty and Service Combined

How One Family Worked Out the Farm Home Problem to Their Complete Satisfaction.

FOR the benefit of a number of our readers who have asked for farm-home plans The Wisconsin Farmer presents herewith some facts regarding a new farmhouse which we have visited this summer.

This farm home, as will be noted by the illustrations shown, was just about completed when the writer visited it. It will be possible to make the place much more attractive by cleaning up the lawn and leveling up the driveways.

The illustrations shown herewith were taken on a beef and hog farm in an adjoining state, but the general farm equipment of this home will be of interest to Wisconsin readers, regardless of whether they have been making their profits from dairying, grain farming, beef cattle, hogs or along other lines.

To begin with, the cost of the structure shown in the accompanying illustration was a little in excess of $8,000. With the rise in prices of building materials since this farm home was contracted for, it is likely that the cost may be increased somewhat. The owner of this beautiful new home was forced to build on account of the fact that his former comfortable home was destroyed by fire. Under the circumstances it was natural that he should be interested in making the new home as nearly fireproof as practicable. To this end he put on a tile roof, which, of course, added considerably to the expense. The exterior walls are stucco on metal lath, and danger of fire catching from sparks has thus been reduced to a minimum. The building material selected also gives the exterior of the house a substantial and solid appearance.

Architects today are getting away from the old-fashioned porch running along one side or two sides of the farmhouse. At first glance many of us old-timers will think that the porch has been eliminated from this farm home, and if this was the case, we would certainly be sorry to see it. For we cannot forget the many happy evenings and Sundays we have spent sitting in the shade of an old vine-covered porch. But everything which the old-fashioned porch offered is also provided for in the building which we are discussing. However, instead of calling it a porch in this new, modern farm home, the architect speaks of a solarium, which, in common language, means sun parlor. This sun parlor will be noticed in the accompanying illustration at the east side of the house. It is surrounded by north, east and south windows and covered with a tile roof, which harmonizes in appearance with the roof on the main part of the house. This house faces the north and the sun parlor is completely encased with windows, which may be replaced with screens in the summertime. The screens are made to cover the entire window opening and not just one-half, as is the case with the other windows in the house. It will be seen that this large sun parlor extending almost the full length of the east side of the house and ten feet in depth provides a delightful outdoor living room. And mother and the girls will easily recognize the possibility of furnishing this sun parlor with rugs, couches and settees, so that the whole family may get enjoyment out of it. But in the winter this sun parlor may be closed in by windows and it may be heated the same as any other room in the house. In this particular case, the entire house is heated by a hot-water system, and when the windows are put on in this sun parlor, the temperature may be brought up to any degree. On sunshiny days in the winter, "Old Sol" through the windows on the east and south floods this enclosed porch with his brightest, warmest rays, and here is where we get the decided advantage over the old-fashioned open porch.

There are many interesting features about this new modern home. It is not altogether likely that many of our readers will desire a house just like it, but they may get some good ideas from studying the accompanying diagrams, showing the floor plans of the cellar, the first floor and the second floor, and also from some of the built-in features. The house would look quite barren in front and at the west side if there were nothing whatever in the way of a porch or entrance way. To obviate this, a modern entrance has been provided on the front (north side) and a driveway entrance at the west. Entrance to the main floor from the front is by way of a cement terrace, extending along the front side of the house. This is illustrated by one of the accompanying pictures. From this terrace one enters a covered porch—a place where our visitors may shake off the snows of winter from their feet. The real purpose of this small porch, however, is ornamental rather than for service, as there is a commodious vestibule just inside. To the left as one enters the house there has been provided a spacious built-in closet for outer garments. Encased in the door of this closet is a full-length plate-glass mirror which gives the ladies a splendid opportunity to examine their attire and headdress before leaving the house. This is only an instance of the careful consideration given by the architect in his effort to provide convenience for this modern farm home.

The portico at the east of the house is a covering for the automobile driveway and is a protection from weather in going in and out of vehicles coming to and from the house. This portico is also ornamental, and, like the front porch, has a tile roof. To those who are in search of convenience and comfort as well as elegance, this plan of a farm home should be especially attractive. The house will always be warm, not only because it is substantially built, but because it is equipped with a fine heating system, hot-water radiation being provided for in every room. It is also equipped with an electric lighting system which furnishes light for the house and barns and also heat for the electric iron

(Concluded on page 6.)

A LITTLE DIFFERENT FROM THE OLD-FASHIONED FARM HOME, BUT IT HAS ALL THE COMFORTS AND MORE.

CURRENT EVENTS

BY a vote of twenty-three to one the senate of Argentina declared for the breaking off of relations with Germany. As soon as the lower house takes similar action—and this is almost a certainty—another nation will be added to the long list of Germany's avowed enemies. Germany has endeavored to remain on friendly terms with Argentina, but to no avail. It was only a fortnight or so ago that she apologized for the sinking of an Argentine merchant ship, saying that it was a mistake, monetary amends would be made and that German submarine commanders had been ordered to respect the Argentine flag henceforth. A few days later Secretary of State Lansing made public the official messages which prove that the German minister to Argentina had used the Swedish cable facilities to instruct Berlin to sink Argentine ships, without leaving a single trace of them, and calling the Argentine minister of foreign affairs a "notorious ass." The duplicity of Germany and the connivance of Sweden were thus disclosed and Argentina could hardly keep neutral any longer. Accordingly, the declaration of war. Sweden has not yet squared itself and a break between Argentina, the United States and Sweden is not out of the question. All over the world there is coming to be a realization of the fact that the desperate German government will stop at nothing and the lines are being drawn still closer. Germany and Austria are now at war with fully a score of countries the world over, while the only countries which have allied themselves with the Teutonic nations, since the outbreak of the war, are Turkey and Bulgaria, both minor ones.

APPROXIMATELY one-half of the 687,000 men of the new conscript or national army have now reached their camps and are ready to begin training. Last week saw 40 per cent of the entire number following the first lots to the cantonments, special trains running all over the country to get the conscripted men to their proper places. There was no confusion, but little delay and wonderfully little grumbling and complaining, all things considered. The men of the new army are cheerful, they are well housed, well fed and well officered, and they are ready to do whatever Uncle Sam demands of them. In a statement the war department says the enormous task of obtaining equipment and supplies for the army is moving satisfactorily. Some of the men of the national army may be only partially equipped for some time after they are mobilized and no attempt will be made to furnish them with full war equipment until the eve of their departure for Europe. Some civilian clothing, such as overcoats, will have to be used for a time, as the clothing industry has not yet caught up with its work. Some of the conscripts will be used to fill out the quotas in the national guard or former state troops, the great majority, however, to be drilled as separate units in the sixteen huge army camps prepared for them within the last few weeks. By next spring the United States will have almost 2,000,000 trained men in its army and will be ready to make a showing in the field.

THAT there can be no peace until the last German has been driven from the soil of France and outraged Belgium, was the ringing declaration of Elihu Root, former secretary of state, in a public address at Chicago last week. Mr. Root was the head of the American commission which visited Russia recently to pledge American assistance to the armies and government of that nation. "The men who are speaking, writing and printing arguments against the war now and against everything that is being done to carry on the war are rendering more effective service to Germany than they ever could render in the field with arms in their hands," declared the former secretary of state, amidst cheers. "It is impossible to resist the conclusion that the greater part of them are at heart traitors to the United States. As time goes on and the character of these acts becomes more and more clearly manifest, all who continue to associate with them must come under the same condemnation." Samuel Gompers, America's chief labor exponent, occupied the same platform with Mr. Root and pledged labor's support to carry the war through to the end.

RETAIL coal prices will be announced from Washington, for all sections of the country, this week or next. Some time ago the president fixed the prices which can be charged for coal at the mine. Since then the fuel administration has been working on a schedule which the retailers can charge, varying according to local labor conditions, distance to be hauled and so on. In the meantime, continued export of coal to Canada in large amounts through great lakes ports at the expense of the northwestern states will be checked immediately by the fuel administration. Dr. H. A. Garfield, the fuel administrator, requested the exports administrative board to permit no more coal to be shipped out of the country except under licenses and asked that no licenses be granted unless they are approved by the fuel administration. Coal has been moving toward lake ports in large quantities for some weeks, under an order issued by Robert S. Lovett, the government's director of priority of transportation, directing that fuel shipments be given preference over other freight. The purpose of the order was to supply the Northwest with an abundance of coal before the winter season closes shipping on the lakes. Complaints coming to Dr. Garfield that much of the coal going to the lakes was not reaching the northwestern states prompted an investigation which revealed that a great part of it was reaching Canada. While Canada has been piling up a reserve store of coal the Northwest is threatened with a shortage this winter which, it is declared, may force industries to close down.

SPEAKING before the conference of consumers and producers, which was held at St. Paul, under the auspices of the National Nonpartisan League, United States Senator A. J. Gronna, of North Dakota told of unsuccessful efforts of certain members of congress to have included in the national food bill the product of other industries with those of the farm. The only tangible result achieved by the food bill thus far, he said, was the fixing of the price of wheat. It was an injustice, he asserted, to have singled out the farming industry for control and regulation. "When the food bill was before the agricultural committee of the senate," Senator Gronna said, "steel, iron, copper and all other products were placed in it for regulation. We had oil included, and poor old John D. might have had to go hungry, so we had to take oil out. We had powder in the bill, but the du Pont Powder Company, with its $80,000,000 of war profits, had to be taken out. What I cannot understand is why the farming industry should be the only one singled out for this sacrifice of war." Senator Borah, of Idaho, and Representative Baer, of North Dakota, were other prominent speakers.

HERBERT C. HOOVER, the food administrator, speaking on the world food situation, declared that starvation would win the war and the side best able to organize its resources for food production and conservation would come out victor. "The food situation of America and the allies is such," said Mr. Hoover, "that the neutral countries of northern Europe cannot hope to get food from the United States unless they expect to furnish equivalent service in other directions to the common pool against Germany. Food has, since the war began, gradually assumed a larger place in the economics, the statesmanship and the strategy of warfare. The allies are blockading the food from Germany and the surrounding neutrals are under great pressure to export their supplies both ways. The Germans are trying to starve the allies by sinking the food ships and all governments are faced with reduction of consumption, stimulation of production, control of prices and readjustment of wages. The winning of the war is largely a problem of who can organize this weapon."

MEN summoned for service under the draft and who have been denied discharge by local district boards because of dependents, have still a means of appeal where they can show there has been error or misapplication of the law in their cases. On such a showing, governors of the states to whom appeal may be taken are authorized to request local boards to reopen cases. There is no appeal to the president, however, except where exemption has been sought on the ground of industrial employment and denied by the district board. The rulings communicated to state officials make this clear in the following language: "The only cases in which there is a right to appeal to the president are cases of claims for exemption or discharge based upon engagement in industry or agriculture. Further than this it is impossible to go. If any of the millions of individual cases within the original jurisdiction of local boards are to be considered in Washington, then all ought to be open to consideration. This is impossible. Therefore, administrative authority will not address itself to particular cases in the jurisdiction of local boards. The president has directed the war department to decline to discuss cases pending before local or district boards or entertain any communications, suggestions or statements concerning the appeal for exemption."

THE $7,000,000,000 war deficiency bill carrying huge appropriations for the army, fortifications and shipping board, passed the lower house of congress last week by an unanimous vote. The bill, the largest supply measure in the country's history, now goes to the senate where prompt action is expected. It directly appropriates $4,830,000,000 and authorizes contracts for $2,314,000,000 additional. The big items include: Shipping board, $635,000,000 cash, as part of the board's construction program limited to an aggregate of $1,749,000,000; fortifications, $1,495,000,000 appropriated and contracts authorized for $975,000,000 more; naval emergency fund, $100,000,000; war department emegency fund, $100,000,000; construction of additional torpedo boat destroyers, $225,000,000, to start a $350,000,000 program. Transportation of the army and its supplies, $350,000,000; army subsistence, $175,000,000; quartermaster's supplies $100,000,000; clothing and camp equipage, $350,000,000; horses, $30,000,000; barracks and quarters, $49,000,000; medical department, $100,000,000; engineer department, $105,000,000; ordinance stores ammunition, $39,520,000.

Get Stumps Out
The CHEAPEST Way

Explosives are recommended by the U. S. Department of Agriculture and by the leading State Experiment Stations as the best means of removing the stumps. Blast out your stumps—turn that idle land into money. You can do the work yourself easily and quickly with

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

Bore a hole, put in the charge, light a fuse, and the work is *done!* Atlas Farm Powder blows the stump entirely out of the ground, splitting it up so it can be handled easily. Any one may use it without experience by following directions. Atlas Farm Powder costs little and works wonders in clearing land of stumps and boulders, breaking up subsoil, tree planting, ditching and draining. It saves labor, time and money.

Mail Coupon for Free Book

Our big, illustrated book "Better Farming" tells how to improve the fertility of your farm by breaking up the subsoil—how to make ditches, clear land, make holes for tree planting. It tells how any farmer can save time and save money by using Atlas Farm Powder—The Safest Explosive.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

Law Questions.

Divorce—Custody of Children.

A Wisconsin Subscriber.—A man got a divorce from his wife in Wisconsin, and the lawyers and judge of the court gave the custody of their children to the wife. Can the man after a few years take the children away from the wife?

Answer.—The man could not take the children away from the wife unless he would get an order from the court permitting him to do so, and such order would be difficult to obtain.

Division of Wife's Estate.

A Subscriber, Sisseton, S. D.—A was a widower and had three children and he married B, and they have two children. A owned two lots and B owned a house and lot. They traded all this property for a farm in Iowa, the deed being made to B. B died without making a will. (1) Can the three children of A by his first wife get my share in said farm? (2) How will said farm be divided, according to the laws of Iowa?

Answer.—(1) They cannot, being not of kin to B. (2) A would get one-third of said farm and the two children of A and B would get the other two-thirds divided equally between them.

Hired Man's Wages.

A Subscriber, Stiles, Wis.—On April 9th I hired a man to work for me, and agreed to pay him $35 per month provided he worked for six months. He worked three months and then quit without any good reason, when I was away from home, and went to work for a neighbor at higher wages, when the hay harvest was about to begin. Can he compel me to pay him $35 per month for the time he actually worked?

Answer.—He cannot compel you to pay $35 per month, as he violated his contract, but he can compel you to pay whatever his work was actually worth, deducting therefrom what you were damaged by his quitting work.

Obstructing Watercourse.

A Subscriber, Gillett, Wis.—My neighbor owns a farm adjoining mine, and on lower ground. A watercourse runs through both farms. My neighbor closed up this watercourse with sand and stone, which causes the water to back up on my farm, and it has already drowned out part of two ten-acre fields. My farm is on the line between two towns and I have applied to the officials of both towns for relief, but they will not do anything. What can I do about it by law?

Answer.—Neither of the towns has any power or authority in the matter. You can bring a suit for damages against your neighbor, also asking for an injunction preventing your neighbor from obstructing the watercourse. This is your only legal remedy. If you can prove in court the facts stated by you the court will give you the proper relief.

Settling With Heir.

A Subscriber, Edwardsville, Ill.—My husband was one of ten heirs, inheriting a farm of 120 acres in Missouri. When his parent, who owned the farm, died many years ago, the farm was valued at $2,000. My husband bought out all the other heirs but two—for the price of $50 per share. One of the two heirs has left the country and has not been heard of for many years. The other is a nephew, and a year ago he demanded $100 for his share, but he now asks $200 for it, claiming that real estate has advanced in price. We think his price is too high. Five years ago tenants burned down the house by an overheated stovepipe and no house has since been built. My husband has paid all taxes for twelve years and expenses of fences. If he does not buy the share of the nephew, can the nephew bring suit and have the farm sold to get his share? What would you advise us to do?

Answer.—The nephew can bring a suit in the circuit court of the county in Missouri where the land is located for partition of the land. As his share is only one-tenth, the land probaby could not be divided so as to set off his share, and in such case the court would order all the land sold and then divide the proceeds, giving the nephew his share in money. Such a suit would be expensive to your husband, so it would be better to pay the nephew his price, rather than have a lawsuit.

The Wisconsin Farmer

THURSDAY, SEPTEMBER 27, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

FARMERS APPEAL TO THE PRESIDENT.

I AM advised that fully 1,000 conscription cases have been appealed to the president, many of them involving the question of farm-labor exemption, many of them filed by grain-belt farmers. I await the adjudication of these cases with the greatest interest. There is no question in my mind but that several of our district exemption boards here in the grain belt have failed completely to grasp the agricultural situation as it exists today, when nothing is more important than that our food production should "be fostered, encouraged and inflated," as Secretary of War Baker admirably expresses it. Exemption claims of farmers have been turned down time after time, apparently regardless of the effect upon crops this year and next. Men whom I confidently believed to be big enough to grasp the situation in its entirety, whom I felt sure would solve the problem of the hour in such a manner that agricultural production would be stimulated instead of retarded, have either displayed indifference to the nation's needs or have woefully failed to see where justice and the best interests of all concerned depend. I am glad, indeed, that there remains the right of appeal from the decisions of these boards to the president himself; I sincerely hope he will give every case the careful, prayerful consideration it deserves, so that justice may be done to all.

I am advised that the farmers whose claims for exemption have been denied have been ordered to report at the army camps while their appeals are pending with the president. However, in most cases the district exemption boards have been fair enough to postpone the drafting of farmers until the last contingent is ordered to report, enabling them to continue the all-important work of gathering corn, sowing winter wheat and completing the crop work of the year. The last of October will probably see these men called to the colors, but that is much better than if they had been ordered to the cantonments last week, as fully one-half of the entire number in the nation was. The president has announced that he will not allow any political "pull" to influence him in deciding these appeal cases, that they will be decided on the affidavits and evidence actually introduced before the district boards. This means that the farmer stands a fair show with the town man and that every case will be decided on its merits.

In this connection I want to congratulate Representative Shouse, of Kansas, on his determined efforts to secure the exemption of farmers as a whole. He has written exceedingly strong letters to President Wilson and Secretary of War Baker and has given the matter the widest publicity, urging at all times that the exemption of farm labor is most important. I regret to find that neither the president nor the secretary of war agrees wholly with Representative Shouse, witness a portion of the war secretary's last letter to him, as follows:

> It is self-evident that the draft must, to some extent, interfere with all industry, since to withdraw from the labor supply of the nation something more than a million men is bound to create some interference. In an agricultural community this interference will be felt by agriculture. The extent to which it will be felt is to be determined by the district board, and upon this determination the decision in individual cases must, to some extent, rest. The district board of Kansas has, no doubt, made this survey. Using its just judgment and discretion it has addressed itself to individual cases.
>
> I have no doubt that, in refusing discharges in some cases, it has interfered to some extent with agriculture, but I equally have no doubt that this interference was necessary. No one could consistently urge that we should make a blanket exemption of persons engaged in agriculture. To do so would simply double, treble or quadruple the tax on the labor supply of other industries. We must adjust, but we cannot protect absolutely. I venture to say, however, that the tax is not creating a general situation of very great hardship. Figured out in mathematical terms, it results in the taking of perhaps one man out of thirty-eight men engaged in agriculture. Often that one man is able to present his case of individual hardship in such a way that the conclusion may be drawn, on superficial examination, that the same condition exists in general and that agriculture is so affected in general. I cannot believe that this conclusion should be drawn.

I sincerely hope and earnestly trust that the president will decide the appeals of farmers in such a manner that our production will not suffer and that the district boards will see the error of their ways and change their methods in the future. We may not be able to win the war without an army in the field; assuredly, we cannot win it without an army in the furrow and feed lot.

THE RELICS OF YESTERDAY.

I HAVE visited several of our grain-belt state fairs the last few weeks. All have their points of excellence and superiority. I was impressed at Des Moines, for instance, by the patriotic display, the marching of thousands of Iowa troops, the flying flags, the eagerness of "the boys" to get to the front. At Hamline the thing which impressed me most was the movement to teach the people of Minnesota to conserve their food supply, to use substitutes for wheat and meat, to make every particle of food go to the very limit. At Lincoln I marveled at the progress Nebraska is making in the production of foodstuffs, particularly in the vegetable line, and at its advance as one of our leading hog states. At Milwaukee I found new evidence of Wisconsin's supremacy as a butter and cheese-producing state and I applauded the work of the boys and girls in the field, feed lot and kitchen; marvelous to one who has not kept posted on the progress of our junior farmers. At Springfield I found many things of interest, but the thing which riveted my attention most was not the splendid exhibit of stock or of grain, but the exhibit of those things which marked the day when Illinois was young, when it was newly snatched from forest and wilderness, evidence more eloquent than any words could possibly be of the splendid advance that magnificent state has made in a single generation.

I do not believe that it is well to live in the past too much. I believe the present is the golden age. At the same time, I think we make a serious, a costly, mistake if we close our eyes and stop our ears to the story of the days gone by. I am old in years, perhaps, for the three score years and ten of the prophets will soon be mine; I hope, however, to be always young in heart and spirit. It is this combination of yesterday with today which I believe makes the spirit of the grain belt, the spirit that nothing can conquer or daunt, the spirit that makes us attempt even the impossible. We have the advantage of seeing how much has been accomplished in the lifetime of one man, it cheers us up to attempt still greater things, we know that what has been done can be done again, and so we strive onward and upward and attain pinnacles which are beyond the reach of other men.

This was the thought which came to me as I spent hour after hour inspecting the exhibit of pioneer relics at the Illinois State Fair a fortnight ago. There was the fine old woman working the spinning wheel, just as my mother worked it a half century ago, her dear voice lifting up the words of "Greenland" as she whirled the wheel and spun the wool with which to clothe her large family. There were the hundred and one things which I had seen, or used, in my own home or the home of our neighbors, things which our fathers had brought across the Alleghenies and the Ohio to help them hew a foothold in the new country, which now, to some of us, seems old. I cannot name them all, a few will have to do: a shaving horse of 1825, an ox yoke of 1859, a grain cradle of 1840, a loom made in 1820, a pair of hames made in 1835, a flail ninety years old, a sausage grinder of 1840 and a sausage cutter of 1830, a plow used in 1820 which took six yoke of oxen to pull, a well sweep used for fifty-five years by a pioneer now eighty-two years old, the tar bucket that hung under the prairie schooner, torches used in Lincoln's presidential campaign of 1860, and so on and on; worn and discolored by time now, but eloquent mementoes of a splendid day when men fought the good fight to make the grain belt great, when women cheered them on with their kisses and prayers, and when children vowed to take up their father's work and never to stop until this country was, in very truth, the land of the free and the brave.

It is well that our state fairs should show our horses and our hogs, our wheat and our corn, our cakes and our babies, our automobiles and our tractors. These are the things of today. But do not forget the things of yesterday, from which these material blessings of today sprang. Let us honor the pioneers while they are still with us; let us display to the youth of today the things with which our fathers and their fathers wrought. The mementoes of the early days of the last century do indeed have a place in the state fairs of today; they are memories to the old, inspirations to the young.

THE PRICE OF COAL.

I AM in receipt of a letter from a good friend and subscriber, Mr. A. M. Wilsey, of Sheldon, Iowa, which brings up a subject of vital importance just now, one which I believe we may well afford to discuss together. That subject is the price of coal. Let Mr. Wilsey introduce the matter with his letter to me:

> Dear Mr. Pierce:—I notice in your paper of September 12th a cartoon showing Uncle Sam with gun in hand with which he has just shot and brought down a bird labeled "Coal Prices." There are many people here who have bought lately and have paid $12 and $12.50 for hard coal and from $8.50 to $9 for soft coal, who would like to have you explain the meaning of that cartoon.

Perhaps if I explain in the beginning that our cartoon sort of anticipated the situation we will make a fairer start. Coal prices have not been reduced, to the consumer, as yet, but there is good evidence that they will be reduced within a few days. In fact, Dr. Garfield, who has been appointed by the president to attend to this matter and who is a son of the late President Garfield, announced this very week that retail prices for coal will be fixed for every community in the country within the next fortnight. It is good newspapering to print the news first; hence our cartoon, shortly after the president had fixed the price of coal at the mines, but before the actual price to the consumer had been announced.

It will not be very long now before we start up the range, fireplace or furnace and prepare for the coming of grim winter. The coal situation therefore becomes important. We will do well if we are able to secure a sufficient supply this winter, at almost any price, in my opinion. There are unusual demands. For instance, here in the grain belt we have four army camps or cantonments, each one consisting of from 2,000 to 3,000 separate buildings, housing from 30,000 to 45,000 men. These must all be heated, while, at the same time, the homes from which these soldiers came must continue to be heated as usual, for most of the men left families behind them. This increases the demand. Factories are running night and day to supply army needs; more coal is needed. Our train service must remain unimpaired, if the troops and their supplies are to be moved about the country as the exigencies of the occasion demand. Never was there a time when the conservation of coal was so important. Never was there a time when the wood lot on the farm was worth so much. We must save coal and wood this winter if we are to win this war; fuel is every bit as important as food and clothing.

This, of course, does not justify the coal dealers in raising prices, as so many have done. Many of them are guilty of such unpatriotic conduct as to subject them to the deepest censure. When they take advantage of the people's needs and of an exceptional situation to raise prices arbitrarily they are guilty of the most reprehensible practices and should be condemned by all men. But there is another side to the question; the coal dealers are not altogether to blame. I asked one of them to state his side of the case and he did so, as follows:

> I am not a prophet nor the son of a prophet, and am not in a position to say whether coal will be higher in price than it is now. I know this, however, that the price at the mines of Illinois, Kentucky and Pennsylvania coal has advanced. The price of Iowa coal at the mines has advanced about 25 per cent. The increase in cost of Iowa coal is due largely to the fact that last April the miners were given an increase of 20 to 25 per cent. Patrons of eastern coal have discontinued its use on account of the high price, and are now buying Iowa coal and this has created a new demand for Iowa coal and you will readily see what this will mean if we have an early cold spell.

Now, the relief for the situation comes just here: the government is going to license coal dealers and fix a price at which coal can be sold. No dealer can sell a pound of coal who does not have a government license; nor can he charge a cent more than the government allows. But the government does not propose to establish an arbitrary price for the entire country. It is investigating local conditions all over the grain belt; the cost of mining and hauling, the probable supply of coal in the mines, and so on. When the government price is fixed it will be based on all these things.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES.

BY JAMES M. PIERCE

JAMES ATKINSON, EDITOR-IN-CHIEF

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter.

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 291 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address THE WISCONSIN FARMER, Madison, Wisconsin

Wisconsin Whole Milk Prices.

Those who felt that milk at $2.30 per hundred pounds had touched a high spot will begin to think that there "is no limit" now that they have a look at the demands of producers for the product this winter. The Madison or Milwaukee resident who found milk raised to 10 cents a quart, and the old 8-cent rate abolished, thought he was coming into an era of high prices for sure. Reports from Dane county producers and also from other sections indicate that $3.54 is to be the price asked by producers, and this is more than $1 a hundred pounds higher than the maximum for the past few months.

The producer feels that he is justified. He looks at the price of hay, of grain and of labor, and sees these things increased in greater proportion than the increase which he asks in the price of whole milk. He feels that in the readjustment, due to changing conditions, he is not getting any the best of it.

Furthermore, the producer finds that the general world scarcity of foods affects the market for milk. If Wisconsin dairymen and farmers were producing twice as much milk as they are today they could still get a high price for the milk. Milk is so valuable as a food that it naturally commands a high price. It is a substitute for meat and meat production has fallen off to an alarming degree. Every day we read about the millions, even billions of dollars which are appropriated by congress to help win the war. If we think of this money as an appropriation for guns and bullets alone, we are entirely mistaken. Purchase of food and clothing supplies will use up a big percentage of these vast sums. Our own people are not only clamoring for food, but more than 100,000,000 European allies and neutrals also want us to help feed them.

Shall we howl at the farmer or dairyman who expects an advance in the products of his farm proportionate to the advances in cost of production and in cost of things which the farmer is obliged to buy? Do those who rail at 14-cent milk realize the difference in the price of hay, grain and labor, from what it was in 1913, the first year preceding the war? Do they also stop to consider that milk is not advancing in price, its value as a food product and the cost of producing it considered, more than are other food products and not nearly so much as the advance in price of many manufactured products? Shall we say that the producer of raw materials, such as milk, shall be subject to all the advances which affect his business, and be allowed no fair advance on his own produce, so that he may keep his profits up to a reasonable level?

Dairymen are paying $50 to $100 a month for help which only a few years ago cost $20 to $40 per month. And a dairy farm cannot be run without competent labor. Some predict that hay may be worth as high as $30 a ton this winter. Concentrated feeds have doubled in price since the war started. Where is the farmer going to land if he has to pay the boosts in costs and fails to keep pace with them on the other side of his ledger?

Many dairymen would like to furnish good milk for city deliveries at 5 cents a quart if they could do so and make a profit on it. A recent investigation in Madison shows that it costs more money than that to produce milk and place it in the hands of the local distributor. As to the costs of distribution the farmer cannot be expected to worry. But the cost of production, and his own profit he must take into consideration, hence he asks, and we believe he should receive, $3.54 for standard test whole milk this winter.

The condition of the market is such that farmers are not obliged to interest themselves in local distribution. Condenseries have sprung up all over Wisconsin in the milk-producing centers. These condenseries will take all the whole milk they can get and they will pay the prices asked. As one dealer expresses it, it is in the power of the local producer to take the butter and cream off the local markets. Condensing factories are now making arrangements to call at farms and get milk, and the charge for this service, which will help solve the farmer's labor problem, is very reasonable. The consumers of milk in local communities are compelled to realize that they are up against a condition and not a theory. Injustice on the part of the farmer can only be shown by proof that the farmers are accruing exorbitant profits under the prices asked. The men who produce milk are not afraid of any such investigation. Many of them would have more backbone to stand up for good prices if they really knew just what it costs them to produce whole milk.

Think Before You Slaughter a Cow.

From a London agricultural weekly we learn that 2,000,000 acres of pasture land in England and Scotland are to be plowed up and put into grain. This can have but one meaning and that is that the number of live stock has become so depleted that pasture fails to have its former value in the general work of producing food. So long as good pastures sustain dairy cattle or beef cattle, it is doing its part toward producing food, but when live stock have been killed to meet food emergencies, then the logical thing to do is to plow up the pastures and make the soil produce grain. There is no room for idle acres at this time in England, and the continuance of the war for any length of time will place the United States on the same intensive basis so far as the production of food is concerned.

This report as it affects conditions in England and Scotland only reflects a general condition in the European countries engaged in war. We have previously called attention to the fact that 120,000,000 head of live stock have been destroyed since the war started. This indicates that millions of acres formerly pasture land are available for grain and vegetable crops.

But who is to fill the breach caused by this tremendous loss in live stock? The world must and does look to the American continent to make up, in so far as it may be possible, the shortage created by the general slaughter of stock in Europe. When we consider that we are failing absolutely to make up this shortage, but on the contrary are running rapidly toward a shortage of our own scarcely less appalling, the importance of conserving our live stock resources and producing more is apparent. It is said that in seven months we have slaughtered 26 per cent of our dairy cattle. High prices offered for meat and high prices charged for feed have been responsible. But not a single good producing dairy cow, that can make a profit, even though small, either by milk production or producing calves, should be killed in this country—certainly not while we are facing the crisis which confronts our country today. To kill a good profitable dairy cow is little short of a crime against our government. To kill an ordinary cow, when she has the capacity for producing as much or more food every year as her carcass is worth is wrong—not only a wrong against the government and the people who must eat, but a wrong policy for the owner of the cow. One of our best agricultural authorities strongly objects even to the slaughter of the unprofitable cows, on the grounds that a cow which does not give a great deal of milk may be mated with a good bull and produce a good calf which may have transmitted to her, through the sire, good production qualities. The Wisconsin Farmer has always advised that the "boarders" should be gotten off the farm, but we believe that this is a time when even ordinary cows should be kept in the herd, and that it should be only in the case of most unusually poor scrubs that the animals should be slaughtered for beef, and the possibility of raising more calves lost forever.

No one should understand that we depreciate the value of cow testing, or that we would recommend for an instant that cows be kept without regard to their producing qualities. It is well to know the record of every cow. It helps to establish her value. Study the effects of feeds on production of individuals, but think well before any cow which will pay her way, and perhaps a little more, is consigned to the block.

Cost of Clearing Wisconsin Stumps.

The Wisconsin Farmer is indebted to several prominent men, whose names we do not need to mention, for information on the cost of clearing stumps. One of these gentlemen, who has had considerable experience along this line, writes as follows:

Inasmuch as there are no two 40 acres of land alike, it is pretty hard to answer definitely the question of land clearing, for instance, on hardwood land that is five or six years old. This would depend entirely on how well the particular piece of land had been pastured. If the land had been well pastured, so as to keep the sprouts down, the stumps ought to be pretty well rotted in five or six years, and the cost of clearing very small—we will say $7.00 to $10.00 per acre.

If the land was not well pastured, the stumps would not rot so fast and the cost would probably range from $13.00 to $15.00 per acre. This is all assuming, of course, that the land was seeded down when the timber was cut off and the brush cut down.

Pine, as you know, does not rot, but if well pastured, the stock tramps around the roots and I have seen whole fields where the stumps are all practically on top of the ground. This is particularly true of clay soil as on clay soil there are no tap roots to the timber, the roots being very near the surface of the land and heaving out more or less every spring when the frost is coming out.

We have cleared pine land here in Clark county at costs varying from $15.00 to $30 per acre, depending on the number of stumps to the acre. This work was done several years ago when the tackle was crude compared to the modern $150.00 stump puller, and as you know, our pine stumps here stood pretty thick—far above the average.

I have maintained that it does not cost the settler a nickel to clear good hardwood land. The timber left on the land (cordwood, bolts, etc.) will net the settler a profit in addition to the cost of removal—in most cases enough to buy clover and timothy with which to seed the land. The hay cut from the land, or the value of pasturage, will more than offset the interest on the investment, so it is a matter of time rather than dollars and cents in clearing hardwood land.

All of the land being cleared here is done by the settler in a small way. That is, he pulls out a stump or two whenever he has the time; consequently he would not be able to give any reliable information as to costs, doing the work in this way. In the localities we are now farming, the timber is practically all hardwood, and settlers are not bothered with pine stumps to any extent.

In our next issue we will quote from others who have had practical experience in land-clearing costs in the Upper Wisconsin counties. Doubtless, before many weeks have passed it will be possible to get definite land-clearing costs from the college of agriculture, as a result of the work done this summer and fall by the Land-Clearing Special, under direction of Prof. F. M. White.

Organize Bull Associations

A dairyman who owns fifty or sixty cows, if he gets a bull worth the money, can better afford to pay $800 to $1,000 than $150 to $200. The high-priced bull will improve the herd so much more than the cheaper animal that he will be the cheaper of the two in the end. The man with five to ten cows, however, can hardly afford to pay a thousand dollars for a bull, first, because, as a rule, he hasn't the money to invest in such an expensive animal; and, second, because at the end of two years when his heifers are ready to be bred, the bull must be disposed of and another one purchased to take his place, and when it comes to selling a bull that has been in use for two years or more by a small farmer it is impossible to sell the animal at anything like what he is worth.

On the other hand, a bull that has been in service for two years and has demonstrated himself to be a good breeder and an animal capable of transmitting his good qualities is more valuable than a younger, untried bull, but the public will not pay the price for him. The man who is willing to pay for such a bull doesn't know that the small five or ten-cow man has such an animal and the result is that high-priced bulls are practically out of the question for the small dairy unless he does what he ought to have done many years ago—organize bull associations and every two years exchange bulls with the members of his association, thus securing for the original purchase price of one bull the use of five bulls for a term of ten years.

Quite a number of bull associations have been formed in recent years in Wisconsin, Michigan and other states, but the movement is by no means general. These bull associations are composed of from ten to eighty farmers, depending upon the size of their herds and the distance at which they live from each other. These associations are usually divided into five blocks of from two to eight farmers each. After an association has been organized and divided into blocks, as mentioned, a committee of the best cattlemen in the association is appointed to buy the bulls needed, say five. They visit the best breeding establishments and pick out the number of bulls required, all belonging to the same breed. Each block of farmers then secures one bull; each bull remains in the block to which it has been assigned for two years. Then the bull from block No. 1 is turned over to block No. 2 and the one in block No. 2 to block No. 3, and so on. Another exchange is made at the end of two more years. By the time the bulls have served for two years in all the blocks it can readily be seen that ten years will have passed, meaning that for the original cost each block of farmers has had the service of a first-class bull for a period of ten years.

Under such conditions small farmers can afford to buy bulls from high-producing ancestors that have plenty of individual merit and that will increase the productive power of the heifers raised and the herds as a whole 100 per cent in ten years. It takes no mathematician to figure this out. A first-class dairy bull of good individuality coming from a dam and a grandam with high milk and butter fat records, may be expected to add from sixty to 100 pounds of butter fat a year to the production of his heifers from the original cows, and when the next good bull is used on those heifers there will be another increase of from forty to seventy-five pounds of butter fat per year. The third, fourth and fifth crosses of good blood will not show quite such large increase, but if the bulls have been well selected and the heifers have been equally well selected, and the poor ones have been weeded out from time to time, it is reasonable to expect the resulting herds to average from 400 to 500 pounds of butter fat a year and that is fully 100 per cent better than the average herds now produce.

We have entered a period of high grain prices and because of that better milk producers must be raised if dairying is to remain as profitable in the future as it has been in the past. The reason for this is that milk and butter fat prices will probably not advance as much as the price of feedingstuffs have advanced, and also because land values are bound to increase on account of high-priced grain and all other farm products. Scrub cattle will have no place in the future. The man who insists upon raising scrubs for dairying or beef production will be forced out of the business. He will not be able to maintain himself unless he has a big bank account and is willing to draw upon it year after year until it has been exhausted.

Each bull can take care of from thirty to eighty cows, depending upon the number of cows in the herds that happen to belong to each block. The larger the number, of course, the more economical the plan. This will also have the effect of increasing the num-

ber of cows owned by the members of the association, because they are bound to meet with much greater success under this plan than on the old basis of using any kind of scrub bull for the mere purpose of getting the cows to freshen once a year.

What applies in this respect to dairy farmers applies with equal force to men raising beef cattle on a small scale. The beef producer needs the very best beef bulls he can secure, just as much as the dairyman needs the best dairy sires. The problem of raising beef at a profit under present conditions, and they will undoubtedly remain for many years, requires efficient cattle—cattle that will produce a maximum of beef from a minimum of grain and roughage.

A short time ago a number of farmers of Ripley county, Missouri, who are raising beef cattle, realized this point and organized bull associations, and sent a committee to purchase the kind of bulls desired. This committee secured no less than two carloads of Hereford and Red Poll sires and a few registered females to be used as a starter for gradually breeding up pure-bred herds. These men are to be congratulated upon having taken this advance step and we trust that many farmers in our territory will follow suit, irrespective of whether they are raising dairy or beef cattle. The better the bulls that are used and the more thought and attention that is given to selecting heifers from the best cows in the herd and weeding out of unprofitable individuals, the larger will be the profit, the greater the satisfaction, and the better for the community in which the work is being carried on as well as for the country at large.

How One Wisconsin Club Got Its Start.

A great many of our readers ask us questions something like this, "How shall we start a farmers' club?"

Perhaps many will be interested in how a woman started the Country Efficiency Club, in Walworth county. Here is the story as told to us, also by a woman:

Our club was organized by a woman, active in club life before coming among us. We were all busy women, the same as other rural women. This woman missed the social and intellectual intercourse of her neighbors. She was especially fortunate in being asked to join most of the city clubs near by. These clubs were delightful, but she had a feeling that if her neighbors were only members, she would be happier. Failing to interest her neighbors in these clubs she thought about it a great deal while about her duties. One day the thought came to her to invite her neighbors in to spend the afternoon with her. Acting upon this thought, she went to the telephone and called up many in the neighborhood, inviting them to bring samples of their favorite cookies and little cakes wtih recipes for same to her home the following afternoon. Nearly twenty responded. The hostess served coffee. The afternoon was passed in discussing and exchanging recipes. This meeting proved so enjoyable that it was unanimously voted to continue these meetings, which was done with increasing interest.

At first only a president and secretary seemed necessary. As the society grew, it became obvious that a simple constitution and by-laws were a necessity. A program was prepared for each meeting and given while each worked on her sewing. The first year a committee of three planned all the programs and furnished all the material. So far this year a committee of six has served two months, changing at the end of that time to six others.

It was the idea of the club to work out a plan best suited to the needs of the whole club. Through all the club meetings, music has had a prominent place, both instrumental and vocal.

Red Cross sewing has taken the place of sewing of each member.

At the close of each meeting, a cafeteria lunch was served. Each lady brought sandwiches and little cakes or cookies for herself and her guests. The hostess served coffee or lemonade and a salad dish. In this way, refreshments were not hard to serve and added to the sociability of the gathering.

The president of the club at this time is Mrs. George Pounder, Delavan, Wis.; secretary, Miss Louise Pounder, Delavan, Wis.; treasurer, Mrs. Warren Hull, Delavan, Wis.

The point which appeals to The Wisconsin Farmer is that this splendid organization came into being in such a simple way. How easy it would be for any woman to call in a company of her neighbors for an afternoon, and what is more natural than that these women, once they are gotten together and have a chance to talk over their mutual interests, should want to meet regularly every week or every two weeks and discuss important events in their everyday life. What the women have done in this instance the men could also do, but, as usual, we will have to give a woman the credit for originating the idea.

The Toll of Tuberculosis.

In the 1916 Yearbook the secretary of agriculture reports that the estimated annual loss from tuberculosis in the United States amounts to $25,000,000 in cattle and hogs. The losses are about equal in the two classes of live stock. This is a deplorable condition when it is a well-recognized fact that this loss could be very greatly reduced, if not almost entirely avoided, provided the proper precautions against the disease were taken.

By reducing the loss in cattle a corresponding reduction in the loss of hogs would automatically be brought about, because hogs contract the disease from drinking milk from tuberculous cows or from rooting in the manure from such animals. That it is possible to very greatly reduce bovine tuberculosis has been shown by the results obtained in Minnesota during the past few years, where a system of inspection has been in use and reacting cattle have been slaughtered. For example, eight years ago 36.8 per cent—over one-third—of all pure-bred cattle tested in Minnesota reacted to the tuberculin test, while last year only 1 per cent reacted. Furthermore, of 25,725 grade and pure-bred cattle tested for tuberculosis in Minnesota 3 per cent reacted. One reason why Minnesota has been so successful in handling this disease is because the state pays 75 per cent of the appraised value of all cattle condemned for slaughter. There is, however, a limitation placed upon the value at which cattle may be appraised amounting to $60 for grades and $150 for pure breds. These values are low as compared with present market prices, but they served fairly well a few years ago; at any rate, the results that have been obtained under this system have brought splendid returns and Minnesota stockmen are generally well satisfied.

Many Minnesota breeders of registered cattle who started to clean up several years ago by testing their herds once a year now have what are known as accredited herds, that is, herds in which no reacting animals have been found in two successive annual or three successive semi-annual tests. The number of these accredited herds amounts to no less than seventy-seven and this will undoubtedly increase at a rapid rate as breeders whose herds have been freed from the disease become more careful about buying stock from herds not so accredited.

Tuberculosis is a disease found principally among cattle in cold climates because of close stabling during the winter season in such localities. It is also found in dairy herds to a greater extent than in beef herds, first, because the drain upon the system of a cow giving a heavy flow of milk is much greater than upon one giving just enough to support her calf and to that extent the disease-resisting power of the animal is lessened; second, the economical production of milk requires warmer quarters during the winter season than are needed by beef cows that are normally dry during that period.

With the present scarcity of beef and dairy products, the importance of conserving our breeding stock is apparent. It is equally evident, also, that the producer of beef and pork for the market who finishes his stock on high-priced grain, cannot afford to lose any of his ripe animals because of disease when this in a large measure could be avoided. But there is another and even more important side to this question. Bovine tuberculosis infects man and produces human tuberculosis. This infection is brought about through drinking the milk of tuberculous cows or eating cheese and butter from animals thus infected. No doubt millions of children have in the past contracted this terrible disease from contaminated dairy products and from them has spread to other millions of human beings.

A great deal of misunderstanding concerning the nature of tuberculosis still exists. We have heard farmers

THE VILLAIN STILL PURSUES.

claim that the feeding of certain classes of feed, as silage or moldy hay, produces the disease; others hold that it is brought about by colds or severe spells of sickness in the case of humans, but all such suppositions are erroneous. Tuberculosis is a germ disease; it is produced by a germ and one germ only—bacillus tuberculosis by name. It is true that when an animal is in a weakened condition from disease or lack of proper feed, and its natural disease-resisting power is reduced, comes in contact with the germs of tuberculosis it succumbs to their attack much more easily than when it is enjoying normal health and its system is able to put up a strong fight against the germs. This, however, is quite a different matter from colds "running into tuberculosis," as so many put the matter. No matter how severe a cold a person may have, if there are no germs of tuberculosis about to invade the system of the patient the disease will not be contracted. In other words, tuberculosis is not a spontaneous disease; it can come only from the specific germ, bacillus tuberculosis, infecting the animal body. Germs or bacteria are plants. One tuberculosis bacteria can be produced only by another bacteria of the same kind, just as a wheat plant can be produced only by a kernel of wheat.

Baby Beeves Pay Out on $2 Corn.

An interesting report recently appeared in the Chicago Drover's Journal giving the record made by Mr. Henry Hortenstine, of Moultrie county, Illinois, in feeding 105 yearling steers. These steers were marketed last week, weighing an average of 963 pounds and they sold for $17.50 per hundred pounds, the highest price ever paid for baby beeves. In describing the manner in which these baby beeves were handled, the Journal says:

The cattle were bought at the S. M. S. ranch last November and cost the Hortenstine Brothers $36.30 per head laid down at their farm. They averaged about 365 pounds at the time. They arrived at the farm on December 9th and were immediately put in the feed lot on a ration of twenty-five pounds of silage, seven pounds of clover hay and four pounds of corn per day per head. On March 1st the corn ration was increased to ten pounds per head. On May 1st the silage ration was cut out and the cattle put out on forty acres of blue grass and clover and timothy pasture.

On July 1st the cattle were allowed to run to a self-feeder and ate about eighteen pounds of shelled corn and one and one-half pounds of cottonseed meal. This ration was maintained until the cattle were marketed. The last sixty days the cattle were in dry lot, clover and timothy hay being substituted for the pasture.

The Hortenstine Brothers have been in the baby beef business for several years, and for the past two years they have topped the baby beef market. They have 110 S. M. S. calves ordered for fall feeding. This is the highest price obtained for calves bearing this brand and the brothers are going to feed more of the same calves this year.

Mr. Hortenstine, in commenting on the record he made with these baby beeves, said that while his corn did not cost him $2 per bushel, yet if all the corn consumed by these young cattle were computed at $2 per bushel, the returns would pay for the corn and in addition pay a handsome profit.

Feeding Horses Economically.

A good ration for a 1,000-pound horse at moderate work is eight pounds oats, two pounds cottonseed meal and fifteen pounds straw. If your horses are not accustomed to cottonseed meal don't suddenly start feeding them two pounds a day, but get them accustomed to it gradually. One-fourth of a pound a day is enough to start on. This may be increased by one-fourth of a pound a day or every two days, as may seem desirable until the two-pound limit has been reached. To feed straw with oats alone will not prove economical, because in order to maintain a horse in good condition on such a ration a very heavy feed of oats would be required and the additional oats would cost more than two pounds of cottonseed meal. Two pounds of cottonseed meal of the best quality—the kind carrying from 41 to 43 per cent of protein—contains about .75 of a pound of digestible protein, and that is as much as is contained in seven pounds of oats. This shows the relative value of these two feeds from a protein-carrying standpoint and also why this cottonseed meal supplement can be used to excellent advantage with oats and straw as a horse feed.

Beauty and Service Combined.

(Continued from page 1.)

and power for the sewing machine and vacuum cleaner.

Our farm mothers and daughters would certainly be pleased with a house which has such a cellar as has this one. Provision is made for a good-sized vegetable room, another room for the storage of canned fruits, etc., a coal room, a boiler and furnace room and a laundry. Adjoining the laundry room is a large drying room, where the clothes may be dried by artificial heat in inclement weather. The laundry is equipped with a combination water heater, laundry stove, built-in tubs and a washing machine run by electricity. Soiled linen and clothes from the upper floors are deposited in the laundry by means of a large chute, and this saves a great deal of running up and down stairs.

It would take too much space to try to describe all the rooms in the house. In arranging the interior considerable space has been saved by the dining room's built-in sideboard and the built-in bookcases surrounding the firplace in the living room. In the vestibule adjoining the kitchen there is a built-in well refrigerator. The house is finished in natural woods, highly polished, with hardwood floors. If members of the family desire to sleep out of doors, they can either utilize the sleeping porch upstairs or the solarium, and with these two large rooms the outdoors sleeping accommodations are sufficient for a large family. This house is equipped with a modern bathroom with tile floor. The tile floor is a little extra frill which was unnecessary, but adds to the appearance of the bath and also makes it easier to clean.

There was quite a little building done in the summer of 1917 on farms throughout the grain belt and a good many new farm homes were erected in Wisconsin. Notwithstanding the increased cost of building materials, it seems that a great many new farm homes will be erected in 1918. Farm products are going to bring a good price, and, while it is going to cost more to build, there will be a very large number of our dairy farmers who will have more money to spend.

The owner of the place where this new farm home was erected has apportioned his expense on farm buildings and equipment so that all of his money was not spent in one department. We find some farms where there are excellent barns, but a poor farmhouse. A great many of our readers have believed that it is best to build the barns and other buildings first and the house later. Of course, this is on the theory that the barn is a profit-maker and eventually the farm home can be erected from the profits accrued from the barn, its occupants and contents. The comparatively new barn on the place which we have been describing is shown by the illustration included herewith. A fine new silo has also just been erected. Having equipped his place with a splendid barn and a good, durable silo and having erected such a beautiful new farmhouse as we have undertaken to describe, what is more natural than that this farmer should also have a new automobile? This automobile is shown in one of the accompanying illustrations, standing in the barnyard. The car had been on the place only three days when this picture was taken.

A GOOD BARN, NEW SILO AND STANDARD AUTOMOBILE HELP COMPLETE A GOOD FARM'S EQUIPMENT.

Judging Contest at Swine Show.

Success of Contest Assured—Its Influence Will be of Far-reaching Benefit to the Swine Industry.

RECOGNIZING the importance of interesting college students in the various breeds of improved swine, the management of the National Swine Show, which is to be held in Omaha, October 3d to 10th, has inaugurated a students' judging contest. This contest is open to all agricultural colleges in the United States, and it is to be hoped that as many as possible will avail themselves of this opportunity to gain the education that the show affords.

The committee in charge has been hard at work securing appropriations for the prize money and enlisting the college judging teams for participation in the event. Their efforts have met with good success and the prospects are that there will be about eight colleges represented from as many different states and the prize fund of $600 will be oversubscribed. The appeal for funds has met with a liberal response from the packing interests, the records and the swine papers.

The effect of this contest cannot but be of far-reaching benefit to the swine industry. The hog has long been the backbone of the meat producing business, but until now has been little appreciated as such. It is planned to provide desirable entertainment for the teams and to see to it that importance of the swine industry in American animal husbandry is properly put before the men, that they may have a better conception of this great American industry. The influence that these men will have on their return to the farms or to the fields of activity that bear a direct influence on our live stock development will be one that will tend to give the hog his justified share of the prominence that is now accorded the beef steer and will give to him the prestige that is so justly his.

The contest will be held on Wednesday, October 3d, commencing at 9 o'clock a. m., and will be in charge of the students' judging contest committee, of which N. M. Gordon, editor of the Duroc Bulletin, is chairman and Ray Davis and Bob Hill, field secretaries of the American Poland China and National Duroc Jersey Record Associations, are members. The event promises to be one of the leading attractions of the show. For further information parties interested should address N. M. Gordon, Room 630, Transportation Bldg., Chicago.

Recent gathering of Oneida county and Winnebago county farmers who met to discuss dairy conditions, feed values, etc., and to look over the good dairy cattle in the Fox river valley. This picture was taken on the Ed Race farm.

Wisconsin's Clover Crop in Danger.

To the Editor:—Will there be clover seed? The prevailing high prices of stock feeds is going to cause farmers more than ever before to cut the second crop of red clover for hay. This is going to mean that clover seed will be high priced or not obtainable at all.

It will be a calamity not to have clover seed. Remember that from clover Wisconsin gets its nitrogen fertilizer, the most expensive and most needed fertilizer.

It will be a calamity in dairy Wisconsin not to have any clover on the farms for feed. Timothy is hard on the soil and is the most expensive and poor dairy feed. It furnishes very little nitrogen from which cows can make milk, and if farmers feed timothy and expect to get much milk they must buy immense quantities of bran, oil meal and other very high-priced feeds.

Farmers, save some second crop clover for seed. You need the seed on your own farm, and if you have any for sale it will bring a good price.

E. L. Luther,
Supt. Farmers' Institutes.

Milwaukee purchased Liberty Bonds representing $35 per capita. The state at large, outside of Milwaukee, bought only $9 worth per capita.

Stock Show at Superior, Wis.

Minnesota and Upper Wisconsin Breeders Bring Out Some Good Stock—By Edward Vaugh, Superintendent of Dairy Cattle.

ONE of the strong features of the Tri-State Fair at Superior, Wisconsin, was the stock exhibit. During the season many new barns were built and everything is in fine shape to take care of stock of all kinds. The stables are very light and sanitary.

The Guernsey exhibit was probably the strongest of any, four herds competing for honors. The battle was waged between the Jean DuLuth Farm, of Duluth, Minn., and Caribou Farms, of Saginaw, also of the North Star State, with Edward Vaughn, of Poplar, Wisconsin, and the Douglas County Work Farm vying for honors.

The aged bull class was led by Starlight Excelsior, a splendidly formed bull, who has been some thirty times champion, and he was closely followed by his half brother, Austerlitz.

In the bulls two years old and under three, Caribou Farm had an easy winner with King Alberta.

Among the bulls one year old and under two and found the junior champion, Golden Noble of the Lakes, who was later made grand champion of the Guernsey show. He is a splendid bull, straight in his lines, with a wonderfully clean-cut shoulder.

Among the younger bulls there was strong competition in all classes.

Fanny of the Vallee Du Cruex was winner over barn mate, Jean Duluth Coronet, who is showing this year in a three-year-old form, and was later made senior and grand champion. Fanny had just come from the Minnesota State Fair, where she won first prize in strong competition.

The junior yearling heifer class, Jessica of Jean DuLuth, who was later made junior champion female, won over Edward Vaughn's Bunty Belle by a close margin.

The Tri-State Fair, of Superior, brought out the strongest competition of the season outside of the Minnesota State Fair.

The awards were made by Prof. Geo. C. Humphreys, of Madison, Wisconsin, who selected his type with great care and followed it very closely throughout the entire judging.

All group prizes were won by Jean DuLuth Farm, with the exception of produce of cow, which was won by Edward Vaughn, of Poplar.

The Holstein exhibit was by far the best ever seen at the Tri-State Fair, there being keen competition between the herd of A. N. Newell, Butternut, Wisconsin; H. E. Utley, Wrenshall, Minn.; H. E. Smith, Barnum, Minn., and William Kemmis, Borea, Wis.

The aged bulls as a class were not especially strong, Newell's Sir Ormsby Phoebe Burke winning, as the Utley bull, Woodlawn King Segis Cornucopia, had gone lame and was badly out of form, but among the younger bulls a great deal of quality and merit was shown.

In the class for bulls one year old and under two the Utley Farm showed their new purchase, King Pontiac Spofford Konigan, a very growthy fellow of splendid lines, but not in the best of show form. He was much larger than his opponents and rather too growthy to appear to the best of advantage, and blue was later tied on Wiley Taylor's Korndyke Segis, with Smith's King Ragapple Colantha winning second place.

The class for cows three years old and over brought some splendid matrons. And Newell's Miss Elinore Mercedes, being in better form, captured the first prize over Utley's Mattowee Jaska De Kol, a splendid cow with a perfectly formed udder.

The best typed Holstein cow in the class was Daisy Korndyke Clothilde, and but for a weak front quarter which had evidently recently been injured, might easily have been made grand champion. She was a cow of wonderful type and bore evidence of having a splendid udder.

Both grand champion cow and bull went to A. N. Newell.

Throughout the Holstein exhibit was good and a credit to the breed.

The ribbons were tied by Prof. Geo. C. Humphreys, of Madison, Wisconsin.

The Red Poll exhibit made by the Jean DuLuth Farm was comprised of their prize winners which have been shown in western Canada this season. This herd has practically made a good, clean sweep this season, including the Minnesota State Fair.

Guernseys—Exhibitors: Jean Du Luth Farm, Duluth, Minn.; Caribou Farms, Saginaw, Minn.; Edward Vaughn, Poplar, Wis.; Douglas County Work Farm, Superior, Wis.

Bull 3 years or over, 1st and 2d Jean Du Luth Farm on Starlight's Excelsior of J. D. and Austerlitz, 3d Vaughn on Queen of Ardell; 2 years and under 3, 1st Caribou Farms on King Alberta, 2d Jean Du Luth Farm on May Rose Searchlight; 1 year and under 2, 1st Jean Du Luth on Golden Noble of the Lakes; 2d Jean Du Luth Farm on Brilliant of C. C. Farms; senior calf, 1st Jean Du Luth Farm on Queenie's Austerlitz, 2d and 3d Caribou Farms on Caribou Romulus and Caribou Masher; junior calf, 1st and 3d Jean Du Luth Farm on LeRoy Starlight and Friar Chene, 2d Caribou Farms on Caribou Captain.

Cow 3 years or over, 1st and 2d Jean Du Luth Farm on Fanny of the Vallee Du Cruex and Jean Du Luth Coronet, 3d Caribou Farms on Sequel's Maid of Beauty; 2 years and under 3, 1st Jean Du Luth Farm on William's May Rose, 2d Caribou Farm on Pearl of Green Lodge 2d, 3d Vaughn on Betty of Poplar; senior yearling, 1st and Jean Du Luth Farm on Chene's May Rose and Gree's May Rose, 2d Caribou Farms on Caribou Berta; junior yearling, 1st Jean Du Luth Farm on Jessican of J. D., 2d Vaughn on Bunty Belle, 3d Caribou Farms on Caribou Rachael; senior calf, 1st and 2d Jean Du Luth Farm on Mosrose of Jean Du Luth and Panope of Jean Du Luth, 3d Caribou Farms on Caribou Mary; junior calf, 1st Jean Du Luth Farm on Marathon Rose Queen, 2d Caribou Farms on Caribou Charmont's, 3d Douglas County Farm on Georgiana Barbara.

Senior champion bull, Jean Du Luth Farm on Starlight's Excelsior of All; junior and grand champion bull, Jean Du Luth Farm on Golden Noble of the Lakes; senior and grand champion cow, Jean Du Luth Farm on Fanny of the Vallee De Creux; junior champion cow, Jean Du Luth Farm on Jessican of Jean Du Luth; breeder's herd, 1st Jean Du Luth Farm, 2d Caribou Farms, 3d Vaughn; get of sire, 1st Jean Du Luth Farm, 2d Caribou Farms; produce of cow, 1st Vaughn, 2d Caribou Farms.

Holstein-Friesians.—Exhibitors, A. N. Newell, Butternut, Wis.; H. B. Utley, Wrenshall, Minn.; E. H. Smith, Barnum, Minn.; Wm. Kimmis, Borea, Wis.

Bull 3 years or over, 1st Newell on Sir Ormsby Phoebe Burke 6th, 2d Utley on Woodlawn King Segis Cornucopia; 2 years and under 3, 1st Newell on Sir Johanna Fayne Mooie; 1 year and under 2, 1st Utley on Gaylord Korndyke Segis, 2d Smith on King Ragapple Colantha, 3d Utley on King Pontiac Spofford Konigan; senior calf, 1st Utley on Alvena Jaska Cornucopia; junior calf, 1st Kimmis, 2d Newell, 3d Utley.

Cow 3 years or over, 1st Newell on Miss Elnora Mercedes, 2d Utley on Mettowee Jaska De Kol, 3d Smith on Daisy Korndyke Clothilde; 2 years and under 3, 1st Utley, 2d and 3d Smith on Harvest Bonnie Agatha Pontiac and K. S. P. Daisy Korndyke; senior yearling, 1st and 2d Utley on Netherland Queen Snowball and Blue Label Rose Nudine, 3d Smith on Lilith Colantha Pietertje; junior yearling, 1st and 2d Utley on Changling Glitka Burke and Miss Johanna Korndyke Torchlight; senior calf, 1st Newell on Queen Elnora Mercedes, 2d Utley; junior calf, 1st Newell on Johanna Phoebe Burke.

Senior and grand champion bull, Newell on Sir Ormsby Phoebe Burke 6th; junior champion bull, Utley on Gaylord Korndyke Segis; senior and grand champion cow, Newell on Miss Elnora Mercedes; get of sire, Newell; produce of cow, Utley; breeder's herd, 1st Newell, 2d Utley.

E. E. Wyatt, of Tomah, Wis., exhibited his excellent herd of Jersey cattle. There was no other herd in competition. Maiden's Varsity King was grand champion bull and Euphemia's Pauline, the grand champion cow.

The Jean Du Luth Farm, Duluth, Minn., exhibited its fine herd of pure-bred Red Poll cattle, there being no competition. The grand champion bull prize was awarded to Pilot Lee, and the grand champion cow to Lady Golden.

There was one herd of pure-bred Herefords, owned by Walter Bros., Chippewa Falls, Wis. Maple Lad 91st was grand champion Hereford bull and Martha was grand champion Hereford cow. It was a good show notwithstanding the lack of competition.

Honey is a delightful and economical substitute for sugar that has all the delicious flower sweetness added to it. It is free from adulteration when delivered to man and for that reason is in many ways better than sugar. It may be used in canning, baking and on raw fruits, in addition to being used as a spread on bread. If you do not have a swarm on the farm it is advisable, in most cases, to get one. See that it goes into winter in good condition and next spring be ready to care for other swarms.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Valve-in-Head Motors.

Suppose there were two motors, both the same size and everything exactly alike, except that one was the valve-in-head type and the other the L-head type. Which would deliver the more horsepower? Which would consume the more fuel?

Answer.—Under the above conditions the advantage would be with the valve-in-head type, both as to power and fuel consumption. The valve-in-head motor would not only use less fuel but it would deliver more power. Such conditions are not often obtained in practice, and the carburetor adjustment usually has more to do with the power and fuel consumption of a motor than the type of motor.

Motor Hard to Start When Cold.

I own a 1914 B36 touring car. It is very hard to start when cold, but when it is warmed by the sun, it starts readily. Is it carburetor trouble? Please tell me how to place the throttle and spark levers. It won't make even one explosion when cold. I can make but ten or twelve miles per gallon. The car is equipped with a Model L Schebler carburetor. Please tell me how to adjust the same so as to run more economically. Does it do harm to use a heavy oil in the Buick car? What causes the gears to make a grinding noise when running in low, intermediate and reverse, while it runs without making a sound on high?

Answer.—Your starting difficulties are more likely due to poor compression and faulty ignition than to carburetor adjustment. Poor compression would also account for the low mileage per gallon of gasoline. See that the spark plugs are clean; if the compression is poor, have the valves reground. If this does not improve the compression you will need new rings; or possibly the cylinder will have to be rebored. When starting the motor, open the throttle about half way and retard the spark only enough to keep the motor from kicking back. Close the choke valve for a few turns, and then open the valve. Find out by experiment just how long it is advisable to leave the choke valve closed when starting. If it is closed too long the mixture will be too rich and the motor will not start.

To adjust a Schebler carburetor, screw down the screw over the air valve so that the valve seats firmly but lightly; turn the needle valve to the right until it is closed; do not screw the needle valve in too tight, as the seat might be injured. Then turn the needle valve to the left four complete turns and prime the carburetor. Open the throttle about one-third and start the motor. Close the throttle slightly and retard the spark. Adjust the needle valve one notch at a time so that the motor runs evenly and hits on all cylinders, having made sure that your spark plugs are in good condition. Adjust the throttle lever screw so that the motor throttles down to the desired speed.

After getting a good adjustment with the motor running idle, do not change the needle valve adjustment again, but make the intermediate and high speed adjustments on the dials. Adjust the pointer on the first dial about half way. Advance the spark and open the throttle so that the roller on the track below the dials is

in line with the first dial. If the motor then back fires, turn the pointer toward the figure 3. If the mixture is too rich turn the pointer back toward 1. Make your high speed adjustment on the other dial in the same manner.

Heavy Mobiloil or oil of similar grade is all right for a 1914 Buick. Your sliding gears are worn. These gears are not in mesh in high speed, hence no noise on high speed.

Trouble With Number One Cylinder.

I noticed an article in your Farm Mechanics Department about trouble with the number one cylinder of Ford cars, due to the oil at the front end of the motor causing poor ignition. I have had a lot of experience with this trouble, and can give some advice that may help some. The first thing to do is to see that the front spring of the car is not sagging down, allowing the front end of the motor to hang low. There should be not less than four and one-half inches clearance between the axle and the spring clips at the middle of the spring. If this happens to be all right, about the best thing to do is to remove the piston and file or turn a groove under the bottom piston ring deep enough to catch the surplus oil; the groove should be V-shaped with the lower side almost square with the piston and the upper side sloping so as to almost meet the edge of the bottom ring. Four holes should be drilled through the sloping side of the groove to allow the surplus oil to drain back into the cylinder. I have treated several Ford cars, also other cars, in this manner and have always met with good success. One 1914 Ford has made 90,000 miles and has never had an oily plug since this treatment.

Answer.—We wish to thank the writer of the above letter. His suggestion is in line with good engine practice, many engine manufacturers grooving their pistons as he suggests. This trouble seems to be one of the most common with Ford cars, and the above advice should be of value to many of our readers.

Charging Battery From Ford Magneto.

Is it advisable to use a storage battery for lights on a 1917 Ford car? Is the magneto strong enough to recharge the battery?

Answer.—The Ford magneto cannot be used to recharge a storage battery. An attempt to charge a battery from the Ford magneto usually results in the magnets of the magneto being demagnetized. If you wish other lights on the car the best way is to have installed a starting and lighting outfit. There are at least three successful outfits on the market, the approximate cost of each being $100. Or you might install a generator and battery charger, running the charger from the fan belt. If you have electric current and your own charging outfit, you could run your lights from a storage battery alone; it would be rather expensive to run from the battery alone if you have to hire the battery charged. The connections are quite simple. For your present lights, disconnect the wire from the magneto terminal on the coil box to the lighting switch, and connect a wire from the battery to the lighting switch. Ground the other battery terminal. If your battery is six volts, you would have to use three-volt bulbs. If you wish to use six-volt bulbs with a six-volt battery, run the wire from the battery to one terminal of each lamp and ground the other terminal of each lamp. Wire the dash light and tail light in the same manner that the two headlights are wired.

Engine Out of Balance.

I come to you for information as to my Foose twelve-horse-power gas engine. It has a nine-inch bore and twelve-inch stroke. The flywheels weigh 1,500 pounds. I have mounted this engine on a very strong truck, but it vibrates so badly when running that I have to take off the wheels and put the engine on the ground. Even then, I have to brace it well to keep it from working back and forth. The timing and valve action are all right. What horse power should this engine produce? Are the flywheels too heavy? This engine has balance weights on the crankshaft. Is there such a thing as an engine getting out of balance?

Answer.—An engine might get out of balance, due to a slight springing of the crank shaft. A single cylinder engine cannot be balanced perfectly. It should be balanced so as to run well at rated engine speed. The best running balance for a single-cylinder engine can best be found experimentally. Place a piece of putty at different points on the inside of the flywheel rim, and note the effect on the running of the engine. You will probably find that two pieces of putty placed about one-fourth the way around on each side of the center opposite the crank pin will cause the engine to run much smoother. The amount of putty can be found by experiment. When running the engine with putty on the rim of the wheel, do not stand in line with the wheel, as the putty might fly off. Having determined the location and amount of putty necessary to balance the engine, weigh it and fasten an equal weight of iron or lead on the inside of the flywheel rim at the proper location by means of rivets or screws. The weight of your flywheel is all right for stationary work. Your engine should develop at least its rated horse power; it would probably develop eighteen horse power if in good condition.

ing 13 years of a life sentence.

SAVE CORNSTALKS OR FACE FEED FAMINE, SAYS EXPERT

CHICAGO, Aug. 23.—Farmers save your corn stalks or face a fodder shortage this winter.

This was the warning sounded here today to midwest farmers by J. B. Lamson, agricultural expert for the Chicago, Burlington & Quincy Railroad.

Warning!

Hay, generally, is scarce and high priced. Now especially you should make full use of your corn fodder by *preparing* it for barn feeding—which gives *twice* better results than shock feeding. If your hay is short, corn fodder will take its place. If you have hay, *cash in* at high prices and use corn fodder. With an Appleton you can get *thousands of pounds of fodder per acre* from your corn—besides saving the labor of hand husking. Increases feed value of corn crop at least 25%. Cuts or shreds stalks, leaves and husks, while husking ears. The original successful husker; so strong and simple that first models, made years ago, still give good service.

APPLETON HUSKER & SHREDDER

is guaranteed to do more work with less power

than any husker of equal size. Husks cleanest, shells least; has most efficient corn saver. Easiest, safest to operate—works in all conditions of corn. Sizes for 4 h.p. engines and up. If you have an average corn acreage, the *extra fodder* value and labor saved by using an Appleton will *pay back the whole investment* on this one crop. Look into this *now*—Write today for *Free Husker Book*. Appleton Mfg. Co., 5122 Fargo St., Batavia, Ill.

A ROLLER FEED MILL

WILL GRIND A WAGON LOAD OF FEED FOR 10 CENTS.

THIS is the **Famous Howell Roller Mill** you have heard so much talk about. The new improved mill for the scientific grinding of grain. Old style Burr and Stone Mills are out of date. Thousands of them are being annually replaced by the Famous Howell Roller Mills. Grind twice as fast as the best burr mill made. Does not heat the feed. Grinds Graham and Rye flour as well as feed. Has big capacity. Requires little power. No burrs or stones to wear out. Guaranteed to last a life time. Made in 13 sizes suitable for any size engine. Save one-half your time, gasolene and money by using a Howell Roller Mill. Write for Catalog F-8 We will send it free, together with the **Famous Howell Roller Feed Mill Puzzle.**

Elkhorn Fair Makes New Record

Walworth County Agricultural Society Will Have Surplus Again This Year—A Few of the Live Stock Winners.

THIS year's Walworth County Fair, held at Elkhorn, September 18th to 21st, proved the biggest ever of the sixty-eight years of fairs held in this county. For the four days Samuel Mitchell, the secretary, estimated 80,000 people visited the grounds. The Walworth fair is one of the two fairs in the state which is able to show a balance to the good after all bills are accounted for. Last year's surplus of $7,649 will be surpassed this year.

Officials of the fair are ever anxious to improve the various departments and this year an increase of 40 per cent in the premium list for cattle had the desired effect of bringing out many new breeders in spite of high prices and labor shortage.

Last year's record of the swine department was not quite equaled this year, fewer animals being shown. Better than 200 pigs were entered, however. The exhibitors were Heck Bros., of Lyons; W. G. Bartholf, of Burlington; Geo. Lasch, of Lyons; Wm. Wrigley, of Lake Geneva; W. H. Esterley, of Whitewater; C. D. Smith & Co., of Rockford, Ill.; Philipps Bros., of Delavan; Gant's Farm, Delavan; Roy Church, of Elkhorn; Walter Besecker, of Delavan; O. B. Coates, of Elkhorn; Ralph Wiswall, of Elkhorn; W. Sheibe, of Burlington; Whittmore Bros., of Burlington; Vaughn & Son, of Spring Prairie; Walter Knilans, of Richmond, and Chas. S. Dunbar, of Lauderdale.

The champion of the Durocs was Gant's boar, King Defender. This boar was easily the largest and best quality hog on the grounds and he was, therefore, made grand champion in the sweepstake class. Champion sow of the Durocs was shown by Bartholf. Champion sow of the Polands was owned by Heck Bros., and she was later on made grand champion of the show. Champion boar and sow of the Chester Whites went to Sheibe. In the Berkshires Whittmore Bros. had everything to themselves as did Vaughn & Son in the Hampshires.

The sheep exhibit was the largest ever on the ground with 162 head entered. Three Walworth county breeders exhibited this year, where last year of ninety-eight sheep entered not a single one was owned by a Walworth county man. The sheep exhibitors were Wm. Wrigley, of Lake Geneva; E. Crall & Son; W. S. Miles; J. C. Ellis, all three of Evansville; H. G. Hogan, of Waunakee, and Vogt & Son, of Lake Geneva.

In the Oxfords Crall was the heavy winner. In the Hampshires everything went to Miles, while in the Lincolns, Cheviots and Dorsets Crall got away with the big money. In the Southdowns Miles had things his own way, as also in the Rambouillets. In the Merinos Crall again was the only exhibitor.

The cattle exhibit was not as large in the beef department as in other years, but each breed showed excellent specimens of more than average quality. J. E. Kennedy, of Janesville, was the only exhibitor of Short-horns, while Boynton Bros., of Janesville, showed a large herd of Polled Durhams. Baby beef exhibitors were C. E. Thompson, Lake Geneva and Leslie Foster, Sugar Creek. Thompson's Hereford heifers took the money.

In the dairy cattle an extra large showing of Holsteins was was made. More breeders from Walworth county showed cattle than ever before. In the Holsteins it was strictly a county exhibit, not a single outside breeder showing. J. G. Voss, R. Minshall, M. Westphal, W. E. Palmer, Ben Bachhuber, H. and G. Weaver, Earl Pierce and H. Donaldson, all of Elkhorn; Crites Bros., Honey Creek; H. Peck, East Troy; A. G. Palmer, Lake Geneva; Whittemore Bros., Lyons, were the exhibitors. Crites Bros. were first on aged bull; A. G. Palmer first on two-year-old bull, bull calf, heifer calf and breeder's young herd; W. E. Palmer was first on aged cow, heifer two to three years old, heifer calf and aged herd; H. Peck first on yearling bull and Earl Pierce first on heifer one to two years old.

The Guernseys were next in numbers, four breeders showing. Goodhand Kingston, of Waukesha; Tilden Farms, of Delavan; Roy Sanders, of Elkhorn, and the Rock County Guernsey Breeders' Association were the exhibitors. Tilden Farms were first on bull calf, two-year-old heifer and aged herd. Rock County Guernsey Breeders' Association first on two-year-old bull and yearling bull. Kingston first on aged cow, yearling heifer, heifer calf and breeder's young herd.

The Jerseys were shown by Orin Day, of Janesville, and Alfred Olson, of Elkhorn. The prizes were divided fairly evenly, but Day's herd showed in all classes and consequently received the greater number of ribbons.

Jimmie Van Etta, of Lima Center, brought his excellent herd of Ayrshires. As he was the only exhibitor he had things all his own way.

The horse show was not as large as usual, but excellent draft type was shown by Floyd H. Lean, of Elkhorn, who was the only winner in the Clydesdale. Will Belman, of Delavan, won everything in the Percheron and also showed Belgians with Alfred Olson, of Elkhorn.

In the poultry building 2,000 birds were on exhibition. The largest exhibitors on the ground were W. W. Hoyt, of Whitewater, with 700 birds. E. G. Robinson, of Ft. Atkinson, had 350 birds, while Lee Kyburz, of Honey Creek, had 117.

One of the features of the fair was the large machinery display. Automobiles were also on exhibition in great numbers. There was less of the amusement end than usual, but to all appearances a "pike" is not the feature which will make or unmake a fair. It is gratifying to know that a county fair can be made as attractive through its educational and industrial features as the Elkhorn fair proved it can be made.

Judging Days at Dairy Cattle Congress.

Those who expect to attend the big dairy cattle congress to be held October 1st to 7th at Waterloo, Iowa, will be interested in knowing just when the different breeds of cattle will be judged. The schedule has been made out and is as follows: October 1st—afternoon: Ayrshire and Brown Swiss bulls. October 2d—morning: Ayrshire and Brown Swiss cows; afternoon: Ayrshire and Brown Swiss groups and championships and Holstein bulls; evening: Presentation of Ayrshire and Brown Swiss diplomas and trophies. October 3d—morning: Holstein cows; afternoon: Holstein groups and championships and Jersey bulls; evening: Presentation of Holstein championships, diplomas and trophies. October 4th—morning: Jersey cows; afternoon: Jersey groups and championships and Guernsey bulls; evening: Presentation of championships, diplomas and trophies. October 5th—morning: Guernsey cows; afternoon: Guernsey groups and championships; evening: Presentation of Guernsey championships, diplomas and trophies.

One of the interesting features in connection with the congress this year will be a calf-club exhibit by the boys and girls of one of the clubs formed last spring by the Iowa State Dairy Association. Calves were purchased by this association and sold to over 100 boys and girls in Blackhawk county. These calves will all be on exhibition at the congress, where they will be judged and prizes awarded to those making the best showing.

The price which the government will pay for the 1917 wheat crop has been fixed at $2.20 for No. 1 northern at Chicago. No. 2 wheat will be purchased at 3 cents less per bushel, No. 3 at 6 cents less and No. 4 at 10 cents less. Mixed wheat will bring 4 cents less than the price of the predominating grade. These prices are for wheat delivered at Chicago, and at other points the crop will be worth transportation and commission charge somewhat less, depending on the transportation and commission charges.

The hum of silo fillers may be heard on many farms at this time, and the owners of these farms are not worrying a great deal about an early frost.

Velie

Your Velie is an Investment

THERE is no better, saner business proposition in any field at the present moment than the Velie Biltwel Six. There is thorough motor car value in this new product of the great Velie factory. The car is a business need—and no other shows the Velie values for the money. Its long service—its remarkable records, are due to such features as the Velie Special Red Seal Continental motor, Timken axles, long underslung springs, automatic ignition.

Act Now and Save!

The present schedule of production just about covers present Velie prospects. You can get your Velie now—but there is no telling how long materials will be available or how long present material prices will hold. You are money ahead by buying your Velie now—at $1185. Seven other Velie Body Styles include 2 and 4-passenger Roadsters, Cabriolet, Coupe, Sedan, Brougham and seven-passenger Touring—at prices from $1165 to $2300.

BIGGER-BETTER MORE POWER

In and Around Wisconsin

Milk is selling at retail in Tulsa, Okla., for 15c a quart; in Los Angeles, Cal., 14c; Little Rock, Ark., 15c; Burlington, Iowa, 14c.

A clover field of seventy-five and one-half acres on a farm owned by C. A. Taylor, Barron county, produced seed worth $4,169, or an average of more than $50 an acre.

The annual Dairy Cattle Congress will be held at Waterloo, Iowa, October 1st-7th. The entry list to date indicates a larger show than usual, and last year broke all previous records. The show will be well worth the time it takes to attend it.

RALPH DOBSON, LANCASTER, WIS., WINNER BOYS' PIG CONTEST AT MILWAUKEE—GRAND CHAMPIONSHIP ON POLAND CHINA GILT.

A conference of all the committees and others directly interested in the sixth annual potato show to be held this year at Madison, will convene at the college of agriculture, Madison, September 28th. At that time the complete program for the show and the Wisconsin Potato Growers' Association's annual meeting, will be arranged.

A new plant is being established at Rhinelander, Wisconsin, to utilize potato by-products. The factory will turn out potato flour, potato flakes, potato stock food, starch, mucilage powder and other products. This plant is being moved from Arlington, Virginia, to Rhinelander, and will be established in the old Wabash Screen Door factory. H. G. Gore, a representative of the federal department of agriculture, is aiding in establishing the institution, which will be controlled by local capital.

At a meeting of the Waukesha county council of defense, the emergency food agent, Mr. E. H. Otis, and the county agricultural agent, Mr. J. E. Stallard, the following resolutions were unanimously adopted:

First by education of the farmers to realize the necessity of raising all dairy-bred heifer calves, and also increasing the number of sheep and hogs, not only as a profit to themselves, but in so doing will be rendering their most loyal service for our federal government and her allies.

Second by protecting the dairy cow, her progeny, and product, pending the high war prices on grain required as dairy feed (that must be fed to cows to have them produce milk), the farmer dairymen must recognize the minimum cost of whole marketable milk as produced at three ($3) dollars per hundred pounds.

Believing this view is fairly representative of our most loyal farmers acquainted with the dairy cow, and the common tendency to sacrifice her by slaughter, we respectfully submit the above for your consideration.

Not only may these resolutions be regarded as a forerunner of dairy conservation, but also as indicating the sentiment of men connected with dairying relative to what milk is worth under present conditions. It is apparent that milk must bring an even better price than it has been bringing the past year, notwithstanding the fact that the 1917 prices have established new records. But milk at $3 a hundred and more is a cheap food—very cheap compared to other substances of equal food value.

Pierce Martiny, of Riley Martiny & Son, Baraboo, Wis., winner of Wisconsin Farmer Duroc Futurity trophy, 1917 Wisconsin State Fair. He won forty-seven points, first on boar, first on sow pig and first on litter.

A number of Wisconsin farmers are planning to attend the National Dairy Show to be held in Columbus, Ohio, October 17th to 27th, inclusive. Every foot of available space in the $250,000 coliseum will be utilized for the various departments of this show. Machinery of all kinds, adaptable to dairy farms, creameries and cheese factories will be on exhibition. In addition, there will be exhibits of tractors, trucks, pleasure cars, feed and forage, etc. In the barns will be over 1,500 head of cattle, representing the Holstein, Jersey, Guernsey, Ayrshire and Brown Swiss breeds. On the morning of October 22d, there will be a mass meeting of the representatives of the dairy industry. On the afternoon of the same day Mr. H. H. Kildee will judge Jerseys; on the morning of October 23d Mr. Robt. Scovell, C. L. Hill and W. A. McKerrow will judge Guernseys; on the morning of October 24th Mr. W. S. Moscrip will judge Holstein-Friesian cattle, and Thursday afternoon at 2:00 o'clock Mr. Will Forbes will judge Ayrshires and Mr. H. G. VanPelt will judge the Brown Swiss herds. From the standpoint of the number of cattle exhibited and the quality, the 1917 dairy show will undoubtedly eclipse anything of the kind ever held in this country. A strong effort is to be put forth to lessen the slaughter of dairy cattle for beef. One authority says that 26 per cent of the dairy cows in the United States have gone to the slaughterhouse in the past seven months. If these figures are true and if such a condition should continue a shortage of milk and dairy products is inevitable. Facing food shortages in the world as we do today, such gatherings as the National Show at Columbus, Ohio, and the International Show to be held later in Chicago, Illinois, are of inestimable importance.

Meatless Day, Tuesday, and Wheatless Day, Thursday, recommended in special proclamation by Magnus Swenson, state food administrator, were quite generally observed in the cities of the state the first week. In Madison nearly all the cafes left meats of all kinds off the bill of fare on the first Tuesday after the proclamation. Even the railroad dining halls eliminated meats. Vegetable soups, cheese, peanuts, fruits, macaroni, eggs and fish were the chief substitutes. In Milwaukee on Wheatless Day the leading hotels and cafes substituted corn bread, corn cakes, rye bread, etc., for wheat bread. Practically no objection was offered on the part of patrons. In a few places the sign "meats for working men only" was seen on Meatless Day. To what extent the proclamation of the food administrator was observed in the country it is difficult at this time to say, but no doubt the meals on Tuesday and Thursday are being rearranged so that the proclamation will be complied with. By leaving meat off the menu once a week and wheat products once a week, millions of dollars' worth of these foods may be saved. To the extent that the recommendations are observed, we will begin to understand just how much our people realize that we are on a war basis.

Roads Good 365 Days a year mean more to the farmer now than ever

Barberton-Greenwich Road, 1½ mile west of Lodi, Ohio, in Medina County. Built by Elyria Construction Co., Elyria, Ohio.

FARMERS living on concrete paved roads have no fear that bumper crops will fail to bring them prosperity. They can market every day of the year in all kinds of weather. Concrete roads are 365-day-a-year-roads. The difference between mud roads and concrete roads is the difference between crops rotting on the farm and crops on the way to the world's markets when prices and demand are best.

Railroads have more than they can do now.

Concrete roads and motor trucks make the farmer largely independent of the railroad. Now, more than ever before, will the farmer value good roads if he has them, and regret their absence if without them.

Be sure you know what a concrete road is.

Concrete is made of portland cement, sand and pebbles or crushed stone, and water. It is hard and durable, rigid and unyielding. Concrete is the material used in building concrete dams, factories, bridges, and big engineering works like the Panama Canal requiring great solidity and strength.

CONCRETE ROADS
Their Advantages
No Mud—No Dust
No Ruts—No Holes
No Slipping
No Skidding
Easy Hauling
Smooth Riding
Long Life—Safety
Always Ready for Use
Low Maintenance
Moderate Cost

Concrete roads are not costly to build. They are cheap to maintain. Write for a free copy of Bulletin 136. You, Mr. Taxpayer-Farmer, can have the kind of roads you demand. You will demand concrete roads when when you read this.

CONCRETE FOR PERMANENCE

Home Storage of Vegetables.

Conservation of Perishable Products Important This Year Above All Others—Will Economize on the Non-Perishable Materials.

WITH proper storage space and proper handling many of the common garden vegetables may be safely stored for winter use. The conserving of the garden vegetables for winter use is important enough during the ordinary years, but this fall this phase of the home garden is drawing more attention than ever before. By saving a quantity of our vegetables for future use we will be going just that much further towards conserving our non-perishable foods for next season.

In the home there is no better place for storing vegetables than the cellar of a house which does not contain a furnace. If a place in the cellar can be partitioned off under an unheated room, so much the better. Furnace-heated houses can have no suitable place for storing vegetables, unless a special vegetable cellar room or cave be prepared, well partitioned off, or better, outside the foundation walls under a porch or with a roof of its own. No furnace flues or steam or hot water pipes should go through a vegetable storage. Unless a temperature of 40 degrees Fahrenheit can be secured for the most of the storage period it is not wise to try to store many vegetables.

Outside caves may be built cheaply for more or less temporary use, or may be made of concrete, clay blocks or brick, to last a lifetime. Home caves should have doors at one end only, because with doors at both ends it is almost impossible to avoid freezing in severe weather. The cave door should be well fitted and there should be a hatchway or door over the steps leading down to the cave door. A ventilator should be provided in the roof at the back end. A sewer tile with the bell end up makes a very good ventilation flue. A concrete or brick floor, especially in the center, is desirable. In some cases a drain tile is needed to carry off the seepage.

Caves may be entered from the house cellar, or, in many other cases, from the porch. It sometimes is dangerous to open up a small outside cave in cold weather. If entered from the outside the cave should be as near as possible to the kitchen door.

Where used railroad ties or similar material can be secured, a very good cave may be built at small expense as follows: Dig a hole about five feet deep, as wide as the length of a tie and as long as desired. Set ties at intervals of two feet along the sides like posts; on top of them place ties for a plate; behind them, next to the earth, place boards or brush to hold back the dirt, and on top of the plate put a solid roof of the best ties, provide a doorway and doors at one end, and cover the top with straw and a sloping roof of earth.

There are two kinds of pits—those not frost proof and those which are frost proof.

For vegetables which are not injured by being held in frozen condition during winter, shallow pits, or better, a barrel or box set into the ground, may be used. The earth should be molded around the box, barrel or pit to prevent surface water from running in. They may be harvested after freezing weather begins, stored in convenient piles and covered to protect them from repeated freezing and thawing. They should not be stored until the ground is frozen and then they should be frozen solid and put away in the pit. The idea is to keep them continuously frozen or to have very few and gradual freezings and thawings. The box or barrel should be covered first with a piece of burlap or carpet, then with a mouse-proof board cover, and finally with straw or similar material. When taken from the pit the vegetables may be thawed out overnight in cold water, after which they often may be kept in ordinary storage for a considerable length of time.

Pits for keeping vegetables cold and free from frost are not very reliable unless great care and thoughtfulness be used, but they are cheap and have a useful place where caves or cellars are not to be had. It is usual to dig a trench about two feet deep, as long as needed, and up to four feet wide, and in it to place the vegetables in a pointed pile and to cover them with a foot of straw and then with a layer of six to eight inches of earth. It is still better to put on a layer of straw with a light covering of earth, and then later more straw and earth as the weather gets colder. This makes two dead-air spaces. At first in the fall the top is left covered only with the straw to allow ventilation and avoid heating. Later the earth covering is made complete. In severe weather the whole pit and the ground near it may be covered with manure. Those who do not have straw may use instead the strawy manure supply for the next year's garden, protecting the vegetables by covering them first with newspapers and earth, or they may use leaves or lawn clippings.

Pits are entered by chopping a hole through the frozen earth at one end, large enough to reach or crawl into, and afterwards keeping the hole stuffed most carefully and deeply with straw or old sacks or both.

Sand boxes in cellars or caves are desirable for certain vegetables.

Shelves in an upstairs room or in a dry cellar near the furnace are well adapted for the storage of certain vegetables.

Potatoes are best stored in covered barrels or small bins. In crates or shallow piles they lose much moisture and shrivel. They must not be stored in piles that are too large, because they heat and may keep poorly or sprout in the center of the pile. No potato should be more than four feet from air. Care should be taken to keep earth out of the potatoes, as much of it in any one place in the pile may prevent ventilation and cause heating and rotting. A few potatoes in a cold cellar are far more apt to freeze than those in a large pile.

Potatoes should be kept absolutely dark to prevent greening by light. Freezing destroys potatoes. No potatoes should be purchased for storage that are dug after the ground is crusted with frost, because it has proven impossible to sort out frosted potatoes. All those touched by frost will spoil, one after another. Do not buy potatoes in sacks that show wet places due to a frosted potato.

Potatoes and many other vegetables that require a storage room should not be too dry or too well ventilated. In some cases a damp earth floor or the sprinkling of the floor helps keep vegetables crisp. It is in this respect that pits excel.

Cabbage is not injured by moderate frost. Late varieties, perfectly sound and not too ripe, are the only ones fit for storage. To wrap cabbages in paper and to leave on the outer leaves keep them crisp. For use after Christmas, most cabbage is best stored frozen solid in a pit. It will stand some freezing and thawing. For use after March, cabbage should be stored as kraut.

Onions need to be thoroughly cured when harvested. Dryness is a first requisite. They should be kept cold as well as dry. A well-cured onion should be firm and not readily dented at the base of the tops by the tip of the thumb when held in the hand. Onions are best for storage if topped about one and one-half inches long. They will stand very little freezing and thawing.

Beets, turnips, kohlrabi, winter radishes, carrots and rutabagas are best stored in sand in cellars or caves, or in pits; or in tightly covered boxes or crocks. The object is to keep them cold and to prevent evaporation. Kohlrabi must be tender when stored.

Squashes, sweet potatoes and pumpkins must be well ripened and cured. They must be free from bruises. They are best kept on shelves in a very dry place. They need not be kept especially cool.

Parsnips, parsley, vegetable oyster and horseradish may be kept in the ground where grown all winter, but as too much freezing and thawing destroys them they should be covered again. These vegetables may be stored as suggested in section 4, but the way to have them available all winter and to keep them most crisp is to hold them frozen. The pit method is recommended as best for these vegetabes and cabbage.

Celery, endive and head lettuce may be rooted in earth in a cellar or cave, and with occasional watering, may be kept until about Christmas time. Turnips, winter radishes and other vegetables also may be stored with the roots planted in sand or earth.

Garlic should be thoroughly cured as onions, or it may be braided by the tops into strings, which are hung up in dry places for curing and storing.

Ground cherries or husk tomatoes may be stored for some weeks in the husk in thin layers in a dry place, free from frost.

Tomatoes may be kept until about Thanksgiving by bringing the well-matured green tomatoes or the vines with the tomatoes on into the cellar or cave in the fall. Most of the tomatoes will ripen and be most acceptable as soon as they color up. The tomatoes may be placed on shelves or in boxes, and the vines may be hung up.—[C. L. Fitch in Iowa Agriculturist.

The Nation's Resources

THE same reason and judgment that makes us conserve national values in the earth, the mine and forest, governs the wise car owner in his choice of tires. This ever-growing demand for the most for the money is testing to capacity the Firestone factory. A careful use of your financial resources is bound to make you a Firestone user.

Test Firestone Super-size Cord Tires. Note their response and road grip; their smooth going. Count the saving in fuel; keep track of the mileage. Your business judgment watching Firestone performance will leave you no choice.

Here's a Real War Cow.

John Ballback, Jr., Milwaukee county, Wisconsin, sends The Wisconsin Farmer a picture of a real war cow. This picture is reproduced herewith. It was taken September 3d, and shows a cow with three of her own nice calves at foot, and all the calves doing nicely. While we are talking about big production and helping to win the war by providing more food, this bossy, belonging to J. Lampke, Milwaukee county, Wisconsin, has certainly done her "bit." The owner of the cow with his son, Norman, is seen in the picture. When the calves were born the smallest weighed twenty-six pounds, the next in size thirty-six pounds and the largest thirty-eight pounds. The mother is a Durham cow and has always proved worthy of her place in the dairy barn.

COW AND TRIPLETS BORN IN MILWAUKEE COUNTY, WISCONSIN.

Eighth Dairy Cattle Congress.

The important part which the dairy industry plays in the nation's welfare will be demonstrated more forcefully than ever before at the eighth annual Dairy Cattle Congress, to be held October 1st to 7th, inclusive, at Waterloo, Iowa. A large number of new features, demonstrations and exhibits have been planned to show that it is a patriotic duty for every dairyman and farmer to produce the largest amount of dairy products in the most economical manner.

The exhibition space for machinery, dairy supplies and equipment is being reserved by manufacturers from every section of the country. Those who are interested in equipping their homes and farms in the most up-to-date manner will find everything they want in the exhibition halls or on the grounds.

The Dairy Cattle Congress is for all dairymen, creamerymen and farmers. It is for those who are interested in better dairy conditions not only in the Mississippi Valley but throughout the nation. Its prize money is open to all breeders in the world and the man who enters cattle will be pleased not only with the treatment accorded him but also with the success both in the ring and in the stable.

Be sure to feed silage fast enough to prevent cold and deterioration in the silo. Otherwise sickness and loss in stock will follow. The top layer shoud be removed to the depth of one inch daily in wintertime. This would amount to 350 pounds from a twelve-foot silo, 500 pounds from a fourteen-foot and 700 pounds from a sixteen-foot silo. If silage is fed at a rate of forty pounds a day to dairy cows, these amounts would supply respectively nine, twelve and seventeen head of cattle.

In Barron County.

To the Editor:—Seven hundred cows under test last month. A grade Guernsey owned by Cedar Lake Farms was high cow for the month with 1,411.1 pounds of milk and 66.3 pounds of fat. Our forty-five-pound list for the month ending August 31st follows:

By the OFICIAL TESTER.

The Byron Association.

To the Editor:—The Byron Association, Fond du Lac county, finished its first month September 10th, with 540 cows under test, representing thirty herds, and it is expected that there will be 600 cows listed in another month or so. Fred Stump, is president; A. E. Tulledge, vice president, and Flint Jones, secretary and treasurer. Please notice our sixty-two-pound record to start with. The forty-five-pound list for the month follows:

Owner, name and breed.	Age.	When fresh.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
Paul Schwefel					
Grade Holstein	6	4-2-17	1277	4.1	52.0
Albert E. Tulledge					
Holstein	7	3-2-17	1197	3.8	45.0
Frank Holland					
Grade Holstein	6		1407	4.4	62.0
Grade Holstein	6		1088	3.9	42.0
George Schwartz					
Grade Jersey	7	11-28-16	986	4.8	47.5

What Is Unicorn?

It is a dairy feed containing three times as much protein and fertility as corn. It contains no human food.

It will pay you to sell most of your corn and oats and use Unicorn in your dairy ration. We have the highest records for milk production of any dairy feed. Send for free copy of Cow Testers' Manual of tables, etc., also interesting records of cows.

Reports of Good Yields Continue.

Wisconsin Oat Crop Averages High—Hay Turned Out Well—Frosts Hurt Corn in Many Sections—Silo Filling Is Pushed at Full Speed.

WISCONSIN.

Buffalo County.—Threshing is all done in this vicinity. Barley yielded from 25 to 26 bushels per acre. Oats 30 to 55 bushels an acre and wheat 20 to 35 bushels an acre. The frost has done quite a little damage to the corn and also other truck. Hog cholera has set in and quite a few farmers are vaccinating. Plowing is slow progress, as the ground is too dry. Clover is being cut for seed and a good yield is expected. Fruits are all ripe and plentiful.—J. W.

Burnett County.—Both the tame and wild hay crop is very short. Timothy from one to two tons per acre. Clover about the same; alfalfa two to three tons per acre. Wild meadow grass from 1½ to 2 tons per acre. Grain gives a good yield. Wheat 16 to 38 bushels per acre; oats from 40 to 80 bushels; barley, 34 to 40 bushels, and rye, 25 to 32 bushels per acre. Corn froze down entirely on the 8th and 9th and much corn had not dented yet. With some care it can be saved for fodder. Potatoes will not be as good as expected on account of the killing frost too early. As I stated in a former report feeding of stock is curtailed on account of the high price and shipping of stock is on a great increase from this locality. The numbers are diminishing, but the health and growth is normal. Dairy business normal on account of the price per pound for butter fat.—Erick H. Johnson.

Clark County.—The second crop of clover is being harvested and averages somewhat lighter than the first crop. The whole hay crop has done better than it did last year. Oats are making about forty bushels per acre. Corn was badly frozen on the 9th and 10th and less than 50 per cent of the crop was far enough advanced to make good silage. Fruit was damaged to some extent by hard frosts. Pastures are low and many farmers are feeding to keep up the milk flow. The demand for milk is good and herds are increasing in number.—Louis Buddenhagen.

Douglas County.—Clover and mixed hay average about one ton to the acre. This is about half the yield of last year. Wild oats or upland hay run about three-fourths ton per acre. The oat crop did well. Wheat has not been cut. Gardens were hurt by frost on the 9th and 10th. Some farmers are selling dairy cows because they fear the scarcity of hay and high prices.—J. N. Ottun.

Door County.—Frost on the 10th and 11th did not do any damage in this vicinity. Pastures have been good because of plenty of rain. Potatoes will make a good crop. Threshing has begun and the grains are turning out fairly well, except peas, which are about 25 per cent short. Apples will not be as good as usual this year.—John Aznoe.

Dunn County.—Killing frost on the 9th of this month found very little corn advanced enough for seed ears. High pressure silo filling on every hand. Late potatoes were damaged 25 per cent. Small grain appears to be at least 20 per cent better than a year ago. The entire season has been especially favorable to live stock.—J. D. Miller.

Jackson County.—Weather has been very favorable for threshing and the yields of all grains are satisfactory. Quality is high. Hay has yielded an average of 1¾ tons per acre for the county and the quality is average. Second crop is extra good. The ground is too dry for good plowing and it has made hard work getting in the rye and wheat. Silo filling will be in full swing the coming week.—P. W. Jones.

Juneau County.—The hay crop was good. June clover went 1½ tons to the acre. Timothy about the same. Wild hay about 2 tons. This will average with last year's crop and for the five-year average. Of course, there are some exceptions. Oats are going about 40 bushels to the acre; spring wheat about 25 bushels; winter wheat about 30 bushels; barley about 35 bushels and rye about 12 bushels. Now, this is machine measure, of course. Corn is cut 80 per cent of crop by the frost. Buckwheat about 80 per cent and potatoes about 50 per cent. The frost did some damage to the gardens, such as tomatoes, squash, pickles and all tender stuff. Stock in healthy condition and being fed roughage of the farm. Some dairymen are feeding on a small scale such as they raise.—C. E. Haskins.

Lafayette County.—The hay crop this year is below normal in quantity but above in quality. More straw than ever seen before. Oats yielding 60 to 90 bushels. All other small grain proportionately high. Corn on all lowland badly frosted and those who have silos are filling with the frosted corn. Corn not hurt by frost promises a fair crop. Potatoes will be a good crop.—W. J. Martin.

Lincoln County.—All crops are good. Threshing is well under way and the grain shows excellent quality. Oats are averaging about forty bushels per acre, wheat about thirty bushels and rye from twenty to thirty bushels. Barley was damaged to some extent by hot winds, but still is a fair crop. Hay did well this year, averaging about two tons per acre. Fruit and gardens are good. All cattle are healthy.—G. A. Patterson.

Manitowoc County.—Threshing is now the order of the day. Winter wheat and rye have done well. The yield has been above the average, the berry being plump and heavy. Oats and barley are not up to expectations as the yield was a little low and light in weight, especially barley, which failed the most. Corn has picked up some, but not enough to make a full crop. Pastures are picking up after the recent rains and few warm days and as a result live stock are doing well. Feeding operations are about the same as last year. Milk flow has diminished very little since pastures are in fair condition. Farmers are now busy sowing wheat and rye. An increased acreage will be devoted to these crops. Potatoes and garden truck are doing well and are up to expectations, as weather is favorable for their growth.—Edward E. Straka.

Outagamie County.—In regard to the hay crop would estimate about two tons of hay per acre, which is a trifle higher than for the last five years. Its acreage was about the same as last year's. Oats are very good and high average. About the best in five years' average, yielding about from 50 to 75 bushels per acre of good quality. Wheat crop is of small average in this locality. A little below average in yield running from 20 to 24 bushels per acre. Barley is a fair average crop, yielding from 30 to 40 bushels per acre. Not so good in quality. Some wheat shrunk in the berry due to excessive heat just at the time of ripening. Corn crops hurt by early frost. Very little ripe corn in this locality. Fruit and garden truck hurt by early frost. Feeding cattle or beef stock is not done very much in this locality. No feed of any kind stored for winter use.—Harry Lepplu.

Oneida County.—A heavy frost on September 11th froze all vegetation. Threshing is under way and small grains are yielding well. Corn is going into the silos, the crop being about 50 per cent normal at the tme of the frost. Early potatoes are being dug and a good crop is reported. Late ones also promise well. Live stock are in good shape, although pastures are getting poor.—Chas. H. Jewell.

Trempealeau County.—Hay averaged from one and one-half to two tons per acre. Some of the second crop was cut for seed and lots of clover is being used for seed. All grains were good this year. Oats averaged about fifty bushels per acre, barley about forty-five bushels, wheat twenty-five bushels and rye about twenty bushels. All corn was killed by frost on September 9th. Only in the earliest fields will there be seed for next year. Potatoes are the best they have been for several years. Pastures are all dried up and most of the farmers are feeding ensilage. The ground is so dry that plowing cannot be done. Most farmers will put in rye and wheat this fall.—J. L.

Winnebago County.—All hay turned out well. Better than last year and also better than an average of previous five years. There is very little threshing done yet and the yield of all grain varies in different parts of the county, running from a total failure to very good. Corn has had a narrow escape so far, the frost of the 9th and 10th inst. running in streaks, some of corn escaping entirely, other fields badly frostbitten. Corn would have been a poor yield at best. Apples a total failure except a few Wealthies. Garden produce fairly good, but so late that a great deal will be destroyed by frost. Farmers are reducing their stock on account of feed. Hogs scarce. No disease general among stock.—Seymour L. Smith.

Wood County.—Threshing is nearly done. Oats are yielding much better than normally, in most cases, making between twenty-five and seventy bushels per acre of good heavy grain. Rye is running from six to thirty-five bushels per acre. Buckwheat is scarcely normal on account of frosts. Corn suffered from frost, but most of it is in the silo. Early potatoes are good, but late ones are only half a crop. Pastures are short and the milk flow is decreasing. Prices are so high that farmers are not inclined to do much feeding. Hogs are scarce and high in price.—P. B.

Cows or Veal Calves.

To the Editor:—Anybody can see through a hole in the wall. It ought not to be necessary to bring any argument to prove that when we sell a calf for veal, that puts an end to all hope of its ever growing into a cow. The calf that is made into meat is a dead calf. No cow from that source. On the other hand, a calf saved and raised will in due time become a member of the dairy herd.

There has been some talk on the part of city folks of shutting down on the purchase of veal on account of the high price demanded, and I am not at moderate values with occasional exceptions. The general average has been entirely satisfactory to the sellers in view of the conditions that have prevailed. But this range of values will be regarded as too conservative sure but a boycott of that kind might be a good thing, not from the standpoint of the consumer, but because of the need of more cows.

What is the effect of this wholesale killing of calves for veal in this country? A single sentence will answer that question in great part: Soaring prices for boots and shoes, harnesses, chairs with leather bottoms, seats for automobiles, belts of leather, in fact, for everything into which the construction of leather enters. Milk is every day climbing up in price to the consumer; butter and cheese are following; meats of all kinds are practically prohibitive, and, finally, people are suffering more than we know from lack of wholesome dairy products and all because of the disposition to slaughter the calves and sell the good cows.

In the United States there are 6,000,000 fewer cows now than we had fifteen years ago and the dearth is all the time increasing. What is going to be the outcome of all this? More suffering, more poor health on the part of old folks and little children, and, finally, less money for dairy farmers, for we are ruining our own source of revenue.

Only one sort of a calf ever should be slaughtered as long as the present stringency lasts, and that is the calf that has no promise in him when he comes to the age of maturity. Even bull calves should be saved until the country's need of good sires has been supplied. Inferior bull calves might be disposed of, but the choice ones ought to be kept. There is good money in growing really desirable male calves for dairy purposes. By advertising a little it is always possible to sell any surplus stock we may have.

We may all of us be benefactors on a small scale in this matter. There is in the hearts of most men a desire to be of some service to their fellows. Because we cannot found libraries and establish and endow colleges we are not to feel that there is nothing for us to do. Save and grow a calf! That helps to make the world a bit happier and better! It is a source of pride and satisfaction to have the calf we save a good one and that makes the world still more happy and a better place to live in. E. L. Vincent.

A SMALL FARM in California will make you more money with less work. You will live longer and better. Delightful climate. Rich soil. Low prices. Easy terms. Sure profits. Hospitable neighbors. Good roads, schools, churches. Write for our San Joaquin Valley illus. folders, free. C. L. Seagraves, Ind. Com'r, A.T.&S.F.Ry., 1959 Ry. Ex., Chicago.

132 ACRES, three miles from Brunswick; improved; $90. G. W. Rucker, Brunswick, Mo.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word per insertion. See page 16.

Pony Puzzle

Count the Dots and Win a Prize

Here is a Shetland pony covered with dots. By being careful any boy or girl can count the dots on this pony. If you can do this we will send you as a prize, a packet of five beautiful embossed postcards lithographed in rich colors, and also a certificate for 1500 Free Votes in our grand contest for a beautiful Shetland Pony. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

Beautiful Pony Given

Remember the pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in this great contest. In case of a tie for the pony one will be sent to each person so tied. Full particulars by return mail.

THE PONY MAN Dept. 223 Des Moines, Iowa

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Potatoes in Bread Making.

The pressure of war conditions has brought to light the value of potatoes in bread making, both in England and America. As an economy in England potato flour was mixed with wheat and a peculiarly delicious bread resulted. In this country potato flour is not available to the average housewife, and the United States Department of Agriculture has, therefore, devised recipes for the making of bread with simple, plain boiled potatoes mixed with the wheat flour.

This bread is said to be not only a complete success from the economy standpoint, where potatoes are cheap and plentiful, but to supply an attractive novelty in the household menu, and a welcome variation from the usual bread monotony. It has a rich brown crust, is tender and elastic, and the flavor is preferred by many to the bread made wholly of wheat. It contains more moisture than ordinary bread, and, therefore, has longer keeping qualities.

Potato Bread, Straight Dough Method—To make four one-pound loaves take three pounds boiled and peeled potatoes, two and one-fourth pounds bread flour, one and one-half level tablespoons salt, three level tablespoons sugar, two cakes compressed yeast, four tablespoons water. Wash thoroughly and boil in their skins about twelve potatoes of medium size. Cook them until they are very tender. Drain, peel and mash them while hot, being careful to leave no lumps. Allow the mashed potato to cool until lukewarm. To three pounds (five solidly packed one-half pint cupfuls) of the mashed potato, add the yeast, which has been rubbed smooth in a cup with three tablespoonfuls of lukewarm water. To get all the yeast, rinse the cup with the remaining tablespoonful of water and add this also to the potato. Next add the salt, the sugar, and about four ounces of the flour (one scant half-pint of sifted flour). Mix thoroughly with the hand, but do not add any more water at this stage. Cover the mixing bowl to avoid the formation of a crust on top and place out of the way of drafts to rise, where the temperature cannot fall below 80 degrees F., or be much higher than 88 degrees F. Where the housewife has no thermometer she should see that the dough in all the risings is kept moderately warm, but not up to blood heat. Any water used in mixing the dough should be moderately warm, but by no means hot. This sponge, if kept at the proper temperature, should, after two hours, become quite light.

To this well-risen sponge, which now will be found to be quite soft, add the remainder of the flour, kneading thoroughly until a smooth and elastic dough has been formed. The dough must be very stiff, since the boiled potato contains a large amount of water which causes the dough to soften as it rises. Do not add water to the dough unless it is absolutely necessary to work in the flour. Set the dough back to rise again until it has trebled in volume, which will require another hour or two. Then divide the dough into four approximately equal parts, reserving a tiny lump weighing two or three ounces for an "indicator." Shape the sample into a ball and press it into the bottom of a small tumbler with straight sides. The glass should be slightly warmed. Note the volume of the ball of dough in the tumbler and mark the glass at twice this volume.

Mold the four portions into loaves and place in greased pans which have been slightly warmed. Place the glass containing the "indicator" besides the pans and let all rise, under proper temperature, until the "indicator" shows that it has doubled in volume. Then place the loaves in the oven and bake in a good, steady heat for forty-five minutes.

To test oven for the right degree of heat, a convenient test will be to put a teaspoonful of flour in an earthen dish in the oven. If this flour becomes light brown evenly throughout in five minutes' time, the oven is right for bread beaking. If the flour scorches in that time, the oven is too hot.

Potato Bread—Sponge Method.—To make four one-pound loaves take three pounds of boiled and peeled potatoes, two and one-fourth pounds of good bread flour, three level tablespoonfuls of sugar, one and one-half tablespoonfuls of salt, one cake of compressed yeast, four tablespoonfuls of water. Boil, peel and mash the potatoes as directed in the straight dough method. In the evening take one and one-half pounds, or two and one-half solidly packed half-pint cupfuls, of the cool mashed potato, add to it the salt, four ounces of flour (one scant half-pint cupful) and the yeast rubbed smooth with the water, reserving one spoonful to rinse the cup. In the morning add the remainder of the potato, the sugar, and the rest of the flour. Knead thoroughly until a smooth and very stiff dough is formed. After working the dough set it to rise according to the directions given for the second rising under the straight dough method. Thereafter handle the dough exactly in the same way as is given under the straight dough method.

Potato Bread Rolls.—To make one dozen small rolls take eight ounces boiled and peeled potatoes, six ounces sifted flour (two tablespoonfuls powdered milk, added to dough, will improve quality of rolls. Milk itself or cream may be used, but they will increase liquid content), one-third cake compressed yeast, three-fourths level teaspoonful salt, two tablespoonfuls of lukewarm water, two tablespoonfuls of sugar, two tablespoonfuls of butter. Boil, peel and mash the potatoes as directed for bread making. Add, in order, to this the salt, the powdered milk (if used), the yeast rubbed smooth and mixed with the water, and lastly two tablespoonfuls of flour. Let this mixture stand at a temperature of about 86 degrees F. until the dough begins to collapse. Add to this sponge the butter, the sugar and the remainder of the flour and, if necessary, enough more flour to make a very stiff dough. Knead thoroughly until a smooth dough which is no longer sticky has been formed. Set back to rise again, and when the dough has trebled in volume, knead lightly, form into small balls and place, not too close together, in greased pans. Allow to rise until double in volume, as shown by the "indicator," and bake twenty minutes in a moderately hot oven.

Daisy Pattern for Quilt.

The evenings are getting long and out will come the quilt blocks. The

daisy pattern makes a most attractive quilt, the daisy being made of yellow on a white ground and with a brown center.

Packing the School Lunch.

Many kinds of lunch boxes, pails and baskets are now on the market. The chief advantage of most boxes and pails is that they are made of metal and can, therefore, be easily cleaned and scalded to keep them in safe condition. Some boxes have the advantage over pails that they can be folded when empty and strapped with the school books. Baskets are ventilated and for this reason suitable for carrying moist foods which are likely to spoil. There is no reason, however, why small holes cannot be punched in metal boxes or pails to let in the air. Baskets can, of course, be washed or scalded, but not so easily as metal containers, and they should be frequently cleansed. There should, in fact, be no part of any food container that cannot be cleaned. For this reason the simplest boxes and baskets are often better than the more elaborate ones with compartments in which to keep dishes, knives, forks and spoons. With the increase in automobile travel, well-constructed boxes and baskets which can be easily cleaned have come on the market with compartments for keeping food hot or cold and for holding liquids. These are, of course, suitable only for children who ride back and forth, and particularly suitable where several lunches are put up in one household.

The precautions which must be taken to keep foods clean and safe differ with circumstances. In dusty seasons they should be wrapped particularly well. In hot weather the use of soft, moist foods in which molds and bacteria are most likely to grow rapidly should be avoided. Although chopped meat moistened with a dressing of some kind makes a good filling, such foods are less desirable in hot weather than slices of meat, peanut butter or other foods less liable to spoil.

Paper napkins or the somewhat heavier paper towels of much the same size are very useful for packing lunches, and, like paraffin and parchment paper, may be obtained at a low price, particularly if bought in rather large quantities. If no provision is made in the school for serving lunches, an extra napkin, either of paper or cloth, should be put in the basket, to be spread over the school desk when the lunch is eaten. Napkins can be made out of cotton crepe at a cost of a very few cents each. The crepe may be bought by the yard, and should be cut into squares and fringed. Such napkins have the advantage of not needing to be ironed.

In packing the lunch basket put at the bottom the things least likely to crush, and wrap the sandwiches, etc., into neat parcels, not all in one. Paper cups; jelly tumblers with covers, which can now be bought in several sizes; bottles with screw tops, such as those in which candy and some other foods are sold; and small jars such as those in which some goods are sold by druggists, can all be used for packing jellies, jams and honey, as well as other soft foods, such as stewed fruits, custards and cottage cheese. When clean and in good condition, empty receptacles of this kind can be saved for use in the lunch basket.

A few bills of fare for basket lunches follow, which may help in deciding what is satisfactory for the purpose. Many others equally good could be suggested:

1. Sandwiches with sliced, tender meat for filling; baked apple, cookies or a few lumps of sugar.
2. Slices of meat loaf or bean loaf; bread and butter sandwiches; stewed fruit; small frosted cake.
3. Crisp rolls, hollowed out and filled with chopped meat or fish, moistened and seasoned, or mixed with salad dressing; orange, apple, a mixture of sliced fruits, or berries; cake.
4. Lettuce or celery sandwiches; cup custard; jelly sandwiches.
5. Cottage cheese and chopped green pepper sandwiches or a pot of cream cheese with bread and butter sandwiches; peanut sandwiches; fruit cake.
6. Hard-boiled eggs; crisp baking-powder biscuits; celery; brown sugar or maple sugar sandwiches.
7. Bottle of milk; thin corn bread and butter; dates; apple.
8. Raisin or nut bread with butter; cheese, orange; maple sugar.
9. Baked bean and lettuce sandwiches; apple sauce; sweet chocolate. —Bulletin.

To Help the Housewife.

If gruel for the sick is whipped to a froth with the egg beater and served in a pretty cup it will prove most tempting to the invalid.

If stamps stick together run a warm iron over them. The glue will soften, allowing the stamps to be easily separated.

Beating cakes encloses bubbles of air, which is one of the secrets of light cakes; stirring stirs them out.

To remove automobile grease or any dark, heavy grease from washable fabric, apply a small piece of butter and rub in well, then wash with soap and rinse.

The washing of pans and kettles will not involve half the labor if done immediately after using.

In ironing a garment on which hooks are sewed, care should be taken not to close the hooks. This can be prevented by placing flannel or anything soft beneath the hooks.

THE YOUNG FOLKS.

Likes to Work in the Field.

Dear Young Folks:—I am going to write you a letter and I do so want to see it in the paper. I have always wanted to write to you since I started to read the letters. I wish I had read

CAUGHT THEM COMING AND GOING.

the letters sooner, but when we first began to take the paper I did not see them. I think our column is very interesting.

I am twelve years old and am in the eighth grade this year.

I like to work out in the field with the men and horses. I have always told papa he should buy a pony for me because I like horses so well.

I agree with Esther that the story about "One Eye, Two Eye, Three Eye" is a good one.

Now here is a riddle for you to guess. What is the keynote to good manners?

Esther.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Enclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date fall and winter 1917-1918 catalog, containing 650 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating thirty of the various simple stitches), all valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

2026-2025—A splendid style for business and home wear. Waist pattern 2026 is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 yards of 36-inch material for a 38-inch size. Skirt 2025 is cut in 7 sizes also: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 5⅜ yards of 36-inch material for a 24-inch size. Two separate patterns, 10 cents for each pattern.

2206—A pretty and practical set. Pattern is cut in 4 sizes: 1, 2, 3 and 4 years. The dress requires 2½ yards of 36-inch material, the slip requires 1½ yards, and the drawers require 1⅛ yards, for a 3-year size.

2214—A trim style for the school girl. Pattern is cut in 3 sizes: 12, 14 and 16 years. Size 14 requires 5⅛ yards of 36-inch material.

2197—A natty suit for mother's boy. The trousers are straight and with side closing. Pattern is cut in 4 sizes: 2, 3, 4 and 5 years. Size 4 will require 3¼ yards of 36-inch material.

2224—Ladies' dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires for a 36-inch size, 6 yards of 44-inch material. The skirt measures 2⅜ yards at the foot.

2221—An ideal undergarment. Pattern is cut in 4 sizes: Small, 32 and 34 inches bust measure; medium, 36 and 38 inches; large, 40 and 42 inches, and extra large, 44 and 46 inches. Size medium requires 3⅝ yards of 36-inch material.

1822—Ladies' house or porch dress. Pattern is cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5½ yards of 44-inch material for a 36-inch size.

2196—A new and practical apron model. Pattern is cut in 4 sizes: Small, 32 and 34 inches bust measure; medium, 36 and 38; large, 40 and 42, and extra large, 44 and 46. Size medium will require 4⅛ yards of 36-inch material.

2065—Ladies' skirt in raised waistline. Pattern is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 3⅜ yards of 44-inch material for a 24-inch size.

1993—Girls' one-piece dress, with sleeve in either of two lengths. Pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 3¼ yards of 44-inch material for an 8-year size.

2007—Girls' one-piece dress, with sleeve in wrist or elbow length. Pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3¾ yards of 36-inch material for a 6-year size.

2062—Ladies' waist with sleeve in either of two lengths. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 2½ yards of 44-inch material for a 36-inch size.

Get a Good Baking Every Time

WHY waste valuable cake recipes, bread and other high priced food in an uncertain oven? Get an Eclipse JOY Range and be *sure* of success with *every* baking. Have *perfect* control of the oven at *all* times—heat *all* parts of the oven.

No need for a big, fuel wasting, roaring fire—only two sticks of wood can do the average baking on this range. Can use any fuel. Write to us about

ECLIPSE
STOVES AND RANGES

"Hot-all-over" top heats all six cooking holes. Gives you *more cooking surface—saves money* in fuel—*saves time* in getting up meals. Smoke pipe comes up behind the splasher back—gives you *more room* for cooking utensils on the range top. With or without white enamel equipment on splasher back and oven door. Big fire box takes 23-inch wood—draft under entire length of fire box—a fuel and work saver. Eclipse Ranges are made of cast iron—guaranteed never to rust out and are slow to wear out. There are many other big features in this beautiful range. Write for our book and read about them.

Our book gives money-saving recipes—gives helpful hints on getting up good meals at low cost. Write today for FREE copy.

International Sunday School Lesson

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for September 30, 1917.

The Goodness and Severity of God.

(Review.)

LESSON TEXT—Daniel 9:3-19.

GOLDEN TEXT—The Lord is merciful and gracious, slow to anger, and plenteous in mercy.—Psalms 103:8.

A profitable way to spend the hour would be to make a study of Daniel's prayer as recorded in the lesson assigned for our reading today, and have the lessons of the quarter as illustrations of the goodness and severity of God. Announcement of the plan may be made the Sunday before, and the different lessons of the quarter assigned to different members of the class to tell how they bear upon the topic of the lesson for this week. A broad analysis of Daniel's prayer is as follows:

I. Confession of the Nation's Sins (vv. 3:15). The circumstances of this prayer were extraordinary. The crisis was so serious that Daniel sought after prayer to the Lord with fasting, sackcloth and ashes. In his confession the people's sins are placed in contrast with God's righteousness. He acknowledges that their sorrows and sufferings justly belong to them. Daniel, the holy man against whom there is no record of wrongdoing, includes himself with his people.

II. Supplication for Mercy and Forgiveness (vv. 16-19). He pleads for God's anger and fury to turn away, and his remembrance of the Holy City and his chosen people. The Lord's honor was at stake. He confesses that Israel had no merit, were utterly destitute of righteousness, and pleads consideration on the ground of covenant relationship.

Another way to conduct the review would be to ask different members of the class to report on the different lessons by giving the vital and central teaching of each. The following are suggested as vital teachings of the several lessons:

Lesson 1. God is absolutely holy, therefore, those who have been sanctified by fire from the heavenly altar are qualified for his service.

Lesson 2. He who turns away from the Lord shall be judged by the Lord.

Lesson 3. In Hezekiah's reformatory work the Passover Feast was restored, showing that the only way to get people to turn to God is to gather them around the cross of Christ—the atonement by blood.

Lesson 4. Though our unfaithfulness and cowardice have shamefully humiliated us, we should turn to God in prayer.

Lesson 5. God's gracious invitation is extended to all without money and without price.

Lesson 6. No matter how wicked one may have been in his apostasy from God, if he sincerely repents, God will be found of him.

Lesson 7. Regardless of one's age and experience, God can use him in doing mighty work if he will but open his heart unto him.

Lesson 8. The Word of God found and read will mightily convict of sin, and transform one's life and environment.

Lesson 9. God's predictions as to the captivity of Israel were fulfilled to the letter. Nothing shall fail of that which God has said he will do.

Lesson 10. Jehovah is the shepherd of captive Israel, and will surely gather them out from their wanderings and save them.

Lesson 11. One should be unflinchingly loyal to God under all circumstances.

Lessons 12 and 13. God is able to deliver those who trust him, from fire and from wild beasts.

You Want This Lamp

This American Parlor Lamp makes your home bright and cozy. Lights the room as bright as day. No strain on the eyes when reading or sewing. Gives 400 candle power light at a cost of one-third cent an hour. Clean and pleasant to use—no wicks to trim or chimneys to wash—no smoke or disagreeable odors. Nickel-plated finish — plain white or fancy shades. *Your dealer sells the American. See him or write.*

American Gas Machine Co.,
735 Clark St., Albert Lea, Minn.

ARE YOU GOING TO BUY LAND?

IF SO, GET A COPY OF OUR JOURNAL FIRST.

It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. WOULD YOU SELL YOUR FARM if you got your price? Sell direct. No commissions. Particulars free. Charles Renich, G-2, Woodstock, Illinois.

118 ACRES, Green county, Wisconsin. Near town milk condensory. $60 per acre, $1,500 cash, long time balance. Box 534, Warren, Ill.

MARATHON COUNTY, WIS., improved and unimproved farms for sale. Free list and map. Wm. Albrecht, Jr., Wausau, Wis.

FLORIDA FARM lands, two to three crops; flowing wells. Write for particulars. T. B. Stinson, Palaltea, Fla.

HOLSTEIN BULL FOR SALE.

REGISTERED Holstein bull, ready for service. Two of his dams averaged 108 lbs. milk in one day and 34.95 lbs. butter in seven days, officially. Price $125. Wisconsin Live Stock Association, Appleton, Wis.

REGISTERED Holstein bull, ready for service. Three of his dams average 106 lbs. milk in one day and 34.75 lbs. butter in seven days officially. Price $100. R. M. Harriman, Appleton, Wisconsin.

MONEY TO LOAN.

MONEY TO LOAN on Wisconsin farms in amounts of $5,000 to $25,000. Security must be twice the amount of the mortgage. 6% with privilege of paying $100 or more at any time. Address 206 Washington Bldg., Madison, Wisconsin.

LEARN TELEGRAPHY.

HUNDREDS OF YOUNG MEN and young ladies are needed as telegraph operators, stenographers and bookkeepers. Write for catalog. Barry's Telegraph Institute, Minneapolis, Minn.

TELEGRAPH OPERATORS IN DEMAND—One superintendent writes: "Can use 25 operators tomorrow." Ladies or gentlemen. Wisconsin School of Telegraphy, Oshkosh, Wis.

LEARN TELEGRAPHY—Positions guaranteed. Young men and women. Write Northwestern Telegraph School, Eau Claire, Wisconsin.

LIGHTNING RODS.

LIGHTNING RODS that are guaranteed protection. $250.00 to find a building burned by lightning with our rods. L. F. Diddie Co., Marshfield, Wis.

GASOLINE TRACTOR.

GASOLINE TRACTOR—12-horse gasoline, portable engine and one two-roll husker. M. H. Mugridge, Waupun, Wis.

RYE.

CHOICE high-yielding plump pedigree rye; recleaned and graded; reasonable price. Arthur Popp, Jefferson, Wis.

LEGHORN HENS.

FOR SALE—Will sell all or part of 200 White Leghorn hens; yearling stock; many of them fit for show room. Oak Dale Farms, Austin, Minn.

STANCHIONS.

ROY SWING STANCHION—Good enough for the best stable and price low enough for the poor man; none better. Ask for booklet describing them. Manufactured by Roy Brothers, East Barnet, Vt.

ENGRAVING Halftones made from pictures or drawings of stock for your letterheads, post cards, catalog advertising. Quick service, best work, reasonable prices. Write for information. THE HOMESTEAD COMPANY Engraving Dept. Des Moines, Iowa

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Crookedness in the Poultry and Egg Business.

To the Editor:—Our experience has been such as to give a better idea of humanity as a whole. From the thousands of eggs shipped each season, as well as the cockerels and breeding pens, not more than ten cases in the quarter century have they showed up dishonorable. What other business could say as much? About half of the adverse happenings were from people who were starting up in the business, thinking they could prey upon their customers, as well as work their poultrymen from whom they purchased, for eggs—more eggs—because the others did "not hatch."

Now, contrary to popular (?) opinion, those men did not stay in the business long enough to beat anyone. They just simply played out the first season before they had given the business a very black eye. One overbearing fellow in particular, who had procured a lot of literature, telling what he would have for sale the next season, proceeded to "work" each poultryman for a second sitting of eggs, claiming that the first sitting did not produce a single chick. He accidentally got his people mixed, and wrote to us at the end of two instead of three weeks, asking, demanding, another lot for hatching. He was very demurely informed that, "I entirely forgot to say that it requires eggs from our ranch three weeks to hatch!"

That season finished that embryo breeder, just as any other business that is a fraud is soon wound up. The backbone of the industry is the farm people, who keep good stock and sell poultry and eggs to other farmers who wish superiority in size and production for the market. One man, a farmer, who with his wife drove twenty miles for cockerels to head his market flock, said: "We have just sold 150 cockerels on the market, and cockerels like these will give a gain of a pound each on our young stock next season, and 150 pounds is worth something with chickens selling for 17 cents a pound."

It is not advisable to start up in enormously high-priced stock or eggs, but it does pay and pay well to get a start of pure-bred fowls; such may be had at a very reasonable figure, and for purely utility purposes will make good. A dandy flock of Reds that we have in mind are practically pure, although they contain a small per cent of alien blood. So long as this flock is being crossed with pure-bred males of their own kind all is well.

Here is an illustration of the other side of it. A neighbor has a flock of grade Rocks that are making good in the same way. A near-by schoolhouse is the common ground for both flocks of poultry, and the Red hens hatched a few of the grade Rocks, making a grade-Red-grade-Rock cross, and the result would be deplorable if there were many individuals of this kind. One cockerel was in the lot, and it was not much of anything. It had the color of the Rocks—or rather an imitation color—a long, slim body that might have run back to the jungle fowl, much smaller than the others of the same age; in fact, it was a very good type for the time that fowls were not yet domesticated and must use their wings and legs to get away from wild animals, instead of going into the frying pan. This is exactly what comes of crossing and recrossing breeds.

To keep from crossing grade fowls, someone must make it a business to keep his flock pure; there are many such, right on the farm which is the best place on earth to grow chickens with lots of stamina and "pep." To say that many earnest farm men or women would sell single-comb fowls for rose comb, or vice versa, would sort up a flock of crossbreds and sell the light individuals to one inquirer and the darker ones to another, is not in reason. Once in a while even a good strain of fowls will throw an off-colored bird, and especially if it be a comparatively new breed that is yet in the establishment.

We once grew a white turkey from one of the best established strains of the Bronze variety this country ever knew. It was not a fraud, either. It was only that it happened in the panic of '97 when corn sold for 16 cents and we had no more gumption than to think that we could keep one of our own young males to breed from, and the flock has irrevocably gone to pieces through mistaken economy. This much inbreeding would be all right in a flock of chickens of similar merit, but turkeys will not stand for it. Not a youngster in that lot was worth keeping over, so the splendid flock that had taken us almost all our life to build was gone.

We have no need for $30 eggs even at half price; we do need—the country needs, the breeder of pure-bred poultry, where we can get stock to keep up the farm flocks of our land. These breeders, in turn, go to the larger breeders of pure-bred poultry—the "fancier," if you please, which does not mean a gambler, but one who is artist enough to breed pretty nearly true to standard and who sells his stock, comparatively speaking, for their value. Each and every one of the poultry people are needed; each has his place in the world, which is just as legitimate, just as honorable a calling as any other. Subscriber.

Habits and Vices in the Poultry Yard.

To the Editor:—Egg-eating is probably the most objectionable of all bad habits. It is a habit generally brought about by overcrowding, lack of exercise, lack of proper shell-forming material and often improperly constructed nests.

Low-down nests are also sometimes the cause. To prevent egg-eating, make the fowls exercise for practically all the feed they get. Do not overcrowd, allowing four or five square feet of floor space for every fowl; provide plenty of oyster shells and grit; locate nests in a dark and secluded place, raised several feet above the floor, so they will have to fly and climb to get to the same. They like it better where they have to go way up and hide. Guard against having and leaving broken eggs around so they can find and eat them, as this often develops a taste for eggs. Also the feeding of egg shells without breaking them up often leads to this objectionable habit.

Perhaps the surest way of curing the habit of egg-eating is by cutting the guilty party's head off, if she is known, but, of course, if many have the habit they can be sold on the market. If they remain in the flock others are sure to get the habit and make bad matters worse. Soft-shelled eggs are caused from lack of lime, and that is one fruitful source of egg eating. Thus it is easily seen that if they have plenty of lime in some form they will not get the habit this way.

It is a noticeable fact that most all bad habits are started in the wintertime when fowls are more or less confined, and the litter is insufficient. Provide a litter, loose and dry, of straw at least eight inches to a foot deep.

Another vice confined and overcrowded poultry, lacking exercise and food, often fall prey to is the feather-eating and feather-pulling habit. Some will get the vice of just pulling feathers from their own body and throwing them down. Others will pull them out and swallow them, and still others will pull them from other members of the flock and either eat them or throw them down.

This is a most aggravating habit or vice when it once gets thoroughly started in a flock, and one which in a short while will greatly damage the general appearance of the flock. Often it leads to drawing blood, and pecking at the sore places and some in the end turn cannibals.

Free range stock seldom contract this habit, and if they do contract it, it is because they are lacking something in their ration. If you should happen to have such in your flock of fowls, make them work all day long for everything they get. Feed them plenty of animal food in some form or other. Beef scraps are good. Milk is excellent. Green cut bone and blood meal is good.

Do not forget the regular feeding of green food daily, because very often a lack of the same brings on the above vices.

Another way of stopping this bad vice is by anointing the feathers about the picked area with an ointment made by adding a tablespoonful of aloes to a cupful of lard, rubbing the same well together. After one or two bitter doses of feathers thus treated the birds will usually stop pulling and eating the feathers.

It is really annoying to have two or three specimens in a flock that get so far along as to seemingly select one member that is physically below the others, and commence pulling the feathers and making the skin bleed and then peck at them till they tear the skin and begin to eat the flesh, and finally kill the bird. I have seen just that condition in a flock. It is needless to say that once a fowl contracts such a habit or vice there is no remedy for same. They should be sold at once and all other members of the flock that have had part in the crime sold also, for they are never profitable after they commence that.

There is just one way to handle such and that is to so handle the flock that they will not get such habits and vices; but in case they have, then the next best thing that can be done should be at once pursued.

No such flock is profitable, for they are not receiving the treatment that it takes to make a flock of hens profitable. Subscriber.

LOW PRICE LAND! HIGHLANDS OF LOUISIANA

Low price land that will yield bountiful returns in high priced grain crops and live stock—that is the great chance offered you in the

Mild, sunny winters; ample rainfall; two and three crops annually on same ground; free, open pasturage nine months every year. The big, FREE book, *"Where Soil and Climate Are Never Idle,"* tells all about it, and is a revelation to Northern farmers. Send for your copy NOW.

Ailing Animals.

Scabies in Cattle.

I have some cattle which for the last few winters have been bothered with a sort of itch on their necks. They rub themselves until the hair comes off. What can I do for them?

It is very probable that your cattle are infested with the scab mite of one kind or other. After careful cleansing of parts affected, and if possible after clipping hair, apply a 5 per cent solution of creolin or lysol. A 5 per cent tobacco decoction may also be used. These applications should be washed off in three days. Disinfection of the stables and fittings is naturally also necessary in order to secure success.

Warts on Teats.

I have a bunch of cows that have little warts on their teats. When I first noticed them one of the cows seemed tender on the teats and would sometimes kick. I could see no cause for it, but in a short time the small warts came out and soon more of the cows started the same way. This was about two years ago. Now almost every cow we are milking has it.

These are often very troublesome, yet they may be greatly benefited or entirely removed by smearing them thickly after each milking with pure olive oil. If they persist they may be cut off with a sharp pair of scissors and the sore touched with a stick of Lunar Caustic. They may then be oiled and the caustic repeated as needed to prevent renewed growth.

Live Stock and Commercial Notes.

Harness Display at State Fair Claims Attention.

THE Walsh harness exhibit at the Wisconsin State Fair in Milwaukee created a great deal of interest among farmers and teamsters who are on the lookout for good, serviceable harness. It showed some of the latest developments of the harness industry, which were the result of an idea that took nearly nine years of careful study and effort to perfect. Parts of ordinary harness that usually wear out most rapidly were eliminated in the Walsh harness—that is the secret of the idea. Where there is friction there is wear and destruction, and friction is most common around the buckles, snaps, billets, loops and holes in the straps. To eliminate this friction, Mr. Walsh of the Walsh Harness Co., Milwaukee, Wis., developed a harness which is without buckles, snaps, billets, loops or holes. It gives 100 per cent wear from the leather, yet is even easier and handier than ordinary harness. Any size horse, from 800 to 1,800 pounds can wear it satisfactorily. It is a wonderful outfit, but costs no more than other kinds. Farmers and teamsters who were not at the state fair should learn about this improved harness. Full information can be obtained by sending a card to The Walsh Harness Co., Milwaukee, Wis., and mentioning this paper.—Adv.

Calf Sold to North Dakota.

THE agricultural college of North Dakota has just purchased the bull calf, Pabst Korndyke Champion 182. Though this bull is very fashionably bred, breeding alone did not sell it. He is an exceptional individual, light in color, absolutely straight top line with great length and capacity. He was born in February of this year and is by the Pabst herd sire, Korndyke Segis Johanna, that is by Johanna McKinley Segis, a son of King Segis and out of Pontiac Lady Korndyke with a record of over 38 pounds, by Pontiac Korndyke. The dam of this bull is Pabst Champion, said by Mr. Pabst to be one of the handsomest cows on the Pabst Stock Farm. She has a record of 38 pounds in seven days and a two-year-old record of 583 pounds of butter and over 13,000 pounds of milk in 365 days. The dam is by King Pontiac champion, that has over 60 A. R. O. daughters and the second dam has a three-year-old record of 29 pounds, and is by Gem Pietertje Paul De Kol 3d. The dam is now running on yearly test and it is expected she will make a large record.—Adv.

The Kennedy Short-horns.

THE Oak Lawn Farm herd of Scotch Short-horns were blooming at the state fair and many coveted prizes were brought home by this herd. The Kennedy herd is far better known by having been exhibited at the various state fairs. This being the first year that Mr. Kennedy has shown, he did remarkably well and it shows that he had great foresight in making his purchases. As we have said on previous occasions, he has one of the greatest herds of Scotch Short-horns in America. If you want a bull of the same caliber, write J. E. Kennedy, Janesville, Wis., and please mention this publication.—Adv.

HOLSTEIN-FRIESIAN CATTLE.

A KING SEGIS BARGAIN

THE Grahamholm Farm is offering a 29.23-pound yearling grandson of King Segis that is nicely marked and that contains 25 per cent the same blood as Segis Payne Johanna, the only 50-pound cow, and Francher Farm Maxie, the only 46.84-pound four and one-half year old. This young bull is a show animal and is out of a great producing cow having a 29.23-pound record at 12 years, 27.85 pounds at seven years, and 580 pounds butter in a year. She also has four A. R. O. daughters, including a 28.26-pound cow. $400 will buy him. Write for further particulars before it is too late.
W. J. BOYNTON, Mgr. Route 1, Rochester, Minn.

Milford Meadows Stock Farm

OFFERS FOR SALE a very well-bred bull calf by Dutchland Creamelle Denver Prince (165048) that is better than a grandson of Colantha Johanna Lad and out of Canary Ormsby, Johanna De Kol, a 28-pound three year old, 111.95 pounds in 30 days, which is practically a perfect individual. Write for extended pedigree. Other bull calves out of A. R. O. dams by same sire for sale.
EMMONS BLAINE, Prop. Lake Mills, Wis.

HILLSIDE HOLSTEINS

SENATOR JOHANNA WHITE, 31-lb. herd bull. Four A. R. O. cows for sale, bred to freshen this fall. Price $175 to $250. Several heifers and young bulls, from A. R. O. dams. Write for detailed description.
KIRKPATRICK BROS. - - - - - - - - Reedsburg, Wis.

Old People's Home
Stoughton, Wis.

OFFERS A 26.57-LB. 3-year-old Holstein bull for sale. Briar Pietje Korndyke (140508) is by Briar Butter Boy Korndyke that has 15 A. R. O. daughters and is out of Pietje Tyrania De Kol, 26.57 lbs., that is by Woodcrest Pietje (61 A. R. O. daughters). Five of these daughters have records above 26.57 lbs. Briar Pietje Korndyke is a good individual, well marked and weighs over a ton. His ancestors represent some of the most noted animals of the breed, including De Kol 2d's, Butter Boy 3d, Pontiac Korndyke and the great cow, Pietje 22d. This bull is priced to sell quickly. For more information write to
O. C. Lee Stoughton, Wis.

RUST BROS.

OFFER the richly bred Holstein bull, Sir Isa Lotta Hengerveld 188663, born Aug. 18, 1915. Ready for service. His dam, Ida Lotta Hengerveld, at 3½ years made 21.34 lbs. of butter in 7 days, 31 days after calving. She is from a long line of heavy producing ancestors, records of her three nearest dams averaging 27.20 lbs. butter in 7 days. She has inherited this heavy producing ability, and transmits it. Sire of bull for sale is Daisy Johanna 5th, 1st prize two year old at Wisconsin State Fair, 1915. His dam has two A. R. O. daughters. Arthur Rust, West Allis, Wis.

HE'LL DO IT—Improve your herd with this young son of Sir Hengerveld Korndyke Ormsby, born May 27, '17. Sire, son of Pietertje Maid Ormsby, 35.56 butter, 7 days, and full brother to Miss Korndyke Maid Ormsby, butter, 365 days, 1,255.62; milk, 25,418.3 lbs. Dam a 11.35-lb. 2-yr.-old daughter King of the Blacks and Whites. Nicely marked and a good individual. Write for price, pedigree and photo. Walcowis Farms, N. Dickinson & Son, Lake Geneva, Wis.

Olathe-Holsteins

HERD SIRE—Sir Bess Ormsby Mercedes 184275, the records of his dam and sire's dam average: semi-official record (365 days): milk, 20,574.9 lbs.; butter, 958.3 lbs., per cent fat, 3.7. Will book order for bull calves sired by the above bull and out of yearly record dams at prices ranging from $50 to $75 at one month.
SILVER SPRINGS FARM CO.,
Geo. H. Comings, Pres. Eau Claire, Wis.

Lake View Farm
Lake Mills, Wis.

OFFERS FOR SALE a son of a $6,800 Holstein bull that is a full brother in blood to a $50,000 bull. The dam of the calf for sale is a 16-lb. two year old, whose dam is a 24-lb. cow. Priced to sell.
FRED GURR :: :: Lake Mills, Wis.

We Are Offering

FOR SALE Sir Vale Johanna Pontiac (134468), a full brother to the state record four-year-old Holstein, Aaltje Johanna 28.57 lbs. His sire, Aaltje Salo Johanna Pontiac, already has a good list of A. R. O. daughters, including a 28-lb. four year old, and his dam, an A. R. O. cow, has three A. R. O. daughters, 28 lbs., 26 lbs. and 20 lbs., respectively. Will also sell two brothers of this breeding, one out of Aaltje Johanna, 28.57 lbs., four years.
E. B. WATROUS Troy Center, Wis.

POLAND CHINA SWINE.

50 BIG-TYPE POLAND CHINA SPRING BOARS AT $40.00 EACH

Double treated, and we record them. They will be worth $40.00 on the market by the time you are ready for their service. Farrowed in last of February, March and April, the greatest lot of high-class pigs we have ever raised, long and deep bodied, heavy boned, nicely marked and good backs. They are from the most noted families of the great breed, sired by Giant Jumbo 2d, the 700-lb. year-old son of Giant Jumbo, whose sire was the 1,055-lb. Maid's Halvor 1st; his dam sired by the 1,000-lb. and over Big Bone 2d, his grandam by Mouw's noted Big Jumbo. There is no bigger breeding. Others by Long Expansion, a 900-lb. two year old, and Pawnee Wonder, a 1,000-lb. son of A Wonder.

The dams are sows weighing from 600 to 800 lbs. and over, of the most intense big-type blood lines. Buy your boar now and save from $20 to $50. Boars will be high and scarce this fall.

Send your check right with the order, tell us the kind of a boar you want and we will send him or return your money. Come and see our herd, one of the greatest in America, as well as one of the most up-to-date, pure-bred stock breeding establishments.

W. H. COOPER, HEDRICK, IOWA

When writing to advertisers kindly mention The Wisconsin Farmer.

Your tractor is only as good as your engine

Correct lubrication will extend the life of the tractor as well as insure the maximum power delivery of your engine.

If unsuitable oil is used, you are inviting premature depreciation of the whole tractor. In other words, the investment of a few dollars a season in a lubricant manufactured especially for tractor service will add to the profits on a season's crop. High priced oils do not necessarily mean they are suitable tractor lubricants.

We Recommend for Cylinder Lubrication of Tractors

STANOLIND
Gas Engine Tractor Oil

WHERE KEROSENE FUEL IS USED

It is an oil of great durability and maintains the correct viscosity under extreme heat conditions. It lubricates thoroughly even the remotest reciprocating surfaces, reducing friction to a minimum.

It is equally efficient for stationery gas engines as well as for lubricating the bearings of all types of harvester machinery and heavy gearings of tractors.

POLARINE HEAVY

WHERE GASOLINE FUEL IS USED

WHERE HIGH SPEED CONDITIONS OBTAIN, REGULAR POLARINE GRADE IS RECOMMENDED

NOTE—Our recommendations are based on extended and exhaustive tests under actual field conditions.

Write to our nearest agency for specific recommendation of correct lubrication of your tractor.

Standard Oil Co. (*Indiana*) **Chicago, U.S.A.**

THE WISCONSIN FARMER

VOL. XLVI. NO. 40. THURSDAY, OCTOBER 4, 1917. WHOLE NO. 1862

CO-OPERATION IN WISCONSIN

THOSE who may be inclined to be discouraged as to the progress of coöperative enterprises in Wisconsin will be able to take heart from information gathered by B. H. Hibbard and Asher Hobson, of the Wisconsin College of Agriculture. Wisconsin now has more than 2,000 coöperative companies, of which the most important are the creameries, and the most numerous the cheese factories. Farmers have become interested in marketing to the extent of organizing and conducting all sorts of enterprises, and that they know enough to "look after their own business" is shown by the fact that they now have breed associations, cheese factories, creameries, fruit exchanges, granges, insurance companies, laundries, milk-selling oompanies, produce companies, telephone companies, tobacco warehouses and live-stock shipping associations. Wisconsin farmers operate 2,070 concerns with $62,646,000 volume of business, distributed as follows:

Kind of business.	No.	Volume.
Creameries	380	$19,100,000
Produce and feed	98	14,936,000
Cheese fact'ries	718	14,490,000
Live stock	124	9,700,000
Merchandise	57	2,500,000
Insurance	214	958,000
Fruit	6	500,000
Telephone	471	454,000
Laundry	2	8,000
Total	2,070	$62,646,000

The above represents the actual coöperative enterprises wherein the product offered for sale is owned coöperatively, but it does not include, as the gentlemen above referred to point out in their statement, organizations and groups of farmers who handle business coöperatively but own their properties and products individually. Classed under this latter heading may be included groups of farmers who purchase carload lots of feed, and those who sell live stock by consignments to a single sale. No account is taken either of the efforts of the county agents or the experiment stations to market community products in bulk, such as seed grain, potatoes, etc., or those who coöperate in the ownership of limestone crushers, handling hemp, etc. A considerable number of groups own bulls or stallions. When all of these active coöperative enterprises are combined it will be seen that Wisconsin stands well to the front rank of those states where a special effort has been made to further coöperation among farmers.

A PRODUCE COMPANY'S PLANT AT EAU CLAIRE, WIS.

Organizations not directly engaged in business are doing a great deal to further coöperation in Wisconsin. There are fifty-five grange organizations in Wisconsin with over 2,200 members. In 1875 the grange reached its fullest development in Wisconsin with 500 locals and 17,000 members. However, all but four of the present active grange societies were organized since 1905, indicating that while the work of this society had a setback, it has taken on new life and is now in a growing condition. The location and number of grange societies by counties is as follows: Rock, three; Bayfield, one; Ashland, three; Iron, six; Vilas, one; Oneida, eight; Lincoln, three; Langlade, ten; Forest, one; Florence, eight; Marinette, four; Oconto, one; Outagamie, two; Winnebago, four. Most of the granges are in the northern and northeastern part of the state. The list as shown was completed up to and including the year 1916 and the number has been increased since that time. The grange offers club work and serves the purpose of a farmers' club, and also takes up all affairs of interest to the farmers of any community. Two granges own stores and others do buying and selling to a limited extent. The grange is a strong educational force for coöperation.

A much larger organization than the grange, in point of number of members, is the American Society of Equity, which, according to latest records secured by Messrs. Hibbard and Hobson, had 400 societies in Wisconsin and about 12,000 farmer members. Ten per cent of the equity societies have women's auxiliaries. The equity organization has been persistent in boosting all coöperative enterprises and has gone to the extent of fathering large packing plants, storage houses, warehouses and elevators. It has a number of shipping associations, buys and sells coöperatively in many places, and in all cases lends

WISCONSIN HAS MORE THAN 2,000 CO-OPERATIVE COMPANIES.

THE LIVE-STOCK ASSOCIATIONS ARE WELL DISTRIBUTED OVER THE STATE.

FEED, ELEVATOR AND PRODUCE COMPANIES NUMBER NINETY-EIGHT.

CURRENT EVENTS

PLOT after plot, in which Germany stands accused as the culprit and the villain, are being bared by official Washington. A week or two ago it was shown how the German minister to Argentina was sending important war news to Berlin through messages transmitted by the Swedish ministry. Last week, Secretary of State Lansing made public a letter exposing the plea of Count Von Bernstorff, former German ambassador to the United States, for $50,000 to influence congress against war just at the time when Germany was proposing to renew unrestricted submarine warfare. Disclosures were made tending to show that certain men and newspapers preaching against preparedness and war had been receiving money from Germany, either directly or indirectly, and that their action was thus corruptly influenced. About the same time Secretary Lansing made public an official report showing how Germany had "shamefully abused and exploited" the protection of the United States by secreting in the German legation at Bucharest after the American government had taken charge of Germany's affairs at the Rumanian capital, quantities of powerful explosives for bomb plots and deadly microbes, with instructions for their use in destroying horses and cattle. Fifty-one boxes were taken from the ground in the garden. Fifty of them contained a cartridge filled with trinitrotoluene saturated with mononitrotoluene, among the most powerful explosives known, one-fifth of each of one being sufficient to tear up a railroad track. In the other box were bottles of liquid found to be cultivations of the microbes of anthrax and glanders. It bore a seal showing it came from the German consulate at Kronstadt, Hungary, and inside was found a typewritten note in German saying: "Inclosed (4) phials for horses and (4) for cattle. To be employed as formerly arranged. Each phial is sufficient for 200 head. To be introduced, if possible, directly into the animals' throats; if not, into their fodder. Please make a little report on the success obtained." Germany has been accused of fighting by means of poisoned candy and poisoned wells heretofore, but no proof so apparently conclusive has been made public as that given out by Secretary Lansing, in regard to actions in Rumania.

BOTH Austria and Germany have replied to the overtures of the pope, stating that they are ready to discuss peace terms, as proposed by him. Austria goes much further into detail than does Germany and her reply has a note of sincerity which is sadly lacking in the case of Germany's. There is ample evidence that Austria, long ago tired of the war and sees in a continuation of it great possibility of the dismemberment of the empire. That she would welcome a peace, with honor and without much further delay, is quite generally conceded. In replying to the pope, the Austrian emperor stated that he was willing and ready to accept most of the pope's proposition, saying: "With deep-rooted conviction we agree to the leading ideas of your holiness that the future arrangement of the world must be based on the elimination of armed forces and on the moral force of right and on the rule of international justice and legality. We, too, are imbued with the hope that a strengthening of the sense of right would morally regenerate humanity. We support, therefore, your holiness' view that the negotiations between the belligerents should and could lead to an understanding by which, with the creation of appropriate guarantees, armaments on land and sea and in the air might be reduced simultaneously, reciprocally and gradually to a fixed limit, and whereby the high seas, which rightly belong to all the nations of the earth, might be freed from domination or paramountcy and be opened equally for the use of all. Fully conscious of the importance of the promotion of peace on the method proposed by your holiness, namely, to submit international disputes to compulsory arbitration, we are also prepared to enter into negotiations regarding this proposal." It is said that the pope will shortly address another peace letter to all the belligerent powers, notwithstanding the rebuff he has received from President Wilson and the spokesmen of the other anti-German allies.

STEEL prices in the United States were cut in half last week by President Wilson, who approved a voluntary agreement made by the steel men with the war industries board. Notwithstanding the sweeping reduction, it is said that the steel men will still make a handsome profit, so high had the prices been forced up before the government took a hand at price fixing. The general public as well as the American and allied governments, will share in the reductions, which go into immediate effect, and the agreement provides that producers shall not reduce wages. The prices will obtain until January 1, 1918, to be revised then if investigation shows they are inequitable. The entire output of American steel plants will be distributed under supervision of the war board, which, exercising the powers of priority of transportation given the government by congress, will apportion it in a way best to meet the country's war requirements. The price agreement was reached after months of negotiations between steel producers and government officials. The prices were based on cost of production estimates made by the federal trade commission after an investigation conducted at the president's direction. Steel is an absolute necessity at present and the steel men had the country and the government literally by the throat when they forced prices up and maintained them there, making fabulous fortunes out of the nation's need. The government is fixing prices on all commodities, step by step, and won a great victory when it brought steel men to time.

BOTH houses of the Argentine congress have voted overwhelmingly to break diplomatic relations with Germany. The Argentine president is doing all that he can to prevent war between the two countries, but it looms up more imminent every day. Peru and Uruguay are also considering breaking with Germany, because of the Argentine situation and the sinking of merchant ships of practically all the South American countries involved. The biggest surprise of the week, however, was the statement that Mexico might join the United States and South American nations against Germany. This report was brought to this country by an American who has large interests in Mexico. He said indications had been pointing to such a move by Mexico for the past month. The suppression of anti-American papers in Mexico, said to have been controlled by German interests; the change in attitude of Gen. Alvaro Obregon, Gen. Francisco Murguia and other prominent Mexican officials and the request for a loan to Mexico were some of these indications of Mexico's attitude toward the United States and the allies, he said. General Obregon now is making a tour of the United States, accompanied by an American army officer. Although he holds no official title with the Mexican government, he is considered the strongest man in Mexico, next to President Carranza. The embargo of foodstuffs to all but allied countries has begun to make itself felt in Mexico and there is a strong demand in the north to have Mexico align itself with the allies in order to have the food embargo lifted. The German sentiment in the north has been waning for the last month and a more friendly American feeling has taken its place. Diplomatic disclosures by the United States showing the perfidy of German diplomats in Argentina and Mexico have also had the effect of turning public sentiment in Mexico to the allies, the American said.

PERHAPS as a result of the terrific drive of the British and French in Belgium, forcing the Germans back along a long line, the kaiser is reported as now favoring the surrendering of Belgium and even its partial restoration at German expense. There are the usual strings to the offer, however, the main ones being that Belgium must allow Germany to maintain commercial supremacy in Belgium and that the Belgian government must be run to suit the German idea of things, demands which will hardly be granted by the Belgian government or the government of the allied nations. While the kaiser is thus flirting with peace the allies continue to make good ground gains. The British artillery has been shelling the positions to be attacked for days and the infantry has gone "over the top" with determination, which stopped at nothing, the result being important gains. In the meantime, the French have forced the German crown prince back at Verdun, so that the past week has been one of good gains for the allies at the expense of the Germans.

IMMEDIATE wage increases of from 20 to 70 per cent were demanded by the country's coal miners, it was announced after a preliminary meeting of operators and miners' representatives of the central competitive field in Washington to discuss a general wage readjustment. The demands were formulated by the miners' representatives. There is every indication that the mine owners will refuse flatly to meet them, first, on the grounds that they are too high, and second, that the recent fixing of coal prices by President Wilson will not permit of any increase. The increases asked, while stipulated for the central field, comprising Ohio, Indiana, Illinois and western Pennsylvania, will serve as a basis for the entire country and if they are granted, would have to be met by other districts. The mine operators declare that it is utterly impossible to grant the miners' demands, with the price of coal as fixed recently by the government. Conferences are to be held with Dr. Garfield, fuel administrator, and there is a possibility that the government may advance the coal prices so that the miners may be paid more for their work.

The Mueller Pipeless Furnace Keeps Our Whole House Warm

THAT'S the testimony that came last winter from thousands of homes in the coldest parts of the United States—and last winter gave all heating systems an unusually severe test.

The Mueller Pipeless Furnace kept thousands of homes warm and comfortable at less cost and with less trouble and work than they ever had before. And next winter thousands more homes—new and old—will be heated with this wonderfully simple, economical and efficient heating system.

The discovery that it is not necessary to have pipes to conduct the warm air to the different rooms—that it will go there just as quickly without any pipes at all—has enabled these thousands to enjoy the comforts and conveniences of furnace heat in their homes at small cost for installation and without the necessity of tearing up the walls for pipes or flues.

No more putting up stoves in the fall and taking them down in the spring—no more carrying coal to the different rooms and lugging away ashes—no more space taken up by stoves—no more heating the house in spots. The Mueller Pipeless Furnace keeps all the rooms at a comfortable temperature because it maintains a continual circulation of warm air throughout the entire house.

It is just about as easy to set the Mueller Pipeless Furnace in place in the cellar as to go through the annual ordeal of "putting up the stoves". And when the Mueller Pipeless is once installed it is there to stay. There is just one heating plant, and that is in the cellar, where it belongs, out of sight and out of the way, yet doing its work perfectly.

Interesting Book About Pipeless Heating, Free

The Mueller Pipeless Furnace is a *real* furnace of exactly the same construction as the old reliable Mueller line, only without pipes or flues. It is the result of 60 years' experience in the building of heating systems of all kinds, and is backed up by the Mueller name and reputation.

The entire furnace is of solid cast iron, the radiator is one piece, grates are of the triangular duplex pattern, the ash pit is large and high and the double jacket is rust-proof. The Mueller Pipeless saves 35% in fuel—burns hard or soft coal, coke or wood.

You should know all about this new and improved method of heating homes. Just tear out this advertisement, write your name and address on the margin and mail to us for interesting illustrated booklet, and name of nearest dealer who can tell you all about the Mueller Pipeless.

MUELLER PIPELESS FURNACE

The Wisconsin Farmer

THURSDAY, OCTOBER 4, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

INJUSTICE TO THE FARMER.

I AM in receipt of a letter from a subscriber telling of a typical case of army drafting, wherein agricultural production cannot fail to be hampered and retarded by the action of the examining board. A young farmer was drawn for army service. A short time ago (before there was any prospect of his being called to the colors, however) he bought 200 acres of farm land. He had been working toward this goal for many years, first as a hired hand, subsequently as a share tenant, saving every cent he and his wife could earn. The farm still has a mortgage of $880 on it and when the young man left for the army cantonment, to which the examining board insisted he should be sent, there were 150 tons of uncut hay, fifteen acres of undug potatoes and thirty acres of standing grain. He asked for exemption, on the grounds of a dependent wife and of agricultural production, but it was denied him. Unless the neighbors turn in and help (and they have about all they can do for themselves) the crops will go to waste and it is doubtful if even the interest on the mortgage can be paid, let alone anything on the principal. Here certainly, as the facts are told to me, was a case warranting exemption.

It is such cases as this (to be found on every hand, here in the grain belt) which give point and weight to the urgent plea made to the president last week by the Federal Board of Farm Organizations, a federation of national farm associations which was formed shortly after the outbreak of the war with Germany as a means of giving the farmer a voice in national affairs. The plea is signed by such representative men as C. S. Barrett, of Union City, Ga., president of the Farmers' National Union; J. W. Shorthill, York, Neb.; Charles McCarthy, Madison, Wis., and Gifford Pinchot, Milford, Pa., former head of the forestry service of the national government. I cannot print the plea of these men, representing 2,000,000 organized farmers, in full, much as I should like, but here is the gist of the argument as they made it to the president:

Agriculture is the only great industry now undermanned as compared with the standards existing before the war. Many industries want additional help. Agriculture actually has less. The shortage of farm labor is cutting down the productive powers of American farms. Transportation companies, contractors and industrial plants offer for labor prices higher by far than any farmer can pay and still produce food for the consumer at reasonable rates.

Farming is a highly skilled occupation. Trained farm labor cannot be replaced to advantage by untrained men, women and boys. Furthermore, the common necessity to make the farm laborer, whoever he may be, a member of the family circle still further restricts the availability of strangers. The return to the farmer is far below that to men equally skilled in any other occupation, while the special risks he runs from weather, insects and diseases are greater than theirs by far. Therefore, men who leave the farm seldom return to it.

Official figures taken from the school census of the state of New York show that in June, 1917, there were 16,000 fewer farm hands on the farms of New York than there were in June, 1916. On March 1, 1917, the farm labor supply in the United States as a whole, as reported by the Bureau of Crop Estimates, was 15 per cent below normal, which means that one in every seven productive farm workers had then been taken away from the farm. The situation is worse today.

Because the world is short of food, the government has asked the farmers, as a patriotic service, to increase their product. In answer to the call, the farmers have done, and will do, their best. But already a large proportion of the farms are undermanned, and the process of depletion proceeds unchecked. America is making the same mistake that England made, instead of learning from her experience. We believe that it is against the national interest and safety, as well as against the purpose of the law and the government, to let this drain go on.

What we seek is a more perfect administration of the purpose of the act to protect the essential occupations. We ask you to see to it that farm laborers and farm owners may be kept or placed where they may serve the nation best.

The situation demands prompt and effective action on the part of the government. There is growing unrest and dissatisfaction on the farms, based, in great part, upon the well-founded belief that the purpose of the government is not carried out. The organized farmers of America look to you to set this matter right. They await anxiously the news, and they will consider carefully the nature of your action for their relief.

If the president will investigate as he should, and as I hope he will, he will find the situation even worse than outlined herewith. There are thousands of cases such as I have set forth in briefest detail above, and surely this means that many members of the exemption boards utterly fail to comprehend the intimate relationship that exists between large production and the supply of effective farm labor. If farmers themselves could have been more largely represented on these boards, so disastrous a situation could not have occurred. Shall the food crops of this farmer and of tens of thousands like him be wasted and the nation's supply of foodstuffs be thus materially reduced by enforcing a policy which includes in the military draft many of our most effective farm workers? The members of exemption boards should consider only the great national need and, wherever possible to do so, allow the farmer to remain at his tasks.

TIN-CAN POVERTY.

THERE is a subject which I think we might well discuss together this week and which, for lack of a better name, I shall term "tin-can poverty." I refer to the shiftlessness of some farmers' wives, who allow their own fruit and vegetables to go to waste, in summertime, and then are obliged to buy canned goods, at the store where they do their trading, in wintertime.

I cannot possibly bring the matter to your attention in a better way than to quote from the splendid letter I received this week from Mr. R. F. Johnson, proprietor of Maple Leaf Farms, Assumption, Illinois. Mr. Johnson lives in town and operates his farms by means of hired help. He pays these men $10 a week and gives them house and garden, two quarts of milk daily, one-half of all the poultry they raise (he furnishing the breeding stock and feed) and one-half of all the fruit, provided it is for their own use and not to sell. On these fair and really generous terms some of his help do not appreciate their opportunity. On the other hand, however, some do. It is the story of a representative of each class which Mr. Johnson tells about in his letter to me, a letter which I shall have to shorten a little, although I would like to print it in full, were it not so long.

Mr. Johnson called on two of his hands recently. At the house of the first he found a pile of tin cans that had been emptied and thrown out. The yard was littered up, weedy and unkempt. Mr. Johnson goes on to say:

I did not pretend to notice the conditions, but asked the woman how her poultry was doing and she informed me that she was through trying to raise any poultry on the shares, as it would take all she raised to make up the original number of breeders. I asked her how she was coming on with her canning and she told me she was not going to can anything, for it would all spoil in moving and they did not intend to stay in the country unless wages were better. I visited a while with her and she sat down on the doorstep and told me her whole history and that of her husband, and how hard it was for a poor man to get ahead. I believe if I had stayed she would be going yet.

Mr. Johnson left this woman, and went to call at his other farm. What a contrast! I cannot cut out a word of what he has to say about this second woman and the efficient manner in which she went about her housework. Here is the picture:

This second woman was flying around like a "hen on a gridiron" and singing like a lark. She came to the door with a smile on her face and asked me if I wouldn't come in. I went in and sat down and, say, she was too busy to stop and talk. She kept on washing out the clothes; she has four little ones, the oldest just starting to school. I did not notice any cans around the house and asked her where they kept the empty cans. She remarked that it was precious few cans she ever had and what she did have she used by cutting the top out clean and hammering them down and making flower pots, grease cans, poultry fountains and so on, out of them. She said she had been over to the other woman's and got a sackful, a week or two before, to pot some plants. I asked her if they never used any canned goods and she said, "Sure we do, but we can it ourselves." Then I told her that I would just like to know what plans and preparations she had made for the coming winter. I will give you a list of some of the things I found in the cellar, as she gave them to me, and these all grew on that farm; some of them put out by her, and both women had the same opportunity to get these things.

First she had the following canned or preserved: Asparagus, rhubarb, spinach, peas, beans, apples, canned apples, dried apples, apple sauce, apple jelly, apple preserves, cherries, canned and preserved, plums, canned, preserves and butter, also jelly, pears, cucumbers, mixed pickles of several kinds, blackberry preserves, canned jelly and some "bounce" strawberries, sunshine preserves and canned raspberries, beets, tomatoes, gooseberries, cauliflower, currants, kraut, mangoes, grapes, grape juice and so on and on. I asked her what else she was going to can and she said that there would be the sweet corn, succotash, late plums and pears and a good many things. She laughingly said that she could find something to can every day if she chose. I asked her what she expected to get from her garden for winter, for it was a "crackerjack," no weeds, to speak of, and well tended. She showed me parsnips, carrots, cabbages, turnips, potatoes and among the potatoes were squashes and pumpkins, a lot of them. She said she would put them all away for pies and if they showed signs of spoiling she would can them.

I asked her about her chickens and she right there stopped all washing, threw a bonnet on her head and said, "Come on, I want to show you some chickens." Well she had seventy-six Buff Orpington hens to start with in the spring. She has kept us in eggs all summer and she said she had over 400 chickens. They were simply beautiful, all fine and fat, and she had caponized about thirty-five that she shut in an old outbuilding and was feeding them separate. They were for our Christmas eating, she informed me, but I am of the opinion that her share will be sold and she will buy flour or a hog, perhaps, with them, although she never said.

Don't you see the significance now of the term "tin-can poverty?" Here was one family raising practically everything they needed to eat for all the year around and paying for what little they had to buy with their surplus produce. And here was another family shiftlessly letting stuff go to waste in season and falling back on canned goods, bought at the store, in winter. Surely, a yard littered up with rusted tin cans is a yard of poverty, no matter what the farm may yield, for there is a poverty of resourcefulness and efficiency, as well as a poverty of funds.

This second woman deserves to succeed, and she will. She is making her husband happy and contented. She is rearing her brood of four little ones in the right way. It will not be long before that family is owning a place of their own, and I do not doubt but that Mr. Johnson will be only too glad to help them when the time comes. The other family will never own a home, unless there is a complete change. So, after all, discuss the hired help and the farm tenant problem as we may, it is the man (rather, it is the woman) who counts most and upon whom everything depends. All our theories and beliefs vanish into thin air before an efficient man or woman who is determined to get ahead.

"Tin-can poverty" I shall always consider it; poverty of the soul as well as of the mind; a poverty, I fear, of the heart as well.

ANOTHER LIBERTY BOND DRIVE.

A NEW Liberty Bond drive is on this month, in the country as well as in the city. Uncle Sam is in need of more money; he has turned to the farmer and the town dweller, asking them to loan him the amount he wants—three billion dollars. I sincerely trust that the farmers of the grain belt will respond as unanimously and as generously as they did when the first bond drive was made, last summer.

I realize that many of my readers will say, "Well, old Uncle Sam is spending a lot of money; what is he doing with all this that we loan him?" I can only reply that he is spending it to organize, arm and equip the two million men he proposes to have in the field by next summer, and is loaning it to his allies in Europe. I am advised that up to the first of this week the United States had loaned two and one-half billion dollars to Great Britain, France, Italy and the other European countries which are fighting the Teutonic nations. Of course, this immense sum (one-half of all the Liberty Bond issuance already made and the one now being made) is to be repaid when the war is ended, at a rate of interest higher than that which Uncle Sam is paying for the money he gets from you and me. This leaves one-half of the two Liberty Bond issuances to be spent for actual war preparations on our part. We who have enjoyed exceptional prosperity the last few years, who have been granted a stable government under which to live and to work, who have profited by high prices and big yields, are now asked to loan our money to Uncle Sam, at a good rate of interest and with a positive guarantee of repayment. Those of us who can afford it should buy another Liberty Bond, by all means. Some may not be able to buy, though their patriotism is as great as those who do buy. But where there is ready money in the bank or in immediate sight, from the sale of our crops, I want to recommend most earnestly the purchase of as many Liberty Bonds as can be taken. The government is hopeful that 8,000,000 people will respond to its call; that the bonds will be taken by the small investors instead of the large ones, so that all may have a hand in winning the war by loaning their money.

I think I pointed out a week or two ago that these new bonds are to bear 4 per cent interest, instead of 3½, the rate of the first issue. The government is working out a plan by which they may be bought in denomination as low as $5, on the installment plan. Bonds of $50 and $100 will be issued as before, and these will doubtless prove to be the

(Concluded on page 6.)

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES.

BY JAMES M. PIERCE

JAMES ATKINSON, EDITOR-IN-CHIEF

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter.

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address THE WISCONSIN FARMER, Madison, Wisconsin

Shall We Send the Young Folks Away to School?

About this time of the year in many Wisconsin homes the matter of sending the boys or girls away to school is discussed. Probably last year it was agreed that "next year John or Susan or both should go." But since then has come the war and labor has become scarcer and all the young folks are needed pretty badly at home. Perhaps the boy has enlisted or been drawn in the conscript army. Things are rather shaken up and out of kilter. In such a time it is quite important to weigh matters carefully, and the school problem should be placed in the "important" column.

It is The Wisconsin Farmer's belief that schooling is even more important just now than it was before America entered the world war. Thousands of young men who would be in school for the next year or two or until the war ends (we will hope it will not be even that long) will miss many months in schooling which most of them will never have an opportunity to make up. Preference may be given in many places in life after the war to returned soldiers. The young man who stays at home, either because he has not been drawn, or because he is not physically able at this time to meet army requirements, should by all means keep up with school life. Following the present conflict of arms will come a commercial conflict and in that peaceful warfare education will be a determining factor for success or failure. The war is proving the power of science, and peace will find science even more firmly in the saddle. Don't keep any children or young men or young women out of school this year unless it is absolutely necessary for the support of dependents. One of the sacrifices of the war will be bearing a little heavier burdens of farm work and responsibility. It is unfair to that boy or girl growing up into young manhood or young womanhood to deprive them of an education, even though it might help solve a labor problem if they were kept out of school.

Science has touched farming as it has touched warfare. The young farmer of tomorrow must know more than his father has known, and in order to meet the changing conditions he will have to get out and brush with the world. The practical knowledge which he gets from working with father is invaluable. If it is necessary to withhold from the boy who is to be a farmer either the practical knowledge gained on the farm, or scientific knowledge which he will get in school, sacrifice the latter. But most of our Wisconsin farmers are in good enough circumstances that they can afford to give the boys and the girls both the home and the school advantages. And this latter course is the ideal one to gain the happiest future for our young people.

Send the boys and girls away to school as usual this year. Our "Ag" school at Madison should be as well filled this year as in former years. There is a better opportunity today for men who graduate in any of the various departments of the college of agriculture than there has ever been, in case the boys want to leave the home farm. But we do not advise them to leave the home farm by any means. The best success usually lies in gaining some knowledge of what the world has learned by experience, as well as what experience can teach in our home community, and then remaining in the old home neighborhood or on the old farm and "building even better than our fathers."

Four-Dollar Milk and Why.

In the light of advancing prices for whole milk the consumers claim to have a right to some information. Naturally the dairyman-farmer is in a much better position if he can show that he will make only a fair and reasonable profit on milk at proposed winter prices than if he takes the attitude that he "charges the price just because he can get it." Milk even at $3.50 a hundred pounds has not yet reached a high price when we consider it in the light of its food value. As throwing some light on the present situation and particularly on the cost of producing milk under present conditions and present food prices we quote from a letter to The Wisconsin Farmer, signed by C. H. Potter, chairman of the milk board, of the Milk Producers' Association in the Chicago dairy district. Mr. Potter writes:

Our association met in joint convention with one delegate from each local and a full board of directors, numbering nearly four hundred, on the 21st day of September, and decided upon a price for October of $3.42 per hundred pounds delivered to country plants, and $2.54 per eight-gallon can delivered, F. O. B. Chicago, for milk testing 3.5, an additional three cents for every point above 3.5 and a deduction of three cents for every point below.

A rule was also passed giving the milk board a right to adjust the price for the remaining five months of the winter period, providing they do not fix any price below four dollars per hundred pounds. If the milk cannot be sold for that the milk board is directed to call another convention for the purpose of adjusting the price.

Figures upon which we are basing our cost of production, or rather the formula that we are using, is furnished us by Prof. F. A. Pearson, of the College of Agriculture, Urbana, Ill. Mr. Pearson has prepared a rough estimate of the corn, silage, hay, bedding and labor necessary in the production of milk per hundred pounds upon the average dairy farm from a survey made covering production of over one thousand cows. Grain, 44 pounds; silage, 188 pounds; hay, 50 pounds; bedding, 39 pounds; man labor, 2.42 hours. Mr. Pearson states that there are other costs included in the production of milk, but he thinks that cows should be given credit that will offset these other charges, such as manure and increase in stock. Taking this basis as given us by Professor Pearson for figuring the cost of production of milk anyone knowing the price of feeds can figure out the cost of milk production near enough to base values upon, and then add what is already fixed as a reasonable profit, ten per cent above cost. Anyone can figure for themselve what farmers should get for milk.

If grain is sold for $50 a ton or 2½ cents a pound, we hav $1.10. Silage is selling at $6.00 a ton or 3-10 of a cent a pound, we have 56 cents for silage. Hay at $20, we have 50 cents for hay. Bedding at $10, we have 20 cents for bedding. Labor, 75 cents. Total, $3.11, cost of production for one hundred pounds of milk. At a reasonable profit of ten per cent we have $3.42.

This plan of figuring milk values seems to be an equitable one. Under the plan milk will, of course, vary in price at different seasons of the year according to the variance of feed costs. This is a fair way to look at it from every standpoint. There may be those who will say that feed costs are figured on the market values of feeds rather than the cost of production of feeds. Silage may be selling at $6 a ton, but no one will argue that it cost $6 a ton to produce it. In fact, this is a much higher valuation than is usually given on silage in figuring feed costs. However, the dairyman-farmer has a right to figure feed costs at the market value of feeds. If he cannot do this there is no incentive to market his feeds through the dairy cow. He would be as well off to sell the feed, save the labor and trouble connected with dairying, and take a good rest for the winter. Too many people in figuring milk costs fail to take into consideration the actual labor costs. It is not simply the labor of the hired help which is to be taken into consideration. The owner of the herd is entitled to labor charges for his services and this is a legitimate labor cost in the production of milk.

No one will claim that 10 per cent is an exorbitant profit on the expense investment in producing milk. When milk values are figured out on the basis herein described by Mr. Potter (and this basis will be used for the Wisconsin associations in the Chicago district) it is plain to all of us that $4 per hundredweight milk is in sight. We expect feeds to advance as soon as winter sets in and it is a simple matter to take a table of feed costs, apply it to the average feed production necessary to produce milk, and arrive at or near the actual cost of producing milk. If this rule is carried out rigidly in January and February milk may sell even higher than $4 per 100 pounds.

Under the old system of stationary milk prices for the winter months the dairyman-farmer failed to realize on increased values of feeds raised on his farm. He sold milk, too often, in January, based on October feed costs. The thing which producers generally in the country are demanding is that when food or feed prices are raised they shall participate in the advance. Under this system of basing milk prices monthly on current market values of feeds, the farmer shares in the advances in feeds instead of all this advance going to the speculators. This is right and we are glad to see the dairyman-farmers of the Chicago district come to their senses on this plain business proposition.

Cost of Clearing Wisconsin Stump Land.

One of the best posted implement dealers in Upper Wisconsin, who very modestly requests The Wisconsin Farmer to withhold the use of his name, sends us the following letter following up our previous editorial discussion of the cost of clearing stump land:

No accurate figures can be given as to the cost per acre for clearing stump land. A contractor would be able to do but little, and previous experience and knowledge of the conditions would govern the cost of clearing land. Even if he were equipped with modern stump-pulling machinery, explosives must be used in connection with the stump puller in order to do good and effective work.

The settler, as a rule, has but little money to pay a contractor for clearing land and in my opinion the expense per acre would be more than the ordinary settler could stand.

A contractor might be able to make a living in some sections where there are farmers who have sufficiently improved their lands to bring them a revenue that would warrant the hiring of the work to be done, but as a rule the settler prefers to work at clearing lands at spare times or at times when it is most convenient for him to do so.

The usual method is to brush the lands and with the use of a jumper or spring tooth harrow scratch off the soil between the stumps and put in clover or timothy and turn cattle into pasture. This brings in a revenue at once and helps to support the settler and his family. By the use of a jumper, or even a mattock, the settler can plant potatoes in hills between the stumps, and with the unusual productions of the soil, from a peck to one-half bushel of potatoes can be gathered from these hills that always find a ready market at good prices.

In the wintertime the settler can work at cutting of cord wood, bolts, etc., and at the same time he improves his land and gets a good return for his labor. A good first-class stumping outfit that will cost from $125 to $200 should be in the field ready for work and when the weather is not of a kind that will permit the field work, a few hours can be put in to good advantage in pulling stumps and it is surprising how much land can be cleared for cultivation if the settler but takes advantage of the existing conditions and is not afraid of good hard work.

This letter brings us back again to the notion that the real practical way is for most settlers to clear their own land. Colonization companies may clear large tracts and sell these tracts as improved farms, but the profits made in clearing come largely from individual effort and the utilization of spare time. Most successful farmers in Upper Wisconsin have started in a small way and grown up with the country. As our contributor outlines, they have been able to make a good living for themselves and families as they went along. The opportunities today are perhaps greater than ever before, as labor is scarce in the woods and wages are high, comparatively. The settler who builds up his own farm out of the timber land is in nine cases out of ten a better farmer, once he gets his land in shape, than the man who comes in and buys a large tract of cleared land. As in all other walks of life we appreciate the things which we get by hard work, so it is in clearing land for an Upper Wisconsin farm. There is a good deal of satisfaction in looking out over an eighty or a quarter section and saying to yourself, "She's a dandy and I made her myself."

Wisconsin Fair Broke Even.

The Wisconsin State Fair of 1917 just broke about even on expenditures and income and this is a better record than has been made for many years. In fact, there is every reason to believe that this is the turning point, and that the grade has been made and in years to come we may expect to see the reports recorded on the profit side of the ledger.

It was a rather tough job which Commissioner C. P. Norgord and Sec. O. E. Remey took hold of over two years ago when they attempted to straighten out the Wisconsin State Fair and put it on a business basis. Fortunately these men had the backing of Gov. Emanuel L. Philipp, who determined that the fair ought to be made to amount to something or abolished. Successes are not easily born out of repeated failures, but that is just what was necessary to do in the case of the Wisconsin State Fair. The first move made was to arrange for stated appropriations and the consent of the legislature was not only secured for these appropriations, but arrangements were made whereby the governor might call upon the "emergency funds" to fill up the gaps between receipts and expenditures. These arrangements gave the workers confidence in their proposition. Administration of the state fair business has continued to be economical, but the commissioner of agriculture has known that the bills which he incurred would be paid. The secretary has not been obliged to blush or stammer when presenting the claims for the state fair, as he knew the state of Wisconhin was back of him and would make his promise good. It was a wise move on the part of the legislature when it was decided that the board of agriculture and the active executives in charge of the fair should have a real chance.

For the future we may expect slow but steady progress at West Allis until all doubts as to the bigness of our fair shall have been done away with. There is a great deal of needed work yet on the grounds. A prominent member of the Wisconsin Live Stock Breeders' Association suggests that a rearrangement of the fair grounds would be a great help. It would seem to be altogether advisable to separate the midway attractions and the "hot dog" tents from the agricultural and live stock features of the show. Give the visitors at the fair elbow room between the horticultural and the dairy building, and more elbow room betwen the dairy building and the poultry building, and still more breathing space between the dairy building and the county exhibits building. The park space on the fair grounds has not been utilized to lend dignity to the chief buildings and the agricultural features of the fair. The large space near the entrance and the larger space across the race track might well be used for many of the things which are crowded into the center of the grounds, and this would give space and a distinctive setting to the buildings in which the chief exhibits are housed. The secretary has been hampered by a small upkeep appropriation and the fact that it has been impossible to get surplus receipts which could be put back upon the grounds for these purposes. But the buildings which we have named, together with the cattle barn, judging pavilion, sheep and hog barns, comprise a very attractive group, provided they can be properly set off by rearrangement of the grounds.

The Wisconsin Farmer is advised that 104 tractors were sold on the fair grounds at Milwaukee. This is a great record considering the few companies which exhibited. One company is said to have sold better than $10,000 worth of tractors. Machinery men had their eyes opened at the Wisconsin fair and we believe that machinery exhibits will be larger in the future. The machinery men have permitted the automobile men to steal their thunder at the state fairs and the automobile men have cashed in on the change. Farmers like to see machinery exhibits, especially when these exhibits demonstrate something. If the war

continues until after another state fair, the 1918 exhibition should have a great "farm labor saving show," which would demonstrate the value of numerous devices now available for cutting down labor costs on farms.

Needless Creamery Machinery.

To be tied for first place in the butter scoring with a score of 96 is a matter of high satisfaction to a buttermaker. It speaks well also for the patrons. Without the raw material in the very best of condition good butter cannot be produced.

At the state fair Tony Kroyer, of Basco, Wisconsin, was one of the two to be tied for first place. In the case of Kroyer we know that his patrons delivered him a fair, perhaps somewhat above the average, clean raw material. Good workmanship and clean methods on the part of Kroyer did the rest. He used no machinery or method which is not applied in the average Wisconsin creamery. Perhaps he knows his business just a little better; perhaps, also, he is a little more careful, but aside from that his methods are the same that are within the reach of every buttermaker in the state.

There is another buttermaker we know of who in years gone by used to score between 92 and 94 in the monthly contests. At the recent scoring his butter was scored 83 by one judge and 89 by another, giving him a score of something like 86 and a fraction. The creamery represented by this buttermaker has in recent months installed a machine which is at present being sold in all parts of the state and is known as the purifying machine. Its makers claim that with it a 92 per cent butter can be produced from below-average cream. They insist that a poor raw material can be made into first-class butter. Be that as it may, the creamery in question receives a good raw material. It needs no purifying before being made into butter. Nevertheless directors and buttermakers agreed that the machine would be a good investment. It cost the creamery $1,300 to put this machine into the factory. With the machine goes the advice to use neutralizers to help the cream. All that the machine does is that it purifies the air which is pumped through water and incorporated in the cream. The air of the ordinary factory ought to be clean enough and is clean enough when things are run right and a good grade of raw material is available as it was at this creamery. The lime method, however, is called upon to help out the purifier, and that is where the damage really comes in.

The big centralizers, creameries that draw their supply from long distances, make use of the lime method and purifying machine because their raw material is not always of the highest quality. Experienced men know to a fraction what is good and possible to do and the product these factories turn out is a fairly good product considering the raw material. When, however, centralizing methods are introduced into the small creamery nothing but evil can result. Using the lime method and the purifier to make a good product better is like calling upon a doctor to make a healthy person healthier. It can't be done. The inexperienced man of the small creamery resorting to the lime method can do naught but damage to the patrons' product, as in the case of the small creamery there is very little raw material which is not of fair quality and arrives at the factory in good condition. Most creameries have all their product in the vat by 2:00 o'clock in the afternoon. There is no chance for any great amount being soured as in the case of the centralizers.

For $1,300 a mighty strong educational campaign could be carried on among the patrons of the factory, new equipment purchased to replace the worn-out and out of date machinery in the factory, and the buttermaker himself obtain a whole lot of useful instruction at the dairy school which would make it possible for him to produce only the highest quality butter from the already satisfactory raw material.

These machines are being sold throughout the state at present and many creameries having no necessity for such expensive equipment and no reason for neutralizing their cream are investing their money. Before any patron allows his directors to vote in favor of such additional equipment let him investigate thoroughly and he will come to the conclusion that for the average coöperative creamery receiving a high grade raw material such investments are a waste of money and an unjustified reflection on the cleanliness of the patrons' cream and milk.

An Appeal to Dairymen.

Those who are milking low-producing cows and who are indifferent in matters pertaining to feeding are finding it extremely difficult to make dairying pay. Some of them are contemplating selling their cows and going out of the dairy business. A poor cow, one that does not produce more than the average cow—140 pounds of butter fat a year—is a big liability in these days of high-priced feed, but one capable of producing 250 pounds a year is still profitable. Better cows are needed now and they must be found if dairying is to be kept up. Sell the cows that are unable to pay for their board under good treatment and buy others to take their place. You will be better off with one cow capable of producing 250 pounds of butter fat a year than with any number of 150-pound cows. Better have a small herd of profitable cows than a large one with half of the cows incapable of earning board.

Do not go out of the dairy business, for the demand for dairy products will be greater than ever this year, and it is quite possible that commercial feedingstuffs will become cheaper, because of the embargo that has been placed upon the shipment of feedingstuffs from this country to neutral countries from which in turn these products were re-shipped to Germany. Since this embargo on feedingstuffs went into effect Holland has ordered the slaughter of half a million cows because there will be no feed for them. This means that we ought to increase the dairy cows in this country enough to make up for Holland's loss. Milk is one of the most important food products in times of war, as has been demonstrated in Europe where hundreds of thousands of small children have died for want of milk to properly nourish them. The great importance of the dairy cow has never been so clearly understood as it is now, and it is the duty of farmers and dairymen to do all in their power to improve their milk cows and keep up their herds to the present numerical standard and increase their size if possible.

Below we print an appeal from the central committee of the dairy industry war council, which will be of interest at this time:

Save your cows and heifers. Every farmer owes it to his country to save every productive dairy cow and her promising female offspring. By so doing you can help feed the nation, save its children, and above all, help to sustain the sons of the nation in their heroic effort in behalf of world freedom and right. Do not sell your cows for slaughter. Remember in this time we all must make some sacrifice, fulfill some duty. The sons of the nation are doing their share; you on the farm can do yours by maintaining the production of milk and thus contribute to the food supply of the allies. Remember that you can produce no food on the farm more important than milk. Remember no nation can exist and maintain its physical and intellectual vitality and energy without milk. Butter fat is absolutely essential to the existence of our nation. Butter, cheese and ice cream are among our most wholesome and necessary foods. The supply of these vital foods depends entirely upon you, and the nation appeals to you to sustain this supply by keeping your dairy cows on your farm.

Use good sires. You can aid yourself and help by increasing the production of your cows; this can be done by improving the quality of your cows by the use of well-bred dairy sires. Every pound of milk added to your production is clear profit to you and patriotic help to your country. Breed up and produce more. Do not breed down and produce less.

Help by exercising care in handling your dairy products. You can help the nation and yourself by exercising every care in handling the product of your cows. Avoid loss and unnecessary waste by the use of clean utensils and keeping the products in clean, cool places. A moment's attention by you may save the life of a child or a soldier. The food department of the government will render you every possible service in production and distribution, both in the cost of feeds and the marketing of your products.

It is all very well to urge farmers not to kill any cows regardless of their worth for milk production, because every pound of milk that can be produced will be needed while the war continues, but the farmer who can get more for his raw grain than for the dairy products produced therefrom is not likely to continue to perform the arduous work of caring for a herd of cows for nothing and even lose cash money by doing it. For that reason we believe it is better to advise getting rid of the boarder cows and thus improving the average production of the herd. Stay by the good cows and breed more of that kind as fast as possible, but get rid of the boarders.

STARTING FOR THE TRAINING CAMPS.

Use Butter in Wisconsin Farm Homes.

No one has a greater right to make free use of milk, cream and butter in his daily diet than the farmer. He is the producer of these nutritive forms of human food. In our state dairying plays a more important part than any other branch of agriculture. We are in a sense very much dependent on a good market for these products. It is our duty to encourage the market by demonstrating that we believe in our own wares. For the greater part our dairymen do this. They make intelligent use of milk, cream and butter on the table, for they believe what they preach through such organizations as the National Dairy Council and many others that are interested in creating a more active market for dairy products. Most dairymen believe that the most economical food for the home is milk in its various forms. They encourage at every opportunity the education of the city consumer to this end. They further attest to their belief by using milk and butter fat in the home wherever advisable. They do nothing to create distrust on the part of the city consumer towards the dairy dishes. They are true dairymen.

There are others, however, who also milk cows for profit. They enrich themselves through an active sale of dairy products. They use the same market as the other dairymen. They subscribe to every request for the advancement of milk and butter fat prices. They hold that dairy products are not properly appreciated by the buying public. They want the best price, the best market, the biggest profits. They believe that butter is the best of foods. But lo and behold! In their own home they use, not butter, but "oleo." They are oleo dairymen. Their actions do not encourage city consumers. Their example is bad. It is a harm to the dairy business. Butter is cheap in price, selling too cheap altogether, but not cheap enough that they would use it. No, "oleo" is cheaper. Though they produce the butter fat, and though they clamor for higher and higher prices—to which the honest dairyman is entitled—they brand themselves as selfish and small, as skimpers in the eyes of those who buy their product. Truly such dairymen have no right to ask for higher prices, for they are a menace to the whole dairy business. Over the whole land dairymen, honest and convinced of the righteousness of their claim that dairy products are nature's cheapest food, are subscribing money to carry on the advertising campaign which will enlighten the public. The results of this campaign benefit the entire industry. Greater demand makes larger returns possible. People do not hesitate to pay more for a product once they are convinced of its high value as a food. The "oleo" dairyman undoes much of the work of his brethren every time he buys a pound of "oleo." Is it fair to the other dairymen to purchase "oleo" when one is manufacturing butter fat?

In a little town of a certain county in our state the groceryman does not handle butter. There is no call for butter. His trade is mostly with the men farming through that section. These men farm and keep cows and sell butter fat. Yet they buy and eat "oleo." The "oleo" business of the merchant is a brisk one. This seems so utterly inconsistent that the indignation of the true dairyman knows no bounds.

The case is very much as though someone went to the factory of a highly praised and highly priced automobile in order to buy at first hand the machine in question. He would not be very likely to buy if he discovered the maker of the machine used a cheaper machine because he wished to save the few dollars' difference in price.

Why should the city consumer be expected to pay higher prices for dairy products now or at any future time when he sees the producer of these products using substitutes?

Another Liberty Bond Drive.

(Continued from page 3.)

most popular ones. There is no safer investment (outside of farm land) and I hope to see the farmers of the grain belt respond to the limit of their ability. "Buy a Liberty Bond" will be heard from ocean to ocean, throughout all of October. Do not turn a deaf ear; answer to the limit of your financial resources:

Uncle Sam issues the summons to clench for him,
Fight with the glorious British and French for him,
Out on the firing line, out in the trench for him—
Dig!

Uncle Sam issues the summons to sow for him,
Feed our brave allies, defeating the foe for him,
Out in the field with the plow and the hoe for him—
Dig!

Uncle Sam issues the summons to lend for him,
Help our great allies, the billions to spend for him,
Reach in our pockets 'way down to the end for him—
Dig!

James M. Pierce

Wisconsin Cabbage Growers, Attention.

To the Editor:—After conference with Mr. Hansche and other members of the Wisconsin Hollander Cabbage Seed Growers' committee, it has been decided to hold the annual meeting for discussion of the season's results and field inspection on Saturday afternoon, October 6th. We will meet at the Chickory Road schoolhouse, Racine, on the M. R. K. interurban line south of the city at 1 o'clock. Dr. L. R. Jones, the originator of the yellows-resistant strain of cabbage, will be present to lead the discussion on cabbage diseases and their control. Prof. H. F. Wilson, of the economic entomology department, will also be present to answer questions regarding control of cabbage insects. After an informal discussion we will go to several friends where experimental and demonstration work has been conducted. The results this season are very satisfactory, showing the ability of Wisconsin Hollander to resist the yellows disease, but at the same time making it plain that continued selection is necessary to improve and fix the type. The selection of yellows-resistant kraut strains of All Season and Brunswick are also very satisfactory. Many cabbage growers also raise onions and will be glad to see the demonstration fields where onion smut has been controlled by using formaldehyde this season. When the cabbage harvest is over I will send you another letter asking for yields and number of heads saved for seed. If I can be of any assistance in selecting heads for seeds, please let me know. R. E. Vaughn.
Asst. Prof. Plant Pathology, Wisconsin Station.

LET ME HELP YOU GET AHEAD

What wonderful opportunities there are today for any man, young or old, who likes machinery and yet how hard it is to awaken these men to this fact. Why do you hesitate?

AUTOMOBILE and TRACTOR WORLD CRYING for HELP

There is absolutely not a single chance to fail. Think of it—not a chance of failure, if you are properly trained. Costs you less than your first month's wages to be properly trained and takes but seven weeks at this complete automobile and tractor school. Takes a little ambition and determination, I know; but if you haven't got either of these, you never will succeed in anything.

JOBS AT $75 TO $300 MONTHLY

The whole world is a field for a man trained in the Gas Engine business. Every day we have calls for help. Located in one of the cleanest and most progressive cities in the country. Over 20,000 square feet of floor space filled with latest equipment. Every instructor from myself down has had years of experience teaching the Gas Engine business.

Everything Simplified — Everything Thorough
Everything Complete — Everything Practical
Everything for One Price Life Scholarship Privileges

Complete Tractor Course included without extra cost.

Mine is the lowest price complete Gas Engine course in the country. Mail in attached coupon for free book.

UPPER WISCONSIN

The Land-Clearing Conference.

Rhinelander, in Oneida county, was selected by the forces in charge of the Land-Clearing Special, now on the last lap of its tour through Upper Wisconsin, as the best location for demonstrating the possibilities of early development by the aid of modern methods of stumping. For this reason the representatives of all organizations interested in clearing up the large tracts of rich stump land were invited to come to Rhinelander on September 28th and see the work now being done under the direction of Prof. F. M. White, of the college of agriculture. The demonstrations lasted all day and consisted in pulling and blasting stumps, piling stumps, cracking stones and blasting for drainage.

The two stump-pulling companies on the grounds did some good work. No attempt was made to do feats impossible for the settler to repeat. The A. J. Kirstin Company demonstrated very satisfactorily the horse power and the one-man machine. The LaPlant-Choate Company, of Iowa, pulled three stumps in four minutes and ten seconds and freed the cables. These can be repeated by any settler under the same conditions, after he has become better acquainted with machinery and has the working knowledge which comes to a man after a few weeks in the field. It was proved by demonstration that a rapid pace can be maintained on large stretches. One machine pulled, some time ago, eighty-two stumps in two hours and fifty-three minutes, an average of two minutes and ten seconds to the stump. However, the records, while very gratifying, are not the thing these people are primarily interested in. Proving by actual work the ease and rapidity with which stumps can be removed day after day under all conditions is what concerns them most. While accurate figures on the cost are also being compiled, no results will be given out until the trip has been completed.

Blasting stumps and cracking rock and land drainage by the use of dynamite was shown by the E. I. du Pont de Nemours & Company expert, Mr. A. E. Mathewson. The use of dynamite in land clearing is not advocated by these people as the only effective means. Dynamite can be the only means and at times is the only means of clearing, but on nearly all occasions the use of dynamite and a stump puller is a good combination.

Splitting stumps before pulling or after can only be done by dynamite. Large stumps cannot be hauled after they are out of the ground unless they are split with the aid of powder. Thus the combination of puller and powder will very materially decrease the cost per acre for powder and the amount of labor for the operation of the puller.

Several types of pilers were working to dispose of the stumps pulled and blasted in the demonstrations. These pilers are being tried out in order to determine how they can possibly be improved and cheapened. The pilers can be constructed at home and the necessary bolts, pulleys and cables secured for a nominal sum. Improvement has been made in the Conrath piler and the LaPlant-Choate trip. As the stump is swung into the pile a simple trip releases the chain holding the stump and the boom swings back ready for another load. There is less tangling of chains and trouble in releasing the load now.

In the ditch blasting a stretch of thirty feet of dirt under water was blown out and a perfect ditch established. One-half pound sticks of 40 per cent dynamite set two feet deep every eighteen inches and connected in series was the powder necessary to make a ditch four feet wide on top and sloping evenly to a depth of two feet. Greater distances can be blown at the same time with the proper connections.

After watching the work all day, the visitors gathered in the Oneida Hotel for an informal meal and discussion of the problems confronting northern Wisconsin. Speakers of the evening were B. E. Walters, secretary Wisconsin Press Association, Mosinee; J. L. Sturdevant, president Wisconsin Daily League, Wausau; R. E. Choate, LaPlant-Choate Company, Cedar Rapids, Iowa; Fred J. Allen, dairy commissioner of the North-Western Railroad; T. A. Hoverstad, agricultural commissioner of the Soo Lines; F. S. McCabe, industrial commissioner of the Omaha & Northwestern; Prof. F. M. White, in charge of the Land-Clearing Special; A. E. Mathewson, expert of du Pont de Nemours & Co.; Prof. K. L. Hatch, of the college of agriculture, Madison, Wisconsin, and E. O. Brown, banker, of Rhinelander.

The speakers emphasized one after another the three points essential towards a successful campaign for settling the stump lands of northern Wisconsin. The three points vital to the building up and development of agriculture in this section are: Cheap money, good settlers and coöperation of bankers and farmers, and farmers among themselves. Cheap money is not common in northern counties; settlers are coming slowly because of this and coöperation is behind cheap money and the bringing of large numbers of settlers willing to go through the first years of hardships. Stumping machines and dynamite are no use to a settler if he cannot buy them. Cleared land is no use to the settler unless he is able to prepare it and seed it. Living is likewise made nearly impossible without live stock. To give the settler the opportunity of purchasing machines, powder, seed and live stock makes rapid development possible. To withhold or make it difficult for the man just starting to buy these things retards development. Railroads are interested in early development of this country because it means profits for them. They are willing to help in forming land-clearing clubs and give time, money and men to bring settlers. They are doing it now. They are looking ahead to the time when farming must form the essential part of northern Wisconsin's wealth. Cities have been created by the lumber business. Men, hundreds and thousands, have made their living from sawing and cutting lumber, but the day is already here in certain sections where lumber is exhausted and agriculture must be the source of wealth.

Prof. F. M. White spoke of the results of the work as far as these could be given out. The trip has brought about a closer coöperation among the manufacturers of land-clearing machinery. It has caused more men of the trained professions, more engineering ability, to give stump-pulling problems time and earnest thought. It has shown that Wisconsin's stump lands can be cleared cheaply and quickly providing settlers can obtain some working capital. It has shown the absolute necessity of banker-farmer coöperation. Federal farm loan bank officials have been convinced of the merit of applications for loans on cut-over lands and a general alleviation of financial conditions is likely. The big results of these demonstrations, however, will not be apparent until later, when the data gathered will have been sorted and worked over into an intelligible analysis of cost of land clearing under various conditions.

The United States Bureau of Crop Estimates places the number of silos in this country at 400,000 and their total capacity at 31,000,000 tons. It is believed, however, that this number is increasing very rapidly, perhaps as much as 10 per cent yearly.

DU PONT AMERICAN INDUSTRIES

America Must Feed the World

Europe is hungry. Ground, once farms, is now a raging battlefield. Women and children are starving. Millions of mouths cry out for food.

The loss of each food ship is a tragedy. But the idle acres of America could grow more food per year than all of the enemy's ships can destroy.

Every Idle Acre Helps the Enemy

Hinder rations and you hinder victory. Other ships and more food must take the place of those destroyed.

Clear—Plow—Plant

Remove the stumps and boulders—drain the swampy places. Cultivate every available acre of land. Bumper crops are essential. Don't let abor shortage hinder you.

Storing Vegetables for Winter.

Wisconsin's Big Crop of Roots and Vegetables Need to Be Well Cared for This Winter—By J. G. Moore, Wisconsin Station.

THE places in which the home gardener may store his crops successfully are house-cellars, or caves and pits. All of these are not equally well adapted for storing all kinds of vegetables, but for a majority of kinds will answer the purpose very well. Where more than one type of storage is available greater success will be had if in selecting the storage the storage requirements of the vegetable and the time it is desired for use are taken into consideration.

The house-cellar is by far the most frequently used storage place of vegetables grown in Wisconsin gardens. If it does not contain a furnace and the temperature does not fall below the freezing point, there will be little difficulty in keeping the vegetables well into the following spring. If, however, there is a furnace in the cellar, then the difficulties of successful storage are greatly increased. In such cellars a small portion, preferably well removed from the furnace, should be partitioned off. The storage room should possess at least one window which will make temperature control easier. The tighter the partition fits the better. As the storage room probably will be quite permanent, it is advisable to exercise considerable care in constructing the partition. An insulated wall or a double wall with a dead-air space between is to be preferred. A heavy cement wall is satisfactory. A single board wall is not to be recommended, but a storage room with such a wall gives better results than storing in the same room with the furnace. The storage room should preferably have a dirt floor. Proper storage of vegetables requires a certain amount, but not too much moisture. A cement floor is too dry.

Outdoor cellars are usually preferable to house-cellars, providing they are so constructed as to prevent freezing of the vegetables and are so located and built as to be of easy access during the winter. Some gardeners have an entrance to their outside cellars through the house cellar. This overcomes the most objectionable feature of the outside cellar—gaining access to the cellar during bad weather. The outside cellar eliminates any unpleasant odors indoors due to decaying vegetables.

The three chief essentials of successful storage are—sound vegetables, proper temperature, proper moisture. With certain vegetables maturity and ventilation are also of prime importance. Many people overlook the first of these storage requirements. Careful selection should be made of all vegetables to be stored. Soundness should include freedom from disease conditions likely to cause rot, and from mechanical or insect injury which provides an entrance for rot organisms or favorable conditions for their development. It is not the loss of the affected vegetable which is so important, but the fact that decay once started may destroy a considerable portion of the stored crop. The importance of soundness, however, does not stop with the selection of sound specimens. It includes careful handling during the storing process. All of us handle fruits which are to be stored with the utmost care, but practically disregard the bruising of vegetables. While the results are not so marked in the case of vegetables, often much of the loss in storage may be traced directly to rough handling.

The best temperature for storing vegetables may vary considerably for different kinds. There are two fairly well defined limits for most vegetables. The temperature should not be so low that the vegetables freeze. It should not be so high as to encourage premature growth. High storage temperature is also more favorable to the development of most rot organisms; therefore, with most vegetables the desired temperature is one close to the freezing point. Some vegetables, as cabbage, will stand slight freezing without injury, but it is usually safest to maintain the temperature of the storage room at not less than 31 to 32 degrees Fahrenheit. Vegetables will keep well at somewhat higher temperatures, 34 to 36 degrees, but only in the case of squash and pumpkin is a relatively high temperature to be preferred.

Large losses occur in storage because of improper moisture supply. The greater part of these losses is due to lack of sufficient moisture. The moisture content of all vegetables is high. When placed in a dry atmosphere they lose moisture very rapidly and with it their quality. With the exception of onions, squash, pumpkins and dry seeds, as beans, a relatively moist atmosphere is desirable. Excessive moisture is injurious, as it furnishes favorable conditions for rot. The aim, therefore, with most vegetables, is to keep the surroundings sufficiently moist to prevent wilting.

DON'T STORE THIS KIND—INJURED VEGETABLES DO NOT KEEP WELL IN STORAGE.

Good ventilation is desirable for the best storage. It helps to regulate temperature and moisture, removes foul odors and may help to prevent decay.

Proper maturity influences storage. With some crops full maturity is necessary, with others slightly immature specimens store best, while with some the stage of maturity makes little or no difference.

The Holland or Danish Ballhead type of cabbage is best for storage, although Succession, Sure Head, Flat Dutch and other varieties of the mid-season type store fairly well. The essentials of satisfactory storage are low temperature, moist atmosphere, no hard freezing, absence of excessive moisture and good ventilation.

For cellar storage the stems and outer leaves are removed and the heads wrapped in several thicknesses of newspaper or in heavy paper. Occasionally it is stored in boxes and covered with sand. When stored by this method, it is particularly desirable to keep the temperature near the freezing point to prevent premature growth. Some store by suspending the plants by the roots from the ceiling.

Several somewhat different pit or trench methods are employed. A common one is to use a trench six to eight inches deep, wide enough to accommodate three heads and sufficiently long to hold the amount to be stored. The trench may be lined as for storing other vegetables. Only the outer leaves of the cabbage are removed and the roots are left intact. Place them head down in the trench and bring the roots together. Straw

Saved—

7 gallons of fuel and 10 quarts of oil in plowing 16½ acres through scientific tractor lubrication

Two successful farmers of Parshal, N. D., own a 30-60 h. p. tractor of prominent make.

They formerly used oil costing 38c per gallon. Now they find it cheaper to pay about twice as much for Gargoyle Mobiloils. Why?

Because a careful field test of Gargoyle Mobiloil "B" as specified for their tractor showed a saving of 7 gallons of fuel and 10 quarts of oil in plowing 16½ acres.

In condensed form here was their test:

With Gargoyle Mobiloil "B"

Ground plowed, 16.5 acres
Oil consumption, 12 pints
Fuel consumption, 28 gals.

With Competitive Oil

Ground plowed, 16.5 acres
Oil consumption, 32 pints
Fuel consumption, 35 gals.

The engineer reported in part, "The reason we made such a good showing on fuel was on account of efficient lubrication—plus a *more perfect piston-ring seal* while operating on Gargoyle Mobiloil "B".

"This is more easily understood when I state that a cloud of vapor was constantly issuing from the breather holes (in the crank case) while the engine was operating on competitive oil, this being due to gas leaking past the piston rings and consequently being wasted.

"While operating on Gargoyle Mobiloil "B" this vapor was not noticeable..... In addition the tractor handled the load more easily."

You ask:

"Can I too show similar savings if I change to Gargoyle Mobiloils?" A natural question.

Gargoyle Mobiloils used as specified on tractors have never yet failed to show lowered oil and fuel consumption when comparatively tested with other oils.

This year progressive American farmers are striving for increased production and lowered costs. Unless you are using Gargoyle Mobiloils, the chances are that you now waste in part your fuel and oil.

The Chart below is today recognized as the scientific guide to correct Tractor Lubrication.

Gargoyle Mobiloils are put up in 1- and 5-gallon *sealed* cans, in *sealed* 15-30- and 55-gallon steel drums, and in wood half-barrels and barrels.

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container. For information kindly address inquiry to our nearest office.

Write for Correct Lubrication booklet containing complete Chart and other valuable data.

GARGOYLE

Mobiloils

A grade for each type of motor

CORRECT TRACTOR LUBRICATION

Explanation:—The four grades of Gargoyle Mobiloils for tractor lubrication, purified to remove free carbon, are:

Gargoyle Mobiloil "A" **Gargoyle Mobiloil "BB"**
Gargoyle Mobiloil "B" **Gargoyle Mobiloil "Arctic"**

In the Chart below, the letter opposite the tractor indicates the grade of Gargoyle Mobiloils that should be used. For example, "A" means Gargoyle Mobiloil "A," "Arc" means Gargoyle Mobiloil "Arctic," etc.

VACUUM OIL COMPANY, Rochester, N. Y., U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

Domestic Branches: Detroit, Boston, New York, Chicago, Philadelphia, Kansas City, Kan., Minneapolis, Des Moines, Pittsburgh, Indianapolis

Invest in One of These!

WHEN corn was selling for 50 cents a bushel, one of our dealers made this offer to a skeptical farmer: "Use this manure spreader to top-dress 20 acres of your 40-acre corn field, putting on eight loads to the acre. Leave the other 20 unmanured as you meant to do with the whole 40. I will take the difference in the yield between the two 20's for the spreader." The farmer agreed, thinking to get his spreader at a low price.

The 20 on which he used the machine produced 512 bushels more than the other 20. He paid the dealer $256.00 for the spreader—a great deal more than its present selling price. Today, higher prices would make that difference about three times $256.00!

You simply cannot afford to be without a spreader when it will pay for itself like that. Hand spreading is out of the question. You want the manure pulverized and spread evenly, not dumped out in big lumps unevenly.

Now that we have added the New No. 8 Spiral Wide Spreader to the Low Corn King and Low Cloverleaf lines, we are in a position to suit any farmer. The No. 8 machines are for the average small farm, very light draft, narrow boxes, spiral wide spread (regular). Our big No. 6 machines—Corn King, Cloverleaf and 20th Century—are "whales for work", easy handling and loading, steel construction, light draft. With the No. 6 spreaders you may have the efficient disk wide spread (regular) or the new spiral wide spread (special).

Here is a spreader for every farm. This year, of all years, you need one. Write us for full information.

ATLAS EXPLOSIVES

Break up the stumps with Farm Powder

A *pulled* stump is hard to handle. Getting rid of it is just as big a job as the pulling. *Blast* it out and you can carry it away like firewood. "Most stump pulling machines are too expensive and unwieldy," says U. S. Farmers' Bulletin No. 150. Use

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

and save money, time and labor. Punch a hole under the stump, load, fire, and the job is *done!* The shattered roots come out free of earth, the soil is loosened for yards around—ideal for crops.

Atlas Farm Powder is made especially for farm use. It is the cheapest farm hand for blasting stumps and boulders, digging ditches and many other kinds of work. Sold by dealers near you.

Send for "Better Farming" Book—FREE

"Better Farming" (illustrated) tells how you can grow bigger crops by blasting the subsoil, how you can bring orchards into bearing two years earlier, and how Atlas Farm Powder replaces expensive labor. Sent free for Coupon.

or litter may be used to cover the heads with a shallow layer of earth put over it. As colder weather approaches increase the earth covering. It is not necessary to cover deep enough to prevent frezing, as slight freezing does not injure cabbage stored in this way. The trench method permits of removing the heads as they are needed without disturbing many of those to be left.

Pit storage is essentially the same, except the pit is usually round and somewhat deeper. In some cases in pit storage, a portion of the stems and the roots are removed. Cabbage is sometimes stored in trenches with the roots down, but under Wisconsin conditions this method is probably not as satisfactory as the one outlined above.

The essentials of successful onion storage are fully matured, well-cured bulbs; dry atmosphere; good ventilation, and a relatively low temperature. Onions will stand some freezing if they are not handled while frozen, but it is better to keep the temperature somewhat above the freezing point.

Onions to be stored are commonly harvested in August and September. When the tops are dead and shriveled and the outer skins of the bulb dry, the onion is ready to harvest. Harvesting may be hastened somewhat by breaking over the tops. On large areas it is accomplished by running a barrel or light roller over them. The tops may be broken over when they begin to turn yellow.

The bulbs are pulled, thrown into windrows, and allowed to cure for a few days. They should be stirred occasionally, exercising care not to bruise them. As soon as well dried, so that the tops rattle when the bulbs are handled, they should be taken inside. If the weather is unfavorable during the harvesting period, onions may be cured in a well-ventilated room, having a dry atmosphere. Curing indoors requires a much longer period than outdoor curing under ordinary conditions.

After the bulbs have been thoroughly cured, the tops should be twisted or cut off not closer than one inch from the bulb. Too close topping results in premature sprouting.

At this time discard for storage purposes all bulbs which are soft or which have thick "necks," as they will not store well.

Onions are commonly stored in crates or bags, as they permit better circulation of air and there is less danger from moisture accumulation.

Mature, disease-free tubers; moist atmosphere; freedom from frost and a low temperature insure successful potato storage. Care should be exercised in storing to discard any potatoes which have been frosted in the field. Any of the types of storage previously discussed are suitable for potato storage providing the above conditions are maintained.

Beets, carrots, rutabagas, turnips and winter radishes demand about the same storage conditions. The leaves of root crops should be removed before storage. Do not top so close as to break the skin of the vegetable. Temperatures near the freezing point and relatively large amounts of moisture are necessary. These crops probably suffer more from insufficient moisture in storage than most other crops. Loss of moisture means lost quality and texture and a practically worthless product. If stored in a cellar, packing in sand in boxes or placing in piles and covering with sand will help overcome the difficulty. The sand should be moistened from time to time. Do not get it too wet. Just sufficiently moist to prevent wilting is the desired condition, which can be readily determined by examining the vegetables occasionally. In cellars with earth floors the moisture may be supplied by applying to the floor. In cellars with cement floors, some keep the atmosphere sufficiently moist by placing water in tubs or putting it on the floor. A large evaporation surface is best when these methods are used. These vegetables may also be stored in pits, but must be covered sufficiently to prevent freezing.

Salsify (vegetable oyster or oyster plant) and parsnips may be stored as other root crops. They are not injured by being frozen and, therefore, need less attention as regards too low temperatures. It is advisable to leave at least a portion of these crops in the garden for early spring use. They are even better in the spring than when harvested in the fall. There is quite a common belief that parsnips left in the ground over winter develop poison-properties. Such is not the case, however. Parsnips so handled may be used without any ill effects until they become too woody to be edible.

Law Questions.

Berries in Road Belong to Farmer.

A Subscriber, Mukwonago, Wis.—Have the people of a town or city in Wisconsin a right to go into the country and pick the berries along a road fence in front of a farmer's place, and can such farmer rightfully order them away, and compel them to go?

Answer.—The town or city people have no right to pick berries in the roadway in front of a farmer's place. Such berries belong to the farmer and he can lawfully order such people away and compel them to go.

Drainage Over Another's Land.

A Wisconsin Subscriber.—A purchased a lot of land in Wisconsin from B. Before A bought the lot, C had made a ditch along one side of the lot and across it. Every year the water in the ditch washes away the soil and the ditch becomes wider. Can A compel C to fill up the ditch?

Answer.—If there was no binding contract between B and C which authorized C to maintain the ditch across the land A can apply to the court and obtain an injunction against prohibiting him from running water across the land.

Wife's Separate Property.

A Subscriber, Withee, Wis.—A married woman owns a farm in Wisconsin, and her husband operates it. The cattle raised on the farm, came from cows bought with the farm products, and horses on the farm were obtained in the same way. No bargain was made between husband and wife about the matter. Does this live stock belong to the wife?

Answer.—By the law of Wisconsin all the rents and profits of the wife's farm belong to her as her separate property. Hence the live stock bought with products of her farm belong to her. These two people should make some sort of a bargain about the operation of the farm.

Drainage of City Lots.

An Illinois Subscriber.—I own two lots in an Illinois city, which have good fall for drainage. The three lots below mine were drained by the city with fifteen-inch tile that empties into an open ditch and the owners were at no expense for such drainage. The alley joining my lots above was drained by the city with fifteen-inch tile. A four-inch tile would be sufficient to drain my lots. (1) Am I required to pay the entire cost of draining my lots with large tile? (2) Can either I or the city be compelled to drain my lots at all?

Answer.—(1) The drainage of lots in the city is controlled and regulated by city ordinance and not by the law of the state, hence you will have to examine the city ordinances on the subject, in order to ascertain your rights in the matter. (2) See also city ordinances for answer to this question.

Permit to Carry Revolver.

Mr. T. A. Gustafson, Fort Dodge, Iowa.—(1) Can anyone get a permit or license to carry a revolver for protection in Iowa, and if so, where and how may one obtain such permit or license? (2) What is the law regarding the carrying of a revolver out of sight, in Iowa?

Answer.—(1) Permits to carry revolvers may be given by any of the following officers, viz., the chief of police in cities of the first and second class and other cities having chiefs of police. In counties and villages where there is no organized police force the sheriff or mayor may issue such permits. Said officers are required to issue such permits to all peace officers and such other persons who, in the judgment of said officials, should be permitted to go so armed. Mining companies, banks, trust companies, railroad and express companies may obtain a general permit for their employes while on duty. No such permit shall be granted to any person unless the applicant shall make personal application therefor to the proper officer, and state his full name, residence and age, place of business, place of employment or vocation, and the nature of his business. (2) It is unlawful for any person to carry a revolver concealed upon his person, except as above set forth, and no person under fourteen years of age is allowed to carry firearms of any description.

Ask your neighbors to subscribe for The Wisconsin Farmer.

Milk Producers' Problems.

To the Editor:—I wish to state that the farmer or milk producer is facing very serious problems at the present time. With the scarcity and high price of farm help, also the high price of feeds, and the uncertainty as to the future price of feeds and help, the farmer is entitled to a price equal to the cost of production plus a fair percentage for profit; about 10 per cent.

It is the duty of every American farmer to produce milk as cheaply as possible at this critical time, but we should not be expected to produce milk or any other farm product at cost.

We, as farmers, as well as other business men, should add a certain per cent for profit.

Capital invested, interest, insurance, losses, repairs and all other things pertaining to the farming business should be figured in.

The dealers and city people appear to think that the farmer has nothing to do but pull in the money. Now, my dear city brother and sister, too, do not deceive yourself. Do not think if you have to pay 14 cents per quart for milk that the farmer is robbing you.

It has been demonstrated that at the present price of feeds it costs very close to $3.50 to produce 100 pounds of milk, or about 7 cents per quart. The other 7 cents will be distributed between the middlemen, who deal it out to you.

The following is a schedule whereby every producer can do his own figuring. It has been prepared by one who is considered the best authority in the United States today.

Amount of feed and forage entering into average herd cost of milk production per hundredweight of milk:

Grain	44 lbs.
Silage	188 lbs.
Hay	50 lbs.
Bedding	39 lbs.
Man labor	2.42 hrs.

Can you buy a balanced ration of grain for less than 2¼ cents per pound?

Is not your silage equal in feeding value to your grain? Hay 1 cent per pound; bedding $8.00 per ton; and labor 25 cents per hour?

Figure it out. Add 10 per cent and note the result.

Can you produce it for less? If so, do your bit. If you cannot, ask more. I think you are legally entitled to it.

Geo. W. Hull.

Walworth Co., Wis.

Lower rates and a revision of tariff rules for the transportation of live stock on virtually all the railroads have recently been requested in a complaint filed before the Interstate Commerce Commission by the Texas National Live Stock Exchange, an allied organization. The complaint asserts that present tariffs and classifications are unjust and unreasonable. Every large stock shipper and receiver in the United States is represented in this complaint.

The advice has been given to cut soy beans when three-fourths of the leaves have fallen and most of the pods have turned color. If cut earlier they are difficult to cure and if later there is a loss of grain from shattering of the pods.

The Missouri Experiment Station has found a valuable use for straw in top dressing wheat. In experimental tests, wheat covered with straw started out vigorously in the spring and made a better yield than that which was left uncovered.

News of the Sale Ring.

E. W. Hendrick's Poland Sale.

Ed Hendricks held held his second Poland China boar sale at Hazel Green, Wis., on the 24th, selling 39 head. There were only a few gilts—six—and the 33 boars averaged a little over $56. Ed did not have his boars fleshy enough to bring their value. He sold some good, stretchy boars that will no doubt grow out well for their buyer, but to get the most money they must carry the flesh. Buyers often make the remark that they would just as soon buy them thin, but the same men will pay a little more for the same animal if he is well covered. The top was $115, that amount being paid by J. F. Sweeney, Vista, Iowa, for a good, big, long, high-backed son of Black Jumbo. Wm. Urdenberg, Prairie du Chien, Wis., paid $105 for a litter mate to the above boar. Black Jumbo is still a favorite of the crowds for what he has done. Model Major 2d made a hit on his great individuality and what he is doing. Hendricks has a great pair of herd boars. W. B. Duncan sold the offering. We follow with a list of those selling for $50 or over:

No. 1, Phil Runde, Sinsinawa, Wis., $70; 2, Jos. Berringher, Epworth, Wis., $80; 5, Geo. Seiple, Julien, Ia., $85; 8, Henry Burgess, Shullsburg, Wis., $90; 9, Leo Apel, Apple River, Ill., $80; 11, J. F. Sweeney, Vista, Ia., $115; 12, Wm. Urdenberg, Prairie du Chien, Wis., $105; 13, F. E. Copperdoll, Stockton, Ill., $95; 14, L. F. Bortling, Platteville, Wis., $75; Wm. Fleege, Sissinawa, Wis., $75; 18, H. G. Efferding & Son, Belleview, Ill., $60; 24, Joe Ruden, North Buena Vista, Ia., $52.50; 28, Fred Weymeier, Polo, Ill., $57.50; 35, F. S. Schmidt, Dubuque, Ia., $75; 36, Loes Bros., Cascade, Ia., $57.50.

Irwin's Poland Sale.

The fall sale of Poland Chinas held by Bert Irwin at Mt. Carroll, Ill., September 22d was well attended. No high prices were realized, the top for boars being $102.50, that amount being paid by W. J. Yeager, Lena, Ill., for a son of Big Joe's Equal. The ringside agreed that M. Madson & Sons, Madison, Wis., secured the bargain of the sale at $97.50, a son of Bill's Chief by Mouw's Chief. Bill's Chief is a half brother to the grand champion boar of Illinois this year. M. Williams, Mt. Carroll, Ill., paid $155 for a sow and litter, and she was a good buy at that figure. The 25 boars averaged $58, and, in view of the fact that they were not in high flesh and as well grown as they might have been, this was a good average. We follow with a list of those selling for $50 and over:

No. 1, J. L. Sleick, Lanark, Ill., $90; 5, W. J. Yeager, Lena, Ill., $102.50; 7, W. L. Helsinger, Lanark, Ill., $67.50; 8, F. J. Brodway, Milledgeville, Ill., $55; 11, Madson & Sons, Madison, Wis., $97.50; 17, P. Gard, Thompson, Ill., $55; 20, John Freeman, Mt. Carroll, Ill., $52.50; 24, Geo. Martin, Shannon, Ill., $52.50; 31, John Hansen, Rochelle, Ill., $75; 43, Fred Handle, Mt. Carroll, Ill., $80; 42, Chas. Miller, Savanna, Ill., $70; 41, D. Sisseler, Mt. Carroll, Ill., $80. Sows—38, M. Williams, Mt. Carroll, Ill., $155; 39, C. R. Forest, Miles, Ia., $95; 40, W. R. Huston, Mt. Carroll, Ill., $100; 32, 33, 34, 35, Clarence Lang, Chatwick, Ill., at $77.50 each.

Miller's Poland China Sale.

M. V. Miller, Lawler, Iowa, held his first annual sale of Poland Chinas on September 26th and made the satisfactory average of $52. J. B. Galbraith topped the sale on No. 31, a good fall yearling boar, at $105. No. 8, an outstanding March pig by Timm's Wonder, sold to Drewelow Bros. at the low price of $100. The hogs were well bred and will make their purchasers plenty of money. H. S. Duncan did the selling. A list of sales follow:

No. 1, J. E. Shannon, New Hampton, Ia., $42.50; 2, R. L. Doore, Dougherty, Ia., $92.50; 3, L. G. Smirl, Hawkeye, Ia., $40; 4, G. W. Owens, Lawler, Ia., $52.50; 5, A. M. Russell, New Hampton, Ia., $62.50; 7, Jos. Dixon, Madison, Wis., $50; 8, Drewelow Bros., New Hampton, Ia., $100; 9, 10 and 11, John McGinn, Delmar, Ia., $47.50 each; 12, H. Finnigan, Lawler, Ia., $50; 13, John McGinn, $47.50; 19, T. H. Murray, Crystal Lake, Ia., $45; 21, A. L. Belschner, Hawkeye, Ia., $47.50; 23, H. O. Adams, Fredericksburg, Ia., $52.50; 24, 26, 27, John McGinn, $47.50, $52.50, $52.50; 28, W. H. Nelman, Fredericksburg, Ia., $42.50; 31, J. B. Galbraith, Dougherty, Ia., $105; 32, M. T. Lyden, Cresco, Ia., $47.50; 33, A. M. Russell, $45; 34 E. S. Hunt, Fredericksburg, Ia., $47.50; 35, John McGinn, $65; 36, L. Zipse, Lawler, Ia., $45; 37, J. Schlick, Worthington, Ia., $45; 38, F. Messerer, Sumner, Ia., $85; 39, M. T. Lyden, $45; 40, J. F. Nolan, Decorah, Ia., $65.

Co-Operation in Wisconsin.

(Continued from page 1.)

its influence strongly to coöperative marketing in its various developments. Equity societies are distributed in Wisconsin by counties as follows: Adams, two; Ashland, two; Barron, ten; Bayfield, three; Brown, one; Buffalo, fifteen; Burnett, ten; Calumet, ten; Chippewa, eleven; Clark, thirteen; Crawford, six; Dane, twenty-one; Dodge, five; Door, one; Douglas, two; Dunn, two; Fond du Lac, two; Grant, four; Green, two; Green Lake, two; Iowa, two; Jackson, nine; Jefferson, one; La Crosse, four; Marathon, seventeen; Marinette, one; Milwaukee, one; Monroe, seven; Oconto, seven; Outagamie, four; Ozaukee, nine; Pierce, sixteen; Polk, eight; Portage, one; Price, nine; Racine, one; Richland, eleven; Rock, one; Rusk, six; St. Croix, seven; Sauk, one; Sawyer, one; Shawano, six; Sheboygan, thirty-five; Taylor, three; Trempealeau, six; Vernon, sixteen; Walworth, one; Washington, thirteen; Washburn, five; Waukesha, eleven; Waupaca, two; Waushara, one; Winnebago, three, and Wood, eight. Equity societies outnumber farmers' clubs in Wisconsin more than two to one. It is a rather interesting fact that in counties where the farmers' clubs are strongest the American Society of Equity, at least in several instances, is weak.

Coöperative creameries, numbering 380 out of a total of 835 creameries in the state, for the most part pay better prices to the farmer for butter fat. For the year 1914 coöperative creameries paid an average of 32.44 cents per pound for butter fat and for the same period privately-owned creameries paid an average of only 29.56 cents. This would seem to be argument enough in favor of the coöperative creamery. Two-thirds of the coöperative creameries limit dividend payments to 6 per cent.

While coöperative creameries are widely distributed over the state, the 718 coöperative cheese factories are chiefly confined to Green, Iowa, La Fayette, Dane and Sheboygan counties. In the Limburger and Swiss cheese districts 78.5 per cent of the factories are operated coöperatively.

Across the central portion of the state are a number of coöperative feed, elevator and produce companies, about 100 in all. The average volume of business done in 1915 by these companies, according to Mr. Hibbard's estimates, was $132,000, and most of the companies carried on this business on capital ranging from $5,000 to $10,000. Out of sixty-three companies reporting, fourteen had a membership of over 200, three between 175 and 200, three between 151 and 175, three between 126 and 150, three between 101 and 125, fourteen between seventy-six and 100, eight between fifty and seventy-five and fifteen less than fifty.

Of 120 live-stock shipping associations in Wisconsin, membership ranges from thirty to 330 or 400. This business has been developed to a high degree in Pierce county. In one year these 120 associations shipped 8,500 cars of stock valued at $8,500,000. Farmers themselves, in reports made to the college of agriculture, estimate that they save 50 to 85 cents per hundredweight by shipping coöperatively. In some communities these associations handle practically all the live stock shipped.

Four coöperative packing plants in Wisconsin have a combined capital of $1,600,000, with 11,300 members. These coöperative enterprises have brought forth new problems too numerous to discuss in this article. In a general way it has been found that the packing companies lack sufficient capital. It has been expensive to sell the stock needed to furnish funds for operating the business. Promoters have realized heavily in the way of profits from this sale of stock, and this profit has, of course, been paid by the farmer members, but has not been available for the business. Mr. Hibbard says that it is a regrettable fact that coöperative enterprises should be obliged to start out in business with but 75 to 80 per cent of the money subscribed and paid in, available for actual business needs. He also says that "as a rule it is safe to await the organization of farmers' companies until the farmers do not have to pay such high prices to someone to persuade them to buy the stock." The Wisconsin Farmer has given its readers, without any prejudice on our part, a great deal of information on coöperative packing plants. It remains to be proved whether the operation of these plants will be sufficeintly remunerative that the stock may be brought up to par.

THE GRANGE AND EQUITY ORGANIZATIONS OF THE STATE.

Of the six fruit exchanges in Wisconsin, the Cranberry Sales Company is the largest with an annual business of $180,000. There is a great opportunity in Wisconsin for further coöperation on the marketing of fruit.

The following table gives a good idea of the business of coöperative tobacco-selling companies in Wisconsin:

CO-OPERATIVE TOBACCO-SELLING ORGANIZATIONS.

NAME	Location	Capitalization	Value of share	No. of members	When organized
Farmers' Equity Warehouse Co.	London	$ 4,000	$ 25	56	1906
Stoughton Equity Warehouse Assn.	Stoughton	3,000	50	30	1910
Gays Mills Equity Warehouse Assn.	Gays Mills	6,000	25	55	1910
Farmers' Warehouse Co.	Viroqua	(†)	None	60	1907
Atlas Tobacco Co.	Sun Prairie	3,000	50	27	1915
*Edgerton Farmers' Warehouse Co.	Edgerton	15,000	100	130	1915
Total		$31,000	....	358	....
Average		5,166	....	59	....

*This is a stock company, but the stock is distributed about equally among 130 farmers. †Rent warehouse.

The following figures, prepared by Messrs. Hibbard and Hobson, show the activities of seventy-eight breeders' associations in Wisconsin in 1915:

ACTIVITIES OF SEVENTY-EIGHT COMMUNITY BREEDERS' ASSOCIATIONS, 1915.

KIND	Number reporting	Total No. of members	Aver. No. of members per assn	No. of cattle inquiries received by secretary	Av. No. of associations conducting: Sales	Contests	Cooperative purchasing
Holstein	32	1,330	41	712	9	12	6
Guernsey	28	962	34	588	3	11	3
Jersey	18	363	20	142	6	7	1
Total	78	2,655	31	1,472	12	30	10

Cow testing, now carried on under about eighty-five active organizations, is one of the most flourishing forms of coöperation in the state. This branch of community work is growing rapidly as the fruits of its activities become more apparent. The average number of cows in associations in the state in April, 1917, was 452 and the average number of members, twenty-nine. The average cost of testing each cow per year is $1.19.

There are fifty-seven farmers' coöperative stores in Wisconsin, not including the Farmers' Store Company, of Bloomer, with its ten branches. Total business for these stores is $2,500,000 annually. The average capitalization is $14,800. Sixty-five per cent of these stores started since 1910. Out of thirty-nine stores reporting, four had over 200 stockholders, four had less than fifty, twelve had fifty to seventy-five stockholders.

Coöperative laundries have been established at River Falls and Milltown and both these have been discussed in The Wisconsin Farmer. The Milltown Coöperaitve Laundry has ninety rural and eleven city stockholders. The River Falls Laundry has eighty-two rural and 156 city stockholders.

There are now 214 mutual insurance companies in Wisconsin organized by farmers. The first one was organized at Newton, in 1860. Covering a period of five years, $122 was collected by town mutuals for every dollar paid for losses, and during the same period (1911 to 1915, inclusive) an average of $235 was collected by stock fire insurance companies for every dollar they paid out in losses. The town mutuals paid an average of 82.3 per cent of their premiums in losses, while stock companies paid an average of only 42.6 per cent of premiums collected, for losses.

For the year 1915 476 mutual telephone companies reported to the railroad commissioner. A total of 334 of these companies had a revenue of less than $500 annually and 268 of these companies were coöperative. The average number of subscribers to these companies was twenty-six. The average receipts of these companies was $200 and the average expense $175. In 1915 there were 244 companies in the state having revenues of $500 to $1,800 per year, and sixty-four of these were mutual with an average of 138 subscribers each. Of the larger companies having revenues of over $1,800 annually, 225 in all, only forty-seven are utual.

Professor Hibbard sounds a warning against the professional promoter of coöperative enterprises. He cites the case of promoted creameries back in 1900, the coöperative society having been promoted to accomplish the sale of machinery rather than to help the farmer. One fatal mistake was in establishing creameries in many neighborhoods where there was not sufficient cream to keep the plant in operation. A large per cent of the money put into these creamery plants was wasted and the failure of many of these plants is doubtless responsible for Wisconsin being second to Minnesota today in the number of coöperative creameries. Minnesota developed its dairying later and profited to a considerable extent by Wisconsin's experience. In Minnesota the college of agriculture published posters warning farmers against clever promoters who worked under the guise of helping the farmer to secure coöperation. In the case of the packing plant at La Crosse, promoters, according to reports, took upwards of $37,000 from subscribers to the stock, and in addition disposed of an old property for $122,000 which ought to have been bought at a much less figure. Altogether farmers of Wisconsin, according to Mr. Hibbard's figures, have paid out about a quarter of a million of dollars to men whose chief service was persuading the farmers that they should part with the money.

"Standard" Plumbing Fixtures for Laundry, Kitchen and Bath are Described in this FREE BOOK

The minute you get running water in the house you are ready for "Standard" Plumbing Fixtures—for a white enameled Kitchen Sink, Bath Tub, Laundry Trays. All these splendid fixtures—made by the house of *experience* in the plumbing field—represent

Genuine Home Comforts

If you are ready for such fixtures in a new or remodeled home—or are thinking about them—write for a free copy of "'Standard' Plumbing Fixtures for the Home."

Talk to your plumber in any nearby town. Ask about "Standard" fixtures. Demand the "Standard" Green and Gold label. Write for the book today.

Standard Sanitary Mfg. Co.

Before Deciding on Your Engine.

Look up the question of construction, first cost, quality, power, speed regulation and fuel used. Learn what produces good compression, positive ignition, easy starting, durability and long life. Read about the advantages of vertical valves, high-tension magnetos, kerosene as a fuel, preheating fuel, etc. These subjects and many others vital to the engine user are fully explained by word and illustration in Ed H. Witte's new (copyrighted) book, "How to Judge Engines."

Any subscriber who is interested in an engine for any purpose, should read this book. It's the original "How-to-Judge-An-Engine" book—written from an experience of over 31 years in the business. Ed H. Witte is the most successful individual gas engine manufacturer in the U. S. today, owning and operating the largest exclusive, direct-selling engine factory in the world. You get the inside story of engine making by a practical engine man and inventor of engines. He tells you what to do with an engine and "How To Make Money" with one.

If you want to know the "Why" of high-grade gas engine construction, send your name and address, today, to the Witte Engine Works, Dept. 2711, Kansas City, Mo., or 2711 Empire Bldg., Pittsburgh, Pa.—Adv.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word per insertion. See page 20.

Calculating Bushels of Corn in Crib.

Simple Rules May Be Used in Ascertaining Capacity of Both Circular and Square Cribs.

AN ESTIMATE of the number of bushels of corn in a crib is often desirable in buying or selling this grain, or in determining the quantity of it which is on hand for feeding. Although weighing gives the most accurate results, it requires a good deal of time and labor, and, therefore, the method of calculating the number of bushels from the crib measurements has been found more satisfactory in most cases.

To find the contents of a crib, measure in feet the width, length and height of the crib as indicated in the drawing in Figure 1, taking care when measuring from the outside of the crib to make allowance for the thickness of the crib walls. Furthermore, if the crib is not full, be sure that the height to which the corn fills the crib is measured instead of the total height of the crib. The next step is to multiply by one another the measurements just found, in order to get the number of cubic feet in the crib. Then calculate the number of bushels by multiplying by four and dividing by ten. The last two operations give the same result as dividing by two and one-half, which is the number of cubic feet in one bushel of corn.

FIGURE 1.—CORNCRIB SHOWING MEASUREMENTS FOR DETERMINING NUMBER OF BUSHELS OF CORN IN IT.

Using, for example, the crib with the measurements as given in Figure 1, we may apply the foregoing rule thus: First, multiplying the width by the length, we get eight times twenty or 160; then multiplying by the height we get 160 times fourteen or 2,240, the number of cubic feet in the crib. Multiplying this number by four gives us 8,960, which divided by ten equals 896, or the number of bushels of corn in the crib.

The foregoing method can be used only when the crib has square corners. For a circular or cylindrical crib, measure the height to which the crib is filled with corn; then the diameter of the crib, which is the distance from a point on the wall, through the center, to a point on the wall directly opposite. This measurement is indicated in the drawing in Figure 2. To calculate the quantity of corn, multiply the height by the diameter; then multiply by the diameter again; next, multiply this figure by eleven and divide by thirty-five. The result is the number of bushels of corn in the crib. The calculations for developing this rule are somewhat complicated, but they are not necessary in applying it, and for most purposes the procedure just given will be found easy to use and accurate. Care must be taken, however, not to measure the height of the whole crib if the corn does not completely fill it, but to measure only the actual height to which the volume of corn reaches.

FIGURE 2.—CIRCULAR CORNCRIB SHOWING MEASUREMENTS FOR DETERMINING NUMBER OF BUSHELS OF CORN IN IT.

We may now apply this rule in determining the number of bushels of corn in the crib shown in Figure 2, which has a diameter of nine feet and contains a volume of corn twelve feet high. Multiplying twelve by nine we get 108; mutliplying by nine again we get 972. Then this figure multiplied by eleven gives us 10,692, which divided by thirty-five equals 305, the number of bushels of corn in the crib.

The foregoing methods are used for determining bushels of clean, shucked corn. If snapped corn is cribbed with the husks on, it is necessary to deduct one-fifth for husks from the number of bushels as determined above.

This is done by dividing the total of bushels by five and subtracting the resu" from this total number. In the case of the circular crib shown in Figure 2, we have a total of 305 bushels. Dividing this number by five we get sixty-one, and subtracting sixty-one from the total of 305 we get 244 bushels. This is the amount of snapped corn equal in bulk to 305 bushels of shucked corn. Of course, it is only an approximate amount, since the husks vary so much in size and bulk that an accurate estimate for all cases is impossible.

The Dairy Barn.

To the Editor:—One of the most difficult tasks which confronts the dairyman is that of keeping the dairy barn in proper condition, as the cows must necessarily spend much of their time within doors. The dairy barn cannot be kept in a healthy condition without regular attention and upon this, to a very great extent, the successful production of milk and butter depends. The two things necessary are to keep the animals in perfect health and to produce a plentiful flow of wholesome milk, and to this end the sanitary arrangements require to be kept in order, and they need cautious supervision.

The first essential in a good dairy barn is that it shall be well ventilated and no one must fall into the error of believing that cows will do well in close quarters provided that they are well aired in the daytime by means of the open doors and windows.

It is beneficial to air the barn thoroughly by day and open doors and windows have the effct of brightening up and refreshing the inside of the barn in a wonderful manner, but this is not enough, and no barn in which cows are kept is complete without a proper system of ventilation.

The cow is an animal which enjoys fresh air as much as any of the animals on the farm, and perhaps she is the one which suffers more than any other in both health and milk yield from confinement in ill-ventilated quarters.

Drafts in the dairy barn are, of

TRAPPERS WE BUY FOR CASH

Highest prices paid for Muskrat, Skunk, Coon, Mink, Fox, Wolf and all other Furs, Hides and Ginseng. Best facilities in America. No Commission. Send for our prices and Free valuable information before shipping elsewhere.
ROGERS FUR COMPANY
Dept. 202 St. Louis, Mo.

TRAPPERS! Furs are high; trapping pays. "Trapcraft," illus., tells how to trap fox, muskrat, skunk, wolf, mink, etc.; water, den, snow, log, blind sets, etc., how to fasten traps, stretch furs, make deadfalls, snares. Fur News, big illus. magazine, tells about fur markets, trapping, hunting, woodcraft, fishing, fur farming, roots, herbs; lots of good stories. Send 10c. coin for copy of "Trapcraft" and sample copy of magazine. FUR NEWS, 71 W. 23d St., New York. Room 622

TRAPS AND GUNS AT FACTORY COST
We pay highest prices for Furs and sell you Guns, Traps, Supplies, etc., AT FACTORY PRICES. Write for FREE CATALOG, TRAPPERS' GUIDE, and Fur Price List. E. W. BIGGS & CO., 157 Biggs Buildings, Kansas City, Mo.

LET US TAN YOUR HIDE—Cow, horse or calf skins for coat or robe. Catalog on request. The Crosby Frisian Fur Co., Rochester, N. Y.

PATENTABLE IDEAS WANTED. Manufacturers want Owen Patents. Send for 4 free books; inventions wanted, etc. I help you market your invention without charge. Richard B. Owen, 37 Owen Bldg., Washington, D. C.

course, undesirable and must be provided against, for winter use, by a system of overhead ventilation; thus the air can be kept sweet and pure without the least danger of injurious drafts, and the same system can be made to serve to keep the air pure and fresh on hot nights in summer.

The inside of the walls of the dairy barn need attention, both in the fall and spring.

It is important that the surface of the walls be kept smooth, and there should be no crevices in which insects and germs of disease can find harborage. Then they should be thoroughly whitewashed with a strong adhesive mixture of lime. It is not sufficient to do this only as high as a man can conveniently reach, leaving the upper portion looking black and hideous. A ladder should be brought into use and the job done thoroughly.

Many people seem to confuse the meaning of the words "ventilation" and "drafts," and the upshot is that they suffer openings to remain in the walls, roofs and windows, with the idea that this is a safe way of ventilating the barn.

Then comes the flooring of the barn for the best comfort of the cows and the most profitable production of milk. Many are the methods of making the dairy barn floor. Some think dirt is all right, and it is for the comfort of the cows, but, oh, my! what a loss of manure. Some think plank flooring best, but a floor can hardly be made tight enough to hold the liquid manure. Some say concrete is not healthy for the cows to stay on, but if plenty of good, soft bedding is used, I know from experience that no ill results will follow. Then all the liquid manure is saved.

I use lots of straw or any other good, dry litter that is not too full of weed seeds on my concrete floors, and sprinkle ground rock phosphate over the surface daily, and have found this the best method of flooring and handling the manure.

We might as well just get down to business and fix the barn up in shape for the winter season that is rapidly approaching. And you will feel so much better to know that your cows are housed in comfort and health and that you are using the greatest economy in utilizing the manure.

This manure saving is not to be slighted if we take into consideration the fact that our acres must be kept up to a high state of production, and it, therefore, resolves upon us to use the best known methods of saving and preserving the manure. During the process of decomposition the manure makes the rock phosphate available for crops, and you will be surprised at the results following an application of such manure. Subscriber.

Silo Filling in Full Progress.

Larger Area of Corn for Ensilage—Potato Yields Average High—Small Grains and Root Crops Are Good.

WISCONSIN.

Baraboo County.—Threshing is about finished with the exception of the buckwheat. Buckwheat was frosted and will not yield more than ten bushels per acre. Other small grain yielded well. Oats were heavy. Corn was frosted and there will be little if any mature ears. Potatoes were not damaged much and promise to yield heavily. Live stock is generally looking fine, but pigs will be marketed early and will be of inferior quality on account of the shortage and high price of corn.—A. H. Buehler.

Bayfield County.—Second crop clover is ready for cutting and shows about one-third less than normal yield. Corn which did not get the early frost will ripen if given two weeks more of good weather. Silos are being filled with what corn was frozen. Oats are a very good yield, as are all the small grain crops. Peas and beans show an exceptionally good yield. Apples are about half normal yield. Root crops are very good, especially rutabagas. Potatoes show a very good yield and in this section were not hurt by early frost. Farmers are cutting down on their milking herds to just what cattle can be fed on their feeds this winter. Mostly cull stock is being moved, however, and will prove a direct benefit to the section. County Agent Brubaker is receiving the whole-hearted support of farmers in the county.—W. E. Plant.

Chippewa County.—The crops for this year are almost completed except corn and potatoes. The hay crop averaged about one ton to the acre. The oat crop was good this year, with about fifty bushels to the acre. Barley was fairly good, with about fifty bushels to the acre. The corn crop was hit by a heavy frost and is no good for ear corn. The potatoes are turning out well, from 150 to 200 bushels to the acre. Fruit was good this year, but some of the garden truck got hit by the frost. The live stock is a little poor this fall, as the pastures are very short.—Gustave E. Rheingans.

Grant County.—The hay crop in this locality is one-fourth short for the reason that there was one-fourth more corn planted. Oats and barley were good, barley yielding sixty-five bushels to the acre and oats as high as seventy-five bushels to the acre. Some hay yielded three tons to the acre. Corn has been frosted to the extent of 50 per cent. Apples are of a very poor quality. Potatoes will make only a fair crop and pasture is quite short for the reason that the grasshopper have been very bad. Cattle feeding is on the decrease in this locality. Stock is in good health.—P. R. Stoffel.

Kewaunee County.—Harvesting is over and threshing is in full swing. Barley and oats are light in certain sections while peas and wheat are yielding well. Pastures are very short and quite a few cattle are marketed. Plowing has started, but the ground is very dry. Quite a few farmers have bought tractors mostly the 10-20 horse power and farmers are well satisfied with same. Corn for silage is very short and most of the silos will not be full this year. About the usual number of pigs will be raised this year. The acreage of winter wheat and rye will be about the same as last year. Potatoes will be a good crop.—W. C. Katel.

Marinette County.—Threshing is nearly all finished in this vicinity and in most instances showed a good yield of small grain. Cool weather and early frost fixed the corn on most farms so that very little of it will do to crib. Potatoes are not yielding as heavily as usual, but better than last year. Beans will be a very short crop. While some farms had a heavy stand of hay, in most instances, and especially on the older farms, the crop was short of normal. Very little clover left for seed, as the first cutting came late. Gardens did well, but have very few apples. About the usual number of live stock except hogs. Except in high producing herds grain feed is away out of proportion to prices received for dairy products, so dairymen are cutting down on the grain rations.—W. B. Sanderson.

Oconto County.—The hay crop is comparatively good this year, the average yield being one and one-half to two tons per acre. The oat crop is fair, with an average yield of 50 bushels. Potato crop is good, but have not begun to harvest yet. We expect about 200 bushels per acre. Frost did damage in some parts. There won't be much ripe corn, but a great deal of fodder. The fruit crop is far below the a erage this year.—Wm. J. Hinker.

Outagamie County.—The hay crop was unusually good and secured in excellent condition. One and a half tons to the acre is a fair average, much better than last year or a five-year average and oats compare favorably with the hay with an average of forty bushels to the acre. Wheat and barley also good. Not much winter wheat raised. Corn in bad condition and very little matured. Silo filling now in progress. Many silos erected to save the corn fodder. Frost the 10th inst. played havoc with the corn and while some fields would be ruined, adjoining fields would be scarcely touched. Corn has been held in cold storage all summer. Just stood still. Garden truck also was badly damaged by frost. Potatoes fairly good. Grocers now pay 50 cents per basket. Some cabbage rotten. Pastures fairly good and cheese and butter at high mark. Nothing doing in mill feeds. Too high. Apples none too good. Poor quality.—Peter Tubbs.

Racine County.—Hay was a good crop in this county, yielding about two tons per acre, which compares very well with the average. Barley yielded about thirty bushels per acre and oats about fifty—very near the general average. Wheat generally did not yield well and is of rather poor quality. Corn is late, but still growing, having escaped the frost except on low ground. From one to two weeks are required yet to produce ripe corn. The potato crop is good. Cabbage is a fair crop, but very late. Indications are that the price will be good. Pastures are poor and milk production is falling below normal. Due to the high price of feed, fewer cattle are being fed.—Chas. Jeffery.

Sheboygan County.—We have had no bad frost so far. Fine weather during the past few weeks has done a great deal toward boosting the late corn. There should not be any serious lack of corn to fill every silo to capacity, but there will be little corn husked. Silo filling has not been started. Threshing is going on rapidly. Yields are only average. One farmer reported 300 bushels of winter wheat from six acres, but his case is an exception. Barley stripe is reported as affecting 95 per cent of all barley fields in the country with a decrease of 10 per cent in yield of grain. A group of farmers met with the county council of defense to consider the desirability of getting a county agricultural agent under the provisions of the Hoover bill. We need a good man of that kind, and hope to have him a permanent asset—not merely for the period of the war.—M. J. Hoppert.

Taylor County.—Threshing is in full swing. Oats are yielding from 50 to 75 bushels per acre. Barley and wheat are poor crops. Winter and summer rye are good crops. Frost hit corn and potatoes hard, but a good crop of potatoes is expected, as most of them were well matured before the frost. Lots of winter rye will be put in this fall. Not much second clover hay will be cut. Grass and pastures are good and all stock looks fine. Horses are plentiful and cheap. Fall plowing has started. Roads are in good condition.—E. H. Dehue.

Trempealeau County.—Grain in this section is yielding well and is of excellent quality. Corn is very light crop. There is no ripe corn of any importance. Pastures are very dry. Very little plowing done or winter grain sown as yet. Farmers are busy filling silos and threshing, which is about all they can do until the much needed rain comes.—Carl G. Kremer.

Washburn County.—Severe frost the 11th and 12th damaged corn, clover for seed and potatoes. There will be some seed corn and considerable soft corn for immediate feed. Small grains are yielding well. Cutting corn and silo filling are the principal activities.—J. W. McCulloch.

MINNESOTA.

Mower County.—Hay is a good crop. There is a good crop of second-crop clover being cut for hay, as it is not filling for seed. Shock threshing is mostly done. Oats are good, some weighing 33 pounds stricken measure. Wheat is good. The corn crop got a black eye. None was out of the way of frost on September 10th, when we had a hard frost. It will be poor feed. Apples are a good crop; in fact, a drug on the market. Feeding operations are on the decrease in this section. Dairymen are looking at the high price of feed with a shudder.—Walter H. Martin.

LET YOUR AUTO SAW YOUR WOOD

WITH THE AUTO UTILIZER

Just Back Car Onto Runway—No Jacking Up, Nothing to Attach.

Your Ford, Buick or any other car, has an engine that will develop power enough, and to spare, to do all your farm work—all you need is the right method of converting its traction power into belt power. The method is all important—it must not put unbalanced strains onto the car's mechanism as constructed for traction purposes—it must be substantial and solidly constructed to stand the wear and tear of power transmission.
With the Auto Utilizer a car does nothing different from what it does on the best road. It's just like running for miles and miles in a perfectly straight line on a smooth pavement. No swerving or slewing—no ruts or obstacles—no changing of gears—

It's the Easiest Thing a Car Was Ever Set to Do.

Bankers and Farmers Fraternize.

First Annual "Mixer," Held at North Lake, September 18th, Was Forerunner of Other Similar Sessions.

UNDER the auspices of the North Lake, Wisconsin, Farm Management Club, whose leading spirits are Prof. D. H. Otis, of the college of agriculture, and Burton M. Smith, president of the North Lake Bank, some 4,000 people gathered at the Hans Nelson Farm, about a half mile out of North Lake, Waukesha county, on Tuesday, September 18th, for the first annual "banker-farmer mixer." It was an all-day affair. Most of the people brought their lunches, while others were supplied from the stands erected on the grounds.

Left to right—W. M. Post, president Wisconsin Bankers' Association; George D. Bartlet, secretary Wisconsin Bankers' Association; President Van Hise, Wisconsin University; Dean H. L. Russell, College of Agriculture; D. H. Otis, emergency food agent, Waukesha county; J. E. Stallard, county agricultural agent, Waukesha county.

For the program speakers were secured from the college of agriculture, from the state bankers' association and from Waukesha county.

BALL GAME BETWEEN THE BANKERS AND THE FARMERS.

In the morning J. E. Stallard, county agent for Waukesha county, and Professor Otis, of the college of agriculture, spoke to the visitors. Professor Otis placed great emphasis on efficient coöperation. He urged particularly that advantage be taken of present organizations in effecting saving of feed and live stock. Local breeders' associations, cow-testing associations and the various agricultural clubs of a county can be made more useful to the members if proper steps are taken to obtain the greatest benefits. When the meeting was thrown open for discussion S. A. Baird, of Waukesha, suggested that committees be appointed by Burton Smith on soils, crops, live stock, farm management, boys' and girls' club work and demonstrations. These committees are to work hand in hand with the county agent in order to bring about a greater perfectness of county agricultural work. Every one of these branches will be pushed so as to increase Waukesha county's farm efficiency to the limit.

In the afternoon W. M. Post, president of the State Bankers' Association, spoke, as did also Dean Russell, of the college of agriculture. The dean made an earnest plea for cutting down waste, preventable waste, on the farm. He emphasized eradication of diseases of live stock and crops in particular. Smuts can be prevented from injuring the grain yield by proper treatment in the spring before seeding. Diseases are to a great extent preventable, providing the necessary precautions are taken in regard to sanitation in the barns, the use of serums and the application of disinfectants. The dean also urged school attendance for the youth of the country. Never before in the history of the world has science in all branches of industry and agriculture been called upon in such a big way as in this war. If the war continues more learning and education are necessary. If the war ends we must pay attention to science in order to keep our place as a leader in agriculture and in industrial fields.

President Van Hise, of the University of Wisconsin, representative of our national food administrator, Mr. Hoover, spoke to the visitors on economy and conservation. Great care must be taken to preserve every bit of available foodstuff fit for human consumption. Every product of our farms must be carefully guarded so that it may help to supply a hungry world at some future date.

MRS. LOUISA SIMS, 92 YEARS OLD, WHO ENJOYED THE "BANKER-FARMER MIXER."

Geo. D. Bartlett, secretary of the State Bankers' Association, ended the program with a short address.

Following the speaking amusements for everybody were in order. The bankers found among their organization enough men to form a baseball team willing to battle the farmers. The game lasted three innings and was won by the bankers, but that's natural, for no one ever heard of a banker losing. However, the farmers took it in good spirit and decided three innings were enough. Dean Russell and W. M. Post acted as umpires during the game.

There were races for the girls and women. Booths containing innocent amusements with nigger babies and nigger dolls were also present. A band was on the job throughout the day.

Much of the credit for the success of the picnic was due to the booster tour organized by the farm management members several days before the picnic. With automobiles and a band these men toured the county advertising the coming event. There were 400 automobiles parked on the ground during the day, and quite a few remained for the separate dances given in the evening to the young folks and the older people.

The farm management members, the agricultural committee of the county board of supervisors, D. H. Otis, J. E. Stallard and Burton M. Smith, had the coöperation of everyone in the county, but to them belongs the credit for the idea and for the extent to which the affair proved a success. The picnic will be repeated each year in different towns of the county.

The advantage of field selection of seed potatoes should be realized as well as field selection of seed corn. Before the vines are dead a stake may be placed by the vigorous, promising plants; then when the potatoes are dug if the tubers on the marked vines are good they may be saved for seed. Since not all plants that look well produce satisfactorily, more vines should be marked than will be needed in order that only the best producers may be selected.

RADIATOR HEATING ahead of all others—

The outline plan of the house shows heat distribution when winter wind is blowing, as shown by arrow. Notice that heat is even in all rooms with IDEAL Boiler and AMERICAN Radiators.

The above diagrams give a clear idea how your home should be heated. The "spotty" heating of stoves is disagreeable, dirty, and uncertain. Furnace heat is somewhat satisfactory, but not always to be depended upon and is wasteful of fuel. Radiator heating is cleanly, sure, safe, and the outfit lasts a lifetime.

AMERICAN RADIATORS & IDEAL BOILERS

The slight difference in first cost of Radiator heating is very soon repaid to you in the great fuel savings over other kinds of heating, the greater comfort of your whole house and the increased satisfaction and better health of yourself and family.

Buy this heat that saves the most

IDEAL Boilers will get the most heat from the fuels of any localities. Scientifically constructed and the most wonderful heat producers known—never need repair or overhauling, not necessary to have water pressure or a basement—place the boiler in side room or leanto. One fire heats the whole house and one charge of fuel will last from eight to twenty hours, depending upon the severity of the weather.

A No. 1-22-W IDEAL Boiler and 422 sq. ft. of 38-in. AMERICAN Radiators were used to heat this farm house.

IDEAL Heating outfits are made in units or sections to fit any size building and are the best investment you can make for the success of your farm. Write us or go to your dealer today and talk with him about it.

Heating book (free)

Write today for copy of our book "Ideal Heating" which is the best one published on the subject. Full of illustrations and valuable information which you should read whether your house is *new* or *old*, or large or small.

Sold by all dealers. No exclusive agents. AMERICAN RADIATOR COMPANY Write to Department F-39 Chicago

ARE YOU GOING TO BUY LAND?

IF SO, GET A COPY OF OUR JOURNAL FIRST. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Questions and Answers.

Cost Per Mile to Run Auto.

What is the average cost per mile to run a Ford car, also a six-cylinder Buick? Expert opinion on this subject would be interesting to many. By cost per mile is meant the cost of gasoline, oil, tires, repairs, etc.; also interest on investment and depreciation.

Answer.—A friend of the writer, a traveling man who uses his car in his work, estimates his cost per mile at 2½ cents. He has a Ford car. The average cost per mile for a six-cylinder Buick is about 3½ cents.

Ford Engine on a Truck.

I have an old Ford engine that I want to mount on trucks and use as a portable farm engine to saw wood, run a small silo filler, etc. Is this possible? If so, at what speed should the engine run to prevent overheating, and what size belt pulley should I use?

Answer.—Run the engine at 1,000 to 1,200 R. P. M. Use a pulley eight inches in diameter with a five-inch face. This idea is practical and your engine should give you considerable service.

Magneto Weak.

I have a 1912 Ford car that will not start by cranking, but starts easily by pushing and letting in gear. A year ago I had it rebored and fitted with new pistons and leak-proof rings. I have new coils and a good K. W. vibrator. I also have a new timer. I have cleaned out the carbon. It has always run with electric lights. Is the magneto weak? It runs perfectly when started. Would the "Philbrin" ignition system help any?

Answer.—The Philbrin system would not help any if the magneto is weak, which appears to be the trouble. The insulation on the windings of the magneto has become oil-soaked and rotten. You can obtain new windings mounted on a plate from the nearest Ford agency. It is possible that the magnets have lost part of their magnetism, though this is not likely.

Building a Light Auto.

I have several parts of an automobile, and I would like to know if it would be practical to build a light car out of them. I have a single-cylinder engine that develops about eight horse power. The gears consist of two speeds forward and one reverse. I have the front axle and front wheels; the rear wheels and the differential. I do not have the housing for the differential and axles. Would it be possible to make one? I would also like to get a light frame. Do you know of a company that could furnish a light frame suitable for these parts?

Answer.—You can make the frame out of hard wood, oak preferred. Many of the earlier automobiles used wooden frames successfully. The pressed steel frame came into use more on account of the manufacturers' convenience than because it was superior to the wood frame. You will find it a difficult problem to make a differential housing unless you have a good supply of tools. The usual way is to make a wood pattern of the part that supports the differential; have a casting made; machine the castings for the bearings; braze in the tubes that carry the axles; and then braze on the brake drum supports. You might be able to obtain a second-hand housing for your car.

Magneto Trouble—Oil in Crank Case.

I have a Model F Buick car that runs all right on batteries, but when switched on magneto it stops. What could be the trouble? Does dampness ruin a magneto. Is the engine supposed to have oil in the crank case? I have a seven-feed oiler on it.

Answer.—Evidently your magneto is out of order. A good magneto should stand considerable moisture, though there is always a possibility of trouble when the magneto is wet. The trouble is generally due to moisture getting into the distributor box and short-circuiting the high-tension current. The remedy is to remove the cover of the distributor box and wipe out the water. It may be necessary to leave the cover off for half an hour to allow the box to dry out. When removing the cover of the box be careful not to injure the carbon brush.

Most engines having forced feed oilers are not supposed to carry oil in the crank case; at least not enough oil so that the rods dip into it. This is particularly true of horizontal engines. A good rule is to use as much oil as possible without causing carbon trouble. Too much oil will cause a smoky exhaust, the smoke being light colored.

Packing Blows Out.

I have a gas engine with which I am having trouble. The packing blows out at the cylinder head. The head bolts on with four bolts. I am sending you a sample of the packing I am using. I always scrape off all the old white lead and put new white lead on the packing and let the engine stand several days before using. I have the timer set so that the engine fires on dead center. The valves are timed right. It always blows the packing out at a small place from one-eighth of an inch to one inch long. It seems to burn out.

Answer.—The packing referred to above is a well-known make of asbestos packing interwoven with copper wires. This makes an excellent packing where the surfaces clamped together are fairly rough. It is not so good on narrow surfaces. It cannot burn out, the burned appearance being due to carbon from the motor. A packing known as "Permanite" would be better for the service referred to above. Permanite is a packing composed largely of asbestos bound together with a small amount of rubber. It may be purchased in sheets about one-sixteenth of an inch thick, the most suitable thickness for a cylinder head gasket. As a last resort you might rough up the head of your cylinder with a centerpunch, taking care not to break the casting. This is a crude way to remedy the trouble, but it usually gives results. If the surface of the cylinder and cylinder head are very smooth and fit each other very well a gasket made from a sheet of soft copper could be used.

Protection Against Lightning.

I have become interested in lightning conductors. I note that when the telegraph and telephone companies wish to make their country poles immune they drive a six-foot rod into the ground and nail a common wire against the post up to within six inches of their wires, and then connect the wire to the rod, being careful to make a good connection. They use the same method to protect their telephones in houses; they just nail a common wire against the side of the house; one end of the wire being about six inches from the telephone wire and the other end connected with a rod driven into the ground. From this it seems to me that if a common building in the country were provided with several fairly heavy wires connected permanently with wet ground, such a building would be just as well protected against lightning as though it was provided with a set of commercial lightning conductors costing $150. Am I right?

Answer.—Undoubtedly the method you suggest would give the building considerable protection. The real value of any lightning rod is a disputed point. The general belief at

present is that the best protection for a building is several heavy copper cables connected to the eve troughs and metal comb of the building. When lightning strikes a wire it runs along the wire and leaks off at many places, so that the current is not concentrated in one circuit. When it strikes a building it takes the easiest path to the ground; if this path is an iron wire the current may be strong enough to melt it. A copper wire will carry about eight times as much current as an iron wire of the same size without melting.

In protecting telephone poles it is common practice to allow the ground wire to extend six inches above the top of the pole. There are many forms of lightning arresters in use on telephones.

Measuring Hay Stacks.

Will you please publish a standard rule for measuring hay in round stacks?

Answer.—Hay in the stack weighs about eight pounds per cubic foot. Figure 1 shows the cross section of a round stack. A is the height of the straight part of the stack; B is

FIGURE 1.

the height of the slanting part; C equals A plus one-half of B; D is the diameter of the stack at the base. The volume of the stack in cubic feet equals .7854 times the diameter times the height C times the di-

FIGURE 2.

ameter; all dimensions being in feet. The volume times 8 divided by 2,000 gives the weight in tons.

To find the volume of a long stack rounded at the ends, as shown in Figure 2, take the lengths, G, each equal to half the width of the stack. The two end parts, if placed together, would form a stack like the one shown in Figure 1, and the volume may be found in the same manner. For the middle part, P equals N plus two-thirds of O. The volume of the middle part equals the width of the stack times H times P. The total weight in tons equals the volume of the middle part plus the volume of the two ends; and this sum multiplied by 8 and divided by 2,000.

Cylinder Lacks Power.

We have a Model T Ford touring car. Number 1 cylinder has very little power. We have had it examined by an expert. He said that the coil and timer are all right. He put in a new spark plug and cleaned the carbon out of the cylinders, yet it has not much power. Could the spark plug cord be burnt out, or could loose connections on the cam shaft cause the trouble? The car runs better at twenty miles per hour than at slower speeds.

Answer.—Remove the spark plugs from all but No. 1 cylinder and crank the motor over to try the compression in No. 1 cylinder. If the compression is poor, this is probably the cause of the trouble. Poor compression may be due to leaky valves, bad piston rings or a scored cylinder. You can tell whether the valves leak by removing the exhaust and intake manifolds and listening at the exhaust and intake ports while someone cranks the motor. Before doing this, remove the spark plug wires so that the motor cannot start. You can see whether or not the cylinder is scored by removing the cylinder head and looking into the cylinder.

It may be that No. 1 cylinder is getting too much oil. A tighter fitting piston and good rings would remedy this difficulty. See that the push rod on No. 1 cylinder is of proper length.

Wiring a Motorcycle.

I have an Excelsior motorcycle with a coil with three wires running from it. I cannot get them connected so as to get the motor started. I use three batteries with it. Could you please tell me how to connect them so as to get results?

Answer.—Connect the carbon of one cell to the zinc of the next. From the remaining carbon terminal run a wire to the engine and ground it on the engine under a nut or bolt head, making sure that the wire makes a good metallic contact with the engine. From the other battery terminal run a wire to the coil to the terminal marked "Bat." From the coil terminal marked "Ground" run a wire to the timer of the engine. From the other terminal of the coil run a wire to the spark plug. If the coil terminals are not marked you may have to experiment to find which is which. Usually the spark plug terminal comes out at a porcelain insulating tube.

Winter Storage of Vegetables.

To the Editor:—An unusually large amount of garden truck has been grown this season. Special emphasis has been placed upon the fact that the surplus should be of winter vegetables.

The next problem is the storage of this material for winter use.

The two important factors of storage are temperature and moisture.

The advent of the hot-air furnace, while a great advantage in many ways, has made the home storage of vegetables all the more difficult.

In the furnace-heated home the tendency is to have the basement too warm and the air becomes very dry, causing the vegetables to lose their moisture and to become tough. While this is true with root crops, certain other crops are favored by these conditions.

Beets, turnips and carrots may be stored in earth or sand. Place a layer of the sand on the bottom, then a layer of the roots, repeating until the box is filled. The sand should be damp, but not wet. Store in the coldest part of the cellar. About 20 to 25 degrees below living-room temperature is ideal for these crops. When the sand dries out give a light watering. If used in quantity it is well to store each kind in a separate box. If attention is given to the watering these crops may be held through the winter in fine condition even in a furnace-heated basement.

Another plan is to replant the roots in boxes. Cut the tops back and place near a window in a warm part of the cellar. Here they will reroot and form new tops. The tops may be cut back from time to time and used for salads and greens.

Onions require a cool, dry place. It is well to spread them when first brought in so they will cure out thoroughly. Squash and pumpkins store best in a dry place at about living-room temperature.

A sunken barrel makes an ideal storage place for cabbage. Place the barrel where the drainage is good. The top should stand three or four inches above the surface. When severe weather comes on cover the top with manure. Cabbage and the various root crops may be pitted. If this is done too early, while the earth is still warm, they are likely to decay badly. Pit storage also has the disadvantage of being inaccessible in winter. It is often impracticable to open up the pit for considerable intervals and at just the time when the vegetables would be most appreciated.

A. T. Erwin.

A convenient water supply in the home will lighten housework more than any other household improvement and it saves much time and wearisome labor. Installing a water system in the farmhouse is a small expense to the farmer when compared with the drudgery that it spares his wife.

A Paying Business for You

Are you looking for one? Here it is--contract ditching with a Buckeye Traction Ditcher for farmers and land owners who find hand ditching too slow and costly.

Hundreds of thousands of acres of rich land need only under draining to make them immensely productive. Why shouldn't you set free a part of this wealth, and incidentally enrich yourself also? The

"A Perfect Trench at One Cut"
BUCKEYE Traction Ditcher

Machines built in a range of sizes for different needs

Apron wheels give ample support in swampy ground

cuts 100 rods to 150 rods of ditch a day--every foot clean, smooth, true to grade and ready for tile. You can operate winter and summer--in frost or hardpan--and as a rule do all the actual digging yourself.

Mr. Wiles, of Plymouth, Mich., who has operated successfully for some years, writes:

"I bought the Ditcher three years ago, principally to tile my farm, and have tiled it completely. Have done enough outside work to more than pay back the price of the machine and all expenses, so my tiling cost me nothing. On one job I dug 80 rods in 4 hours, and on another 160 rods in 9 hours. Have not paid out $10 for breakage."

Now, this is concrete evidence and should convince you. We have other letters--many of them--equally to the point and will be pleased to send you our book of facts--entitled "Dollars in Ditches"--which gives some wonderful Buckeye records.

Remember our Service Department is at *your* service, to help you establish yourself firmly in this paying business. Write us today.

Cost of Keeping a Dairy Cow.

A cow survey has been carried on in some of the counties of Ohio by Prof. O. Erf, connected with the department of dairying of the Ohio State University. This survey shows quite conclusively the cause for decrease in production—cows were being slaughtered or sent outside the state. Ohio is the center of a rich dairy section and contains a very great number of high-producing cows, so there has been a great demand for dairy cattle from that section just as there has been from the state of Wisconsin. While conditions are not identical in Ohio and Wisconsin, as Wisconsin has much the best of it in the way of grass, the conclusion reached by Professor Erf are somewhat illuminating. Professor Erf speaks of the labor problem as a great hardship on the dairymen in Ohio. Their sons and good hired help have been taken for service for their country, and it has been necessary to pay more for labor. This problem can only be solved, according to Professor Erf, by the consumer paying more for milk. Added costs to the consumer must be commensurate with the increase in price of feed and labor.

The following is an itemized statement of cost of keeping a cow in a well-managed herd under sanitary conditions:

Feed.—Concentrates: Two thousand one hundred and forty pounds at $46 per ton, $49.22. Concentrates are charged at the market price plus hauling.

Dry roughage: Hays, 3,800 pounds at $12 per ton, $22.80; stovers, 370 pounds at $6 per ton, $1.11; total, $23.91. Market price of hay is charged minus baling and hauling if grown on the farm. If purchased, the market price of baled hay plus the price of hauling to the farm. Cost of stovers is the market value as estimated when bought and sold among farmers.

Succulent roughage: Silage, 6,950 pounds at $6.50 per ton, $22.60. Silage is charged at the rate of the market price of corn, plus the stalk and cost of soiling, plus the interest on and depreciation of silo.

Pasture: Four months at $3 per months, $12. It is very difficult to determine the value of pasture on account of the great variation in the nature of the feed which it supplies. Cows must be on good pasture if a good flow of milk is to be maintained, and if it is not good it must be supplemented with feed. Hence if good land or large areas are used, it is necessary to charge a good rate for pasture.

Labor.—Productive labor: 1. Feeding; included those operations necessary to get feed from storage, such as throwing down hay or silage and the carrying and mixing of grains according to the individual requirements of each cow. 2. Milking, ninety hours; just that operation at the rate of six cows per hour. 3. Driving cows to and from pasture to yard, four hours; stabling, six hours; putting cows from yard to stanchion and tying before milking, untying and driving out after milking. 4. Cleaning stables, nine hours; not only removing manure to pit, but also liming and whitewashing. 5. Cleaning and sprayig, 4.5 hours; keeping cows in sanitary condition which entails the labor of brushing of cows and wiping of udder and protecting as much as possible from flies by spraying. One hundred and twenty-seven hours at 18 cents per hour, $22.86.

Handling milk: 1. Carrying from cows to cooler or separator, eleven hours. 2. Cooling or separating, sixteen hours. Twenty-seven hours at 18 cents, $4.86. Hauling milk, twenty-eight hours at 18 cents, $5.04.

PORTAGE COUNTY CALF CLUB AND EXHIBIT—CHAMPIONS IN JUNIOR WISCONSIN STATE FAIR.

EDWARD DOBIE, FIRST-PRIZE HOLSTEIN, BOYS' CALF CLUB, WISCONSIN STATE FAIR.

Delbert Kingston and Waukesha first-prize heifer, boys' and girls' calf club, second-prize heifer Wisconsin State Fair.

Managerial labor	Hrs.
1. Selecting, buying and selling cows	9
2. Buying and hauling feeds	3
3. Compounding rations	2
4. Buying and installing equipment	1
5. Care of equipment	6
6. Attending sick cows, disinfecting	5.5
7. Breeding cows	1
8. Finding market for milk	2.5
9. Attending dairy meeting	3.5
10. Reading dairy papers	3
Total number of hours	36.5
At 18 cents per hour	$6.57

Labor is based on twelve hours per day, twenty-nine days per month, which at the present time is very economical labor. This will undoubtedly have to be increased in a short time to be in proportion to similar work in other lines.

Horse labor: Thirty hours at 15 cents. Horse labor includes the hauling of milk from the farm to the station and the hauling of feed. Total labor cost, $43.83.

Other Costs.—Depreciation on cows, $8. For example, let us appraise a cow four times: First, at beginning of production, $80; next, at maturity, $120; when she has passed her maximum production, $100; and when of value only for beef, $60. Since the increase in value from $80 to $120 was at expense of production, she costs $120. The cow sells for $60; hence a loss of $60, to be distributed over her years of lactation.

Interest on cow	$6.00
Taxes	1.40
Injury risk	1.60
Veterinary service, drugs, disinfectants	3.48
Cost and loss of tuberculin test	2.00
Mortality loss other than tuberculosis	1.90
Calf loss	2.10
Building and Equipment—	
1. Interest on barn	$3.00
2. Interest on fences	1.60
3. Interest on milk house	.72
4. Interest on machinery	1.20
5. Interest on ice house	.67
6. Interest on yard for cows	2.40
7. Taxes and insurance	1.44
8. Depreciation in value of barn	1.20
9. Depreciation in value of fences	1.80
10. Depreciation in value of milk house	.60
11. Depreciation in value of ice house	.18
12. Depreciation in value of machinery	3.20

Barns are estimated to be valued at from $50 to $60 per cow, which makes as cheap a structure as can be used in the production of milk which will meet the sanitary requirements. The average good barn costs about $220 per cow. There are fancy barns which cost from $2,000 to $3,000 per cow. Fences and machinery are estimated on the same economic basis.

Repairs	$3.60
Bull service	3.65
Supplies—	
Bedding	$2.50
Oil	.40
Manure reinforcement	.40
Ice	1.30
Soap	.24
Gasoline	1.20
Kerosene	.69
Salt and condiments	.62
Cow-testing associations	1.50
Managerial ability and business risk	9.00
	$221.66

Managerial ability is estimated at the minimum of a man's ability to increase the production of a cow above the average. A man who raises the producing capacity of a cow from 4,000 to 5,000 pounds if milk is worth $2 per hundred his managerial ability is worth $20. The same is true in regard to the care of the cow and economy in feeding. His ability to secure the maximum price for milk and his qualifications for buying the best feeds at a minimum cost are also factors. Business risks depend to a certain extent upon the size of the dairy. This charge has been eliminated in these tables.

Value of manure	$19.00
Value of calf	8.00
	$27.00
	$194.66

The average cow under these conditions produces 5,500 pounds of milk.

5,000 pounds per cow: Cost to produce per cwt	$3.89
6,000 pounds per cow: Cost to produce per cwt.	3.53
5,000 pounds per cow: Cost to produce, per gal.	.34
5,500 pounds per cow: Cost to produce, per gal.	.30
6,000 pounds per cow: Cost to produce, per gal.	.28

Our dairymen should read these figures and compare them with their own costs, if they have kept the same in such form that they are suitable for comparison.

When writing to advertisers kindly mention The Wisconsin Farmer.

THE BEAVER DAM FAIR.

Most Creditable Live Stock Exhibits and an Attendance That Would Be Creditable for a State Fair.

DODGE COUNTY'S annual fair, held at Beaver Dam, September 24th to 28th, was a good one. More than 70,000 people attended during the five days. Visitors came by automobile from every township within thirty miles of Beaver Dam.

The live stock exhibits this year were just a bit lighter than usual, but the herds and flocks included many individuals fit to enter successfully in stronger shows.

The hog show was fully as large as last year, but in some of the breeds not as high in quality. H. B. West, of Ripon, showed Victorias and Berkshires and had no competition. In the Durocs, W. W. Bird, of Cambria, and Perry F. Goodrich, of Burnett, showed together. In the Chester Whites some very good hogs were shown. E. W. Kuehlman, of Beaver Dam, and Chas. Rogers, of Union Center, took care of the ribbons about equally. The Poland China show brought out some large, rangy individuals, well bred and developed. James Derivan and C. J. Schoenfield, of Fox Lake, and Emil Nitschke, of Burnett, were the exhibitors. Derivan won first on the two-year-old black sow, Black Ball by Black Jumbo, and first and second on sow with litter. Nitschke was first on boar in the six months and yearling classes, while Schoenfield took the ribbon on aged boar.

The sheep were well represented. Over 150 animals were entered by Brogden Farins, from Rush Lake, and Smith Bros.' farm. These breeders showed in the Rambouillet, Dorset, Oxford, Cheviot, Hampshire, Lincoln and Shropshire classes, dividing honors fairly well. Edward Leltzner, of Sun Prairie, came out well for the first season in the ring. He showed Shropshires.

Dairy cattle were shown by eight breeders. Boynton Bros., of Janesville, were on hand with their excellent herd of Poland Durhams and had things all to themselves. Guernseys were only represented by one breeder, J. H. Beirus & Sons, of Oakfield. Brown Swiss were shown by Mrs. A. H. Clark, of Fond du Lac. Mrs. Clark has a splendid herd, well bred and a good deal better developed and taken care of than the general run. Only two or three Jerseys were on hand. These were entered by W. Fredrich and C. Knup, of Beaver Dam. The Holsteins had the biggest representation with three herds on the grounds. S. C. Stanchfield and C. M. Corcoran, of Fond du Lac, and Fred Henke, of Beaver Dam, were the exhibitors. Stanchfield won first on aged herd, Henke on aged bull and cow and Corcoran on junior bull. All told, honors were fairly and evenly distributed. Professor Oosterhuis, of the college of agriculture at Madison, judged the dairy classes. Only Short-horns were entered in the beef cattle classes. They were exhibited by Chas. Rogers, of Union Center; H. B. Drake, of Beaver Dam, and C. J. Schoenfield, of Fox Lake. Rogers carried away most of the honors with the balance divided between Drake and Schoenfield. George Hutton, of Madison, did the judging.

Pure-bred draft horses were not up to usual in numbers. Butler Babcock and Sam Bushke, of Beaver Dam, showed Belgians. Honors went to Babcock in most of the classes. Percherons were entered by Francis Lamb, of South Byron; William Possin, of Chester; Schoenfield & Sons, of Fox Lake; Sam Bushke and Emmons Blaine. The ribbons were placed by George Hutton and fairly well split up among all. James Derivan, of Fox Lake, showed a Clydesdale filly.

Beaver Dam has an opportunity of increasing her live stock department in numbers and in quality. The accommodations are fair, but not what they will be when the buildings that are being planned are a reality. The new hog barn is a dandy. A new sheep barn will be erected this year. A new machinery shed ought soon to follow. Though every available foot of floor space in this building was used, the exhibit was small.

Side shows of every kind occupied much space on the grounds—too much so for a modern fair.

Educational and industrial exhibits need not be the only attractions, but they should predominate.

Keeping the Separator in Good Order.

All users of cream separators who haven't tested their skim milk for butter fat recently should make this test at once, for it is probable that they are not getting as much butter fat from their milk as they can and should obtain. Cream separators, like all other kinds of machinery, sometimes get out of adjustment. When the separator is in good working order not more than .02 of 1 per cent of fat ought to be found in the skim milk, but there is no question but that on a great many farms .05 of 1 per cent of fat is left in the skim milk and this means a heavy waste.

If the separator is not skimming as close as it ought to, see whether it is standing level or not. If it is not standing level it must be leveled up. A separator cannot be expected to do good work unless it stands perfectly level. The bowl must be in balance. If it vibrates while in operation clean skimming cannot be obtained. If a level is not at hand one suitable for the purpose can be had by filling a glass vial nearly full with water.

It may be that the machine is not being turned in accordance with the directions of the manufacturer. If the bowl does not revolve at the speed it should a portion of the butter fat is certain to be left in the skim milk. If the separator is being operated by hand it is well to check up occasionally to see whether the handle is being turned the proper number of times per minute.

If all the above-mentioned conditions are as they should be and still the machine is not doing good work it will be necessary to look elsewhere for the trouble. Sometimes the cream outlet becomes clogged or partially closed. If this is the case it can readily be seen that less cream will flow through the outlet per minute than if it were larger. The result will be a thicker cream and the chances are that the skimming will be much less perfect than would otherwise be the case. Everyone who uses a separator knows that the percentage of butter fat in the cream can be regulated by turning the cream screw either one way or the other. By enlarging the opening the cream becomes thinner and by reducing it the cream becomes thicker, that is, the cream will contain a larger percentage of butter fat.

Some separators will not skim effectively when the cream contains as much as 40 per cent of butter fat or more and the only way one can tell whether his machine is one of that kind or not is by testing the skim milk. A Babcock testing outfit should be on every dairy farm, but in the absence of this the proper thing to do is to take a sample of the skim milk to a neighbor who has a tester or to the creamery and have it tested there. If one is not a regular customer of the creamery he may have to pay for the testing, but the cost will be nominal and should not be considered, for it pays well to know exactly whether or not all the butter fat is being gotten out of the milk.

When frost has nipped the sweet potato vines the potatoes should be dug and stored before the sap in the frozen stems has time to pass down into the potatoes. Otherwise they will be injured and have a tendency to rot when stored.

Look for this Label on your Coat

Reg. U. S. Pat. Off.

Raynster

Reg. U. S. Pat. Off.

Raynster is the name of the best storm-coats. To make sure that you get full value when you buy, look for the Raynster label.

You're equipped for the roughest work in the roughest weather when you have a Raynster.

These strong, durable storm-coats keep you dry through he worst of downpours. They bring the protection of your own roof out into the fields.

And mark this: When you buy a Raynster your selection is not *limited*. This word represents a line of storm-coats complete in every style and type of coat.

Every man, woman, boy and girl can find just the coat they most need in the Raynster line. Work-coats, dress-coats and play-coats of all kinds and descriptions, with real service and the best of materials and workmanship, is the real meaning of Raynsters.

Go to your dealer's and select the right Raynster for your needs. Take it home. Then when it rains you're *ready*. Write us for interesting style book. It pictures some of the most popular Raynsters.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Economical Use of Meat.

There are many ways in which the cheaper cuts of meat may be used and thus reduce the butcher's bill. This is not so big an item with those who can furnish their own meat as it is with those who must depend on the local meat market. But even those who have their own fresh beef may make the less desirable cuts palatable by careful preparation.

In purchasing the cheaper, and often tougher cuts of meat instead of the choicer cuts, a housewife is losing little, if any, nutriment, provided, of course, the proportion of bone to meat is no greater than in the more costly kinds. She rather is sacrificing only texture or flavor or ease of preparation for the sake of cheapness; and, if she wishes to produce dishes as palatable as those made from expensive meats, must expend more care on preparing, flavoring and cooking. For instance, if the cheaper steaks are purchased, they may be rendered reasonably tender by the well-known method of pounding the meat. The juices and flavors of such steaks will be retained more satisfactorily if flour is sprinkled over them during the pounding process and so worked into the fibers on the surface. If it is then well browned in butter, covered with water and allowed to cook slowly until the water has all disappeared, it lacks nothing for tenderness and is most palatable as well.

Making a tough steak tender by pounding. The sprinkling of flour helps retain the juice.

Another common method of utilizing the tougher meats is to grind them and form into balls which may be broiled like steak. Cheap cuts of meat also may be cooked slowly with vegetables or dumplings in a casserole or other thick-walled baking dish which can be covered, the juices thereby being retained.

Whatever the quality of the meat, there will be trimmings and scraps, such as fat, bones, gristle, etc. The fat, of course, may be tried out, and the trimmings, gristle and bone boiled slowly and used for soup stock.

An important way in which the amount of money expended for meat may be lessened is by preparing relatively small quantities of meat in such a way as to extend the flavor to other and cheaper foods. In using meat so as to extend the flavor it may be ground and combined with rice, bread crumbs, etc., to form croquettes; made into pies with relatively large quantities of pastry; cooked with dumplings; served in the same dish with gravy and starchy foods, such as spaghetti or rice; ground and used with bread crumbs or other materials as a stuffing for vegetables such as tomatoes and green peppers; or cut thin and wrapped around a stuffing of bread crumbs, rice, vegetables, etc.

Of course, these methods of using left-over and cheap meats are familiar to most of our readers and the only point we wish to make is that when meat is scarce and high in price we might make use of these recipes a little oftener and set our tables just as well, too.

Women Field Workers in England.

Official reports of the work of women in England that have just reached the United States show how much a matter of course these war-time activities of women have become.

One report tells of the establishment of rest rooms for women who work in the fields in various parts of England.

The rooms are being supplied with newspapers, magazines and writing material, and are places where women can bring their food and obtain a cup of tea at cost. Stockings, shoes and skirts are kept in stock, so that women workers drenched by the rain in the fields, can dry their clothes in comfort.

One report says that most of the women workers are giving satisfaction. "It would be absurd to pretend that every woman who has volunteered to take up the work on the farm has proved satisfactory," reads the official statement, "but most of them are giving satisfaction even though they may not be quite as efficient as the men whose places they are doing their best to fill."

It is reported that the women who are working as hay balers are especially efficient.

She Is Doing "Her Bit."

To the Editor:—Some time ago you gave some directions for making light bread by substituting corn meal for part of the wheat flour. I wonder how many of the Home page readers tried it. I did and I want to tell you how pleased I am with the result. We are being urged all the time to conserve the wheat supply and it seems to me this is one way that we women can show our patriotism. I never heard of a farmer's family that didn't eat lots of corn bread, but the light bread made with part corn meal is different and you can use it all the time, instead of occasionally as you do regular corn bread.

I make my bread just as I always do, setting the yeast at night. I make the yeast of all wheat flour and then in the morning when I mix up my bread I use a fourth corn meal and three-fourths wheat flour. When you use corn meal you cannot mix your bread quite so stiff as you do with wheat flour or the bread will be dry and chaffy.

I was a little dubious the first time I made it for fear my family wouldn't like it, but they did, and for two or three months we have had nothing else. Once when I didn't have any corn meal in the house on baking day I made the bread entirely of wheat flour and, "Mother, where is the corn meal?" greeted me when I put it on the table. Corn meal bread isn't a war ration with my family—it is a treat.

I am sure that all the Home page readers will like bread made this way if they will try it and I am glad to tell how much benefit I have had from the hint.

Now that I am writing I want to get something else off my mind, too, that I have been thinking about. I am anxious to do "my bit" in these war times and I am doing a little—a very, very little compared to all that must be done—in the way of knitting. I also hunted up some old bedspreads and took them to town with me and left them with the Red Cross chapter. It wasn't much, but they seemed glad to get them. It seems they use them, in combination with other materials, to make pads to stop the flow of blood and keep down the odor when the wounded are first taken off the battle field.

But what I wanted to say was, why can't we all write, for the benefit of others, what we are doing as "our bit?" I think it would be most interesting to know what the others are doing and we might all get hints that would help us. I know that in some country communities the ladies get together and knit or do other things and have a nice, social time besides, but in my neighborhood we haven't any such organization and those of us who have time for any work at all are doing it individually. I should like so well to know what others are doing.

A Patriot.

Pennsylvania Scrapple.

Scrapple, "liverwurst" or "ponhaus," so called in various parts of Pennsylvania, is generally made from the waste parts of pork, at pork butchering time.

Take 200 pounds whole hogs' heads, fifty pounds hog livers and hearts, fifty pounds beef head meat, or other cheap beef; 120 pounds corn meal, ten pounds buckwheat or rye flour, spices, as marjoram, sage, thyme, pepper, etc., four pounds; salt, ten pounds. Liquor in which meat is cooked, an amount equal to total weight of combined solids.

Pig's feet, skins of fresh pork, the trimmings of fresh hams and shoulders and other waste pieces of pig meat can be used.

Clean the hogs' heads and feet thoroughly; remove the eyes, ear tubes, etc.; split the heads and cut out the teeth and turbinated and ethmoid bones, to eliminate the nasal mucous discharge; wash the meat thoroughly and cook until the meat falls off the bones; remove the bones and run the meat through a grinder; return the meat to the cooking kettle along with the liquor in which it was cooked; boil again, and while boiling add the meal, stirring constantly. When it is thick, add the spices and salt and cook until thoroughly done. Pour into shallow pans and allow to cool.

Scrapple will keep probably three weeks in a cool place. But it is too good to keep. Its season is cold weather.

Recipes.

Poppy-Seed Cake.—One and one-half cupfuls sugar, three-fourths cupful butter, three-fourths cupful milk, three-fourths cupful poppy seed, two cupfuls flour, two teaspoons baking powder, four eggs. Pour the milk over poppy seed and let stand overnight. Cream butter and sugar, add milk and poppy seed, then flour and baking powder. Last of all beat the whites of the eggs and then pour in the other mixture.—Edna.

Nut Cake.—One-half cupful butter, one cupful sugar, two eggs (well beaten), one-half cupful milk, one and one-half cupfuls flour, one and one-half teaspoons baking powder, three-fourths cupful nut meats chopped fine. Bake in sheet with cocoanut filling.—Mabel C.

Quince Preserves.—Four quarts or eight pounds quinces, five pounds sugar, one quart water. Pare, quarter and core the quinces. Boil the fruit in clear water until tender, but not broken. Drain carefully. Make a sirup of the sugar and water by boiling twenty minutes. Put in the fruit and let simmer one-half hour. Put in jars and seal. The parings and cores may be used for jelly.

Citron Preserves.—Select a good-sized citron, cut in half-inch slices, peel and remove seeds, then cut in small pieces and weigh. To one pound of fruit add three-fourths pound of sugar. Put in the preserving kettle, cover with water and cook slowly for about three hours or until the fruit is tender and the sirup thick. About half an hour before removing from the stove add two lemons, sliced very thin, with seeds removed. Put in air-tight jars and seal.

Diced Liver.—One pound liver, one pound bacon, salt and pepper. Cover the liver and bacon with water and simmer gently (do not boil) for two hours, or until perfectly tender. Take from the fire, drain off all water, and cut the meat into small pieces. Return these to the fire and cook for ten minutes, season with salt and pepper, mixing freely that all may brown evenly and lightly. Serve on strips of toast, moistened in the liquor in which the meat was cooked. Chili sauce should be served with this dish.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

God's Girls.

I think God took a patch of blue
To make your baby eyes;
They are so much alike, the two—
God's babies and God's skies.

I think God took a robin's call
To make your baby words;
I cannot tell your song at all
From music of the birds.

I think God took a woodland rose
To make your baby lips;
They are pink petals like to those
The honey merchant sips.

I think God took a bit of sun
To make your baby curls—
Of all his treasures, ev'ry one,
God makes his baby girls!

—Douglas Malloch in Woman's World.

A Girl From Down South.

Dear Young Folks:—I live on a farm of forty acres one mile from school. We are thirty miles from the Gulf of Mexico, and I have been there twice. We are close to the Mexican border, which is the Rio Grande river.

I am fourteen years old and in the seventh grade at school. I have one sister, Ella, and four brothers. Two of them, Carl and Harry, are serving in the U. S. A. Motor Truck Co. 21, and are stationed in Georgia. My other two brothers, James and Richard, live in western Kansas.

Elsie.

Another Recipe.

Dear Young Folks:—I have felt that I would like your cozy little corner, so today I picked up enough courage to write to you. We haven't any cats or dogs for pets, but we have two little pigs. I live on a farm with my brother.

How many of the girls like to bake? I do, for one. I will send you a recipe for "snow cake." One-half cupful butter, one cupful sugar, one and one-half cupfuls flour, one-half cupful sweet milk, whites of four well-beaten eggs, one teaspoon baking powder, one teaspoon flavoring.

I want to ask you a riddle, too: What is it that has a head and no tail?

Blanch.

Do You Know This Song?

Dear Young Folks:—I always read your letters, but I have never written to you before. I am fourteen years of age and am five feet four and one-half inches tall. I am a freshman in high school this year. We live on an eighty-acre farm two miles from town. I like farm life much better than town life.

If any of the Young Folks has the song, "Young Charlotte," which begins "Young Charlotte lives on a mountain side," will you be kind enough to send the words in to our department? It is an old song that my grandmother used to sing when she was a girl, and I would like very much to have it, because I do not know all the words.

Neola.

Found a Little Rabbit.

Dear Young Folks:—I am a boy ten years old and live on a forty-three-acre farm. I had a little brown bantam hen and one Sunday the lightning killed her and almost got me, too. I was in the barn.

Well, I am going to tell you about my little pet rabbit. We were putting up hay and a little rabbit ran out in front of the rake. One of the men tried to put it down my neck. I took it to the house and made it a cage. One hind leg was broken and the other one was scratched. I bandaged them up and fixed a cotton bed for it. One morning it got loose and I never saw it again.

J. L.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Enclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date fall and winter 1917-1918 catalog, containing 550 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating thirty of the various simple stitches), all valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

Waist 2252-Skirt 2251—A smart gown. The waist pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt pattern in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. A medium size will require 5 yards of 44-inch material for the skirt and bolero, and 2¾ yards for the waist. Two separate patterns, 10 cents for each pattern.

1944—Girls' one-piece dress, with sleeve in either of two lengths. The pattern is cut in 4 sizes: 2, 4, 6 and 8 years. Size 8 will require 2¾ yards of 44-inch material.

2246—Ladies' dressing sack, with sleeve in either of two lengths. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 3¾ yards of 36-inch material.

2255—A pretty seasonable model for mother's girl. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. Size 6 requires 1¼ yards for the guimpe, and 3¾ yards for the dress, of 27-inch material.

2230—A simple, but stylish dress. The pattern is cut in 3 sizes: 16, 18 and 20 years. Size 16 will require 6¼ yards of 36-inch material.

2242—Girls' one-piece, plaited dress, with sleeve in either of two lengths. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 requires 4⅜ yards of 44-inch material.

1955—Ladies' overall apron, with sleeve portion in either of two lengths. The pattern is cut in 4 sizes: 34, 38, 42 and 46 inches bust measure. It requires 6½ yards of 36-inch material for a 38-inch size.

1875—A popular coat suit for the growing girl. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 4¼ yards of 44-inch material for a 12-year size.

2076—A unique and attractive skirt style. The pattern is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 3⅜ yards of 44-inch material for 24-inch size.

2098—A smart, one-piece dress. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3 yards for the guimpe and 5⅝ yards for the dress, of 36-inch material, for a 36-inch size.

2241—A practical house dress with long or short sleeves. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 5⅝ yards of 44-inch material.

1919—Ladies' shirtwaist. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 2¾ yards of 36-inch material for a 36-inch size.

You Can Do as Well as This Man

This is H. A. Neumann the Lange man for Dodge Co., Wis. His sales for one month were $931.50, average per week $192.68. He is 27 years old; started two years ago, both he and his goods strangers in the territory, and has built up this splendid business of his own, selling Lange's Extracts, Spices, Teas, Coffees, Household Specialties and Veterinary Remedies direct from wagon to home. You can do as well. Let us give you actual figures of their sales. We will instruct you on every point, teach you how to sell and give you exclusive territory near your home. Our contract beats all others. If you're not making $200 a month, write us at once about our plan. We want men right now for Walworth, Columbia, St. Croix, Lafayette, Portage and Richland Counties, in Wisconsin.

International Sunday School Lesson

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for October 7, 1917.

Psalms of Deliverance.

LESSON TEXT—Psalms 85 and 126.

GOLDEN TEXT—They that sow in tears shall reap in joy.—Psalms 126:5.

These Psalms breathe the spirit of the true patriot. The Psalmist sees his afflicted country suffering for the sins of the people, prays for their restoration to the Divine favor, and with the eagle eye of faith anticipates the joyful day of spiritual and temporal blessings because of restoration of the Divine favor. Doubtless such patriotism would be pleasing to the Lord on the part of us all.

Psalm 85.

I. Praise for Mercies Received (vv. 1-3.)

Praise is given for

(1) Deliverance from Captivity (v. 1). He had in mind the specific mercies of a given time; perhaps it was one of the oppressions of the Philistines from which they had been delivered.

(2) Forgiveness of Sin (vv, 2, 3).

"Thou has forgiven the iniquity—covered all their sin." God's restoration was the proof that he had pardoned. Great indeed was the sin of Jacob, but God's forgiveness was greater. He is peculiarly a God of mercy. Having forgiven the sins his anger is taken away. He stayed his hand from the judgment which would have justly fallen, to show his mercy.

II. Prayer for Restoration From Backsliding (vv. 4-7).

He knew how worthless the outward blessings of the Lord would be unless the people inwardly turned to the Lord. He, therefore, besought the Lord to give them the greater blessing, that of a change of heart. Without the change of heart forgiveness would be futile. A change of heart can only be by God's help.

(1) That God would turn the hearts of his people toward himself (v. 4).

Knowing the people's utter helplessness to turn to God, he cried out to God to save them by turning them to himself. He knew that God's anger could not turn from the people as long as they were impenitent.

(2) That God would take away the very remembrance of their sins (vv. 5-7).

(a) The ending of his anger (v. 5). The desire seems to be that he would wipe out the very marks of his displeasure by not longer allowing punishment to be meted out to them.

(b) The return to the people's joy (v. 6).

Their joy could only be realized through a revival from God. The Psalmist now becomes more bold in his requests.

(c) Shall show them mercy (v. 7).

"Make it visible," is his cry. God's judgment was most real. His desire is that his mercy would be just as real.

III. Exultant Anticipation (vv. 8-13).

Having spoken the sentiment of the repentant people, the poet expresses confidence of the Lord's response. So faithful is God that those who sincerely pray to him can go forward with the assurance of petitions granted.

(1) "He will speak peace" (v. 8).

He knew that a gentle answer would come, but its continuance would depend upon the fidelity of the people. Turning to folly would provoke again his wrath.

(2) Will bring his salvation near (v. 9).

Only as his salvation was near could glory be in the land.

(3) Devise a way by which "mercy and truth," "righteousness and peace," may be united (vv. 10, 11).

He did not suggest a way. He may not have known it. Faith now sees the way in Christ. In him such a union has been blessedly effected.

(4) The land shall become fruitful (v. 11).

When sin is removed, temporal prosperity shall follow. Earth's barrenness is due to sin. When the curse is removed fruitfulness shall follow.

(5) Righteousness shall be the guide of his people (v. 12).

In that golden, glad age God's righteous ways will leave a track in which his own may walk with security.

Psalm 126.

I. The Fact of Zion's Deliverance (vv. 1, 2).

(1) By whom (v. 1). The Lord.

(2) Effect of (vv. 1, 2.)

(a) The people were scarcely able to believe it. So sudden and unexpected was their deliverance that it seemed to them as a dream. They expressed their feeling in joyful laughter.

(b) The heathen noted their deliverance as marvelous, and ascribed it to God (v. 2).

II. The Song of the People (v. 3).

They ascribed their deliverance to the Lord and expressed their gratitude in singing God's praise.

III. The Prayer (v. 4).

The people cried to God to visit their restoration with fruitfulness, even as the streams from the South spread out and make a country fruitful.

IV. The Promise (vv. 5, 6).

Though the people were still obliged to suffer the consequences of their sins, they were encouraged to go on in sowing though in tears, as the reaping would bring joy.

This ALUMINUM SET GIVEN

WITH YOUR 1918 IMPERIAL RANGE

A special offer with every Imperial Range—an elegant Pure Aluminum Cooking and Roasting Combination or choice of other useful premiums as shown in catalogue.

In and Around Wisconsin

Beekeepers of St. Croix, Dunn, Pierce and Eau Claire counties have arranged to organize what will be known as the Northwestern Wisconsin Beekeepers' Association. Mr. J. D. Millar, of Dunn county, was chairman of the preliminary meeting.

The 1917 crop of potatoes is being sold in the commercial districts to potato buyers at 75 cents to 90 cents a bushel, depending upon the grade of stock. There will be more grading of potatoes in Wisconsin this fall than ever before. But as a general rule, the stock is of good quality, though not so large as in former seasons. The frost of September 10th and 11th stunted potato growth and there will be many small tubers—some so small that they may have to be fed to the hogs.

A call has been sent out for labor in the potato fields of the commercial growing districts. In some cases the schools are being closed for a time so that the boys can help to dig the potato crop. According to County Agent Coyner, farmers of Portage county must have help in the fields or lose several hundred thousand dollars' worth of potatoes. All school boys in Portage county who assist in harvesting the potatoes will be given full credit for school work during the time they have spent on the farm. In other sections school will be dismissed for several days, and in some places business men and clerks will get out and help with the harvesting.

The Edgewood Stock Farm, located near Burlington, Wisconsin, and owned by C. Roy McCarnna, some time ago procured the services of Fred Merrill as manager. Mr. Merrill is well known throughout the dairy world as a pleasing and forceful extension worker and has a large acquaintance among the big men in the dairy industry. For the past six years Mr. Merrill has been an active worker and has had opportunity to study dairy conditions in twenty-five different states. Three years were spent with the federal dairy division and three years with the DeLaval Cream Separator Company. In addition to being the active manager of the Edgewood Stock Farm, Mr. Merrill will be publicity man for the Wisconsin Condensed Milk Company. Already his efforts along this line have been quite marked among the patrons of this creamery. Timely circulars have been printed which contain condensed, practical information written in clear and impressive language. Mr. Merrill has also been collecting some valuable data with reference to the condition of the herds of their patrons. Several important discoveries have been made from this data. First is the large number of milk producers not using a pure-bred sire and the relatively large number of farmers attempting to produce milk from cattle not bred for milk production. It is Mr. Merrill's purpose to make the Edgewood Stock Farm a service station for the patrons of this company. He is buying up stock continually so as to have on hand at all times good, reliable cattle for sale, both grades and pure breds. A good pure-bred Holstein herd will also be kept. They now have at the head of their pure-bred herd Downing Pontiac Butter Man, the grand champion bull at the Wisconsin State Fair in 1916, and King Pontiac Segis Veeman, a twenty-nine-pound son of King Segis Pontiac Count.

The convention committees arranging for the 1917 State Potato Show at Wisconsin, October 19th to 24th, met at Madison, September 28th. Reports to these committees indicate a large attendance at the state show. There will be at least twenty county exhibits competing and a very large display from the commercial concerns. The sessions will be held in the live stock pavilion on the university campus. More complete announcement of the program will be made later.

Throughout Wisconsin many rural patriotic meetings will be held this winter. In some counties the councils of defense have already arranged programs which will include meetings in practically every town. Some of these meetings are under the auspices of organizations and others will simply be the old-fashioned schoolhouse and town hall rallies. Undoubtedly there never has been such a time to develop patriotic speakers since the civil war as there is now. The transportation facilities now afforded farmers makes it certain that these meetings will draw large audiences and create great enthusiasm.

The Land-Clearing Special in Upper Wisconsin will wind up its work this month. The demonstration at Phelps, Vilas county, with Oscar Gunderson in charge of local arrangements, closes October 6th. Another demonstration will be held at Laona, Forest county, October 8th to 10th, and another at Merrill, Lincoln county, October 11th to 13th. Mr. John Swenehart is making arrangements for the Forest county demonstration and Mr. A. H. Cole for the Lincoln county demonstration.

DIAGRAM OF FLOOR SPACE IN STOCK PAVILION, MADISON, WHERE STATE POTATO SHOW WILL BE HELD NOVEMBER 19TH TO 24TH.

The Milk Producers' Association at Janesville recently met and agreed that the $3.42 per hundredweight price set on milk for the dairy district was a fair price. The meeting endorsed the Liberty Loan, urged farmers to save all their heifer calves instead of selling them for veal, and favored constructive work to put the dairy business on a better basis. A survey of the county last June showed about 6,000 cows in Rock county and the producers' association is urging more cows as a remedy for the present high milk prices. Some of the members of the association recommended $4.13 as an October price on milk.

Wisconsin was well represented at the annual meeting of the American Poultry Association last week in Milwaukee. The association expects to make a nation-wide campaign for bigger poultry production. In this campaign a great deal will be expected of Wisconsin. There will be about eighty poultry shows in Wisconsin this winter, and thirty-seven or thirty-eight of these receive state aid. This convention passed resolutions urging the federal government to fix the price of the 1917 corn crop at not to exceed $1.20 per bushel. This was in the interest of reasonable priced feed for poultry. The fact that the government has fixed the price of wheat has led many to erroneously believe that the food administrators can also fix the price of corn. There has been no law passed that will permit a price-fixing on corn. However, it is possible that congress can be appealed to to pass such a law.

A special series of lectures on animal disease control has been arranged for by Dr. F. B. Hadley, of the Wisconsin College of Agriculture, department of veterinary science. The first lecture, September 29th, by Dr. A. S. Alexander, inaugurates the following program:

October 6th—Causes of infectious diseases, Dr. F. B. Hadley.

October 13th—The agents which spread infectious diseases, Dr. Alexander.

October 20th and 27th—Natural protection against infectious diseases, Dr. Hadley.

November 3d and 10th—Artificial protection against infectious diseases, Drs. Alexander and B. A. Beach.

December 1st and 15th—Disease control through water supply, feeds, disposal of carcasses, by Dr. Alexander.

January 12th and 26th—Live stock sanitary laws, quarantine, and the accredited herd plan, E. G. Hastings and C. P. Norgord, state live stock sanitary board, Dr. Hadley.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

The Late-Hatched Chick.

Last August, a man who is a poultry crank proper, purchased a trio of S. C. Buff Leghorns at a fair where they were being shown. Pretty little creatures they were, too. Much interest was manifest in the pen of fowls, which, aside from being very attractive, were the first of the kind in that vicinity.

The purchaser thought it might be a good plan to pen the birds and raise for the next season. They were July hatched pullets, and began to lay heavily in January. The poultryman was a trifle uneasy, thinking that as the stock had been hatched so late they might bring weakling chicks. Such was not the case. From the number hatched, there was not a single loss.

The care was of the best, the later hatches being brooded by hens in a shady, secluded place away from the larger flock; if the season was dry, beef scraps were given, probably to even up the scarcity of bugs. So successful was this man that he made the mistake of advising all who were within sound of his voice to "hatch the late chick—it is a money-maker!"

It was one of the few clashes between the fancy end of the business and the utility side; usually they go hand-in-hand. The next statement he made explained the situation: "To make winter or spring shows, one may have young birds at the proper stage of development. The plumage of the late chick does not become faded as that of the earlier hatches. I would advise setting a few late hens as a starter; they will please you."

It is just possible that any of the breeds could be hatched at the right time to be at their very best at show time. Indeed it is one of the advantages in the show room to have the young stock just reaching maturity. Never again is a pullet in the same bloom as just before she lays her first egg.

The small, nervous breeds may be hatched late and come out whole, because they mature early, and besides, they are a warm climate fowl, and do better through the hot dry months than through the early cold, damp weather, such as our all-purpose breeds weather and grow rapidly. The Mediterranean breeds could more nearly be likened to the prairie chicken and the quail, in this point.

For the larger breeds, unless for a show specimen, alone, nothing runs a flock down and out sooner than to raise from the late-hatched pullets, for a few generations. They are smaller, as well as immature, and it does not require much figuring for a farmer to understand how it is. It is not from the smaller stunted colts that we raise our horses—far from it. Poultry is on exactly the same principle.

The late-hatched chicken has a place in the farm, though, but not to be hatched and coddled. It is when the hen sits out and hatches off a brood on her own account and hies away to the fields where they wax large and fat on waste material; grain, seeds and injurious insects. Many times such chicks hatched in August will outgrow the June chick that required much care as well as feed.

The cockerels of such hatches make dandy fries late in the fall and winter, while the pullets begin to lay in the spring at the time when the other hens are falling off, and getting broody. It is not advisable to use their eggs for incubation; neither is it necessary. The eggs of the late hatches rarely, if ever, are aas large as those of the matured birds, but they are mighty handy for culinary purposes, when the others are needed for incubation. Especially is this true when eggs are sold for hatching, and not enough to spare for home use.

For the most part, the fancy, so-called, and the utility go together, one being a complement of the other. We need the purely professional poultryman who makes it his sole business to raise pure-bred stock. We do not need the birds that are hatched to be pampered, and made to appear what they are not. A bird is worth exactly what it will bring over the block, or what it is worth to keep up the stock that is to go over the block. The primary reason for raising poultry is the meat and eggs it produces.

Poultry Business Not All Smooth Sailing.

To the Editor:—I am taking six different poultry papers, and I find so many different opinions given in them that it is worth while to think them over and compare statements made therein. All seem to agree that we should try to raise 100,000,000 more pounds of poultry this year than we did last, so that we can feed our population and foreigners with more animal food than we did last year. I see that some of them are advising the amateur to go into the chicken business and do his bit for his country. It says that eggs for hatching can now be purchased for half price, on account of the lateness of the season, and the eggs that were $20 and $30 a setting can now be purchased at half those prices.

My advice to the amateur is this, to go slowly in raising chickens, or trying to raise them, with the cost of feed as high as it now is. Should he, however, conclude to take hold of the business I would advise him to go to some farmer who has good stock and buy eggs from him, as he could get them at market price, and should he be unsuccessful with his hatches, he would not be out a great deal for his first cost.

I see that some of our universities are offering to send out bulletins to aid the beginner as much as possible, but you cannot raise chickens nowadays on bulletins. With wheat above the $2 mark and corn at $3 a hundred and oats 70 cents a bushel it would cost a person a great deal to feed his chickens, and it is all the professional chicken raiser can do to make both ends meet in the chicken business at the present time.

I also see that many recommend the city folks to keep a dozen hens in the back lot and feed them the table scraps to support them, while another writer says that there must be no table scraps during these hard times. One writer says that there are $700,000,000 wasted in the kitchen every year. If a person undertook to follow all that is given in the poultry papers he would soon be a candidate for the poor house. Thirteen years in the poultry business has taught me that in order to succeed with poultry a man must use a little gumption in the matter. In short, he should at least use good common sense in the matter.

There are so many that try to do the impossible when they go into the chicken business that they fail badly. Some think that all that is necessary is to hatch chickens and then they take care of themselves. Hatching is the easiest part of it, and the test comes in raising them to a month old, when they are generally safe if cared for properly.

In purchasing eggs for hatching purposes from those at a distance it is often the case that but few of the eggs hatch on account of the rough treatment they receive at the hands of the express company.

Again we find that the person ordering does not get what he ordered. Last March I ordered a setting of eggs from a prominent Red breeder and they were to be rose comb, but every chicken is a single comb, and, while rose-comb birds sometimes throw a single comb or two, I never before knew them to throw all single combs. I once remarked to a gentleman that I thought that there is more crookedness in the chicken and egg business than in any other and he said "except the nursery business" and, as he was handling nursery stock, I thought that he might know about it. It is surprising how much dishonesty is shown by many poultry advertisers, and I speak from the experience I have had with such. Three weeks ago one of our leading merchants ordered some Buff Orpington eggs and when the eggs hatched he had one black chick and he offered to make me a present of it. There must have been something wrong in the breeding pens of that breeder. I have known of persons who kept both light and dark Brahmas, and once a hen stole her nest and hatched out twelve chicks, half of them marked as light and the other half dark and he told me that he sold the ones that were light for that breed and the others for dark. Is such a thing right to the buyer?

I might give scores of cases that I have known, but time will not permit, but I would say that I believe that there is more rottenness in the poultry business than in any other. I think in many cases that the buyer is as dishonest as the seller. I have no stock to sell, or anything that I care to part with in the way of chickens, but I believe in giving every man a square deal. The golden rule should be followed.

James Lowrey.

Straight Answers to Timely Questions

What is Pratts Poultry Regulator?
A positive tonic and conditioner for poultry of all kinds and ages. *A health-builder and health-preserver.* Not a food.

What does it contain?
Roots, herbs, spices, mineral substances, etc. Each ingredient performs a certain duty. The combination spells "health insurance."

What does it do?
Pratts Poultry Regulator makes and keeps poultry healthy, vigorous and productive. It sharpens the appetite, improves digestion and circulation, hastens growth and increases egg-production. *It saves feed* by preventing waste due to poor digestion. *It prevents disease* by keeping the birds in condition to resist the common ailments.

Has it been fully tested?
Yes! In general use for nearly fifty years. The *original* poultry conditioner. Imitated, but unequalled.

Does it give general satisfaction?
Positively! *Satisfaction guaranteed or money refunded.* Test it at our risk. Increased egg-production will prove that "Pratts makes hens lay."

How is it best used?
Daily, in small quantities. For adults, a tablespoonful daily for 10 birds. Younger stock in proportion. Mix with dry or moist mash.

What does it cost?
Nothing, because *it pays big profits.* One cent a month per hen is the *investment* required.

Where can I get it?
From 60,000 Pratt dealers. There is one near you. Direct from the manufacturer, prepaid, if your dealer can't supply you.

How can I learn more about it?
Ask the Pratt Food Co., Philadelphia, for valuable FREE BOOKS on poultry keeping. Write today!

Wisconsin Cows Drafted to Service

Forty Thousand of Them Were Called for Service Last Month—By Noel Negley, Special Organizer Wisconsin Dairymen's Association.

ALTHOUGH man, the master of the world, has compelled himself to register and to serve wherever he can render the most service, almost 1,800,000 Wisconsin cows, hirelings and servants of man, serve or "slack" at will and thus lower the efficiency of the nation in the present struggle.

Some cows can best serve humanity by converting feed into milk, some by converting feed into beef, while about all that some others can do is to convert feed into fertilizer. Labor, money, precious food, all to make only refuse at a time when the country is in need of all the labor, all the capital, and all the food that America can produce.

At present over 2,500 Wisconsin dairymen have registered their cows under the selective service law by enrolling them in cow-testing associations, where, after taking monthly examinations for one year, they can be easily placed in the positions where they can render the most service to humanity. It is no crime for a dairy cow to convert feed into beef, but it is a crime if she converts feed into beef unprofitably under the guise of a dairy cow.

During the month of August, 101 cows were rejected as physically and temperamentally unfit to serve in the milk producing ranks, and were assigned to the butcher, or interned for the period of the war. Special honor should be given the 5 per cent of the cows tested which made over forty pounds of fat during the month—especially so, in view of the fact that this was an unusually low producing month.

Not only are these men demanding that their cows be efficient, but they insist that the machinery also be efficient, and also are having their cream separators examined each month. Fred Cuenot, of the Alto association, reports stopping a leak of $2.86 a month by repairing a cream separator. C. P. Chrysler, of the Leon Valley association, reports the repairing or replacing of three separators. Fred Waldman, of the Rice & Cedar Lake association, reports that two of the separators in his association were found to be "lazy" and they were equipped with new bowls.

Many of these 40,000 cows examined last month are not efficient because they are handicapped by their owner's methods. To determine just where the responsibility lies, many of the dairymen are using milk scales and weighing the milk of each cow at each milking. During the past month three members of the Muscoda association have bought milk scales. Fred Pfuehler, of the Wolf River association, says that twenty-nine of his members see the advantages of daily milk weighing and have bought $106.50 worth of milk scales since the association started three months ago.

J. T. Toolajian, of the Winchester association, believes that "Cleanliness is next to Godliness" in the dairy as well as elsewhere, and has made arrangements to have each of the barns in his association whitewashed. The association will buy a spraying machine and start the movement for clean and light barns early in October.

"To aid in any way in promoting the interests of the dairy farmer" might be called the cow tester's creed. Another way that he can be of service is to test the soil for acidity, especially where legume crops are to be grown. The Dodgeville association has bought a Truog soil tester and now Louis Bober, of the Lone Rock association, writes that its members would like to buy an outfit and test soil as well as cows.

That the scrub bull cannot stand the present-day strain of competition in efficiency is shown by the sale of scrubs and their replacement by pure-bred animals. Last month four scrub bulls were sold and replaced with pure-bred animals. When the cow-testing association comes in the pure-bred and bred-for-production bulls come with it and the scrubs go out.

Beef prices are high, but that is not the only reason why one tester reports the sale of three pure-bred cows for beef. The reason is that these three were no good at the pail and the owner was too honest to sell them for dairy purposes. May the number of men, with the backbone that this man has shown, increase!

F. G. Soboda, county representative, and secretary of the Langlade Cow-testing association, writes: "I took a buyer out to see some grade Jerseys belonging to one of our members who has been in the association three years. The buyer got four cows at $125, $135, $150 and $165, respectively. A dairy cow is seldom sold for more than $100 in this section. Had these cows not been tested, I am sure the member would have been satisfied with $85 a head for them."

An investment of $1.25 brought one member $100. Harvey Little, Janesville, says: "The cow-testing association records of my herd increased the price I received for my bulls $100 per head."

Why not receive good prices for the surplus stock? The cow-testing association will tell their value in a language that everyone understands.

To let the people of the state know what cow-testing associations are doing, exhibits were held at the state fair and the following county fairs: Green, Portage, Langlade, Sauk, Polk, Chippewa, Waupaca and Fond du Lac. R. E. Kirsch, of the first association in Crawford county, is planning an exhibit at the Gays Mill fair. These exhibits attract great interest among the dairymen, and will result in more associations or continued membership in the present associations.

An annual report is of value if it tells something worth while that has been done. If nothing has been done it is better to keep the "Annual Report" under cover. But a cow-testing association never fears to publish an annual report. Excellent reports have been received lately from the Langlade county, Rosendale, and Monticello associations.

Grow Up the Best Heifer Calves.

To the Editor:—Throughout the entire country there is a great shortage of milk cows. It has come about by the big demand and the high prices offered by butchers and shippers for all kinds of calves for veal. As a rule, it is very difficult to judge the young heifer calves as to what they may develop into as milkers. The thing to do is to choose all the best-appearing ones, grow them up to three to five years of age, and then after two or three calves have been dropped decide if they are profitable for further use as milk stock.

Such as prove undesirable can then be fattened for beef. If they are smooth and well fattened the price for them as beef stock will well pay for growing them. There is such a great demand for milk, sold fresh or to condenseries, and an unlimited market for cream, butter and cheese, that if the number of milk cows was very largely increased there would be no break in the present prices. The future is rich in promises for a continuous fine price for all milk products and almost universally farmers who only keep a few cows can very profitably double up on the present number they are keeping.

With the silo, plenty of clover hay, some grass and the straw and fodder that all farms can or are producing, the calves can be cheaply grown into cows, and when they become fresh milk can be produced at such figures that fine profits will result. All this can be done, too, without materially interfering with the present arrangement of the farm stock or crops. So I advise both buying and producing on the farms a great many extra heifer calves, and growing them to be milk cows.

W. A. G.

YOU PAY NOTHING EXTRA

to have your horses shod with Capewell nails. You do avoid the risk of having cheap imitation nails used—

You do have assurance that the nails will hold the shoe—

But it costs you not a penny more because Capewell nails sell at a fair price and all shoers can afford them. Ask for the Capewell.

WHITE PLYMOUTH ROCKS, winners at the Wisconsin State Fair. A choice lot of cockerels for sale. Buy early and get the best. Everything sold on approval. A. F. Pelz, Hartford, Wisconsin.

THE LIVE STOCK MARKET

Union Stockyards, Chicago, September, 29.—The final week of September was one which will hold a high place in live stock history. With cattle receipts on an extraordinary heavy basis and hog receipts correspondingly light, prices have gone through the natural changes which are to be expected under such conditions. During the first half of the week there were three cattle to every hog at the ten principal western markets, a condition which probably never before existed at this season of the year. Cattle receipts at these points on Monday totaled 173,000, the Chicago run leading the list with a total of 42,377, the third largest local run on record, while Kansas City reported 39,000. Omaha hung up a new yard record by about 1,000 head when 24,500 arrived, and St. Paul also exceeded their previous high mark by nearly 1,000, when 20,300 showed up there. Tuesday's run in the West swelled Monday's total by 99,000 and made a new record two-day total, while Wednesday's run was curtailed considerably, only 64,000 being reported. The three-day run figured up to 335,000. In direct contrast to these figures, the hog supply at seven western markets for three days showed a total of only 113,00 head against 201,000 for the same period last year.

Killers have labored under the heavy cattle receipts all week, and, although the market has declined rather sharply, prices have, in reality, been extremely well maintained taking supply figures into consideration. Sharp breaks were logical and the only wonder is that they were not much larger. Such a glut as the Chicago market has gone through this week always brings back the desired agitation of equal distribution of marketings on the five days of the week. The piling up of such an enormous supply as the country has done the first three days this week simply gives buyers an added advantage which they would not possess had the supply been more evenly distributed.

Climatic conditions are the main cause of the heavy runs. No beef famine is suggested by the figures but they are hardly representative of the exact conditions. Cattle breeding has, without doubt, been on the increase, but to no such proportion as the figures indicate. The high feed bill working hand in hand with bad weather conditions has done more to increase marketings than any other factor. Thousands of cattle are being sent to market prematurely west of the Missouri river owing to the drouth, and with the culling out process taking place in dairy herds in all sections in response to the high prices, the future supply appears doubtful.

Hog receipts showed the results of the clean-up process which took place early in the season and the market responded well to the light runs. Prices advanced by 10@15c jumps until a $19.70 top was reached on Friday and the trade confidently expects a return of the $20 quotation in the very near future. The present miniature movement of hogs to the market showed a distinct inferior quality and indicated that the dregs of the porcine population were being gathered on the strength of the prices. Pigs, being healthy, are being conserved, and no heavy run of new hogs is possible before January. Present prices are at new high levels of a year ago.

Barring strictly prime grades of long-fed beeves and fancy yearlings, the beef steer market shows sharp losses when compared with last week. Even the best grades were shaded a bit from a week ago, but the scarcity of that kind tended to keep them in a class by themselves on the market. Trade was irregular, but a general decline of 50@75c took about 75 per cent of the crop. Packer buyers discriminated strongly against heavy steers which were a little below the top grade, and a good many sellers quoted declines of $1@1.50 on these. A strictly good handy-weight kind found the readiest outlet, but even these failed to escape the declines brought about through oversupply. Proportion of native beef steers eligible to sell above $17, was small, by far the long end of the crop being of plain quality. A new high point was reached for yearlings on Wednesday when 41 head of prime Illinois-fed Angus averaging 1,039 pounds, reached $17.65, the former record being $17.50, but these were in the specialty class and were not a criterion to the general market. The week's top on heavy cattle was $17.85 scored on Monday, this being only 5c under last week's record. On the midweek session bulk of all beef steer sales were at a range of $10@15.50 against last week's range of $10.75@16.50. The long end of the crop comprised common and plain grades of grass steers, selling largely at $8.50@11, while a lot of medium to good light short feds cashed at $11.75@13.75, good to choice corn-fed beeves landing at $13.75@16, and only something in the choice to prime classes being quotable to $17 and above.

Of the 42,300 cattle which arrived Monday, 15,000 were western rangers, and outside markets reported a proportionately large supply, indicating strongly that drouth conditions on the ranges are tending to speed up marketings. But for the drouth and the high feed bill, a large proportion of the range cattle at present coming to market would be kept another year. Although prices broke under the big supply, the market gave a good account of itself, everything considered. The mere fact that sellers were able to clear such an excessive supply each day, even at the declines noted, was indicative of the tremendous demand for cheap beef. Local supply for the half week was 28,000 against 20,000 last week. Declines of 50@60c were general for the rank and file of western steers which went into the killer outlet, the better grades selling at $13 and above, escaping with smaller losses, and the steers with feeder quality, which meant minus horns, finding less declines. Prime Canadian beeves from Alberta, averaging 1,500 pounds, sold at $16, but those were in a class by themselves, and a good kind of Montanas cashed at $14 with the big end of the Texas-bred stuff from the Northwest cashing at $9.50@11.25. Those at $8.50@9.50 were inferior to plain. Good to choice western cows sold at $8@9 and some at $7 were of fair class, while a canner and cutter grade cleared downward to $6.25.

In the butcher cattle trade prices were largely 50@75c under last week's close, choice grades of heavy cows and prime corn-fed heifers being the only fortunate classes to escape. There was a fair call all week for good to choice heifers selling at $8.75 and above, but below that point, and for the plainer grades, selling at $7.50 and below, it was a dull, draggy market. Cows of big weights were scarce. Some sold up to $8.50@9, which looked no more than 25c under a week ago, but plain and medium grades, going at a range of $7.50@9, were weak, while the low-priced cows had just decent action. The medium sorts were at all times hardest to clear. The bull market declined 25@50c under a good supply and weak demand. Strong-weight bolognas of good quality sold largely at $7@7.25, with prime heavies up to $7.50, while the fair qualitied light weights had to sell around $6.85 and lower, the common kinds going from $6.50 down. Prime yearling bulls and choice butchers were scarce and sales were made up to $10 and higher.

Stocker and feeder supply was heavy all week, the western run yielding a large proportion and there being a profusion of light plain 600 to 800-pound stuff from Wisconsin and Minnesota. There was strong demand for the good to choice grades and these showed little change from last week, but demand for the under grades was not equal to supply and declines of 25@40c were noted. The country is coming into the market strongly for feeding stock to consume the new corn crop and prices show a substantial advance over a month ago, but prospective purchasers have little to fear when the wide range between feeder and fat cattle prices are considered. Prime fleshy feeders sold up as high as $12, but few cattle went countryward above $10, this price taking a choice 700 to 900-pound kind. A plain class of stockers sold at $7.25@7.50 and a good grade at $8@8.50. Stock calves were on a $7.50@8.25 basis and good to choice yearlings were worth $9@9.75.

The course of the hog market has been much like the sensational advance of two months ago. During the first five days of the week the local run was less than 56,000, making an average of less than 12,000 per day. That the country is short of hogs is now a foregone conclusion and with countrymen holding on to their healthy pigs and under weights, there is no possible chance of an oversupply before the year is out. Receipts during the last month have been just about enough to supply fresh meat demands, and packers are having to unload coolers to make up the deficit. The country is closely conserving the crop even in the face of the advancing prices and the opinion is general that a sharp break would have more effect in bringing a good-sized run than further advances. Brave forecasters around the yards are looking for the return of the $20 hog within a few days, but forecasting under such conditions is accompanied by danger to the reputation of the forecaster. The advance has been a steady one, each day being 15c higher than the previous one until on Friday a $19.70 top has been reached and the market stands generally 75c@$1.50 higher than a week ago. The good demand from packers has caused the heavy and mixed packing grades to show the longest advances, thereby narrowing up the spread which has been extremely wide for the past four months. Very few hogs are selling at present below $18.50, the bulk of the packing grades going at $18.70@19 and the bulk of the better grades landing from $19.15@19.60. Shippers have taken very few hogs, but local demand from packers and city butchers has been enough to absorb the crop. Most of the common to good mixed packing sold at a range of $18.50@19.10, with a lot of poor to good heavy packers at the same prices. A range of from $19@19.30 took fair to choice medium-weight hogs, while fair to good butchers sold largely at $19.20@19.50, a prime, selected, medium-weight butcher class going at $19.60@19.70. Common to good light shipping hogs landed mostly at $19@19.35, with light, 140 to 180-pound grades from $18.50@19.10. Old packing sows were slow sale at $17.50@18.30.

A demoralized meat trade in the East and liberal supplies at all points have combined as a bearish influence on the lamb market early this week, though some reaction was noted toward week-end, and prices are closing unevenly 15@35c per cwt, lower than a week ago. Choice feeding lambs show the least loss, although, for the first time this season, there is a wide spread between choice and the weighty undesirable feeders. Best fat range lambs are going on killing account from $17.50@17.75, with lss desirable kinds from $17@17.25. Choice light-weight feeders are going to the country up to $17.75@18, though weighty kinds are selling anywhere from $17@17.50. Bulk of the native lambs selling from $17.25@17.50 at the close yesterday. Sheep, owing to acute scarcity, have been practically immune to decline, the few coming selling on about the same basis as a week ago. Good to choice ewes from $11.25@11.50, with fat aged wethers quotable at $12.25@12.75 and good to choice fat yearlings at $13.75@14. There have been no feeding sheep available on this week's market of consequence, but they are nominally quoted as follows: Good to choice feeding yearlings, $13.25@13.75; good to choice aged feeding wethers, $12@12.50, with feeding ewes from $9.50@10.50, depending on their condition. Breeding ewes are selling anywhere from $12.75@16, according to ag weight and quality, with the supply much short of demand.

Your Government Wants You to Raise More Live Stock

Government officials have found, by careful investigation, that there is a very serious shortage of live stock in this country. They state that unless farmers RAISE MORE HOGS, SHEEP AND CATTLE, especially now that we must feed our own soldiers and help feed those of our allies, famine conditions may result. YOU WANT TO DO YOUR "BIT"—DO IT RIGHT NOW. Increase your live stock at once. It will pay you well. You are bound to get

Higher Prices — Bigger Profits

But, don't forget that WORMS are the greatest enemies of live stock—greatest "profit-consumers." They cause 90% of live stock losses. Never before has it been as necessary to feed a good worm destroyer and conditioner as RIGHT NOW, and the best and cheapest remedy—one that is guaranteed—is SAL-VET, the old reliable live stock conditioner and worm destroyer. It costs but 2½¢ per month per head of hogs or sheep—horses and cattle a trifle more. It not only gets rid of the worms, but tones the blood, aids the digestion and makes stock thrive faster—KEEPS them healthier and SAVES feed.

"When I ordered the SAL-VET I had eight pigs that were at a standstill; they had not gained a pound in two months, and were four months old at the time. I fed SAL-VET as directed and the worms came from them by the dozen, some of them ten and twelve inches long. They have gained more in the sixty days than they did in the entire four months. SAL-VET also cleaned out an old horse on which I had tried several kinds of medicines." R. K. COWARD, New Paltz, N. Y.

You can't afford to be without SAL-VET. It is the cheapest, safest, surest preventive against losses and pays big profits on its small cost. Ask your dealer about it; if there is none in your locality, write us. A postal brings a valuable live stock book, just issued, free. Send for a copy today.

Dept. 137 CLEVELAND, OHIO

Blacklegoids

NO DOSE TO MEASURE.
NO LIQUID TO SPILL.
NO STRING TO ROT.

BLACKLEGOIDS are small pills. Each pill is an accurate dose of blackleg vaccine.

BLACKLEGOIDS are easily administered—simply inject them under the skin with a vaccine injector.

TAKE NO CHANCES.

Don't wait until your calves become infected. This means certain loss—there is no *cure* for blackleg. Vaccinate now—before the deadly disease shows itself.

THE COST IS SMALL.

BLACKLEGOIDS are economical. The expense is trifling compared with the loss you are liable to sustain if you do not use them.

ORDER THROUGH YOUR VETERINARIAN OR DRUGGIST.

Write for free booklets on Blackleg, with full information about Blacklegoids.

KENDALL'S SPAVIN TREATMENT

A

Known for 40 Years as Kendall's Spavin Cure

A New Name

But the Same Old Reliable Remedy

FARMERS and horsemen everywhere will be glad to know that this change is in the *name only*—that there is no change whatever in the famous old-time formula that has rendered such remarkable service in horse ailments—Bone Spavin, Ringbone, Splint, Curb, Sprains and Lameness—by the counter-irritant method.

Whether you get Kendall's under the old label or the new, the quality and efficiency is the *same* old reliable—with a 40-year-old reputation.

Get it of your druggist—$1.00 per bottle—six for $5.00—and ask for book "Treatise on the Horse"—or write

Live Stock and Commercial Notes.

Gathered by Representatives of The Wisconsin Farmer.

Notes on the Atwater Fall Sale.

ON October 17th L. F. Atwater will hold his second fall sale at his farm near Bangor, Wis. We saw this offering on September 21st and we are glad to report that L. F. is selling some of the best herd-boar prospects that we have seen listed for a sale this fall. Not every one, of course, is suitable to head the best registered herd of Duroc Jersey sows, but there are about 15 that, in any of the western sales, would be "killers," etc., the big kind, up well on legs, good, high backs with good feet and sired by good, well-advertised boars. We can't mention all of them in this limited space, but there are a few that we want you to become interested in if you are going to buy a herd boar. Investor Jr. is listed as an attraction. Now we will be frank and say that we do not think this boar will be the top of the sale, but we do believe that he is the best herd boar prospect in the sale, if someone gets him that will grow him. He is thin in flesh, and as he is of the big type many that are accustomed to the short-legged, short-bodied kind will not like this boar. The demand is for the big ones, and the man that lands this boar will make a real buy. He is sired by Investor and was bred and raised by Sam Eagle, of Illinois, the breeder that bred Investor. The first-prize boar pig at Minnesota will be one of the contending boars for high honors, and he is certainly entitled to that position, for he is a wonderful pig in every respect. One of the best pigs in the sale is sired by Dreadnaught, an Iowa boar bred by Dr. Still, and a son of Illustrator. The dam is a daughter of Walt's Top Col. out of a Jack's Friend dam. Proud Chief Jr., Atwater's Cherry Chief-Proud Col. bred boar, is the sire of some of the best, and P. S. Wonder's boar pigs were winners at the fairs. Two boars, and one that is outstanding, are by Investor out of the Lady Top Notcher sow that cost $310 last winter. These boars should be in demand and competition should be keen between the particular breeders. In our next issue we will have something to say about the dams, but then you know the sows have made the Atwater herd. Be sure and get the catalog and "study your lesson" well. Try and be at the sale, but if that is impossible send your buying instructions to T. P. Shreve, field man for The Wisconsin Farmer, in care of L. F. Atwater. When writing for catalog, please mention this publication. See advertisement on page 26.—Adv.

Write Quackenbush, Melrose, Wis.

W. W. QUACKENBUSH, Melrose, Wis., is the man that has those good, big-type Poland Chinas, and we want to suggest, to the man that wants a boar or a few gilts that he write this breeder at once. Mr. Quackenbush has some of the best sows in the state, the dams of the pigs he has for sale. He is not going to hold a sow sale, so the gilts are being offered as well as the boars. Many of you breeders are going to be short on sows to breed this fall, so this is your opportunity. He has the goods. Don't be afraid of them. Mention The Wisconsin Farmer, please. See page 27.—Adv.

The Neeseman Polands.

AUG. NEESEMAN, whose postoffice is Warren, Ill., but who lives in Wisconsin, is offering some Poland China boars that he guarantees will please you. They have the size and stretch that is needed in youngsters and they carry the very best of breeding. Good boars are going to be scarce the last of this month, so if you are going to buy a boar do not wait too long. Communicate with the above breeder and let him quote you prices and description. Mention The Wisconsin Farmer, please. See page 27.—Adv.

Silver Spring Farm.

GEO. H. COMINGS, president of the Silver Spring Farm Co., Eau Claire, Wis., makes a specialty of of selling Holstein calves. This firm supplies milk for the city, and while they take good care of their calves they do not wish to bother with them longer than necessary, and for that reason the prices quoted on the bulls are very attractive. One of the best bred bulls in Wisconsin heads this herd and many of the cows have A. R. O. records. If you want Holstein calves write the above firm. See page 25.—Adv.

Evansville Breeders Claim February 19th.

THE Evansville, Wis., Chester White breeders, Wm. F. Butts, B. H. Babcock and Walter George, claim February 19th for their winter sow sale. This will be during "Swine Week." Evansville is near Madison, and the Chester men can attend this sale and then get to Madison at 3:30 or in plenty of time to attend the banquet. Keep this date in mind.—Adv.

J. J. Cain Sells, October 30th.

J. J. CAIN, Skyberg, Minn., sells Duroc boars and gilts October 30th. Cain is the man that raised that great boar, Giant Invincible, that he sold during the Iowa State Fair to Jake Waltemeyer for $2,500. Some pigs by this boar sell on the above date. Watch this paper for details of this sale.—Adv.

Underwood's Red Polls.

DON'T forget L. C. Underwood, Avoca, Wis., when in need of Red Polls. He has one of the good herds of the state and many of his cows are in the A. R. list. As secretary of the Wisconsin Red Poll Breeders' Association he is in a position to give you any information you may wish to have relative to the "double deckers." When writing please mention The Wisconsin Farmer.—Adv.

Owens' Poland China Sale.

ON OCTOBER 17th G. W. Owens Lawler, Iowa, will hold his annual sale of big-type Poland Chinas. As usual, he has a splendid offering and well grown. His pigs are sired by I Am Baron, his sensational big-type herd boar and one of the largest in the country and a sire of exceptional merit, and his other herd boar, Blue Valley, Jr., by Blue Valley Quality by Blue Valley and out of a dam by Miller's Choice. The largest spring boar that the writer has seen this year is one sired by Blue Valley Jr., and out of Belle B. by A Wonder A. There are three boars and one sow in this litter and they are tops. The one boar pig especially is one of the greatest prospects of the year. There is a litter of six gilts and three boars by Big Price, the Minnesota and South Dakota champion, and out of a dam by King Expansion, that are extra good and are very even. There is an extra good litter by I Am Baron and out of a good brood sow, Big Lady. One extra good gilt is by I Am Baron and out of Nemo P. by King Giantess. This is a straight-bred gilt and very desirable. Mr. Owens will pay the car fare of anyone who attends the sale and is disappointed in the offering. We will have more to say next week. See this page and write for a catalog, mentioning this paper.—Adv.

Rock River Valley Holsteins.

WHILE talking to the owner, John D. Hetts, Fort Atkinson, Wis., the other day about the herd, he sounded the keynote of its performance by saying that "we do no claim the world's record, but we do claim a world of records. The average semiofficial yearly record of all the cows tested in our herd is 16,800 pounds milk and 711 pounds butter." When you consider the fact that this average includes two year olds as well as the other junior classes up to mature cows and that few herds in the state have made more yearly records than this one, some conception of the significance of this average can be formed. The grand old foundation cow, Fannie L. De Kol, is in many respects the greatest cow in Wisconsin. She is a show cow, a producer, and a reproducer of A. R. O. show cows. She has 11 A. R. O. daughters which is the world's record and her blood has been conspicuous in many of the noted Holstein shows for many years. Mr. Hetts always has a good lot of bull calves on hand from this large herd so that it would pay you to come to his farm and look them over when in need of a sire. See advertisement on page 25.—Adv.

Dan P. Jones' Holstein Sale.

ON page 25 of this issue will be found the advertisement of Mr. Dan P. Jones, of Cambria, Wis., announcing a dispersion sale of purebred Holstein cattle at the farm two and one-half miles from Cambria on Tuesday, October 9th. There will be sold at that time 15 head of pure breds in addition to five superior grades. All animals in the herd have been tuberculin tested and they are able to give good account of themselves as milkers. At the same time Mr. Jones will sell nine head of good, heavy draft horses and a fine assortment of farm machinery. Wisconsin Farmer readers should keep this sale in mind, as it may prove to be an ideal opportunity to obtain some good Holsteins at reasonable prices.—Adv.

Those Grant County Chesters.

THESE good boars of any breed are getting scarce and if yu are going to need a boar this fall you had better get busy at once. John P. Vogt, Jr., Glen Haven, Wis., raised a large number of spring pigs and we feel sure that he can sell you a boar worth the money. He is not asking long prices and those wanting good, serviceable boars should write Mr. Vogt. See page 27.—Adv.

Du Rocks Du.
